**Pry bar.** Generally, a pry bar is a weapon of convenience, not choice. It can be used as an effective bludgeon.

**Quarterstaff.** The staff is the favored weapon of travellers and peasants everywhere. Its iron-shod ends are used to strike powerful blows or jab at an enemy. The oriental bo stick resembles the quarterstaff in length and balance, but is used differently. The quarterstaff suffers a –2 penalty to attacks against plate armor.

**Sai.** The sai is a parrying weapon with a large crossguard. It resembles a dagger, but the "blade" is round with no edges. It is normally used for bludgeoning attacks. The sai's crossguard provides a +2 bonus to any block, trap, or disarm attempts.

**Sang kauw.** This weapon resembles a short, double-ended spear with a buckler or bladed guard at the center. It requires both hands but provides a proficient user with an AC bonus of +1 due to the small shield. Like the lajatang, the sang kauw threatens both of the wielder's flank squares as well as his front spaces.

**Sap.** The sap is a leather bag filled with sand or lead shot. It is used to render an unsuspecting victim unconscious. Saps are only effective when used against opponents in leather or lighter armors. To go for an instant knockout, the user must make a called shot to the target's head. If he hits, there is a 5% (40% chance maximum) chance per point of damage that the victim is knocked out for 3d10 rounds. A target wearing a helm of any kind provides the attacker with an additional –4 penalty in addition to the called shot penalty. A creature of size Large or greater cannot be knocked out this way. See Chapter Two for more information on sapping.

**Scourge.** The scourge is a torturer's weapon. It consists of a handle with several leather whips, often studded with barbs, nails, or other similar devices. The scourge's whips can catch and grab an enemy's weapon, and the wielder of the scourge gains a +1 bonus on any disarm attempts.

**Scythe.** Another tool converted into a weapon, the scythe mounts a curving blade perpendicular to a long wooden haft. It was originally intended to be used for harvesting grain, and is slow and awkward as a weapon.

**Shuriken.** Also known as *shaken* or *throwing stars*, shuriken come in a variety of shapes and sizes. The most common designs are large throwing needles and flat, star-shaped blades. Shuriken are the favored weapons of assassins in oriental campaigns.

**Sickle.** Like the scythe, the sickle is primarily a tool that occasionally sees use as a weapon. The sickle's curving blade is used for cutting crops for harvest, and priests of nature or agriculture often use the sickle as a ceremonial weapon.

**Sledge hammer.** Sledges are used in construction and masonry work of all kinds. It is generally too heavy and slow to be used as a weapon except in an emergency.

**Sling.** One of the most common missile weapons is the humble sling. This is not a child's toy slingshot; this is a weapon that can hurl small stones or lead bullets with lethal force. The sling is a simple length of cord or cloth with a cup in the center. The projectile is placed in the cup, and the sling is whirled rapidly in a sidearm or overhead motion. Slings can be improvised from many materials, and are among the cheapest of weapons.

Slingstones can be found in any rocky landscape. Normally, small round rocks are best, such as the type found in streambeds. Sling bullets are made of lead, bronze, or iron,

much like the bullets for a firearm.

**Spade.** Shovels or spades can be used as a weapon of last resort if there is nothing more warlike at hand. Folding military spades with sharpened blades were used in hand to hand fighting in both World Wars.

**Spear.** The spear is one of mankind's oldest weapons. Literally thousands of variations exist, but they all feature a head designed for stabbing or thrusting. Throughout the Bronze Age and the years of the Roman Empire, the spear was the most common weapon on the battlefield. In primitive settings, stone-headed spears are common. The spear can be used either one-handed or two-handed.

**Spear, long.** The long spear is nothing more than a heavier spear with a longer reach. A normal spear ranges from 5–8 feet in length, but a long spear is about 10–12 feet long. The longest weapon of this family is the pike, which was often 18–21 feet in length. The long spear is a two-handed weapon.

**Staff sling.** The staff sling simply consists of a short wooden staff with a leather sling at one end. It can be used to throw larger and heavier projectiles than a normal sling, but can't throw them as far or as accurately. The sling has no short range category; instead, any shot from 0–12 squares away is considered a medium range shot.

In addition to throwing stones, staff slings can also be used to throw *stinkpots*—small clay vessels filled with noxious burning materials. If a stinkpot misses its target, it still scatters and breaks open (see Grenade-like missiles in the *DMG*.) Any character within one square of a stinkpot hit must roll a successful saving throw vs. death or suffer a –2 penalty to all attacks due to choking and coughing for 1d6 combat rounds.

**Sword.** Swords are the most efficient weapons of ancient times, combining ease of use with excellent armor penetration. The earliest copper swords appeared thousands of years before the rise of the Roman Empire, and ceremonial swords are carried today by most of the world's armies and navies.

Bastard swords are also known as hand-and-a-half swords. They are nothing more than longer, heavier long swords. The extra weight of a bigger blade enabled the sword's wielder to hack through the heavier armor that appeared at the end of the Crusades. Whether used one-handed or two-handed, the bastard sword gains a +1 bonus to hit opponents in any type of mail or plate armor.

Broadswords have existed in a number of settings. Any medium-sized blade designed for slashing can be called a broadsword. In ancient times, the best blades fall into this category; by the Middle Ages, this describes a civilian's sword or a court blade. Later broadswords were built with basket hilts, which give the weapon user a +1 bonus on any block attempts.

The claymore is a Scottish two-handed sword somewhat shorter than the true two-handed sword. It is an excellently balanced weapon with fearsome cutting power. The claymore gains a +1 bonus to hit opponents in any kind of leather, mail, or plate armor.

The cutlass is a heavy, slightly curved, single-edged blade of medium length. It was popular with sailors and marines for hundreds of years. Like some broadswords, cutlasses were made with basket hilts.

The drusus is a Roman short sword of exceptional quality. It's really nothing more than a well-made gladius kept at a razor-honed edge. The weapon's fine quality provides a +1 bonus to attack rolls, but after any fight the weapon is considered to be dulled and functions as a normal gladius until it is re-honed—a task that requires a fully-equipped

forge and a trained swordsmith.

The estoc is the grandfather of the rapier. It is an edgeless thrusting sword designed for piercing armor. It gains a +2 bonus to attacks against opponents in any kind of mail, and a +1 bonus to attacks against opponents in any kind of plate armor. Estocs were often made with perfectly triangular or square blades.

The falchion is a slashing weapon with a slightly curved blade and a squared-off point. It is nearly useless for thrusting, but its blade design concentrates the weight of the blade near the end for excellent chopping power.

The traditional weapon of the Roman legionary was the gladius. It is basically a well-made iron or steel short sword used almost exclusively for thrusting.

The samurai's katana may be the single finest sword ever made. It is a slashing weapon with a sharp, chisel-shaped point. The steel was often of exceptional quality, built up with a laborious process of folding and re-folding; some blades had hundreds of folds. This created a sword of tremendous resilience and strength. The hilt accomodates one or two hands equally well.

The companion to the samurai's katana is the wakizashi, a shorter blade of similar construction and design. In eastern cultures, only a samurai may wear these two blades together. It is very common for a katana and wakizashi to be paired as a matched set.

The khopesh is an ancient weapon of the Bronze Age. Its blade runs straight from the hilt, but then curves around in a great sickle shape. It is heavy and awkward, but may be the only sword available in some settings.

The long sword is meant to represent the weapon of the typical western knight, but also includes any medium-length straight blade designed for both slashing and thrusting. The advent of heavy plate armor made the long sword obsolete; longer, heavier blades were required to pierce a knight's armor.

Just as the samurai has his traditional katana, the ninja has his ninja-to, the traditional sword of the assassin. The ninja-to is smaller than the katana and generally not as well made. Unlike the katana, the ninja-to features a larger guard and a sturdy scabbard which can be used as a climbing step.

The largest oriental sword is the no-dachi, a two-handed katana-like weapon almost six feet in length. Some no-dachi are built to the exacting specifications of a katana, but most are not of the same quality.

One of the later swords to appear was the rapier, a light, long thrusting weapon. The rapier was the gentleman's weapon in the Renaissance and later centuries, remaining in use until the 18th century. The rapier appeared largely because armor was beginning to disappear from the battlefields of Europe.

Another duelist's weapon is the sabre, a slightly curved slashing blade of medium length. The sabre had one of the longest periods of service of any sword; they appeared in Europe during the 11th century, and were still considered standard issue for cavalrymen at the beginning of the 20th century.

The most ancient sword in this listing is the sapara, a weapon of the Mesopotamian empires of the Bronze Age. The sapara is a smaller version of the khopesh, and is no larger than a standard short sword.

One of the most distinctive swords is the scimitar, a gracefully curved weapon favored by many Arabian cultures. The scimitar was carried by Muslim warriors from Spain to India and became a symbol of the strength and subtlety of Islam. The great scimitar, a

two-handed version of the normal blade, was a weapon reserved for ceremonial guards and elite palace troops.

By far the most common blade is the humble short sword. Thousands of varieties have been created by nearly every culture on Earth. Regardless of the setting, some equivalent to the standard short sword can be found. The short sword is primarily a thrusting weapon, ranging from 11/2 to 21/2 feet in length.

The spatha is the ancestor of most Western European blades. It is the Roman long sword, a weapon developed for Roman cavalry but soon copied by the barbarians who fought against the Romans.

The sword-axe is not a true sword. It features a long wooden haft in place of a hilt, and a sword blade with an axe-like construction at the business end. In battle, it would be wielded more like an axe than a sword. It was a weapon of ancient times that was soon replaced by more efficient blades.

The tulwar bears a small resemblance to the falchion, but is found in eastern settings. Unlike the falchion, the tulwar curves inward for chopping power, instead of outward for a longer slash. The famous Ghurka knife is a good example of a tulwar-like blade.

The largest and most powerful sword is the two-handed sword, or *zweihander*. It was developed in the Renaissance to deal with pikemen and dismounted knights. It often stood well over six feet tall. The two-handed sword gains a +2 bonus to attacks against opponents in any kind of mail or plate armor, since its heavy blade can easily penetrate even the heaviest armor.

**Three-piece rod.** It is said this weapon was invented by a master of the martial arts whose staff had been broken by his enemy. The three-piece rod consists of three short wooden staves, linked by rope or chain. It is exceptionally useful for performing traps, blocks, and defensive disarms; the three-piece rod confers a +4 bonus to any such attempts.

**Throwing knife.** This terrifying weapon resembles a sword with three or four points. The handle and lower part of the blade appear normal, but the blade forks several times into a number of dagger-like points. It's thrown horizontally, so that it spins parallel to the ground. The throwing knife is usually considered a weapon of savage cultures.

**Torch.** Most torches can be used as serviceable clubs in a pinch. If the torch is burning, it inflicts 1 extra point of damage. In addition, most animals fear open flame and may avoid a character waving a burning torch around. Torches only ignite very flammable substances, so normal clothes and the like won't usually be set afire by a single blow from a lit torch.

**Trident.** The trident is the famous three-pronged spear of seafarers and mercreatures. Fishermen of many cultures use tridents as hunting weapons, but military tridents are much more scarce.

**Two-handed axe.** This mighty weapon consists of a four- to five-foot haft with a very heavy blade. The axe may be double-bitted, with blades on both sides of the haft, or it may only have a single blade. It is an unwieldy weapon, but a skilled warrior can strike blows of tremendous strength with it.

**Vial.** Vials aren't particularly damaging by themselves, but when filled with acid or holy water they're somewhat more dangerous. When a vial is thrown at an opponent, the attacker may ignore armor—only Dexterity and magical adjustments to AC count for the defender. If the vial hits, the victim suffers the full damage of whatever substance is

inside. If it misses, it may still inflict damage with a splash hit depending on where it lands (see Grenade-like Missiles in the *DMG*.)

**War club.** The war club is considered a work of art in many cultures. It is carefully built from the best materials available and often lined with sharp stones or spikes to increase its damage potential. War clubs cannot be thrown.

**Warhammer.** The warhammer is very similar in size and balance to the horseman's pick, but instead of a point for piercing armor the warhammer is equipped with a blunt striking head. The warhammer gains a +1 bonus to attacks versus plate armors.

**Whip.** The whip cannot cause damage to an opponent in any kind of plate, mail, or leather armors but can still be used to perform a number of special maneuvers. It gains a +2 bonus to pull/trip and offensive disarm maneuvers. In addition, the sting of the lash may force normal animals to retreat at the DM's discretion.

## Weapon Groups

As noted in previous chapters, weapons can be classified into *tight* and *broad* groups. All weapons in a tight group are considered to be related to one another; a character proficient in one automatically has familiarity with the rest. Note that a weapon proficiency includes stone or bone versions of the same weapon.

In the listing below, broad groups are noted under the red bold type, and tight groups are in italics.

**Axes, Picks, and Hammers**

*Axes:* battle axe, hand/throwing axe, hatchet, two-handed axe, sword-axe, mace-axe
*Picks:* horseman's pick, footman's pick, pick
*Hammers:* warhammer, maul, sledge
*Unrelated:* adze

*Bows:* short bow, composite short bow, long bow, composite long bow

**Clubs, Maces, and Flails**

*Maces:* footman's mace, horseman's mace, mace-axe
*Clubs:* club, great club, war club, ankus, morning star
*Flails:* horseman's flail, footman's flail

*Crossbows:* hand crossbow, light crossbow, heavy crossbow, pellet bow, cho-ku-no

*Daggers & Knives:* dagger, stiletto, jambiya, main-gauche, parrying dagger, knife, katar

*Lances:* Light, medium, heavy, jousting

**Polearms**

*Spear-like polearms:* awl pike, partisan, ranseur, spetum
*Poleaxes:* bardiche, halberd, voulge
*Bills:* bill, bill-guisarme, glaive-guisarme, guisarme-voulge, hook fauchard
*Glaives:* glaive, fauchard, naginata, nagimaki, fauchard-fork
*Beaked:* bec de corbin, lucern hammer

*Unrelated:* military fork, tetsubo, lajatang

**Spears & Javelins**
*Spears:* spear, long spear, awl pike
*Javelins:* javelin, pilum, dart
*Unrelated:* harpoon, trident, brandistock

**Swords**
*Ancient:* broadsword, sapara, khopesh, sword-axe, short sword
*Roman:* broadsword, drusus, gladius, spatha
*Middle Eastern:* short sword, scimitar, great scimitar, tulwar
*Oriental:* cutlass, katana, wakizashi, no-dachi, ninja-to
*Short:* short sword, gladius, drusus, sapara, dagger, tulwar
*Medium:* broadsword, long sword, cutlass, sabre, falchion, estoc
*Large:* bastard sword, claymore, two-handed sword, great scimitar, no-dachi
*Fencing weapons:* rapier, sabre, main-gauche, parrying dagger

*Chain & Rope Weapons:* chain, kau sin ke, kusari-gama, kawanaga, chijikiri

*Martial Arts Weapons:* sai, jitte, nunchaku, sang kauw, three-piece rod, bo stick

**Firearms**
*Hand match weapons:* arquebus, hand gunne
*Matchlocks:* arquebus, caliver, musket
*Wheellocks:* arquebus, belt pistol, horse pistol
*Snaplocks and Flintlocks:* musket, belt pistol, horse pistol

If a weapon does not appear in the preceding listings, it belongs to no weapon group. For example, weapons such as the bolas, the boomerang, or the mancatcher are so unique in their employment that nothing even comes close to being similar.

## Weapons and Ability Bonuses

Generally, a character may apply his Strength bonuses to any weapon powered by his own muscle. Any hand-held weapon used to slash, bludgeon, or thrust at an enemy certainly counts, but weapons that don't inflict damage or don't have a type don't allow a character to use his attack bonuses. For example, a character's Strength has no effect on the use of a lasso or net.

Characters may use their reaction adjustment for high Dexterity when throwing or firing any kind of missile weapon. However, they do not use their Strength bonuses unless the weapon is thrown and complies with the conditions above. Firearms, bows, slings, and crossbows are not normally affected by a character's Strength.

Bows can be made to take advantage of a character's Strength bonuses, but must be custom-made. Refer to Chapter 6: Money and Equipment in the *Player's Handbook*.

**The 16th-level Dart Specialist:** It's ludicrous to allow a high-Strength character the full benefit of his muscular power if he insists on using tiny little weapons such as darts. A good way to address this kind of min-maxing is to limit the damage bonus granted by

high Strength to the maximum roll of the weapon's base damage. A dart normally causes 1d3 points of damage against size M targets, so a character with exceptional Strength could gain a total of +3 to his dart's damage—but no more, even if he is normally entitled to a damage bonus of +4 or more.

## Armor Descriptions

The armorer's craft evolved over the course of thousands of years, much as weapons evolved. The marvelous works of the German and Italian master armorers of the 15th century simply cannot be duplicated by craftsmen with more primitive technology. Therefore, armor is limited by time period just as weapons are.

The following descriptions note the adjusted base AC for a full suit of each armor type, and also a generic encumbrance value for typical humans in that armor. Player characters may accept these encumbrance values or use the more advanced encumbrance rules to total up their equipment weight.

The armor table also includes protective values for pieces of armor. In most cases, these are fractional—for example, a chain mail arm piece improves the wearer's AC by 0.5. For most PCs, this reduces the wearer from an AC of 10, so if a composite suit of armor improves the character's AC by 3.9 points, his actual Armor Class is a 6.1 (10–3.9), which rounds down to an AC of 6. Only round to the lower AC if the fraction is .3 or less; an AC of 6.1 is a 6, but a 6.4, 6.5, or 6.9 is considered to actually be AC 7.

Partial armor can always be bypassed by the use of the called shot rules in Chapter Two. The attacker suffers a –4 penalty for making a called shot, but of course he gets to make his attack against the defender's unprotected AC of 10. The best use for partial armor in the game is to simulate various forms of composite protection favored in different time periods; for example, medieval infantry often wore breastplates and helmets but did not wear armor on their legs or arms.

Last but not least, armors are loosely grouped into three basic types—plate armors, mail armors, and leather armors. Some weapons gain special attack bonuses against certain types of armor. For example, the heavy blow of a mace is especially effective against mailed opponents, because the flexibility of the mail allows the blow to cause damage even through thick armor.

**Back-and-breast.** (AC 6; enc. none; type plate) This armor is simply a steel breastplate and back piece, worn like a shirt. It protects the wearer's vital organs but leaves the limbs uncovered. Historically it saw use throughout the Renaissance.

**Banded mail.** (AC 4; enc. light; type mail) There is some debate over the existence of this armor in the Middle Ages, but Roman legionaries wore banded breastplates as part of the *lorica segmenta*. Banded mail consists of parallel bands or strips of armor covering the torso, shoulders, arms, and legs, with mail guarding the joints.

**Brigandine.** (AC 6; enc. none; type leather) A very common armor of the later Middle Ages and the east, brigandine consisted of a coat of leather plates. Each leather plate was a sandwich with steel strips inside of it. The joints and limbs were constructed with fewer armor strips for flexibility. Splinted mail, described below, is nothing more than a heavier version of brigandine.

**Bronze plate mail.** (AC 4; enc. light; type plate) This armor never existed as a full suit historically. However, bronze breastplates, greaves, and arm guards were quite common, especially in Greek and early Roman settings. With a full suit of bronze plate

mail, the underlying chain mail backing that is found in normal steel plate mail is replaced by backing made of studded leather.

**Buckler.** The smallest shield used is the buckler. It is usually not more than a foot in diameter. Its small size makes it easy to carry, but it is of limited usefulness against anything except fencing weapons. The buckler's AC bonus can only be counted against the attacks of a single opponent in any combat round.

**Cap.** Steel, bronze, or iron caps are among the most common helmets until the later days of the Crusades. A cap is often worn over a mail coif for additional protection; the two together provide an AC of 3 for the user's head and neck. Caps often include nasals, or projecting bars, that cover the user's nose.

**Chain hauberk.** (AC 6; enc. light; type mail) Chain mail was first constructed in Roman times as shirts or skirts. Throughout the Dark Ages mail was reserved only for the wealthiest warriors. By the end of the Dark Ages, the most common form of mail was the hauberk, a long-sleeved coat that hung to the wearer's knees. Because the lower legs are vulnerable, the hauberk doesn't offer the same protection that a full suit of chain mail does.

**Chain mail.** (AC 5; enc. light; type mail) The full suit of chain mail appeared early in the Crusades, when chain leggings were added to the traditional hauberk. For more than a century mail was the universally favored form of protection in Western Europe and the Holy Land; armor experts refer to the 11th and 12th centuries as the Age of Mail.

**Chain-lamellar.** (AC 4; enc. light; type mail) Chain mail was used widely in Byzantium and eastern lands, too. It was common for eastern peoples to augment their lighter mail with heavier armor. Chain mail with lamellar breastplates, greaves, and arm guards was widely used by Byzantine, Turkish, and Persian cavalry.

**Close-faced helm.** This category includes a number of variations, ranging from steel war masks, to the Crusaders' barrel helms, to samurai helmets. The helmet offers excellent protection, but is heavy and can limit vision and hearing. In situations where field of view or clarity of hearing may be important, the DM can impose a –1 penalty to surprise checks for characters wearing close-faced helms.

**Cord armor.** (AC 8; enc. none; type leather) Only found in savage or exotic settings, cord armor consists of rope-like fibers woven and knotted into a thick, tough fabric. It may be found in places where leather is scarce.

**Field plate.** (AC 2; enc. moderate; type plate) The armorer's craft reached its peak during the Renaissance, when full suits of articulated plate armor were common. Field plate armor dispenses with the chain backing of plate mail or full plate armor to save weight. Instead, a light suit of padding, or *aketon*, would be worn beneath field plate. The considerable weight of this armor was distributed over the wearer's body, and a trained knight could lie down, stand up, or vault into the saddle while wearing heavy armor.

**Full plate.** (AC 1; enc. moderate; type plate) The final development of armor was full plate armor, which protected the wearer with padding, chain, and a suit of beautifully crafted interlocking plates carefully angled to deflect blows. Armor of this type could even withstand long-range gunfire, as long as the bullet didn't strike square on target. A well-made suit of full plate armor was the sign of high nobility; many lesser knights had to make do with far less impressive suits due to the great expense of this marvelous armor.

**Gallic armor.** (AC 8; enc. none; type leather) Reserved for the gladiatorial arena,

Gallic armor consisted of leather leggings and a leather sleeve, with a wide metal belt. No free soldier would normally wear such light armor if better could be found.

**Great helm.** The great helm actually sits on a metal gorget, or throat-guard, instead of resting its weight on the wearer's head. The face is completely covered. The protection offered by the great helm is unmatched, but the wearer's visibility and hearing are seriously impaired; he suffers a –2 penalty to any surprise checks that might be affected by his ability to spot his enemy or hear someone sneaking up on him.

**Half-plate.** (AC 4; enc. light; type plate) As firearms became more prevalent, the usefulness of heavy plate armor rapidly declined. The trend towards more complete coverage reversed, and soldiers and knights began to discard all but the most critical pieces of armor. Half-plate consists of a breastplate and tassets, or hip armor, but the lower legs are left unarmored, as are the insides of the arms. Half-plate lingered on into the 17th century before disappearing altogether.

**Hide.** (AC 6; enc. light; type leather) Hide armors were rare in Western Europe, but saw some limited use in eastern settings. At the DM's option, hide armor can be used to simulate the buff coat—a Renaissance armor made of several layers of stiffened leather.

**Hoplite armor.** (AC 5; enc. light; type plate) The armor of the classic Greek warrior consisted of a bronze breastplate and greaves with a studded leather skirt. It offered a good compromise of protection for vital areas without too much weight. Alexander's soldiers conquered half the world in armor like this.

**Improved mail.** (AC 4; enc. light; type mail) Several varieties of improved chain mail appeared during the Crusades. Bar mail consisted of small metal strips threaded through the links; double mail used heavier links double-joined; augmented mail used a thick leather backing to reinforce the coat. All types of improved mail offer better protection than normal chain mail, but at the price of increased weight.

**Lamellar.** (AC 5; enc. light; type mail) Lamellar armor consists of small, overlapping plates of metal sewn together or stitched to a backing of leather or cloth. It is similar to brigandine and splinted mail, but isn't sandwiched in leather like the other two armors. Lamellar is a very ancient armor that was used in Mesopotamia and ancient Egypt thousands of years before the rise of Rome. Byzantine and Persian cavalrymen used breastplates of steel lamellar as part of their heavy armor.

**Lamellar shirt.** (AC 7; enc. none; type mail) Full suits of lamellar armor were very rare in the Bronze Age, but lamellar coats with cloth skirts were somewhat more common. This composite armor represents the best protection available to the common soldier in extremely ancient settings.

**Leather.** (AC 8; enc. none; type leather) Leather armor has been used by light troops since the Bronze Age. Leather can be toughened by treating it with oil in a process known as *cuir boilli.* This armor type uses cuir boilli pieces to reinforce vital areas and soft leather for the legs and arms.

**Leather helm.** The lightest helm available is made from cuir boilli leather reinforced by iron or bronze bands. The leather helm doesn't provide much protection compared to other types, but it's better than nothing.

**Light scale.** (AC 7; enc. none; type leather) Normal scale armor is made out of iron, bronze, or steel, but it's also possible to make scale armor out of cuir boilli leather scales, bone, or horn. Light scale is often the armor of nomadic or savage peoples who have difficulty finding metal to work with.

**Lorica hamata.** (AC 6; enc. none; type mail) This Roman armor consisted of a chain mail shirt and a skirt of leather reinforced with bronze or iron strips. It was an early armor used from the time of the Punic Wars into the 1st century a.d.

**Lorica segmenta.** (AC 5; enc. none; type mail) Lorica segmenta replaced lorica hamata and was used until about a.d. 350. It consists of a breastplate of banded mail and a reinforced skirt of studded leather armor.

**Mail coif.** The mail coif is a hood of chain mail that drapes over the neck and shoulders as well as the head. It is usually worn with a cap or beneath another helmet, since chain mail by itself doesn't offer much protection against impact weapons. If worn with a cap, the mail coif is AC 4; if worn under another helmet, it provides no additional protection but at least allows the user to remove his restrictive helmet and get a look around without baring his head completely.

**Mail and plate.** (AC 4; enc. light; type plate) Plate armor first appeared near the end of the Crusades as reinforcement for chain mail armor. Small breastplates were introduced first, but rapidly grew into full breastplates with complete leg and arm covering. The mail and plate armor describes an early form of plate mail in which a breastplate is worn over a full suit of chainmail.

**Open-faced helm.** Greek and Roman helmets normally fell under this category, as did many helmets of the later Middle Ages. The open-faced helm provides good protection and only moderately compromises vision and hearing. This category also includes the Renaissance morion, kettle helm, lobster-tail, and other such helmets.

**Padded.** (AC 8; enc. none; type leather) Padded or quilted armor is probably one of the oldest and most universal forms of personal defense. Even in the days of full plate armors, padded suits known as aketons were worn beneath the steel plate to cushion blows and help distribute the weight of the outer armor. Light troops of many time periods are often equipped with padded armor.

**Plate mail.** (AC 3; enc. mod; type plate) This is the cheapest and most common form of plate armor in the Middle Ages. Instead of attempting to articulate the joints and provide complete plate protection, portions of this armor are simply protected with chain mail. This form of armor was nothing more than an expanded suit of mail and plate, and the forerunner of true plate armor. Even in the age of full plate armor, simple plate mail was still common among poorer knights and professional mercenaries.

**Ring mail.** (AC 7; enc. none; type leather) Ring mail consists of a leather coat with rings sewn onto it. It slightly resembles chain mail, but the links do not interlock. In the Dark Ages, ring mail was a cheap substitute for true mail, which was too expensive for many warriors. Some varieties of ring mail were used throughout the Middle Ages by light troops, artillerists, and skirmishers.

**Scale mail.** (AC 6, enc. light, type mail) This ancient armor type consists of a leather coat or shirt with scales of metal riveted to it. (Some forms of scale mail were made with horn or leather—see Light Scale.) Scale mail was never widely used in the West, but saw extensive use in the Mideast and Orient.

**Shield, small.** The small shield, or *targe*, is usually a round shield about two feet in diameter. Some later medieval shields were triangular or square in shape. The small shield can be used against two enemies in a combat round, as long as they are in front of the character or on his shielded flank.

**Shield, medium.** This catch-all category includes anything from the Roman *scutum* to

the Norman kite shield. It usually stands about three feet tall and is two to three feet wide. The medium shield can protect the wielder from up to three enemies per round, as long as they are in front of the character or on his shielded flank.

**Shield, large.** Also known as the body shield or tower shield, this mighty shield stands at least four feet tall and is two to three feet wide. It can protect the wielder against any attack from his front or shielded flank.

**Splint mail.** (AC 4; enc. light; type mail) Splinted armor resembles brigandine, but larger metal strips are used. The metal strips are riveted together in an overlapping pattern and then enclosed in two layers of leather. Splinted armor was not widely used in Western Europe, but was popular in India and the Far East. The *o-yoroi* of the samurai can be considered to be splint mail.

**Studded leather.** (AC 7; enc. none; type leather) Reinforcing leather with metal studs or small plates is an old idea; armor of this type has been used since the Bronze Age. It was still common among foot soldiers even as late as the Renaissance.

**Three-quarter plate.** (AC 3; enc. light; type plate) Like half-plate, three-quarter plate appeared when knights began to discard the less important pieces of their armor. There's little point in carrying around 70 pounds of armor when it won't stop a bullet or a heavy crossbow bolt. Three-quarter plate retains the breastplate, arm protection, hips, and thigh plates but dispenses with protection for the lower legs and inner part of the thighs, which would normally be protected by the horse.

**Wood or bone armor.** (AC 7; enc. none; type leather) In primitive or savage settings, metal may be unavailable for armor. Wood or bone lamellars and reinforced coats are not uncommon among people with little access to metal. Usually, armor of this type concentrates on protecting the torso while leaving the arms and legs free for mobility.

## Barding

Warriors have been looking for ways to armor their mounts almost as long as they've been armoring themselves. It doesn't take a genius to figure out that an unarmored horse might be an easier target than the heavily plated knight who's riding it. Therefore, characters who plan on riding their horses into battle should try to acquire barding.

| Armor Type | Cost | Armor Class | Weight |
|---|---|---|---|
| Leather scale | 75 gp | 7 (–1) | 50 lbs |
| Scale | 350 gp | 6 (–2) | 80 lbs |
| Padded | 35 gp | 8 (–1) | 30 lbs |
| Chain | 500 gp | 5 (–2) | 100 lbs |
| Plate and chain | 750 gp | 4 (–3) | 130 lbs |

The AC *replaces* the mount's natural Armor Class, if the barding AC is better than the animal's normal AC. If the animal's AC is better than the barding, then the barding simply improves the animal's AC by the number in parentheses.

*For example, horses have a natural AC of 7. Scale, chain, and plate barding replace their natural AC. Since leather and padded armors don't provide an AC better than 7, they simply lower the horse's AC to 6 or 5, respectively.*

**Leather scale barding.** This barding dates back to the Bronze Age, but also saw use in Roman times and the Dark Ages. It consists of a leather blanket with cuir boilli scales sewn onto it.

**Padded barding.** Often used by Crusaders, this light armor also allows a knight to display his colors on his mount.

**Scale barding.** The best barding available until the Hundred Years' War is scale barding. It consists of a coat sewn with metal scales. Scale barding was used by the princes and kings of the Bronze Age.

**Chain barding.** Only the strongest horses can carry an armored knight and a heavy coat of mail, too. Chain barding was not very common because of its expense and weight.

**Plate and chain barding.** The best armor available for horses came into use towards

the end of the Hundred Years' War. The horse's forequarters, flanks, head, and neck are protected by steel plates, and loose chain skirts cover the rest. Like chain barding, plate barding is very heavy and very expensive. It would normally only be found on the mount of a great knight or prince.

# Chapter Eight: Siege Warfare

Small frays between bands of adventurers and their foes are not the only battles fought in a fantasy world. Companies of brigands roam the countryside, and there might be scores of troops in a town guard or castle garrison. In times of war, armies numbering in the thousands might take to the field.

Nor are hand-held weapons such as swords and spears the only deadly implements a hero is likely to face. Well-prepared opponents often employ war machines of ingenious design and fearsome potential. Likewise, defenders need not depend solely on the local terrain for protection; instead they might employ all manner of constructions and fortifications.

This chapter's first section, *War Machines*, discusses fighting equipment that generally is larger than typical hand-held weapons. Bombardment engines, vehicles, and miscellaneous devices are included. Escalades covers a wide variety of actions, including battering down common portals and scaling walls. *Sieges and Fortifications* discusses the lengthy processes of smashing through fortifications through brute strength. *Mass Combat* provides a way to quickly determine the outcome of a battle too large to play out using the *Player's Option* combat system. Finally, *Proficiencies* gives details on two new warrior proficiencies introduced in the previous sections.

### Does This Belong in My Campiagn?

Few campaigns will use the material presented here all of the time (castles, artillery, and massed troops are hardly commonplace), but most campaigns will find it useful occasionally.

The majority of the material in this chapter is intended for use with the combat system from Chapter One and the Battlefield rules from Chapter Three. It is not necessary to use the combat system with any of the material in this chapter, but your games will be greatly enhanced if you do. The rules on fortifications presented here use many terms and concepts from the material on battlefields, and it is necessary to be familiar with Chapter Three before using them. The material on sieges and on mass combat is intended to stand alone.

### War Machines

Any piece of potentially useful battlefield equipment, offensive or defensive, can be considered a war machine if it is too large for a single character to use. A tree trunk used as a battering ram, a catapult loaded with greek fire, and a howdah strapped to an elephant's back all can be considered war machines.

## Bombardment Engines

Any large device intended to hurl missiles qualifies as a bombardment engine. The most common types and their basic statistics are listed on the table below.

Bombardment engines are difficult to aim at individuals. Generally, a bombardment engine can target only units of creatures, buildings, other war machines, vehicles, ships, and single creatures of Gargantuan size; see the individual bombardment engine descriptions for exceptions.

It takes time and effort to set up a bombardment engine and prepare it to fire for the first time. The minimum preparation time is 10 minutes or the time required to change facing, whichever is greater. The number increases by 50% if a trained artillerist is not on hand to direct the operation.

When used with the *Player's Option* combat system, a bombardment engine has a field of fire of 45 degrees left or right of its current facing. This is generous for most weapons included here, but it is assumed that a bombardment engine's slow rate of fire accounts for a considerable amount of manhandling between shots.

**Range:** Ranges are divided into minimum, short, medium, and long categories. A weapon cannot be aimed at targets closer than its minimum range.

**THAC0:** The chance to hit a target with a bombardment engine is a function of the engine, not the crew.

**Damage:** The number before the slash is the amount of damage inflicted on Man-sized or smaller creatures; the number after the slash is the damage inflicted on larger creatures. If there is only one value given, the damage is the same for all sizes of creatures. Some creatures are entitled to a saving throw to reduce or avoid damage. Damage to structures is covered in the Escalades and Siege and Fortifications sections.

Note that creatures immune to normal missiles are not immune to missiles from bombardment engines. Creatures immune to blunt weapons are immune to catapult and trebuchet missiles and to round shot fired from ballistae. Creatures immune to piercing weapons are immune to bolts from ballistae. Creatures immune to nonmagical weapons are immune to attacks from ballistae, catapults, and trebuchets (unless the missiles employed are enchanted). Cannon and bombard projectiles are blunt weapons, but they are propelled with enough force to harm creatures that are otherwise immune to blunt weapons. Cannons and bombards also can harm creatures that are immune to nonmagical weapons. Light cannons are treated as +1 weapons for determining which creatures they can harm. Medium cannons and great bombards are treated as +2 weapons, and heavy cannons are treated as +3 weapons.

**Knockdown:** The size of the die the weapon rolls for knockdowns.

**ROF:** (Rate Of Fire) This is how often the weapon can be fired if fully crewed; 1/8 means the weapon can fire once every eight rounds.

**Change Facing:** This is the number of rounds required to change the weapon's facing 45 degrees. Any weapon listed as "0" can change facing during the End-of-Round step of a round in which the weapon was fired.

**Crew:** The number of Man-sized creatures required to operate the weapon. If fewer crew are available, the weapon's rate of fire decreases by one for every missing crew member, and the weapon cannot be operated at all if the available crew is less than half the required number. Extra crew can be allocated to the weapon to maintain its rate of fire in the face of casualties among the crew. At the DM's option, two Small or four Tiny creatures can replace one Man-sized creature; one Large creature can replace two Man-

sized creatures, one Huge creature can replace three Man-sized creatures, and so on. If at least one trained artillerist is not on hand to supervise the crew, the rate of fire decreases by one. Creatures must have manipulative appendages and a racial intelligence of at least low to serve on a crew.

**Target Size:** The smallest creature the engine can target individually; see the engine's description for details.

**Weight:** The engine's approximate weight in pounds.

**Spaces:** The number of map spaces the engine occupies on the map.

*Indicates that the usual –5 modifier for long range shots does not apply.

### Bombardment Engines

| Weapon | Range M/S/M/L | THAC0 | Damage | Knock-Down | ROF | Change Facing | Crew | Cost | Target Size | Wt. | Spaces |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Ballista, Light | —/11/22/33 | 12 | 2d6/3d6 | d8 | 1/8 | 0 | 1 | 200 | Any | 100 | 1 |

| Catapult, Heavy | 18/—/—/36* | 16 | 3d10 | d12 | 1/16 | 20 | 5 | 500 | G | 500 | 2 |
| Trebuchet | 24/—/—/48* | 17 | 4d10 | d12 | 1/16 | 30 | 8 | 750 | G | 1,000 | 4 |

#### Ballista

This engine looks something like a giant crossbow mounted on a swivel. It usually fires spear-like bolts, but some versions fire round shot of stone or metal; both types use the same basic statistics. Ballista projectiles have a relatively flat trajectory, and they are fairly accurate.

A light ballista can be aimed at any target in sight, provided the weapon is fully crewed. A light ballista with a partial crew can fire at single creatures of Large or greater size. A medium or heavy ballista can fire at a single Huge creature, or at a Gargantuan creature if partially crewed. Any ballista's field of fire is limited to 45 degrees left or right of the weapon's facing at the beginning of the round. A ballista's facing can be changed up to 45 degrees during the last phase of any round when it fires.

#### Bombard

The term "bombard" encompasses a broad category of nonstandardized, primitive gunpowder weapons that fire large stone or iron balls in a high arch. A typical bombard has a short, thick barrel cast from bronze and set in a rigid wooden base. More advanced siege mortars from the cannon era also use the bombard statistics.

A single shot from a normal bombard requires 10 charges of *smoke powder* or gunpowder; a great bombard requires 20 charges, and both types of bombards are subject to misfiring (see Chapter Seven for details). The heat and debris left in the barrel after firing accounts for the weapon's relatively slow rate of fire, as the weapon must be cooled and cleaned before it can fire again.

A bombard's facing is fixed at the beginning of a battle; a full crew working nonstop

for 30 minutes can change a bombard's facing 45 degrees. For a partial crew, add 10 minutes to the time requirement for each missing crew member; a crew at half strength cannot move a bombard.

The bombard's thunderous roar can confuse or panic creatures unaccustomed to loud noises or normally fearful of thunder. This includes most creatures with a basic morale score of 10 or less and any creature generally unfamiliar with explosives or magic. Such creatures must check morale if they are within 40 yards of a bombard when it fires. Creatures usually lose their fear of a bombard's noise if they win an encounter against an enemy armed with one or if they spend a month or so getting accustomed to the sound.

### Cannon

These weapons are more refined versions of bombards. They have long, slim barrels made from high-quality bronze and they fire wrought-iron shot in a low, flat trajectory. They are fairly accurate.

Cannons are subject to misfires just as bombards are. A shot from a light cannon requires 10 charges of *smoke powder* or gunpowder. A medium cannon requires 15 charges, and a heavy cannon requires 20 charges.

A light or medium cannon can change facing 45 degrees during the End-of-Round step of any round when it fires. A full crew working nonstop can change a heavy cannon's facing in 15 minutes.

The sound of cannon fire can panic some creatures just as a bombard's can.

### Catapult

This engine usually consists of some sort of lever mounted on a sturdy frame. The lever acts as a throwing arm and is fitted with a cup or sling to hold the projectile. When fired, a catapult lobs the projectile high into the air. Tension provides the catapult's power. In primitive catapults, the lever was made from some flexible material (usually green wood) and provided its own power when it was bent back and released. More sophisticated catapults were equipped with a rigid arm powered by a mass of twisted skeins (usually horsehair). Ancient catapults often resembled ballistae aimed upward to fire indirectly; all types of catapults use the same basic statistics.

Catapults usually fire large stones, but they can be loaded with almost anything: small stones, chains, dead animals, or anything else small enough to fit in the sling or cup and not so heavy that it overloads the lever. Large objects inflict the damage listed on the table. Masses of small objects can inflict an extra die of damage against most creatures but are useless against structures and any creature with a natural Armor Class of 0 or better (including characters with an Armor Class of 0 before shield or Dexterity modifiers).

A light catapult with a full crew can target Huge creatures.

A light or medium catapult can change facing 45 degrees during the End-of-Round step of any round when it fires. Heavy catapults generally are left in place once they are sited for a battle. A full crew can change a heavy catapult's facing after 20 minutes of work.

### Trebuchet

These massive engines are similar to catapults, but they derive their power from gravity.

A trebuchet's throwing arm is a rigid beam with a heavy weight at one end and a sling or cup for projectiles at the other. When the beam is released, the force of the falling weight hurls the projectile in a high arch. Like catapults, trebuchets fire large stones or masses of smaller objects.

Trebuchets generally are left in place once they are sited for a battle. A full crew can change a trebuchet's facing after 30 minutes of work.

## Bombardment Engine Procedures

A bombardment engine fires in the very slow phase of the round when its loading is completed. If loaded and aimed during a previous round, a bombardment engine can fire in the very fast phase.

### Indirect Fire Engines

Bombards, catapults, and trebuchets fire their projectiles in a high arch; they are inaccurate and cannot really be aimed at anything; the crew simply points the engine in the target's general direction and hopes the missile will land somewhere nearby.

All targets are considered Armor Class 0, but there is no range modifier. The attack roll is modified as follows:

- +3 for stationary targets;
- –3 for targets moving at a rate greater than 3 but less than 12;
- –6 for targets moving at a rate of 12 or greater;
- +4 for the second and subsequent shots at a stationary target;
- +2 for targets whose largest dimension is greater than 30';
- +4 for targets whose largest dimension is greater than 90';
- +6 for targets whose largest dimension is greater than 270'.

Cover generally is not a factor when resolving indirect fire, but concealment can be. Indirect fire generally can arch over obstacles between it and the target, provided that the obstacle is no higher than 150% of the distance between the obstacle and the engine, or the obstacle and the target, whichever is less. For example, a wall 90' feet high would not block indirect fire unless it was within 60' of either the engine or the target. Note that in many cases it is easier for an engine to fire at a feature or structure where opponents are hiding than it is to fire at the opponents themselves.

If a creature is too small to be targeted individually, an indirect fire engine still can fire at the 15' square area containing the creature. The base modifier is 0 (because the target is not *larger* than 30' long). Modifiers for the small target's movement apply (it's hard to hit the right area when the creatures within it are moving). The attacker must select an intended impact square for the missile; any of the nine squares in the area can be selected.

**Hits:** An engine's missile tends to bounce or shatter on impact and affects an area, as shown on the accompanying diagrams. Creatures within the area of effect suffer damage listed for the weapon. Creatures with 5+1 or more Hit Dice can roll a successful saving throw vs. petrification to avoid the damage; modifiers for Dexterity and magical protections apply. A creature that has suffered a direct hit (by being in the impact square or by being large enough to qualify as a target and getting hit) is allowed no saving throw even if normally eligible for one. Creatures with hard cover between them and the impact

square get a saving throw even if not normally entitled to one. Creatures under cover get bonuses to their saving throws; see Chapter One.

If the engine is firing at an area containing creatures too small to target individually, the shot never lands exactly where intended. Follow the procedure outlined below for misses, but roll 1d4 for distance.

**Misses:** To determine where the shot actually falls, roll 1d8 on the indirect fire scatter diagram to determine the direction of the miss; then roll 2d6 to determine the distance in squares from the intended impact square and the actual impact square. It is possible for the shot to fall inside the engine's minimum range or outside its maximum range. Creatures in the area where the shot falls suffer the effects of a hit.

**Hits and Misses Against Large Creatures:** If the missile scores a direct hit on a creature large enough to qualify as a target, there is no effect on creatures in the adjacent squares. The creature's body prevents the missile from bouncing or shattering. If a direct attack on a large creature misses, the attacker rolls for scatter. The intended impact square is always the square the creature occupies. If the creature occupies more than one square, the intended impact square is always the square closest to the engine.

**Critical Hits and Knockdowns:** Only direct hits can be critical hits or cause knockdowns. If the rules from Chapter Six are in play, indirect fire engines inflict Large bludgeoning criticals.

**Flaming Projectiles:** Catapults and trebuchets can be loaded with missiles soaked in pitch or a similar flammable substance. The missile's range is reduced by 1/3. When it strikes, the missile scatters flaming debris over its normal area of effect. The debris burns for two rounds, inflicting 2d6 points of damage the first round and 1d6 points of damage the second round. The effect on wooden structures is the same as flaming oil. A catapult also can hurl canisters of Greek fire. A Greek fire cannister also reduces the catapult's range by 1/3. The cannister breaks on impact and scatters Greek fire over the catapult's normal area of effect.

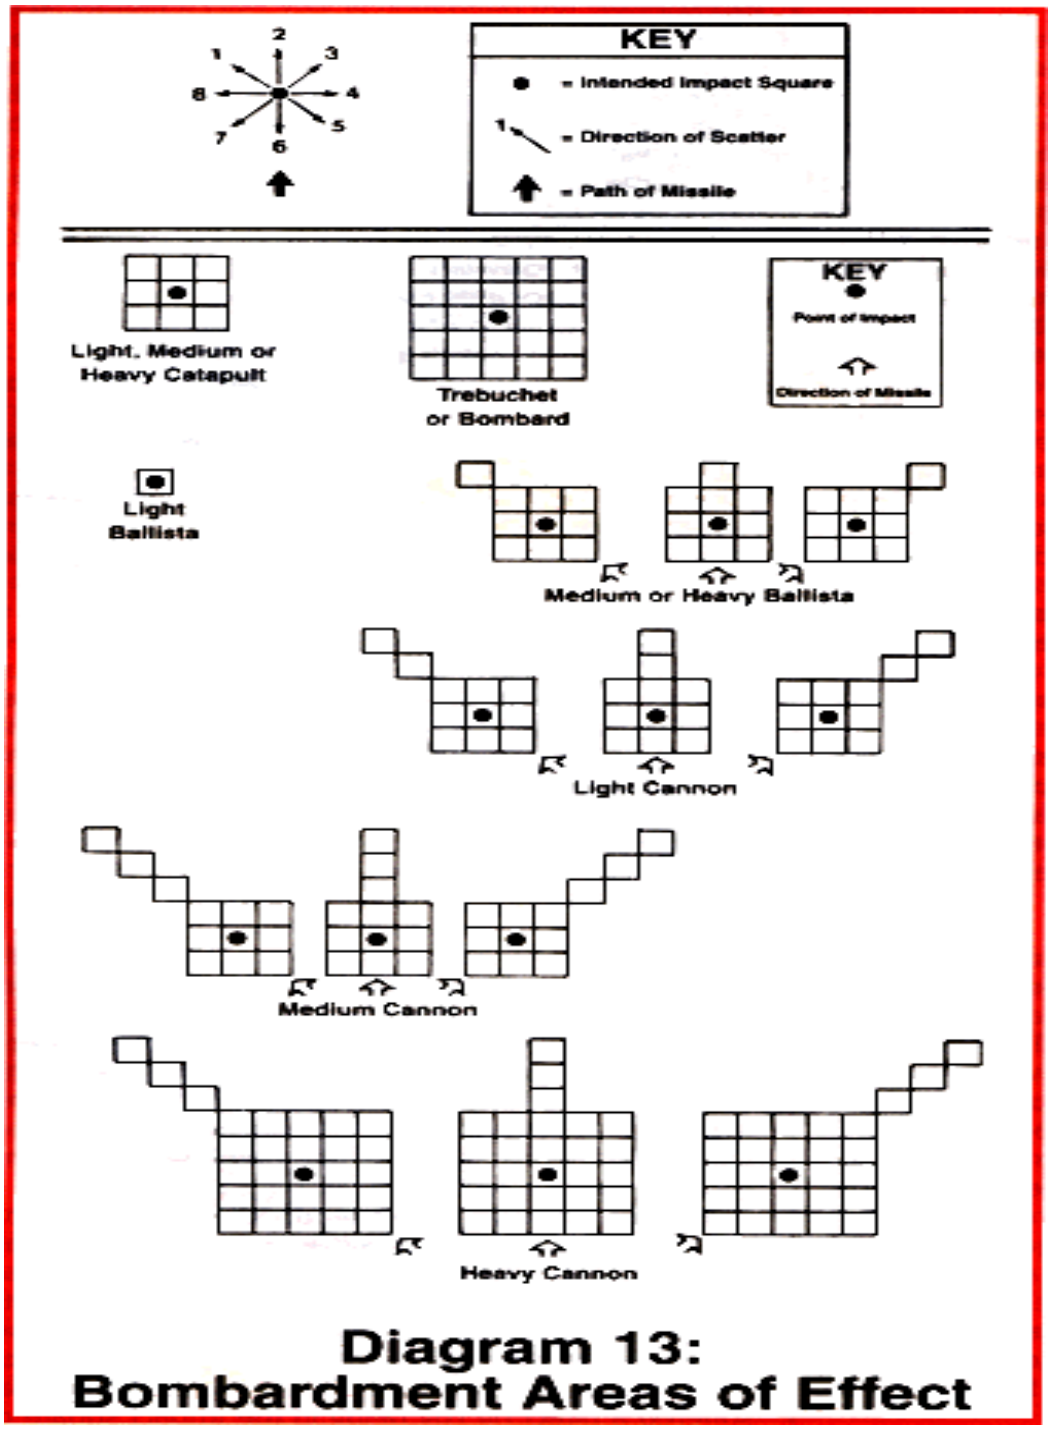

**Diagram 13: Bombardment Areas of Effect**

## An Example of Indirect Bombardment

A group of five dwarves led by a 6th/6th-level fighter/cleric has located a fortified goblin village. They hunker down in an ancient ruin about 300 yards from the village walls to discuss plans. Unfortunately for the dwarves, an alert sentry has spotted them and the goblins ready their medium catapult for a shot at the intruders. The dwarves have taken cover behind an old stone wall 12 feet high; they sit with their backs to the wall while they talk. Because the dwarves are within 8 feet of the wall, the catapult cannot target

them. Even if the dwarves were in the open, the catapult could only target their area because they are Man-sized creatures.

The goblins decide to fire at the top of the wall and hope for the best. The wall is stationary and several hundred feet long. However, the goblins are aiming at one specific section, so the DM decides there is no attack bonus. Because the dwarves are the true target of the attack, the DM decides to impose the standard –4 penalty for 90% concealment (it might be a fairly easy task to hit the wall, but it's a bit more difficult to strike the section of wall directly above the dwarves' heads). The goblins have the catapult loaded with a mass of small stones, which gives them an extra die of damage against creatures (4d10 points of damage in this case). The attack roll is a 12, a miss. (A medium catapult's THAC0 is 15, so the goblins needed to roll a 19 or better to hit.) The goblins roll 1d8 for scatter and get a 3, indicating an overshot to the right. The goblins now roll 2d6 for distance and the result is a 7, so stone shot impacts 7 squares away from the aiming point, too far away to score any incidental hits on the dwarves (see diagram 14).

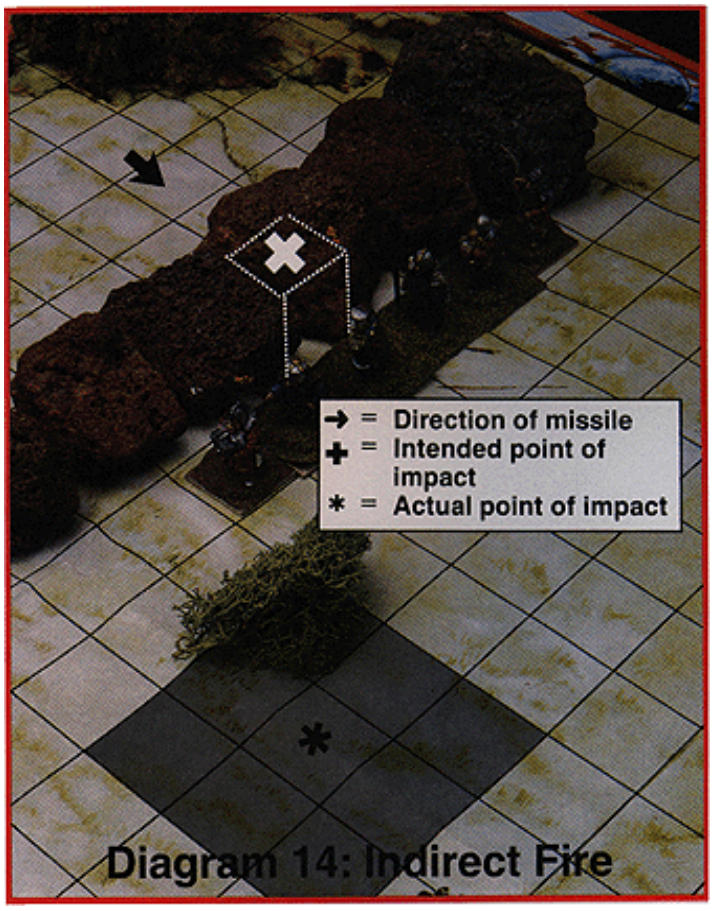

Diagram 14: Indirect Fire

When they see the catapult stones dropping beyond them, the dwarves decide to leave, intending to exit through the far side of the ruins and return home. The medium catapult is reloading and cannot fire again before the dwarves get away. Unfortunately, the goblins also have two light catapults, and the sentry alerts their crews to the dwarves' flight.

Because the dwarves' movement takes them more than 8 feet away from the wall, the light catapults can hit them. The goblins must fire at the area where the dwarves are. Their attacks receive a –3 penalty for targets moving faster than 3 but slower than 12. The crews have an adjusted THAC0 of 17 for these shots. The first crew rolls a 6, a miss, but the second crew gets a 20, a hit. The scatter and direction dice place the miss too far away to hurt the dwarves. Because the catapult that hit was firing at an area containing small targets, the hit also scatters. The goblins roll a 2, indicating a straight overshot. Because the shot was a hit, the goblins roll 1d4 for distance and get a 1, so the shot lands right in front of the dwarves. The leader and two dwarves are within the area of effect. The two dwarves are one-Hit-Die creatures and they have no cover, so they are not allowed a saving throw. The damage roll is a 16, which kills both dwarves. The leader is allowed a saving throw vs. petrification to avoid the damage and the roll is successful. The leader takes no damage and beats a hasty retreat with his three surviving followers.

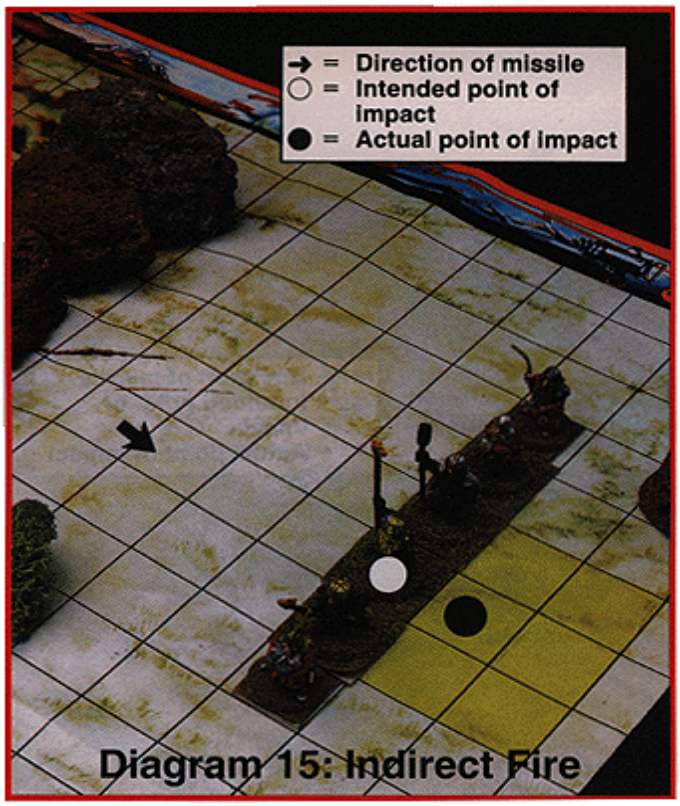

Diagram 15: Indirect Fire

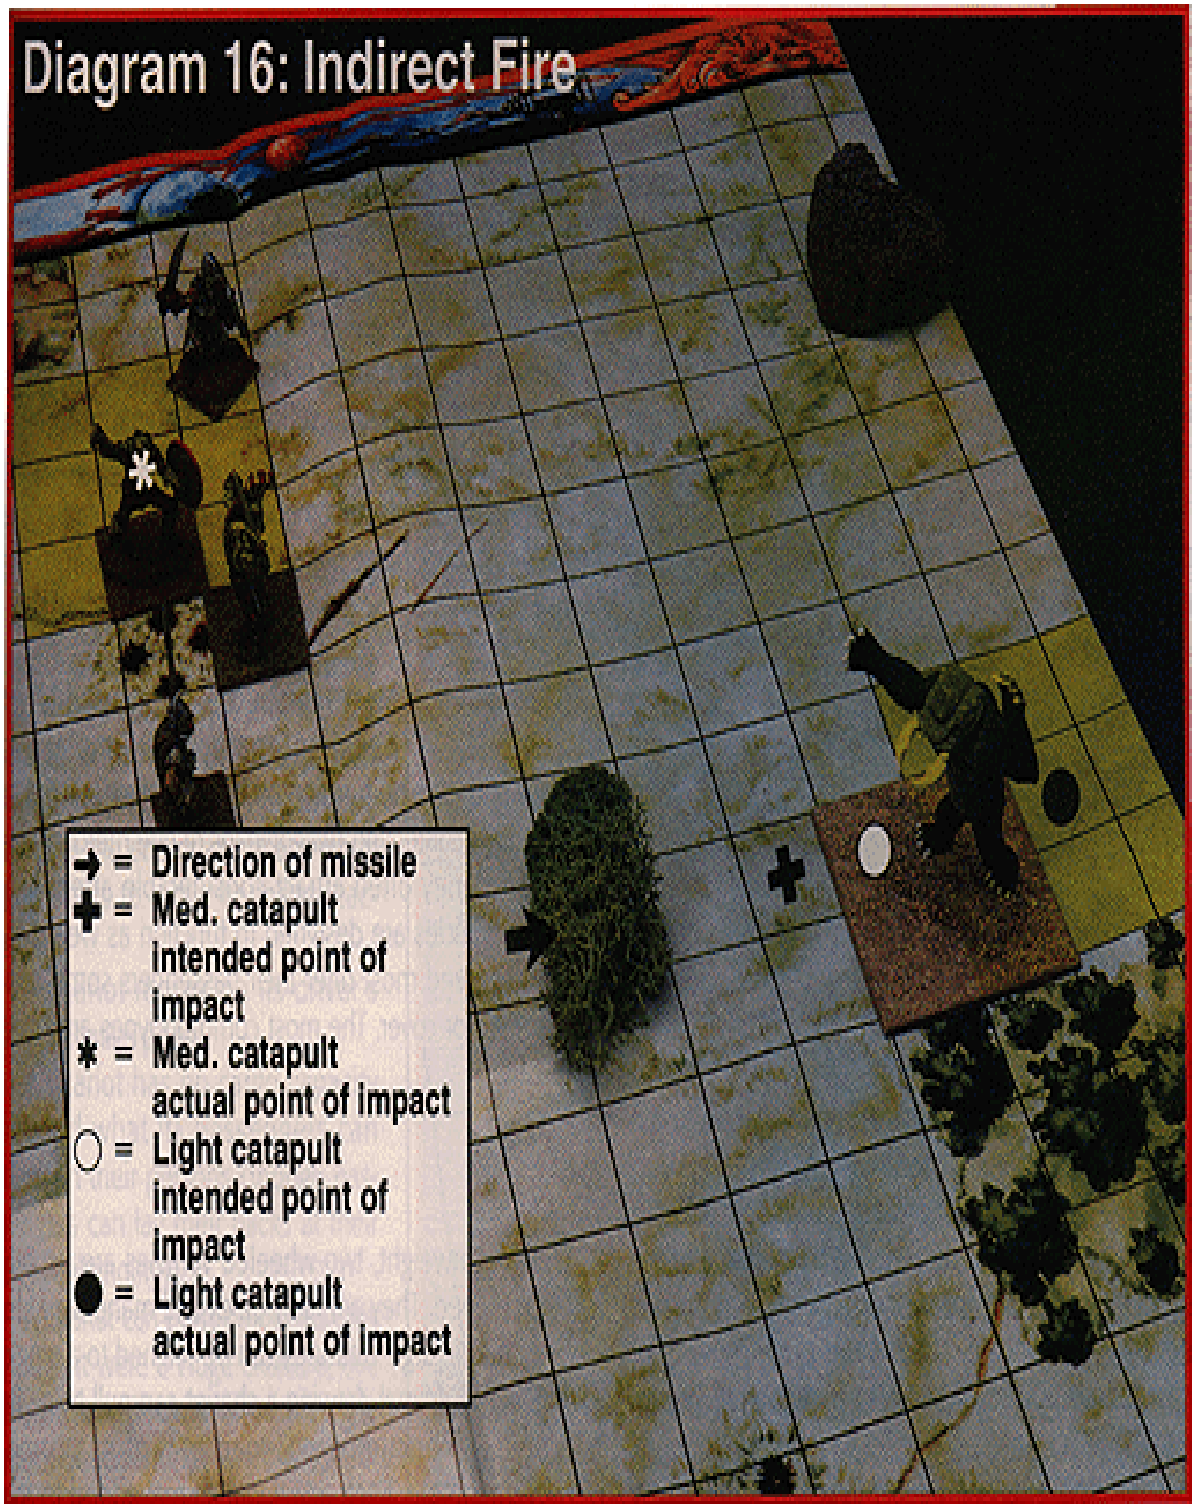
Later that day, a monstrous 20' umber hulk (a true mutant — it is considered size Huge for the purposes of this example) bursts from the ground and attacks a goblin patrol about 200 yards from the village. If the umber hulk were much closer, it would be within the minimum range for the catapults (150 yards). Most of the patrol flees, leaving one unfortunate comrade trapped in the umber hulk's mandibles. The medium catapult cannot target on Huge creatures, so it must fire at the area containing the umber hulk. The crew selects a square next to the umber hulk as the intended impact square (they hope to score a lucky direct hit by rolling the right combination of scatter and distance dice). The umber hulk remains in place while crushing its goblin meal, but part of its body remains hidden below ground, so the DM applies a –1 penalty to the shot for 25% concealment,

giving the medium catapult an adjusted THAC0 of 16. The goblins roll an 11, a miss. The scatter die is a 7, short and to the left; the roll for distance is a 6, and the shot lands too far away from the umber hulk to do any damage. Unfortunately, two of the fleeing goblins are in the shot's area of effect and are killed (see diagram 16).



The two light catapults can fire at Huge creatures. With the –1 modifier for concealment, the light catapults have adjusted THAC0s of 15. The attack rolls are 15 and 6. The first shot hits the umber hulk, and because of the direct hit, the umber hulk gets no saving throw and suffers 3d10 points of damage from it (the goblins are still using masses of small stones). The miss scatters, using the square containing the umber hulk's head as the intended impact square. The roll is a 2, a straight overshot. The distance roll also is a 2, which places the umber hulk within the shot's area of effect in spite of the miss. The umber hulk has 8+8 Hit Dice and gets a saving throw vs. petrification to avoid damage; it rolls a 19, easily succeeding. Nevertheless, the direct hit convinces it to retreat below ground with its prize.

## Direct Fire Engines

Ballistae and cannons fire their projectiles in a low, flat curve. They are fairly accurate, though somewhat difficult to aim at small targets. Only light ballistae can be aimed as freely as a hand-held weapon can; larger engines can hit small targets only by aiming at the area containing the target.

All targets are considered Armor Class 10. If the target is a creature (not an area containing a creature) bonuses from Dexterity and magical protections apply. The attack roll is modified as follows:

- +3 for stationary targets;
- –3 for targets moving at a rate greater than 3 but less than 12;
- –6 for targets moving at a rate of 12 or greater;
- +4 for the second and subsequent shots at a stationary target;
- +2 for targets whose largest dimension is greater than 30';
- +4 for targets whose largest dimension is greater than 90';
- +6 for targets whose largest dimension is greater than 270';
- –2 for targets at medium range;
- –5 for targets at long range.

Modifiers for cover and concealment also apply. Concealment versus direct fire bombardment engines is easier to find than true cover, as few barriers are substantial enough to resist hits. For example, a thick hedgerow might provide cover from arrows and sling stones, but it can provide only concealment against cannon fire.

The procedures for determining the effects of hits and for determining exactly where a direct fire missile lands are generally the same as for indirect fire engines, except that hits in a 15' area containing creatures too small to target individually roll 1d3 for scatter distance. Direct fire engines roll 2d4 for scatter distance when they miss.

**Cannons:** Creatures within a cannon shot's area of effect suffer 1d4 points of damage even if they make their saving throws. All cannons have the same basic damage listing against creatures—1d12x5. Roll 1d12 and multiply the result by five. This represents the possibly catastrophic effects of coming into contact with the cannon ball or the shrapnel a cannon ball impact produces. If the 1d12 roll is 10 or higher the affected creature also must save vs. death or be killed outright (see the Death from Massive Damage rule in

Chapter 9 of the *PHB*).

**Critical Hits and Knockdowns:** Only direct hits can be critical hits or cause knockdowns. If the rules from Chapter Six are in play, cannons inflict Large bludgeoning criticals, and most ballistae inflict Large piercing criticals. Some ballistae fire shot instead of bolts and inflict Large bludgeoning criticals.

**Flaming Projectiles:** Ballistae can be loaded with bolts tipped with wads soaked in pitch and wrapped in cloth. The flaming bolt's range is reduced by 1/3 and it inflicts normal damage and 1 point of additional fire damage if it scores a direct hit. The flame can set fire to wooden structures.

## An Example of Direct Bombardment

The Huge umber hulk from the earlier example later discovers a community of gnomes and charges to the attack, sending the gnomes scurrying into their burrows. The gnomes have installed several light ballistae and a light cannon for defense. Two ballistae and the cannon take aim at the umber hulk while it dashes about trying to locate its vanished prey. The umber hulk is about 200 yards away from the bombardment engines.

Light ballistae can individually target creatures of any size. The ballistae have medium-range shots. The range imposes a –2 penalty and the scorpion's movement of 6 imposes an additional –3. The ballistae have adjusted THAC0s of 17. The attack rolls are 5 and 20. The 5 is a miss; because the missile was targeted directly at the umber hulk, the intended point of impact is the umber hulk's square closest to the ballista. The gnomes roll a scatter die and get an 8, indicating a miss to the left. Now they roll 2d4 for distance and get a 2, so the missile lands two squares away and has no affect on the umber hulk. Fortunately, there were no gnomes in the area to be hit by stray missiles.

The 20 is good enough to score a critical hit against the umber hulk's effective Armor Class of 10, even with a –5 attack penalty. The umber hulk is a Huge creature, and it suffers 3d6 points of damage (and possibly a severe piercing critical). The damage dice total 11 points of damage.

The light cannon can also target a Huge creature, so the crew aims it at the umber hulk. Its adjusted THAC0 is a 19. The attack roll is an 8, a miss. The scatter roll is a 6, short and dead ahead. The distance roll is only a 2, which just barely places the umber hulk within the shot's area of effect. The umber hulk has 8+8 Hit Dice, and is allowed a saving throw vs. petrification. It rolls a 4, a failure. The umber hulk suffers 1d12x5 points of damage (it would have suffered 1d4 points of damage even if it had been successful). The damage roll is an 8, inflicting 40 points of damage, enough to kill it after the 11 points of damage the umber hulk suffered from the ballista bolt.

Vehicles Most vehicles are simply used to get people or materials from place to place and have no function on the battlefield, except as objects of contention (wagonloads of rare merchandise or tax money often attract considerable attention). Some vehicles are designed to function as weapons, however, and most offer their passengers some concealment or cover. The most common types are listed below.

## Chariot

These lightweight, two-wheeled vehicles are usually open topped. They are fairly quick and maneuverable. One to four large creatures can be hitched to a single chariot. An animal drawing a chariot can pull twice its normal (unencumbered) load at 2/3 of its normal movement rate. Each additional animal added to the team either increases the movement rate by one point or adds its maximum load to the chariot's useable load.

For example, two light horses could pull a 340-pound chariot load at a movement rate of 17 or a 680-pound chariot load at a rate of 16. Standard movement rates for fully loaded chariots are given in the individual descriptions below.

A chariot must stop immediately if an animal drawing it is killed. The driver or a passenger must spend a half-move action getting out and disentangling the animal and an additional half-move action or an attack cutting it loose. Cutting an animal loose requires

a knife or slashing weapon.

Although chariots are highly maneuverable vehicles, they are not as agile as characters. A chariot must spend one point of movement to change facing. A chariot cannot change facing in response to attacks. If a chariot changes facing more than four times during a round, the driver must make a driving check for each additional change or the chariot flips over.

Chariots function best on smooth, fairly level ground. Chariots must avoid most obstacles; at the DM's option, chariots can attempt to cross obstacles less than 2' high (or deep) at a cost of two movement points per square, but a driving check is required to avoid flipping over. If a chariot crosses any terrain where the footing reduces movement, the chariot must pay the movement penalty and must pass a driving check at the end of any phase when it attempts to move or change facing.

A chariot moves on its driver's base initiative phase.

A chariot has no cargo capacity beyond what its passengers can carry on their persons (though passengers can lay their packs at their feet while riding).

A chariot can perform overruns as though it were a Huge creature; use the driver's THAC0 to resolve the attack of opportunity when an opponent is knocked down (see Chapter One). Chariots are treated as Huge creatures when resolving fire from bombardment engines. A chariot occupies as many squares on the map as required to accommodate the figure representing it, but never less than four squares in any case.

A chariot's passenger capacity, protective value, and other characteristics vary with the type of chariot:

- A light chariot's car can hold as many creatures as one map square (one Large creature, two Man-sized creatures, and so on; see Chapter One). If the passengers go into close order so they can fit into a car they need not all have the same facing, but the driver must face forward. Man-sized passengers in a light chariot can claim 50% concealment from frontal attacks.

An overrun attack vs. a Large or Man-sized creature with a light chariot requires a driving check if the opponent is knocked down. If the check fails, the chariot flips over.

A light chariot drawn by two light horses can carry two armored men at a speed of 18.

- A medium chariot's car can hold as many creatures as two map squares. Man-sized passengers in a medium chariot can claim 50% cover from frontal attacks and 50% concealment from flank attacks.

An overrun attack vs. a Large or Man-sized creature with a medium chariot requires a driving check at +1 if the opponent is knocked down. If the check fails, the chariot flips over.

A medium chariot drawn by three light horses can carry four armored men at a speed of 18.

- A heavy chariot's car can hold as many creatures as three map squares. Man-sized passengers in a heavy chariot can claim 50% cover from frontal and flank attacks.

Heavy chariots do not require driving checks when making overruns.

A heavy chariot drawn by four light horses can carry six armored men at a speed of 18.

A chariot driver cannot attack while the vehicle is moving, except for swerving attacks

(see below).

Chariot passengers get their full allotment of melee or missile attacks regardless of the chariot's movement. Passengers cannot make melee attacks against opponents in front of the chariot unless they are armed with weapons long enough to reach those squares. Passengers make their melee attacks in the normal initiative order.

If the chariot is moving during an action phase when a passenger makes an attack, the passenger attacks at the end of the chariot's movement. If a chariot is moving at full speed, any missile or melee attacks the passengers make suffer a –2 attack penalty. If the chariot moves at half speed or less, the attack penalty is –1. There is no penalty for attacking from a motionless chariot.

It is not possible to cast a spell from a chariot moving at greater than half speed or from a chariot moving over rough ground at any speed. If the chariot is moving at half speed or less, a passenger can cast a spell only if another passenger helps steady him.

Any chariot can be equipped with scythe blades on its wheels and the front of the car. A scythe chariot inflicts an extra 2d6 points of damage when making overruns. If the defender is not knocked down during an overrun attempt the attacker still can make an attack of opportunity that inflicts 1d6 points of damage.

A character driving a scythe chariot also can swerve, making his normal allotment of melee attacks against single creatures in the car's flank squares. The attacks are made during the chariot's movement phase and are resolved as normal melee attacks except that the defender receives no Armor Class bonuses for Dexterity or a shield and the attack receives no attack roll or damage bonuses from Strength. If the attack hits, treat it as a successful overrun; the minimum damage is 2d6. If a swerve attack inflicts a critical hit, treat the scythe as a large slashing weapon.

## Howdah

A howdah is a fighting platform strapped to a beast's back. Howdahs usually are used on Huge or larger creatures, but they can be used on Large creatures as well.

Most howdahs are open topped and provide 50% cover to Man-sized creatures inside against attacks from the howdah's front, flank, or rear.

Like a chariot, a howdah's passenger capacity is measured in map squares. A howdah's weight and maximum capacity varies with the size of the creature that carries it, as follows:

| **Creature Size** | **Capacity*** | **Weight** |
|---|---|---|
| Large | 1 | 50 lbs. |
| Huge | 2 | 100 lbs. |
| Gargantuan | 3 | 150 lbs. |

*Maximum capacity; Huge and Gargantuan creatures can carry smaller howdahs. Some common sense adjustments are necessary. For example, polar bears are Huge creatures, but their rounded bodies and rocking gait limits them to one-space howdahs at best.

Unless the beast carrying a howdah has at least low intelligence, one passenger must act as the driver or *mahout*. Usually, the mahout does not ride in the howdah, but in a saddle located near the creature's head where the mahout can issue commands more easily. A mahout mounted this way counts against the beast's total load, but not the howdah's

capacity; thus a war elephant could carry four men in a howdah, plus a mahout in a saddle. A beast without a mahout acts as an NPC under the DM's control.

A mahout usually is completely occupied with controling the beast. If the beast is intelligent or exceptionally well-trained, the mahout can function as a mounted character.

Passengers in a howdah can fire missiles, cast spells, or make melee attacks (but see the note on elevation, below) as though stationary as long as the beast carrying the howdah does not charge, sprint, engage in melee, or attempt an overrun. If the beast charges, engages in melee, or attempts an overrun, everyone in the howdah must declare a half-move action to stay inside and keep steady. If the beast sprints, everyone in the howdah must declare a full-move action to stay inside and can do nothing else. Passengers can try to jump out; a character who jumps out of a howdah is considered knocked down and suffers 1d6 points of damage unless he rolls a successful saving throw vs. breath weapon.

Characters riding a Huge beast are considered to be one square above the battlefield, while characters riding a Gargantuan beast are considered two squares above. Characters elevated above the battlefield cannot make melee attacks or be attacked in melee unless weapons with sufficient reach are employed or the opponent is the same size as the mount, larger than the mount, or no more than one size class smaller than the mount. For example, a man riding in a triceratops howdah and armed with an axe could not attack or be attacked by a footman armed with a club, but he could attack or be attacked by an ogre.

A creature carrying a howdah moves on its base initiate phase.

### Carrying Capacities For Beasts

If a creature's carrying capacity is not listed in the *PHB*, assume that most creatures can carry five pounds per point of Strength (see the formula for computing this in Chapter Two); particularly large or sturdy quadrupeds can carry 10 pounds per point of effective Strength. To these numbers add 400 pounds if the creature is Huge and 600 pounds if the creature is Gargantuan.

The resulting number is the creature's normal load, which allows movement at the creature's base speed. The creature can carry 150% of its normal load and move at 2/3 speed and it can carry twice its normal load and move at 1/3 speed. A flying creature reduced to 2/3 speed loses one maneuverability class; a flying creature reduced to 1/3 speed cannot fly.

Note that this is intended as a quick method for determining carrying capacities. Where previously published information conflicts with the numbers presented here, choose the one that seems most appropriate. Some sample calculations are provided in the table on the next page.

Note that the size category of the African elephant has been altered from its listing in the *Monstrous Manual*. It seemed only reasonable that the elephant's carrying capacity should be equivilant to, if not greater than, the polar bear, a Huge creature as well.

## Wagon

These cumbersome four-wheeled vehicles are useful for carrying passengers or cargo. One to 12 large creatures can be hitched to a wagon. An animal drawing a wagon can pull

triple its normal (unencumbered) load at half its normal movement rate. Additional animals attached to a wagon either increase the wagon's movement rate by one or add their tripled load to the useful load. For example, two light horses could haul a 510-pound wagon load at a speed of 13 or a 1,020-pound wagon load at a speed of 12.

A wagon must spend a movement point to change facing, and each change of facing must be separated by at least one square of straight movement. A wagon cannot change facing in response to attacks. If a wagon changes facing more than twice in a round, the driver must make a driving check on each additional change or the wagon tips over.

Like chariots, wagons function best on smooth, level ground. Unlike chariots, wagons cannot attempt to cross obstacles. Unstable footing slows wagons and can cause them to flip over.

A wagon moves on its driver's base initiative phase.

A wagon can perform overruns as though it were a Huge creature. Wagons are not particularly difficult to avoid, and the target gets a +2 bonus to the knockdown saving throw. All other modifiers apply. For example, a human subjected to a wagon's overrun would normally have a –4 penalty to the knockdown saving throw for being two sizes smaller than the wagon, but the penalty is reduced to –2 because of the wagon's +2 modifier.

A wagon is treated as a Huge target when resolving fire from a bombardment engine. A wagon occupies as many squares on the map as required to accommodate the figure representing it, but never less than four squares in any case.

A wagon's cargo and passenger capacity is determined by the number of animals pulling it and by its size; a wagon can have from one to six squares of passenger capacity.

Man-sized creatures in a normal wagon can claim 25% cover from the wagon's sides. If the wagon is covered or enclosed, it offers 50% cover. A specialized war wagon offers each passenger 90% cover.

Passengers in a wagon can fire missiles, cast spells, or make melee attacks as though stationary as long as the animals pulling the wagon do not charge, engage in melee, rout, or attempt an overrun. If the team charges, fights, or attempts an overrun, everyone in the wagon must declare a half-move action to stay inside and keep steady. If the team routs, everyone in the wagon must declare a full-move action to stay inside and can do nothing else. Passengers can try to jump out; a character who jumps out of a wagon is considered knocked down and suffers 1d6 points of damage unless he rolls a successful saving throw vs. breath weapon.

### Carrying Capacities for Beasts

| Creature | Size | Normal Load/ Speed** | Moderate Load/ Speed** | Maximum Load/ Speed** |
|---|---|---|---|---|
| African Elephant* | H *1* | 680/15 | 1,020/10 | 1,360/5 |
| Ankylosaurus* | H | 660/6 | 990/4 | 1,320/2 |
| Griffon* | L | 210/12<br>Fl 30 (C) | 315/9<br>Fl 20 (D) | 420/4 |
| Mammoth* | H | 700/12 | 1,030/9 | 1,400/4 |
| Polar Bear | H | 530/12 | 745/9 | 1,060/4 |
| Silver Dragon, Young | H | 550/9<br>Fl 30 (C) | 825/6<br>Fl 20 (D) | 1,100/3 |

| | | | | |
|---|---|---|---|---|
| Giant Stag Beetle* | L | 210/6 | 315/4 | 420/2 |
| Subterranean Lizard* | H | 630/12 | 945/9 | 1,260/4 |
| Triceratops* | H | 730/9 | 1,095/6 | 1,460/4 |
| White Dragon*, Old | G | 960/12<br>Fl 40 (C) | 1,440/9<br>Fl 27 (D) | 1,920/4 |
| Wyvern | G | 745/6<br>Fl 24 (E) | 1,117/4<br>Fl 16 (E) | 1,490/2 |

* Creature receives sturdy quadruped bonus
** Creature moves at the listed speed as long as its load does not exceed the listed weight, otherwise it moves at the next slower rate. Creatures loaded beyond their maximum capacity cannot move.

*1* The African elephant is listed as Large in the *Monstrous Manual*™ accessory; however, it has been changed to a Huge creature for purposes of this table in order to bring it in line with the other creatures listed.

## Driving Checks and Flipping Over

An unskilled chariot or wagon driver must roll an 8 or less on 1d20 to keep from flipping over in a dangerous situation. The driver can add his Armor Class adjustment from Dexterity/Agility to the required number and gets an additional +1 bonus if he also has the animal handling proficiency. If the driver has the vehicle handling proficiency, he can make a proficiency check instead of a driving roll; the +1 bonus for the animal handling proficiency also applies to the check.

The vehicle flips over if the check fails. Everyone in the vehicle must roll a successful saving throw vs. breath weapon or be pinned underneath. A successful roll indicates that the character is thrown clear. If the vehicle is fully enclosed by a rigid structure, passengers cannot be pinned under it, but anyone inside must spend all of the next round climbing out. Passengers in an open-topped wagon (not a chariot) get a +3 bonus to the roll. If the roll is successful, the character is considered knocked down and must spend a half-move or attack action to stand up. A pinned character remains, prone, under the vehicle for the remainder of the round and must spend all of the next round getting clear.

## Ramming

Ramming occurs when vehicles (including creatures carrying howdahs) attack each other directly. A ramming attack is resolved during the attacker's movement phase.

If a vehicle attacks another vehicle, make an opposed driving roll. The following modifiers apply:

- +1 for each size class larger than the opponent;
- +1 for having more wheels or legs than the opponent.

If the defender wins the roll, one of the attacker's wheels, as determined by the DM, must roll a successful saving throw vs. crushing blow (see *DMG*, Table 29). If the roll fails, the wheel breaks and the attacking vehicle flips over. If the attacker wins the roll, one of the defender's wheels must roll vs. crushing blow as above. If the wheel does not break, the defender still must make a driving check to avoid flipping over.

If a creature attacks a vehicle, the vehicle's driver rolls an opposed driving check vs. the creature's effective Strength score. If the creature wins the roll, the vehicle flips over. A creature cannot attack a vehicle in this fashion unless it is at least as large as the vehicle. If the vehicle wins the roll, the creature must veer away from the vehicle.

If a vehicle attacks a creature that is too large to be overrun, use the procedure outlined above. If the vehicle wins the roll, the creature must move one square, just as though it had been overrun (but the attacking vehicle inflicts no damage).

If an attacker tries to ram an unattended vehicle, use the procedures outlined above. The unattended vehicle has a default driving skill of 5.

## Miscellaneous War Machines

The following weapons do not fit into any of the previous categories, yet they could very easily be found on the battlefield.

### Battering Ram

In its simplest form, a battering ram consists of a sturdy beam that one or more creatures can pick up and swing against a portal or wall to batter it down. More complex rams have beams with reinforced heads and a frame to support the beam. Any long, heavy object (such as a log or bench) between five and 30 feet long can be used as a simple ram, provided there is at least five feet of free space behind the ram (to allow the crew to swing it). A minimum of one Man-sized creature is required of each 5 feet of ram, and a maximum of two Man-sized creatures is allowed per five feet of ram. A ram can affect only portals, structures, or large, stationary objects (see the Escalades section, below).

Creatures carrying or wielding a simple ram move and defend as though heavily encumbered, regardless of the ram's actual weight.

A ram suspended from a frame can be from 10 to 60 feet long. A suspended ram allows the crew to employ its strength more efficiently, inflicting more damage.

A ram crew can swing the ram once a round, during the very slow phase.

### Bore

A bore, also known as a sow, is similar to a suspended battering ram, but has a head similar to a pointed screw. The screw head is very effective against stonework. Otherwise, it functions as a suspended ram.

### Cauldron

The most common form of this weapon is a huge kettle placed in a frame that allows it to tip and spill its contents on unfortunate opponents below. The same effect can be obtained by suspending a barrel, bucket, or bladder from a beam and tipping or splitting the container so that its contents spill out.

Unless otherwise noted, the contents of a cauldron pour down in a stream one square wide. When it hits the ground, it forms a puddle three squares wide and three squares long, centered on the point of impact. If there is a wall or similar barrier that keeps the pool from spreading out, the pool is five squares long and two squares wide, with the long side lying along the barrier.

The amount of damage a cauldron inflicts varies with the type of material in it:

- Flaming oil burns for two rounds, inflicting 2d6 points of damage on the first round

and 1d6 points of damage on the second round;

- Boiling oil must be heated for at least one hour before use or it is treated exactly like flaming oil (once heated its temperature can be maintained as long as fuel is available). Boiling oil burns for two rounds, inflicting 4d6 points of damage the first round and 1d6 points of damage on the second round;
- Boiling water is much cheaper than boiling oil. It must be heated for 30 minutes before use. Boiling water inflicts 2d4 points of damage when it strikes a creature and 1d4 points of damage the round thereafter as it soaks into fur or clothing and continues to scald. Creatures entering the area of effect on the second round take no damage;
- Molten lead must be heated at least four hours before use, and the volume of hot liquid is generally small. Molten lead forms a puddle two squares wide and two squares long, with one square directly under the cauldron and spreading away from the cauldron to the left or right as the attacker chooses. Molten lead sears its targets for three rounds, inflicting 4d6 points of damage the first round, 3d6 points of damage the second round, and 2d6 points of damage the third round.

## Gallery Shed

A gallery shed is a low structure built to protect a ram, bore, or team of sappers (see the Escalades section below). It has a peaked roof of heavy planks, it is supported by thick wooden walls, and it is usually wheeled and covered with wet hides to make it flame resistant. Gallery sheds are usually 15 to 60 feet long and five to 20 feet wide. The shed protects as many map squares as it covers. For example, a 10- by 50-foot shed protects 20 squares. Creatures within are completely hidden from view and protected from missile and melee attacks lunched from outside the shed. Creatures within the shed, however, cannot attack except to operate their ram or bore to make sapping attacks.

If the shed has no wheels, it takes one Man-sized creature to carry it for each map square it covers. The 10- by 50-foot shed from the previous example would require 20 Man-sized creatures to carry it. Creatures carrying the shed move as though severely encumbered regardless of its weight. If the shed is wheeled, it can be pushed along as though the crew were heavily encumbered, but it cannot negotiate rough terrain or even moderate slopes.

## Greek Fire Projector

Greek fire is an alchemical mixture that readily bursts into flame and burns furiously. A Greek fire projector is a metal tube about six inches wide and five feet long. When uncapped, it acts like a flame thrower, spraying a line of flame one square wide and four squares long. The line begins at the projector's mouth and extends directly away. Creatures within the area immediately suffer 3d10 points of damage unless they roll a successful saving throw vs. breath weapon for half of that. Targets suffer an additional 1d10 points of damage during the next two rounds, regardless of the initial saving throw's result.

## Mantlet/Abatis

A mantlet is something like an oversized shield. It is typically made of heavy planks and is six feet high and 10 feet wide. A single figure armed with a bow or crossbow can fire

through an opening in the mantlet and claim 90% cover. Additional figures firing from behind the mantlet can claim 50% cover.

A mantlet weighs 100 pounds and requires at least two Man-sized creatures to carry it. Creatures carrying a mantlet move as though heavily encumbered (due to the mantlet's bulk) even if they can handle the weight. Mantlets usually are fitted with props so the troops carrying it can set it down and use it without being encumbered.

An abatis is similar to a mantlet, but lower and thicker. It is used to plug breeches in walls and to provide a semi-mobile barrier against foes. An abatis provides 50% cover to creatures behind it. Large-sized and smaller creatures cannot cross an abatis until it is destroyed. Giants and other Huge, bipedal creatures can cross an abatis at a cost of two movement points.

## Ram Catcher

This is a large hook or fork on a long pole. Typically, it can catch and hold a ram or bore working directly below. The ram remains held, unable to attack, until the attackers break the ram catcher or kill the crew. The ram catcher is too small to be attacked by bombardment engines, but it is susceptible to attacks from slashing weapons. It has an Armor Class of 2 and 30 hit points.

## Rocks

One of the most simple and effective ways to defend a wall or fortification is to hurl chunks of rock or masonry down on the attackers. The character hurling the rock makes a normal attack roll. The damage inflicted varies with the size of the rock and the distance it falls:

| | **Size** | | |
|---|---|---|---|
| | **Small** | **Medium** | **Large** |
| **Knockdown Die** | **1d6** | **1d8** | **1d12** |
| **Distance Fallen** | | | |
| *Short* | 1d4 | 2d4 | 3d4 |
| *Medium* | 1d8 | 2d8 | 2d8 |
| *Long* | 1d10 | 2d10 | 3d10 |

Small rocks weigh less than four pounds. Medium rocks weigh more than four but less than eight pounds. Large rocks weigh eight pounds or more.

A short fall is 10 to 30 feet. A medium fall is 31 to 60 feet; the standard –2 modifier for missiles at medium range applies. A long fall is 61 feet or more; the standard –5 modifier for missiles at long range applies. Dexterity bonuses apply to the attack roll, but Strength bonuses do not (nor do Strength bonuses apply to the damage roll). Rocks are dropped on the attacker's base initiative phase.

### Critical Hits and Knockdown Dice

A dropped rock inflicts Small, Medium, or Large blunt critical hits, depending on its size. All rocks add +1 to the knockdown die at medium distances and +2 to the knockdown die at long distances.

### Multiple Targets

If a rock is dropped on a group all scaling the wall by the same route, ladder, or rope, the attacker makes a normal attack roll against the lead climber. Every creature below the leader must roll a successful saving throw vs. breath weapon to avoid being hit as well. The other climbers receive a +3 bonus to the save if the initial attack misses.

## Siege Tower

This construction is also called a belfry. It consists of a framework mounted on wheels and covered with thick planks and a layer of hides soaked in water (to make the structure flame resistant). The whole tower is about 40 feet high. Inside, a siege tower has three stories: The ground floor is about 15 feet square. Creatures on this floor are protected as if they were in a gallery shed (see above). The second story is 30 feet from the ground. This story is equipped either with three arrow slits where troops armed with bows or crossbows can fire out with 90% cover, or a 10- to 15-foot drawbridge that can be lowered to provide quick access to the top of a wall. While the drawbridge is up, troops on the second story have 100% cover.

The third story is a partially enclosed deck about 10 feet square. Creatures on the deck have the same benefits as creatures behind a mantlet.

Six Man-sized creatures working within the bottom story can push a siege tower as though they were severely encumbered. Six more Man-sized creatures can push from behind the tower and the team of 12 can move as though heavily encumbered. Like a wheeled gallery shed, a siege tower cannot cross rough terrain or moderate slopes.

## Miscellaneous War Machine Costs and Weights

| Machine | Cost | Weight |
|---|---|---|
| Bore | 500 | 100–600 |
| Cauldron | 50 | 150 |
| Gallery Shed | 250–500 | 400–4,900 |
| Greek Fire Projector | 500 | 75 |
| Mantlet | 15 | 100 |
| Ram Catcher | 25 | 25 |
| Ram, Simple | 50 | 50–300 |
| Ram, Suspended | 400 | 100–600 |
| Siege Tower | 800 | 2,000 |

## Escalades

Technically, an escalade is an attempt to storm a castle or fort by scaling the walls, usually with ladders. Rules for doing so are included here, but this section also includes rules for other types of actions that can take place during a *Player's Option* combat scenario, including combat between war machines.

## The Approach of a Castle

The area around a castle usually provides clear lines of fire out to the maximum range of the castle's defensive weapons. For example, a castle equipped with light ballistae offers a clear line of fire out to 330 yards. The encounter range is always the same as the

maximum missile range.

Footing around a castle varies with the terrain. A castle built on a plain has good footing. Mountain castles are surrounded by rocky slopes (2/3 or 1/3 movement when going uphill), forest castles tend to be surrounded by masses of stumps where trees have been cut to provide clear lines of fire (1/3 movement).

Cover is generally not available to creatures attacking a castle once they enter maximum missile range, regardless of the quality of the footing.

A castle's walls present an obvious obstacle to attackers. In addition, castles often are surrounded by ditches or moats, usually from 10 to 20 feet deep.

## Walls

One way to capture a castle or fortress is to climb the walls and overpower the defenders inside. This sort of undertaking is very dangerous, but its simplicity and speed makes it an obvious choice for small bands of heroes.

There are four basic types of castle walls in the AD&D game:

**Wooden Palisades:** These walls usually are made from sharpened logs about six inches thick. They typically are 10 to 15 feet tall. Defenders cannot fight from atop a palisade unless it is provided with a catwalk or hoardings (see below).

**Stone:** These walls are made of a single layer of stone or brick and are otherwise similar to palisades.

**Curtain Walls:** These walls are built of two layers of dressed stone with dirt and rubble packed in between. Curtain walls generally are thick enough to provide a fighting platform and are usually battlemented (see below) to provide extra cover. Curtain walls are usually 30 to 60 feet high and can be from 10 to 30 feet thick.

**Earth ramparts:** These walls are mounds of dirt, usually carefully packed and braced. Unlike the other three types of walls, which are vertical, a rampart slopes upward at a steep angle. Defenders can fight from atop a rampart, but a stone wall, palisade, or catwalk often is added at the top to provide extra cover. Ramparts are usually 20 to 40 feet high and 40 to 80 feet thick.

### Wall Defenses

A simple wall offers no cover to characters standing on it. Castle designers, however, had several ways to rectify the problem:

**Battlement:** This is a barrier about six feet high with alternating solid parts (merlons) and openings (embrasures). A battlement gives Man-sized creatures standing behind it 50% cover while actively defending the wall against attacks coming from below the battlement. The best cover an active defender can claim from attacks coming from the battlement's level or higher (for example, from attackers atop a siege tower) is 25%. A wall less than 10 feet thick requires a catwalk to make a battlement useful.

**Catwalk:** This is a narrow ledge that allows defenders to hide behind the wall. It grants 25% cover against attacks coming from below.

**Embrasure Shutter:** These heavy wooden shutters can be added to a battlement to increases the cover value to 75% against all attacks.

**Hoarding:** This wooden construction is similar to a catwalk, but it is built on the outside of the wall. It gives 90% cover to creatures attacking opponents at the base of the wall,

and 75% cover otherwise. A hoarding made of stone is called a machicolation.
**Splay:** This is an angled area at the base of a wall. It helps support the wall, and makes it difficult for siege engines to attack the wall directly. If the defenders drop rocks from atop a wall fitted with a splay, the weapons scatter if they miss. Use the bombardment engine scatter diagram, but treat a roll of 5, 6, or 7 as a roll of 2. The rock bounces one square in the indicated direction. War machines are automatically struck and creatures must roll a successful saving throw vs. breath weapon or be struck, regardless of Armor Class.

## Scaling Walls

It is possible for most characters to climb a castle's walls. See the *Player's Handbook*, Chapter 14, for basic climbing rules. Treat palisades as rough surfaces, stone and curtain walls as very smooth surfaces, and ramparts as sloping walls (see *PHB*, Table 27). Note that climbing movement is measured in feet per round. Characters scaling a wall suffer a number of restrictions and penalties:

- A climber loses all Armor Class bonuses from a shield and Dexterity;
- A climber suffers a –2 penalty to attack, damage, and saving throw rolls;
- Attacks directed at a climber from the ground gain the standard +2 bonus for rear attacks. Attacks directed at a climber from atop the wall gain the standard +1 bonus for an attacker on higher ground;
- A climber struck for any amount of damage must succeed with an immediate climbing check or fall to the ground. If an attack also causes a knockdown chance or a forced retreat, the climber must make a successful saving throw roll vs. death or fall to the ground;
- A climber cannot employ a two-handed weapon.

## Ladders

This is the best way for an unskilled climber to get up a wall. Carrying a ladder requires two Man-sized creatures per 10 feet of length. The carriers move as though heavily encumbered. A ladder can be put in position against a wall in the End-of-Round step of any round when it is carried to the base of the wall. A ladder must be at least as long as the wall is tall, plus five feet. A character can climb four feet of ladder per movement point each round.

Defenders atop a wall can use an attack to push a ladder away. If the ladder is not braced or loaded with climbers, the attempt always succeeds. Otherwise, the ladder falls if the defender makes a successful open doors roll. Trying to push a ladder away provokes attacks of opportunity if the defender is threatened.

When a climber reaches the top of a wall, he can step onto the wall during the round's resolution phase if there is an empty square in front of him (this could provoke an attack of opportunity). If there is no empty square, the climber must slay a defender or force a retreat and create an empty square before stepping from the ladder.

## Grappling Hooks

To set a grappling hook, the wielder makes an attack roll vs. Armor Class 5, adjusted for range. It takes a full round to hurl the hook and set it firmly or to recover the grapple after

a miss.

A character climbing by means of a rope and grapple moves at the rope and wall rate and receives a bonus to his climbing chance (see *PHB*, Chapter 14).

A defender can cut the rope attached to a grapple by attacking it with a slashing weapon. The rope has an Armor Class of 5 and 5 hit points. A length of light chain can be attached to the grapple to make cutting more difficult. A chain reduces the grapple's maximum range in half. The chain has an Armor Class of 0 and 20 hit points.

## War Machine vs. War Machine

A siege is a slow-moving process that can take months to resolve—not the best subject for a heroic role-playing game. However, an artillery duel or an attempt to storm a castle's walls, supported and opposed by war machines, provides lots of action for battle.

The table on the next page gives attack and defense values for all the common war machines listed in this chapter. Defensive values for some common structures are also included. Note that statistics for true fortifications are not included here—it takes more than a few combat rounds to bring down a castle wall. Rules for true sieges are given in the next section.

### Fires

Wooden constructions, including most war machines (but not cannons) can be set ablaze by Greek fire, flaming oil, incendiary missiles, and the like.

Unprotected wood catches fire whenever struck by a fire attack. Wood protected by wet hides or continual soaking catches fire only on a 1–3 on 1d20. Green or freshly wet wood catches fire on a roll of 1–11 on 1d20.

The structure takes normal damage from the attack the first round. On the next round, the attacker rolls 1d20 for each point of damage inflicted in the first round; on a roll of 10 or more, one additional point is inflicted. If defenders spend the whole round fighting the fire there is more damage only on a roll of 15 or more. If no damage is inflicted, the fire goes out. The process is repeated each round until the construction loses all its structural points or the fire goes out.

**Door, Common:** This is a regular door made of heavy planks.
**Door, Reinforced:** This is a typical dungeon or castle door strengthened with metal bands and studs.
**Gate/Portcullis:** This refers to large portals for admitting vehicles and mounted troops. A gate is double valved and made from heavy planks or metal bars. A portcullis is a metal grillwork. Drawbridges also fall into this category.
**Ladder:** A typical ladder is made from a pair of half-inch rails with rungs about the same size lashed on.
**Walls:** Values given are for a section 10' square.
**Brick:** This includes walls made from fired brick, tile, adobe, or soft stone about six inches thick. Hard stone such as granite has twice the structural value.
**Thick Wood:** This includes walls made from rough hewn logs or heavy timbers.
**Thin Wood:** This includes walls made from ordinary planks, wattle and daub, and similar lightweight materials.
**Rocks:** The first number indicates structural damage inflicted when the rock is dropped a

short distance. The second number indicates a medium drop, and the third number indicates a long drop. Structures and war machines have an Armor Class of 10 when attacked by rocks.

**War Engine Attack and Defense Values**

| | Range | Attack | | | Defense | |
|---|---|---|---|---|---|---|
| **Weapon** | **M/S/M/L** | **THAC0** | **Value** | **ROF** | **Crew** | **Value** |
| *Bombardment Engines* | | | | | | |
| Ballista, Light | —/11/22/33 | 12 | — | 1/8 | 1 | 4 |
| Ballista, Medium | 1/11/22/33 | 14 | 1d3 | 1/12 | 2 | 8 |
| Ballista, Heavy | 2/12/24/36 | 17 | 1d4+2 | 1/16 | 4 | 12 |

* Indicates that the usual –5 modifier for long range shots does not apply.
† The material loaded into a caldron determines damage. Boiling water inflicts no damage on structures. Boiling and flaming oil inflicts 1d4 points of damage to wooden structures on each of the two rounds it burns; if the structure catches fire during the first round, the extra damage is added during the second round. Molten lead inflicts 1d4+1 points of damage to wooden structures each round it sears.
†† Greek fire inflicts 2d4 points of damage to wooden structures each round it burns. If the structure catches fire during the first round, the extra damage is added during the second round.
‡ Simple rams require a crew of at least one Man-sized creature per 5' of length; the maximum crew is two Man-sized creatures per 5' of length. Suspended rams and bores require a crew of at least two Man-sized creatures per 10' of length; the maximum crew is four Man-sized creatures per 10' of length.
*1* Per two Man-sized crew members. Bores add +1 to each die of damage if the target is stone. A simple ram crewed by a single Man-sized creature inflicts 1 point of damage.
*2* This is the time required to reposition and reload the cauldron. Time required to heat the contents is not included.
*3* Per two Man-sized crew members. There must be at least two crew operating the ram catcher for every 10' of ram or no damage is inflicted. If the ram is protected by a gallery shed, there must be at least four crew members per 10' of ram.
*4* Indirect fire engines usually cannot target portals, as the missiles tend to strike the wall containing the portal instead.

## Sapping

Teams of four Man-sized creatures can inflict 1d2 points of structural damage each round if armed with picks, crowbars, or weapons that can serve as picks or crowbars. Teams of less than four creatures also can inflict structural damage, but there is a one-round delay for every creature missing. For example, a team of three humans could inflict 1d2 points of structural damage every two rounds. Sapping is a no-move action that occupies a creature for the entire round.

Two Small or four Tiny creatures count as one Man-sized sapper; one Large creature counts as two Man-sized sappers, one Huge creature counts as three Man-sized sappers, and so on. Burrowing creatures inflict triple damage dice. For example, a single umber hulk (a Large burrowing creature) inflicts 3d2 points of damage every two rounds.

## Petards

A petard is an explosive charge placed against a wall or portal in an attempt to blow it open. Generally gunpowder or smoke powder is the explosive. Every 10 charges of powder inflicts 1d4 points of structural damage to the target.

## Creatures Inside Destroyed Targets

Defenders inside a structure that is destroyed (loses all its structural points) must roll

successful saving throws vs. death or be killed in the collapse. Success indicates 2d6 points of damage.

## Magical Attacks

The following spells and magical items can be useful during an escalade:

***Bigby's Clenched Fist***

A blow from this spell inflicts 1d4 points of structural damage. The disembodied hand is a Man-sized target.

***Dig***

This spell allows the caster to dig through earth ramparts at the rate given in the spell description. If a hole dug through a rampart collapses, the area above it becomes damaged (see the Sieges section, below).

***Disintegrate***

Because this spell obliterates a 10' cube of nonliving matter when it strikes, most war machines and portals are effectively destroyed when struck. If the DM decides a target is not destroyed, it still suffers 2d10 points of structural damage—and has a 10' hole in it.

***Earthquake***

Buildings suffer 5d12 points of structural damage from this spell. The spell also caves in mines and tunnels and can cause the ground to crack open and swallow up war machines as though they were Large creatures. Siege towers have a 50% chance to fall over even if they do not fall into a crack.

***Fireball***

This spell inflicts 1d2 points of structural damage against wooden targets (including those protected by wet hides) for every two dice of damage it normally inflicts; round fractions down. For example, a fireball from a 5th-level caster inflicts 2d2 points of structural damage. A *fireball* can set wooden constructions afire.

***Horn of Blasting***

A blast from this item inflicts 4d4 points of structural damage against stone or metal targets and 6d4 points of structural damage against wooden targets.

***Incendiary Cloud***

This spell does not harm structures or war machines directly, but it can set fire to wooden constructions during the fourth round of its existence. Roll for a fire once for each level of the caster.

***Lightning Bolt***

This spell damages wooden constructions just as a fireball does. It inflicts 1d2 points of structural damage against stone or metal targets for every three dice of damage it would normally inflict; round fractions down. For example, a *lightning bolt* from a 7th-level caster would inflict 3d2 points of damage against a mantlet (a wooden target) and 2d2

points of damage against a portcullis (a metal target). A *lightning bolt* can set wooden constructions afire just as a fireball can.

### *Potion of Fire Breath*

The tongue of flame from this potion can damage wooden constructions. It inflicts 1d2 points of structural damage for each die of damage it normally inflicts. For example, a single draught inflicts 1d2 points of structural damage. It also can set wood constructions afire.

### *Mattock of the Titans*

This item can be used to bore through ramparts or walls at the listed rates, similar to a dig spell, except that it can also bore through stone.

### *Maul of the Titans*

When employed against small constructions or war machines, this item inflicts 2d8 points of structural damage.

### *Move Earth*

This spell can collapse ramparts (or sections of ramparts) up to 240 yards long and up to 60 feet thick. A rampart collapsed in this manner is treated as damaged; if less than a third of its original volume remains, it is considered destroyed (see the Sieges section, below). A rampart can be made resistant to *move earth* spells by facing it with brick or stone or bracing it internally with timbers or stone. A rampart reinforced in this manner resists a move earth spell on a roll of 10 or higher on 1d20. If the rampart is faced and internally braced, it is immune to *move earth* spells.

### *Ring of the Ram*

This item inflicts 1d4 points of structural damage per charge expended.

### *Ring of Shooting Stars*

This item's *ball lightning* effect inflicts structural damage as a *lighting bolt* spell does. If multiple balls are discharged against the same target in a single round, total the normal damage dice before calculating the structural damage dice. For example, if the wearer creates two balls of lighting (5d4 points of damage each) and directs them both at a single target, the balls would inflict 5d2 points of structural damage against a wooden target or 3d2 points of structural damage against a stone or metal target.

### *Transmute Rock to Mud*

This spell effects only "natural" stone. Stone which has been created or protected by magic is unaffected, as is stone which has been artificially shaped on all four sides. For example, the walls in a simple tunnel driven through solid rock are subject to this spell, but if the tunnel were lined with brick or stones that had been worked into blocks, a *transmute rock to mud* spell could not harm them. This spell still is very useful in a siege, however, as virtually all castles must be built upon bedrock in order to support the weight of the walls. It is possible to use a *transmute rock to mud* spell to undermine a wall by attacking the bedrock underneath, provided that the spell has enough area to reach under

the wall and that the mud can flow out and leave a cavity under the wall. In some cases it might be necessary to employ sappers or a *dig* spell to get at the bedrock and provide a place for the mud to go. If these conditions are met, the wall still remains unaffected if the defender rolls a 10 or more on 1d20.

***Wall of Fire***
This spell can set fire to wooden structures as mentioned in War Machine vs. War Machine, above, if it is placed against them. Roll for a fire once for each level of the caster. If a wooden construction passes through a *wall of fire*, it suffers 1d3 points of structural damage plus one point per caster level and can start a fire as noted above.

***Wall of Iron***
A plain iron wall created by this spell has five structural points per 1/4 inch of thickness.

***Wall of Stone***
A plain stone wall created by this spell has two structural points per 1/4 inch of thickness.

***Warp Wood***
Wooden bombardment engines and wheeled vehicles are disabled if affected by this spell. Doors and walls suffer 2d8 points of structural damage.

## Sieges

Sieges are ponderous affairs that involve a lot of waiting and general inactivity. The attacker's main goal is to batter down the defending walls so they can launch an escalade or to drive the defender out through starvation or thirst. The following system allows you to simulate the effects of an extended siege, handling months of operations with a single die roll.

## Reduction

This refers to any attempt to destroy a castle's walls. Use the table to resolve the attempt.

**Attacker:** The type of engine attacking the wall. This assumes one engine attacking each 30' section of wall.
**Defending Wall Type:** This refers to the wall types described in the Escalades section. Curtain walls are treated as hard or soft stone, depending on the materials used to construct them. Ramparts are treated as earth. Palisades are treated as thick wood. Normal buildings, mantles, and abatises are treated as thin wood. Note that ramparts are difficult to batter down but fairly easy to climb.

**Reduction**

| | Defending Wall Type | | | | |
|---|---|---|---|---|---|
| **Attacker** | **Hard Stone** | **Soft Stone** | **Earth** | **Thin Wood** | **Thick Wood** |
| Ballista, Medium | — | 3/Month | — | 10/Day | 5/Day |
| Ballista, Heavy | 3/Month | 4/Month | — | 11/Day | 6/Day |
| Bombard | 5/Week | 9/Week | 7/3 Months | 20/Immediate | 16/Day |
| Bombard, Great | 7/Week | 11/Week | 9/3 Months | 20/Immediate | 20/Day |

| | | | | | |
|---|---|---|---|---|---|
| Bore | 9/Hour | 11/Hour | — | 12/Immediate | 12/Day |
| Cannon, Light | 5/Week | 9/Week | 7/3 Months | 20/Hour | 20/Hour |
| Cannon, Medium | 6/Week | 10/Week | 8/3 Months | 20/Immediate | 20/Day |
| Cannon, Heavy | 7/Week | 11/Week | 9/3 Months | 20/Immediate | 20/Day |
| Catapult, Light | 2/Month | 6/Month | 4/3 Months | 20/Day | 13/Day |
| Catapult, Medium | 3/Month | 7/Month | 5/3 Months | 20/Immediate | 14/Day |
| Catapult, Heavy | 4/Month | 8/Month | 6/3 Months | 20/Immediate | 15/Day |
| Ram, Simple | 7/Hour | 9/Hour | — | 20/Hour | 20/Day |
| Ram, Suspended | 8/Hour | 10/Hour | — | 20/Immediate | 20/Hour |
| Mine | 10* | 10* | 8* | 10* | 10* |
| Trebuchet | 5/Month | 9/Month | 7/3 Months | 20/Immediate | 16/Day |

*Each attempt to mine is a one-time attempt. See Mines for more information.

## Reduction Procedures

Cross reference the type of attacker with the type of defending wall. The number before the slash indicates the saving throw, rolled on 1d20, the wall needs to resist the attack. The time period after the slash indicates the amount of sustained attack there must be before the die is rolled; "immediate" indicates that the wall must save every time it is struck. For purposes of these rules, one "day" represents abut 10 hours of sustained bombardment. If the crews are relieved (and they can see their targets) it is possible to perform two shifts of bombardment every 24 hours. If more than one engine is attacking the same section of wall, roll once for each engine. The saving throw numbers assume a wall of average strength and thickness for its type. If the wall is unusually well made (a dwarven fortress with exceptional stone, for example), the DM can allow a saving throw bonus of +1 or +2. Furthermore, an exceptionally thick wall gains a saving throw bonus of +1 for every 50% of extra thickness. A curtain wall 45 feet thick, for example, would gain a +1 saving throw bonus.

## Saving Throw Failure

If a wall section fails its saving throw once, it becomes damaged. The center 10-foot section loses 1/3 of its height and special cover such as hoardings, parapets, and splays are destroyed. The debris creates a crumbling slope that any character can attempt to climb. If a wall section fails its saving throw twice, it is destroyed. The center 10' section is breached and reduced to 1/3 of its original height. The breech becomes a rocky slope as long as the wall's original thickness. In addition, the 10' section to either side of the breech becomes damaged. If the defenders have an abatis prepared they can move it into position immediately. An abatis saves as thin wood.

*For example, an attacking army brings three heavy cannons to bear against a fortress with granite curtain walls 50' thick and 45' high. The walls save as hard stone and receive a +1 saving throw bonus for their thickness. The DM assigns them an additional +1 due to superior workmanship (a gang of storm giants working under a dwarven engineer built the castle).*

*The attackers aim all three of their cannons at one section of wall. At the end of one week, the defender rolls three saving throws. The rolls are 5, 9, and 20. All the rolls are successes and the attackers make no headway the first week. Assuming that the defenders*

*do not sally forth to knock out the cannons, they continue their bombardment for another week.*

*At the end of the second week, the defender rolls three more saving throws. The rolls are 3, 4, and 11; two of the rolls are failures. The center of the 30' section of wall is reduced to a rocky slope 15' high, 10' wide, and 50' long. In addition, the 10' sections of wall to either side of the breech are damaged and reduced to sloping walls 30' high. Any special features on the damaged sections, such as hoardings, are destroyed.*

## Mines

Attackers who found a castle's walls too difficult to batter down often attempted to undermine them by digging a tunnel underneath the walls and collapsing it, either by burning out the supports or filling the mine with powder and blowing it up. The main factor in mining is the amount of time required to dig. The following table gives the volume, in cubic feet, that a team of 10 miners can excavate in a single eight-hour shift:

| Race of Miner | Earth | Soft Stone | Hard Stone |
|---|---|---|---|
| Gnoll, halfling, human | 150 | 100 | 50 |
| Gnome, kobold | 160 | 120 | 60 |
| Goblin, orc | 170 | 130 | 60 |
| Dwarf, hobgoblin | 180 | 140 | 70 |
| Ogre | 300 | 200 | 100 |
| Hill giant | 600 | 400 | 200 |
| Fire giant, frost giant | 600 | 400 | 200 |
| Stone giant | 1,000 | 700 | 350 |

If a creature is not listed, pick the most appropriate type from the table. For example, elves mine at the human rate. The mine tunnel must be a minimum of 5' square plus an additional 5' for each size class beyond Small. For example, humans, orcs, and dwarves require a shaft 10' square. Stone giants require a tunnel 20' square.

When the mine reaches the wall, a gallery must be dug out underneath. The galley must be as long as the wall is thick, at least 10' wide, and at least 5' deep (more if the miners require a larger tunnel). Once the gallery is dug the supports can be fired and the 10' section of wall above the gallery must roll the listed saving throw or be destroyed; if the save fails, the adjoining 10' wall sections become damaged.

The gallery can be more than 10' wide, and an additional section of wall must make a saving throw for every extra 10' of gallery width. Smoke powder or gunpowder placed in the mine can reduce the wall's saving throw. Twenty charges of powder reduce one section's saving throw roll by –1.

### Counter Mining

If the defenders suspect the attackers have begun a mine, they can attempt to dig their own tunnel and attack the miners. Given general knowledge of an approaching mine's position (such as which wall the mine is aimed at) a counter mine is successful on a roll of 10 or better on 1d20. This chance can fall to nothing (if the defenders are completely fooled about the mine's location) or be an automatic success (if the defenders know where the mine is through divination magic or reconnaissance). When a counter mine

succeeds, the two parties must fight a melee to see who controls the tunnels. Miners usually wear no armor and can carry only small weapons, but troops sent in to guard the miners or launch a counterattack can be armed and armored normally.

## Investment

Another and generally more reliable method for capturing a castle or fort is to simply surround it and wait for the garrison to starve (assuming that the castle does not have resident priests who can keep the troops fed). The DM must decide in advance how much food is stored inside the castle. Generally, castles have no more than a year's worth of supplies on hand, and they usually have much less, perhaps several weeks' to a few months' worth.

A garrison's morale rating drops by 1 when it runs out of food. Each week thereafter, roll 1d4 for every 10 creatures in the garrison; on a roll of 4, single-Hit-Die creatures in the group expire and other creatures lose 25% of their hit points. Do not roll for player characters and important NPCs; instead, they are allowed a saving throw vs. wands with a –5 penalty to avoid the hit point loss.

The garrison also checks morale each week without food. Failure indicates that the troops open the gates to the attackers. If prevented from opening the gates, the troops attempt to leave the castle any way they can. If the morale check succeeds, the garrison holds out another week. Repeat the procedure until all the defenders starve, their morale breaks, or relief arrives.

Most castles have adequate sources of water, usually a well inside the walls. If a garrison is deprived of water, use the procedure given above for food but check for casualties, hit point losses, and morale every three days.

## Mass Combat

Occasionally, battles will arise that are just too large to play out with the *Player's Option* combat system. For example, it can take a long time to resolve a battle when 40 goblins attack the PCs as they negotiate with a dwarven lord and his 15 bodyguards.

You can use the mass combat rules whenever you feel they are necessary. Generally, if there are more creatures in the battle than will fit on your map, it's a good time to use the mass combat rules. It's usually best to leave PCs and important NPCs in place on the map and use the normal combat system to resolve their actions. Use the mass combat rules to determine the outcome of the larger battle raging around the PCs.

## Mass Combat Procedures

Keep paper and pencil handy to keep track of the troops on both sides.

Start by dividing the opposing forces into groups of a convenient size; groups of 5, 10, or 20 usually work the best. If there is an odd number of troops, make one group shorthanded. For example, a group of 35 creatures could be divided into three groups of 10 and one group of five or seven groups of five. It is best to keep groups of similar creatures together.

Assign each group an Armor Class based on the most prevalent AC in the group. For example, if a group of 20 halflings included three leaders in chain mail and 17 archers in leather armor, the group has an Armor Class of 8. If there is a tie for the most prevalent armor type, use the worst one. Assign each group a THAC0 based on the most prevalent

THAC0 in the group, as above.

Once you have assigned an Armor Class and THAC0 to each group, you are ready to begin. You may choose to roll for surprise, allowing one group to attack unopposed, but after this combat is considered simultaneous. Assign one side of the combat to be the attackers, and one side to defend. Line up attacking groups against defending groups on a one-to-one basis. Each defending group must be attacked once before any defending group can be attacked twice. For example, a force of 60 orcs divided into six groups of 10 are attacking 40 dwarves divided into four groups of 10. Two groups of dwarves are attacked once, and two groups are attacked twice. The orcs can't attack one group six times. Note that in some cases only part of an attacking force can get into a battle. A force of 20 dwarves guarding a cave mouth might hold out against hundreds of orcs because only 20 of them can attack at a time.

The attacking group makes a normal attack roll. If the roll succeeds, they will inflict one Hit Die on the defenders for each creature in the attacking group, ignoring critical hits; however, do not remove any casualties yet.

Now, reverse the process, having the defenders return the attack, using the same procedure. When both sides have made all of their attack rolls, mark off enough casualties in wounded groups to account for all the Hit Dice inflicted, leaving only one wounded defender. For example, if a group of 10 orcs successfully attacks 10 3rd-level dwarves, three dwarves are killed and one loses a single Hit Die.

Repeat this procedure until one side is killed or breaks morale. Apply subsequent hits to wounded creatures first.

To save time toward the end of a combat, you can reorganize survivors into new groups.

Creatures "killed" in a mass combat are allowed a saving throw vs. death if they receive some form of healing immediately after the battle. These figures are assume to be hovering at death's door (see Chapter One) and can be saved. If there are a lot of casualties, roll the saving throws in groups of 5, 10, or 20.

## An Example of Mass Combat

The dwarven leader and bodyguards from the example at the beginning of this section are talking to a group of six PCs when 40 goblins attack. The 15 bodyguards are 4th-level fighters with battle axe specialization (adjusted THAC0 16), wearing *chain mail +1* and carrying shields (AC 3). The goblins have a THAC0 of 20 and an Armor Class of 6. They are armed with short swords and short bows.

The DM decides to divide the combatants into groups of five, so there are eight groups of goblins and three groups of dwarves. The DM also decides that all the bodyguards will join the mass combat, leaving the PCs and two groups of goblins to fight a normal *Player's Option* combat system battle. The goblins gain surprise, and loose arrows. The ten goblins fighting the PCs attack individually. The remaining six groups attack the bodyguards, two groups of goblins against each group of dwarves.

The goblins fire two volleys of arrows from 10 yards away. They are at short range and receive a +1 to their attack rolls because of surprise. Each group of dwarves receives four volleys of arrows (two groups of goblins each firing two volleys). Against the first group, the attack rolls are: 3, 17, 18, and 18; three hits. The first group of dwarves suffers 15 dice of damage; three dwarves are killed and one suffers three dice of damage. The

attack rolls against the second group are 6, 17, 13, and 20; two hits. The second group suffers 10 dice of damage, killing two dwarves and inflicting two dice of damage on a third. The attack rolls against the third group are 3, 19, 4, and 14; one hit. One dwarf is killed and a second dwarf suffers one die of damage. There are no return attacks from the PCs and dwarves, because they were surprised.

The next round, the PCs and the dwarven leader fight a normal battle against their 10 foes. They make short work of the goblins, killing seven of them.

In the mass combat, the dwarves are now in the thick of the fight, charging at the goblins. The dwarves have a +2 bonus for the charge and an additional +1 because they are dwarves attacking goblins. The goblins are still firing their bows, and loose a volley of arrows as the dwarves charge. They receive a +1 bonus to their attack rolls because their opponents are charging.

The dwarves complete their charge. Each group of dwarves attacks one group of goblins, while the remaining three groups are not attacked. Their attack rolls are 16, 14, and 13; three hits. The first group contains two dwarves who inflict two dice of damage and kill two goblins. The second group contains three dwarves, and they kill three goblins. The final group contains four dwarves, who kill four goblins.

Each group of dwarves is attacked twice. The rolls against the first group are 3 and 18; one hit. The first group suffers 5 dice of damage; the wounded dwarf (who had already suffered three dice of damage) is killed and another dwarf is killed as well, wiping the group out. The rolls against the second group are 5 and 11; both misses. The rolls against the third group are 20 and 14; one hit. The wounded dwarf is killed and a second dwarf suffers two dice of damage.

The goblins wisely decide to withhold their second volley of arrows, and the dwarves get no attacks of opportunity.

Because there are only six dwarves left, the DM decides a morale check is in order, and the dwarves pass it. The DM also decides to re-combine the survivors into a single group of six. The goblin casualties result in 21 goblins remaining, which the DM divides into three groups of five and one group of six. The DM also decides that the group of six goblins leaves the mass combat to attack the PCs and dwarven leader, leaving three groups of goblins in the mass combat. (There are now nine goblins in the normal combat.)

During the next round, the PCs continue to do well, slaying seven more goblins. The two survivors fail a morale check and flee the field.

In the mass combat, the dwarves get two attacks this round, since they are specialists. The dwarves first attack roll is a 17, and six HD worth of goblins would be killed. This is enough to wipe out an entire group of goblins, but the sixth Hit Die will be wasted. The second attack is made against a second group of five goblins, and the roll is a 10; still good enough to hit the goblins' Armor Class of 6. Five more goblins will die, and the last Hit Die goes to waste.

The three groups of goblins attack, rolling 20, 12, and 4; one hit. The attack kills two wounded dwarves (who each were two HD down) and wounds another for one die of damage.

There are now five goblins facing the six PCs, the dwarven leader, and the four surviving guards. Finding themselves outnumbered, the goblins check morale and pass, not wanting to flee from their hated dwarven enemies.

The DM decides that the remainder of the battle can be handled using the normal rules, and the mass combat ends. The PCs and dwarves win handily. The 11 fallen dwarves receive magical healing and first aid as soon as the battle ends. Each rolls a saving throw vs. death to see if they can be revived. The rolls are incredibly bad, and only four dwarves survive. The PCs also revive one goblin for interrogation.

### Proficiencies

The following proficiencies are applicable to warfare and the operation of war equipment. They are acquired the same way standard *PHB* proficiencies are.

**Artillerist** (1 Slot) Charisma/Leadership
Group: Warrior

A character with this proficiency can direct the siting and operation of a bombardment engine. The maximum number of engines the character can control is equal to 1/3 of the character's Charisma/Leadership score, provided that the engines are no farther apart than the character can sprint in a single round.

**Vehicle Handling** (1 Slot) Dexterity/Dodge
Group: Warrior

This proficiency allows the character to control a wagon or chariot under difficult circumstances. The character can roll against this proficiency when a driving check is normally required.

# Chapter Nine: Monsters

Monsters are the meat and drink of a fantasy campaign. The ability to defeat fearsome beasts is what sets great heroes apart from ordinary mortals. This chapter contains information on using monsters in *Player's Option* games.

There are three parts to this chapter. The first part, *Creatures in Battle*, discusses how monsters generally behave on the battlefield, using basic AD&D game information such as alignment, intelligence, and morale as a guide.

The second part, *Creature Types*, discusses the physical characteristics of monsters, including tactics and combat options that are especially applicable to particular types of monsters and how to determine what happens when a monster suffers a critical hit.

The third part, *Attack and Armor Types*, discusses the natural weaponry and protection available to monsters and how it functions in the *Player's Option* game.

### Does This Belong in My Campaign?

The amount of material from this chapter you need to use depends on how much of the optional material from the previous chapters you are using. The first two sections should prove helpful to anyone using the *Player's*

*Option* combat system from Chapter One. The last section deals primarily with optional material from the rest of this book.

## Creatures in Battle

All creatures do not fight in the same manner. A creature's instincts, natural weaponry, bravery, and culture all have an impact on the way it fights. A great wyrm red dragon is not only vastly more powerful than a kobold, its titanic intellect and vast experience makes it a more complex and unpredictable opponent than a mere kobold could ever be.

### Intelligence

Creatures tend to fight as cleverly as they can, and a creature's intelligence is what determines how clever it can be:

**Non- (0)**

The creature just reacts to what its senses tell it. It is not capable of assessing the dangers it faces or the rewards it stands to gain. In a fight, a nonintelligent creature turns its attention to the most immediate threat. When badly hurt, a nonintelligent creature usually flees, but some creatures just don't know when they're hurt and fight on, ignorant of any danger. Nonintelligent creatures' combat actions usually are limited to attack or charge. If they flee, they run or sprint rather than withdraw. They do not employ any of the special battle tactics or attack options presented in Chapter One.

**Animal (1)**

The creature has a limited ability to asses risks and rewards. Generally, it responds only to very basic motivations and does not attack unless it is trained to, it is hungry, or it is defending something it values (such as food, offspring, a mate, or hunting territory). In a fight, an animal intelligence creature relies on its instincts. It attacks the most accessible opponent, the opponent that is most likely to be edible, or the opponent that scared it into attacking. The creature has some grasp of tactics, enough to know that flank attacks are better than frontal attacks and that rear attacks are better than flank attacks. The creature also instinctively understands the value of not being detected prior to its attacks.

Animal intelligence creatures usually flee if badly injured, but can fight to the death if trapped or cornered. An animal intelligence creature's combat actions can include attack, charge, guard (such as a cat waiting at a mouse hole), run, and sprint. Like nonintelligent creatures, they do not use battle tactics or attack options.

**Semi- (2–4)**

The creature has some ability to assess risks and rewards and is smart enough to delay an attack until a good opportunity presents itself. It is capable of learning something about its opponents' abilities. A lion or tiger, for example, knows enough to stay downwind of creatures that depend on scent and to stay behind creatures that depend on sight. With experience, the creature probably can learn to recognize missile and melee weapons and to direct attacks at lightly armed characters. If the creature has encountered missile weapons, it learns to recognize the value of cover. Otherwise it is limited to attacking, charging, guarding, running, and sprinting.

### Low (5–7)
The creature relies more on experience and reasoning than instincts. It is generally aware of risks and rewards. It can make simple plans and can employ any attack option that it is equipped to use. For example, a low intelligence creature can employ missile weapons, but only if they are available. Most battle options are still beyond the creature's grasp, but it can make unarmed attacks, ride a mount, and maybe join a spear hedge or shield wall (see Chapter One).

### Average–Very (8–12)
The creature might occasionally act from impulse, but generally relies on reasoning and observation to make decisions, and it can think beyond the obvious. The creature has a good appreciation of risks and rewards, but this is limited by its experience. It is capable of planning and organizing its actions and coordinating them with others. The creature can use any of the attack options, battle tactics, and combat options presented in Chapter One.

### High–Exceptional (13–16)
The creature generally is not impulsive. In battle, it thinks ahead and considers how its current actions might affect its options in the future. The creature is very flexible, and can alter its tactics to fit an unforeseen situation. The creature can use any of the attack options, battle tactics, and combat options presented in Chapter One.

### Genius–Supra Genius (17–20)
The creature is very insightful and almost never impulsive. It plans for the future and always carefully measures risks against rewards. Any scheme or subterfuge it employs is apt to be hard to detect and very deadly.

### Godlike (21+)
The creature can make correct deductions from incomplete information. It is invariably knows the most appropriate action to take in any situation. (Though it might not always take it; godlike beings are hard to understand.) To reflect the creature's superior intellect, the DM might decide to make the PCs declare their actions before deciding what the creature does in a given combat round.

## Alignment
A creature's beliefs and expectations can influence the way it fights, especially if it has at least average intelligence.

### Chaotic
The creature tends to think of itself. It does not respond well to leadership unless intimidated or persuaded to follow orders. Its tactics are usually intended to improve its individual effectiveness and survival, not the group's.

Chaotic creatures are apt to seek quick and dramatic results and combat, and are likely to employ called shots, offensive disarms, and shield rushes.

### Neutral

The creature is as likely to consider the needs of the group as much as itself, so long as it can serve one without compromising the other. The creature responds moderately well to leadership, so long as it does not feel its needs are being subordinated to the group's. The creature has no great desire for individual glory.

Neutral creatures are apt to seek ways to restrict an opponent's options and to counter opposing actions, and are likely to employ parries, blocks, pull/trips, and defensive disarms.

### Lawful

The creature tends to think of its group. The creature responds well to leadership, providing it is not inept, ineffective, or unnecessarily harsh. The creature generally functions as a cog in a larger machine, promoting a common goal it shares with its companions.

Lawful creatures are apt to choose tactics that rely on the group, such as shield walls, pike hedges, and massed overbearing attacks.

## Morale

A creature's morale score measures its ferocity, perseverance, and courage. Though most frequently used to decide if a creature runs away or surrenders during a fight, morale also can serve as guideline for deciding the creature's general willingness to fight.

### Unreliable–Unsteady (2–7)

The creature is most likely to deal with a threat by running away or hiding unless it has been trained for war or it has been cornered. If forced to fight, the creature does not purposefully do anything that exposes it to increased danger.

### Average–Steady (8–12)

The creature is not so skittish as to flee at the first sign of a threat. If it does not wish to fight, it is likely to bluff or stand its ground before taking flight. The creature is not aggressive and is unlikely to make an unprovoked attack unless it is hungry or otherwise stands to gain from a fight. It is unlikely to make a frontal attack when outnumbered or outsized; if sufficiently motivated, the creature might wait for an opportunity to attack when it has an advantage over an otherwise superior group. Once a fight begins, the creature is willing to try almost anything that will improve its chances for victory, provided the risk does not exceed the potential reward.

### Elite–Champion (13–16)

The creature is aggressive and generally tries to bluff its way out of fights it does not want. If the bluff fails, the creature is more likely to fight than run away. If faced with a superior force, it almost always looks for ways to even the odds before attacking. After a fight begins, the creature is willing the undertake considerable risks to help insure a victory.

### Fanatic–Fearless (17+)

The creature is very aggressive. It does not bluff, preferring to attack when threatened. Once engaged in a fight, it seldom retreats. It is willing to take almost any risk to gain a

victory.

## Creature Types

A creature's physical characteristics also play a role in how it acts on the battlefield. If you are using Critical Hits System II from Chapter Seven, a monster's body type also determines what critical hits chart to use and what kinds of special damage can affect it.

Many basic types of creatures are described below, but you must use your own judgement and common sense when deciding a monster's type. Study the creatures statistics and description. If there is a picture, study that, too.

## Humanoid

Humanoid creatures have two arms, two legs, and a head. The creature walks upright and generally uses tools and weapons. In most respects, the creature functions just like a player character, and is subject to all forms or critical hits and their special effects.

### Human

The creature is Man-sized or smaller: humans, dwarves, elves, orcs, kobolds, hobgoblins, and thri-kreen are examples of human type creatures.

**Critical Hits:** Use the humanoid charts. If the creature has multiple arms or legs, the limbs actually involved in the combat or closest to the attack are the most likely to be struck. Roll 1d6; a roll of 1–5 indicates that the active limb is struck, and a roll of 6 indicates the inactive limb is struck. If the creature is employing all its limbs, there is an equal chance for any limb to be struck. For example, an unarmed thri-kreen is fighting with all four claws and its opponent rolls a left arm critical. The two arms on the thri-kreen's left side are equally likely to be hit (roll 1d6 to determine which one). However, if the thri-kreen was using a weapon in one right hand, a shield in one left hand, and holding equipment in its remaining two hands, a left arm critical would most likely strike the shield arm.

**Combat:** Human types use attack options, battle tactics, and combat options as their intelligence ratings allow.

### Ogre

The creature is larger than Man-sized, but not Huge: ogres, gnolls, bugbears, minotaurs, and quaggoths are examples of ogre type creatures.

**Critical Hits:** Use the humanoid charts.

**Combat:** Ogre types use attack options, battle tactics, and combat options as their intelligence ratings allow. They often employ tactics that exploit their superior size and reach, such as moving back out of melee range to force an opponent to close again while the creature guards.

### Giant

The creature is Huge or larger: the various races of giants, giant-kin, titans, and some genies are examples of giant type creatures.

**Critical Hits:** Use the humanoid charts, but most opponents are forced to attack low (see Chapter Six).

**Combat:** Most giant types are fond of overrunning opponents, especially if they are two

or more size classes larger (see Chapter One); a giant is likely to create a great deal of havoc when overrunning an entire formation of dwarves. Overrunning can be a dangerous tactic, however, and intelligent or experienced giants usually only try it early in a battle, when they have enough hit points to withstand the attacks of opportunity they are likely to provoke.

### Humanoid Flyer

The creature can be any size, but has wings sprouting from its back: pixies, harpies, gargoyles, and pit fiends are examples of humanoid flyer type creatures.
**Critical Hits:** Use the humanoid charts. Arm hits can strike the wings instead; for frontal attacks roll 1d6; 1–4 means an arm hit, 5–6 a wing hit). Reverse the odds for rear attacks. Arm hits from flank attacks have equal chances of hitting an arm or a wing.
**Combat:** A flyer's tactics usually emphasize mobility. If the creature has a ranged attack, it stays out of reach and attacks from a distance. In melee, the creature tends to swoop down for flank or rear attacks, then flies out of reach (using the withdraw option at half its flying speed).

### Troll/Ape

The creature can be any size, but relies on natural weaponry: trolls, gorillas, and umber hulks are examples of troll/ape type creatures.
**Critical Hits:** Use the humanoid charts; however, a troll/ape's long arms can be used for locomotion if necessary. Reduce movement penalties from leg hits by one step: a no-move result limits the creature to a 1/2 move, a 1/2-move effect reduces the creature to a 3/4 move, and a 1/4 effect is ignored. Trolls and other creatures that regenerate ignore grazes. Points regenerated count as magical healing for reducing bleeding effects. For example, a troll suffers major bleeding for only two rounds before it is reduced to minor bleeding (because it regenerates 6 hit points in that time). After two more rounds, the minor bleeding stops.
**Combat:** These creatures are fond of overruns (if their size allows) and wrestling attacks (they can bite while wrestling). Their powerful claws are treated as weapons one size larger than normal (see below).

## Animal

Animals are creatures with four limbs of some kind and sometimes a tail. They employ natural weaponry and usually walk on four legs, fly, or swim. An animal's size has no effect on its type.

### Avian

The creature has two forelimbs adapted for flying (sometimes for swimming) and two hind limbs for walking or roosting: birds, bats, rocs, and perytons are examples of avian type creatures.
**Critical Hits:** Use the animal charts; treat foreleg hits as wing hits.
**Combat:** Avians tend to swoop to the attack, then break away, just as humanoid flyers do. Avians attacking from a dive are considered to be charging and inflict double damage with their claws.

### Quadruped
This is the most common animal type; examples range from house cats to elephants.
**Critical Hits:** Use the animal charts. If the animal has no tail, reroll any tail hit.
**Combat:** Large quadrupeds frequently charge and overrun their opponents. Smaller quadrupeds prefer to attack from surprise.

### Serpent
The creature has a head and a long, legless body. Snakes, nagas, and eels are examples of serpent type creatures.
**Critical Hits:** Use the animal chart; most leg hits are treated as tail hits.
**Combat:** Many serpents can employ a constriction attack. Treat constriction attacks as wrestling attacks, except that there is no attack of opportunity and the attack must hit the opponent's normal Armor Class. A creature trapped in the serpent's coils is considered grappled and locked (see Chapter Five) and can use the normal wrestling procedure to get free.

### Fish/Whale
The creature has a long, streamlined body with flippers or fins for direction control.
**Critical Hits:** Use the animal charts. Foreleg hits (location rolls of 1 or 2) can affect pectoral fins or flippers. Rolls of 3–5 affect the tail. Movement penalties from fin or flipper hits apply only if the animal changes direction or makes a melee attack during the round. The animal relies on its tail for movement and suffers movement penalties from tail criticals with severities of 9 or more.
**Combat:** These creatures often employ avian tactics, using their superior swimming speed to deliver quick attacks and then move out of reach.

## Monster
Monsters come in all shapes and sizes. The basic monster critical hit charts assume four limbs, a head, and a tail; however, it is often necessary to use two different charts to assign a hit location.

### Amorphous
The creature has a fluid body with no obvious limbs; the creature often can alter its shape freely and can form limbs or appendages as needed. Slimes, oozes, jellies, and gelatinous cubes are examples of amorphous type creatures.
**Critical Hits:** Amorphous creatures are immune to critical hits.
**Combat:** Amorphous creatures threaten everything adjacent to them. Fortunately, most of them are nonintelligent and cannot tactically exploit this ability. Amorphous creatures have no flank or rear spaces.

### Plant/Fungi
The creature has a fibrous body with no internal skeleton and few or no internal organs. The creature often has vines or branches instead of arms and roots or tendrils instead of legs. Myconids, treants, and shambling mounds are examples of plant/fungi type monsters.
**Critical Hits:** Use the humanoid critical chart. Abdomen and torso hits affect the trunk or

stem. If the creature has no head, head hits affect the trunk instead. Arm hits affect the creature's branches or grasping appendages. Leg hits affect roots (if the roots are exposed) or the trunk. The creature ignores crush results, and all bleeding is automatically reduced by one step.
**Combat:** Plant/fungi creatures can be very difficult to detect when lurking in normal foliage. When resolving overbearing attempts, the creature gets the bonus for having more than four legs (it's pretty difficult to push a treant down). A plant creature with grasping vines (such as a choke creeper) can make wrestling attacks without provoking an attack of opportunity; such attacks are resolved against the creature's normal Armor Class, not AC 10. A creature caught in a grasping tendril is considered grappled and locked and can use the normal wrestling procedures to get free.

## Dragon

The creature has a scaly body, a head, two or four legs, and a pair of wings sprouting from its back. Dragons, pseudo dragons, wyverns, and ki-rin are examples of dragon type creatures.
**Critical Hits:** If the dragon is the same size or smaller than the attacker, use the monster charts. If the dragon has only two legs, foreleg hits strike the wings. If the dragon has four legs, foreleg hits from frontal attacks strike the wings on a roll or 5 or 6 on 1d6. Reverse the odds for rear attacks (wings are struck on a roll 1–4). Foreleg hits from flank attacks have equal chances of hitting an arm or a wing.

If the dragon is one or two sizes larger than the attacker, facing determines the chart to use. Frontal attacks use the humanoid charts, treating foreleg hits as wing hits; leg hits strike the forelegs. Flank attacks use the monster chart, treating foreleg hits as wing hits. Rear attacks use the humanoid chart, treating foreleg hits as wing hits and head hits as tail hits. If the dragon is three or more size classes larger than the attacker, it is immune to special effects from critical hits, though it still suffers double or triple damage.
**Combat:** Dragons' tactics emphasize mobility. They tend to soften up the opposition with their breath weapons and special attacks before closing to conduct melee. Very large dragons like to overrun spellcasters and other physically weak characters before engaging more formidable characters in physical combat.

## Radial

The creature's body is essentially circular, with a central head and torso surrounded by limbs. Octopi, xorns, grell, and beholders are examples of radial type creatures.
Critical Hits: Use the monster charts, treating head hits as torso hits. Any foreleg hit strikes one of the limbs the creature is currently employing in combat. Any tail or hind leg hit strikes a limb not involved in combat. If the creature is employing all its limbs in combat, any leg or tail hit is treated as a foreleg hit. If the creature's limbs have no joints (an octopus's tentacle, for example), the creature ignores movement penalties from knee and hip hits.
**Combat:** A radial creature with sensory organs on its flank or rear negate the usual bonuses for flank or rear attacks. If the creature also has limbs in its flank or rear sides it threatens those squares, as well. For example, a zorn threatens every square adjacent to it with its three arms and three eyes. An intelligent radial creature might try to grab its opponent's weapons with one or two of its limbs while attacking normally with the rest.

Such grab attempts do not provoke attacks of opportunity as long as the creature is making more normal attacks than grab attacks.

### Insect/Arachnid

The creature has a chitinous body divided into two or more segments and multiple limbs. Giant insects, giant spiders, giant scorpions, and giant crayfish are examples of insect/arachnid type creatures.

**Critical Hits:** Use the monster charts. If the creature has no tail, treat tail hits as abdomen hits. Foreleg hits affect the creature's claws or fighting limbs. Hind leg hits affect one of the creature's other limbs. The effected limb is the one closest to the attacker; if several limbs are equidistant, roll randomly to see which limb is effected. The creature's movement is unaffected by damage to the legs as long as it has at least two undamaged legs on each side of its body. For example, a giant spider can suffer knee hits to two of its left legs and suffer no movement penalties. If it suffers damage to a third leg on the left side, however, its movement is affected. All bleeding results are automatically reduced by one step.

### Worm

The creature is similar to a snake. It has a long, sinuous body and may or may not have limbs. Giant slugs, giant centipedes, and purple worms are examples of worm type creatures.

**Critical Hits:** Use the monster charts. Ignore the effects of leg hits unless the creature has hands or claws it can use in combat; in such cases, a forelimb hit (a roll of 1 or 2) strikes the fighting limb. All other leg hits are treated as tail hits.

**Combat:** Very large worm type creatures often can swallow victims whole. If the creature scores a critical hit, the victim takes double damage and is swallowed whole instead of suffering a special effect.

### Centaur

The creature has an animal (usually quadruped) body and a humanoid forepart with a head, torso, abdomen and arms. Centaurs, wemics, and driders are examples of centaur type creatures.

**Critical Hits:** Use the humanoid charts for frontal attacks. Leg hits affect the creature's animal forelegs and arm hits affect the creature's humanoid arms. Use the monster chart for flank and rear attacks. If the creature has no tail, treat tail hits as abdomen hits.

**Combat:** Centaur type creatures armed with missiles function as unmounted archers. Some centaurs types might use a weapon to parry, block, or disarm while attacking with their forelimbs.

### Merman

The creature has a fish or snake body and humanoid or animal foreparts. Mermen, sea lions, and yuan-ti are examples of merman type creatures.

**Critical Hits:** Use the humanoid or animal chart for frontal attacks, re-rolling leg hits. Use the monster chart for flank and rear attacks. Foreleg hits strike the creature's arms or forelimbs. Rolls of 3–5 strike the tail. The animal relies on its tail for movement and suffers movement penalties from tail criticals with severities of 9 or more.

### Lizard Man/Lycanthrope

The creature has a generally humanoid body shape but also has a tail. Lizard men and lycanthropes in hybrid form are examples of lizard man/lycanthrope type creatures.
**Critical Hits:** Use the humanoid chart for frontal attacks. Use the monster chart for flank and rear attacks. Forelimb hits strike the creature's arms.
**Combat:** These creatures generally function as humanoids in combat. Many of them also can bite while attacking with a weapon; bite attacks are made on the creature's base initiative phase and can be made simultaneously with a weapon attack.

### Other

The creature defies easy classification. This type includes all creatures that lack large limbs and well-defined body areas, and creatures that are too small to present well-defined target areas. Normal insects, crawling claws, and urchins fall into this category.
**Critical Hits:** Use the monster chart. Treat all critical hits as abdomen hits.
**Combat:** These creatures usually employ specialized attack forms based on their unique physical characteristics. Creatures with ranged attacks usually use them in favor of melee attacks.

### Undead

The creature is dead; it can be an animated or transformed corpse, such as a skeleton, ghoul or vampire, or a physical manifestation of a dead creature's spirit, such as a ghost, wraith, or spectre.
**Critical Hits:** Use the chart appropriate for the creature's body type; most undead are humanoid. Undead are immune to most critical hits. They completely ignore grazed, struck, and injured results. They suffer only the movement penalties for crushed, shattered, and destroyed results (they ignore attack penalties and hit point reductions). Undead ignore bleeding effects. Incorporeal undead ignore critical hits altogether, but still suffer double damage.
**Combat:** Most undead eagerly enter melee combat. Mindless undead simply attack. Intelligent undead hope to make full use of their touch-delivered special attacks.

### Golem

The creature is an artificial construct or magically animated object. The various golems and most animated objects are examples of golem type creatures.
**Critical Hits:** Use the chart appropriate for the creature's body type; most golems are humanoid. Golems are hard to hurt; reduce all severity rolls by two (treat results of 0 or less as no effect). They completely ignore grazed, struck, and injured results. They are immune to bleeding. They suffer only the movement penalties for crushed, shattered, and destroyed results (they ignore attack penalties and hit point reductions).
**Combat:** Most golems are mindless. If left on their own, they move directly into melee, attacking whatever creatures they can reach. Golems under another creature's direction might employ more sophisticated tactics, depending on the directing creature's ability to formulate plans and communicate them effectively.

## Attack and Armor Types

A monster's claws and teeth can inflict critical hits just as a

normal weapon can. A monster's natural defenses also help it resist attacks just as magical armor or a high Dexterity score does.

## Attacks

To determine the type and severity of a critical hit inflicted by a monster, consult the table below:

| Form | Type | Size |
|---|---|---|
| Bite | P/S* | Same as Creature |
| Butt | B | Same as Creature |
| Claw | S | Creature –1** |
| Fist | B | Creature –1 |
| Horn | P | Same as Creature |
| Hoof | B | Creature –1 |
| Tail | B | Same as Creature |
| Sting | P | Creature –1 |
| Wing | B | Same as Creature |

**Form:** What the creature uses to deliver the attack.
**Type:** The kind of attack the creatures delivers. The three categories are the same as the categories for weapons—piercing (P), bludgeoning (B), and slashing (S).
**Size:** How large the weapon is for purposes of determining severity. Creature –1 means the attack is treated as one size class lower than the creature. For example, a claw attack from a bulette is treated as a Medium weapon for purposes of critical severity.

*Treat as a slashing attack unless the target is immune to slashing weapons or only the creature's fangs are large enough to inflict damage. For example, snake and spider bites are piercing attacks.
**Claw attacks from troll/ape type creatures are treated as the same size class as the creature for severity purposes.

## Armor

A creature subjected to an attack that ignores armor, such as an overbearing attempt, a short-range shot from a crossbow, or a shot from a bombardment engine, might be entitled to an adjustment to its effective Armor Class of 10 due to Dexterity or magic.

Divide a creature's land movement rate by 9 or its flying or swimming movement rate by 12 to get its effective Dexterity bonus against such attacks. Drop fractions. If the creature is entitled to multiple Dexterity bonuses, it gets only the best one. For example, a light horse, MV 24, is entitled to a –2 Armor Class adjustment.

Any creature with an Armor Class of less than 0 is entitled to a magical Armor Class adjustment equal to its negative Armor Class. For example, a great wyrm red dragon has an Armor Class of –11. Its effective AC against a short-range crossbow shot or wrestling attack is –3 (there is a –11 magical adjustment and a –2 Dexterity adjustment).

*For example, an aarakocra is a human-type creature. It uses the humanoid critical hit charts. Arm hits with a severity of 8 or more also make flying impossible and force a*

*crash landing if the aarakocra is in flight. An aarakocra attacks with two claws, which are treated as small slashing weapons. The creature has an effective –3 Dexterity adjustment to Armor Class due to its flying speed.*

*A beholder is a radial type creature. It uses the monster critical hit charts. Generally, opponents must attack the creature's central body and must make called shots to affect the creature's eyestalks and central eye. However, foreleg/wing and hind leg critical hits strike the creature's eyestalks and head critical hits affect the creature's central eye. The creature's bite is treated as a size M slashing and piercing attack.*

*An adult copper dragon is a dragon-type creature. Frontal and rear attacks use the humanoid critical hit tables; flank attacks use the monster critical hit table. Because the dragon is Gargantuan, it is immune to special effects from critical hits inflicted by size M and smaller attacks. The dragon's bite is treated as a Gargantuan slashing/piecing attack. The dragon's claws and kicks are treated as Huge slashing attacks. The dragon's tail slap and wing buffets are treated as Gargantuan blunt attacks. The dragon has a combined magical and Dexterity adjustment to its AC of –5, –2 due to its flying movement rate and –3 due to its standard Armor Class.*

# Foreword

When I first began playing the AD&D® game (more years ago than I care to remember), the system seemed to offer rules for every conceivable eventuality—indeed, the books contained more systems and procedures than any player or DM could possibly need.

It didn't take long to disabuse myself of that notion. As I recall, it was the first time the players asked me, the DM, if their characters could swim. How well? How fast, and for how long? And if their characters couldn't swim, could they float for awhile? And how many gold pieces could you carry before you sank like a stone?

Many of those questions have been subsequently answered in accessories and, most significantly, in the AD&D 2nd Edition game rules. However, for every situation defined by rules, and every new procedure introduced to the game, more questions were asked by creative (dare I say 'devious'?) players, and more systems were improvised by every DM.

It would nice the say that the Player's Option™: Skills & Powers system will put all that to rest—but we'd all recognize that as an exaggeration, to say the least. Nor would that be a realistic objective. Part of adventure gaming is the discovery of the unknown and the unexpected, and we'll always need a referee to oversee this.

However, I believe that this book adds a lot to the game, and I hope you will agree that it does so without increasing the game's complexity. The word 'option' is in the title for a very good reason: We have attempted to add to the number of choices available to players and DMs alike, without adding to the complications of resolving these choices.

I sincerely hope that you'll decide that we have succeeded.

Doug Niles, April 25, 1995

All things in nature must evolve in order to keep pace with their surroundings. Organisms must adapt as their environment changes if they wish to thrive. This also is true in gaming. The AD&D game is one of the oldest role-playing rules systems around. And it's a great system; its longevity is proof enough of that. But in the time that the AD&D game has existed, gaming itself has evolved, and so has the game. The original AD&D game evolved from the D&D game in the late 1970s. Then, in the early '80s, the Unearthed Arcana book, the first major evolution of the AD&D game, was published. More evolutions followed, culminating in 1989 with the publication of the AD&D 2nd Edition game rules. Now, the Player's Option books (and the DM™ Option: High-level Handbook to be published later this year) represent the latest evolutions of the AD&D game.

The central concept behind the Player's Option books is player choice. We wanted to expand the AD&D game in ways that had never been explored before. We hoped to offer the players and DMs of the AD&D game more options (there's that word again) than

they ever had. We wanted to give those who play the AD&D game more choices, more control over their game and their characters than was previously considered possible. We hope we've succeeded, but in truth, that decision is not in our hands. You, the DMs and players of the game will have the final say in this matter.

We hope you use these rules in your games. We also hope you'll give us your feedback on these rules and the AD&D games you play using them, thus insuring that the game will continue to evolve.

Me, I'm just happy to have had an impact on the game that has influenced my life for so many years.

Dale Donovan, April 26, 1995

# Chapter 1:
# Character Points

Introduction Welcome to Player's Option *Skills & Powers*, the companion to the Player's Option *Combat & Tactics* book. This volume unveils new role-playing possibilities without increasing the complexity of the AD&D® game. Just as the *Combat & Tactics* book widened the scope of encounters, this tome expands character creation. Together, these books heighten players' involvement with their characters, the campaign, and the AD&D game as a whole. Use what you like, change what you don't like, and above all have fun!

The chapters in this book are building blocks for constructing Player's Option characters. AD&D game players will find several familiar terms, such as kits. But these kits are different than those presented in supplements such as *The Complete Fighter's Handbook*. Instead, Player's Option kits are packages coupled with special skills that add depth and flavor to characters. There are other changes and additions, and these will unfold as you read this book. One such change is selecting character abilities using a character point system. Here's an overview of what character points do:

Character Points Every character begins play with a number of character points determined by his race and class. Further, every time a character advances a level, he gains 3 to 5 character points. The character point system is a new concept for the AD&D

game. The points serve numerous purposes, and these are summarized below. Note: This book assumes that a typical campaign will award 3 CPs per level, and that most characters will use one of these during play (see below). Larger character point awards will result in a higher-powered campaign, but if both DM and players agree, that's fine—enjoy yourselves.

- Character points are used to purchase weapon proficiencies. New weapon proficiencies usually cost 2 or 3 character points. This is discussed in chapter seven.
- Similarly, character points are used to purchase nonweapon proficiencies. Purchasing a nonweapon proficiency usually costs from 2 to 5 points. Also, character points are used to purchase traits, and bonus character points are awarded for taking disadvantages. This is discussed in chapter six.
- Points can be used to increase proficiency scores. One character point improves a proficiency score by a +1 permanent bonus. For example, A wizard with an Intelligence of 17 has a spellcraft proficiency score of 11. The character will successfully use this proficiency on a d20 roll of 11 or less. The wizard could improve this score from 11 to 12 by spending 1 character point. This is covered in chapter six.
- Points can be spent to acquire racial abilities for demihumans, such as infravision or the elves' attack bonus with swords or bows. Racial abilities cost 5 to 10 character points. Humans have no racial abilities and can spend their points in other ways. This is discussed in chapter three.
- Player characters can spend points on acquiring class abilities, such as the paladin's capacity to *lay on hands*. Each class ability usually costs 10 character points. There is more information about this in chapter four.
- Priests and wizards can spend points to gain extra spells. Only one additional enchantment per level can be purchased this way, and the cost is 2 points plus 1 point per level of the spell purchased. Priests and wizards cannot purchase higher level spells than they can cast. Look to chapters four and eight for more information on magic and character points.
- Points can be spent to improve a character's roll for additional hit points when advancing a level. For every 2 character points spent, the player can roll one additional die when determining new hit points, taking the highest number from the dice rolled.
- Character points also can be used in the course of play, not just during character creation or between adventures. During a game session, a player can spend saved points to give his character a second chance to accomplish a feat, or to reroll a failed attack, saving throw, proficiency check, or even a low damage roll.

For example, Leon chooses to save 2 character points after creating his fighter. During a game, Leon's fighter tries to strike an ogre. The attack roll fails. However, the ogre strikes the fighter, wounding him badly. In the next round, fearing for his fighter's life, Leon declares that he will spend a character point if his attack misses. The roll indeed fails, and Leon now can spend a point and reroll his attack. If this attack roll succeeds, the first roll is ignored and Leon's fighter has struck the ogre. If the reroll failed, Leon's character still misses and play continues.

Regardless of any reroll's success, any character points spent are lost. Players can continue to spend points as long as they declare so before rolling any dice—and as long as they have points to spend. This mechanic allows characters a second chance to accomplish important tasks or to achieve feats vital to the story.

More information about character points can be found throughout this volume. The following section discusses establishing character statistics.

## Character Generation

The *Player's Handbook* details several methods for determining a character's six ability scores. These are summarized below, in addition to a few new ideas that allow players more control over their characters. DMs should review all the options and choose one for their campaign so that all characters are created using the same method.

The six systems of character creation from the *Player's Handbook* generate different types of heroes. Methods I and III yield characters with few scores of 15 or above. These methods are best for campaigns in which the heroes arise from the common people. These characters usually have average ability scores, and are often less capable of amazing feats. Low-fantasy or low-magic campaigns with a grim or gritty tone are the perfect settings for such characters.

However, if epic story lines filled with rousing adventure and swashbuckling action are preferred—and the characters are expected to perform three miraculous quests before breakfast—higher ability scores are called for. Characters generated using Method IV are particularly suited for this type of campaign. The other generation methods give varying results.

**Method I:** Roll 3d6 for each of a character's six ability scores and record the dice total in the following order: Strength, Dexterity, Constitution, Intelligence, Wisdom, and Charisma.

**Method II:** Roll 3d6 twice for each ability. Choose the highest total of each pair of rolls and record the scores in the order: Strength, Dexterity, Constitution, Intelligence, Wisdom, and Charisma.

**Method III:** Roll 3d6 six times, noting each total. Players place the totals in the abilities of their choice.

**Method IV:** Roll 3d6 12 times and note the totals. Players can choose the six highest totals and assign those six to abilities in any order they want.

**Method V:** Players roll 4d6 for each ability score and select the three highest numbers. Then the numbers are assigned to characters' abilities as desired.

**Method VI:** All six abilities begin with a score of 8. The player has an additional 7d6 to divide among those scores. All the points from a d6 must be applied to one ability score. Scores of 18 are possible only if the total of one or more dice, added to the base of 8, add up to exactly 18. Scores higher than 18 are not possible—except in some campaigns, such as the Dark Sun® setting.

**Example:** Leon wants to use Method VI to create his character. His 7d6 rolls are: 5, 1, 5, 1, 3, 3, and 4. Remember, his PC already has the following base points as well:

Strength 8
Dexterity 8
Constitution 8
Intelligence 8
Wisdom 8
Charisma 8

Leon wants to create a cleric, who should be wise but also capable of defending himself well in combat. Leon chooses to place the points he rolled on the 7d6 as such:

| | |
|---|---|
| Strength 8+5 | =13 |
| Dexterity 8+4 | =12 |
| Constitution 8+3 | =11 |
| Intelligence 8+3 | =11 |
| Wisdom 8+5+1 | =14 |
| Charisma 8+1 | =9 |

Leon need not add any of his 7d6 results to an ability score if he is willing to accept an 8 in one or more abilities.

## New Systems

Here are four new methods of determining a character's six ability scores.

**Method VII:** Each player has 75 points to divide among a character's six ability scores. No score can be lower than 3, and none can be higher than 18. Also, all racial maximums and minimums must be observed. When all six abilities have numbers assigned, double-check the math by adding the ability scores together. They should total 75. If not, there is a mistake somewhere. Start again.

Leon wants to create a wizard character using this system, and divides his 75 points as follows:

Strength 9
Dexterity 15
Constitution 15
Intelligence 18
Wisdom 9
Charisma 9

**Method VIII:** The player assigns 24d6 among a character's six ability scores. Each ability score must have at least 3d6, but no more 6d6, devoted to it. If the player desires a character with a high Strength, he could devote 4d6, 5d6, or even 6d6 to that ability. Next, the appropriate number of dice are rolled for each ability, and the total of the three highest results become the score. Any and all other dice rolled for that ability are discarded.

For example, Leon wants to create a rogue character using this method. He decides to divide his 24d6 as follows:

Strength 4d6
Dexterity 6d6
Constitution 3d6
Intelligence 4d6
Wisdom 3d6
Charisma 4d6

Leon rolls the number of dice he assigned to each ability and records the results:

Strength **5,** 2, **5, 4**
Dexterity **6, 5,** 3, 1, 3, **4**
Constitution **6, 1, 2**
Intelligence **5, 4, 3,** 3
Wisdom **4, 4, 2**
Charisma **6, 4,** 2, **4**

Taking the three highest results from each set of dice and discarding the results of the other dice, Leon's rogue character has the following ability scores:

Strength 14
Dexterity 15
Constitution 9
Intelligence 12
Wisdom 10
Charisma 14

**Method IX:** A player rolls 2d6 to randomly determine the number of points that can be divided among his character's six abilities and the maximum score of each ability. No ability score can be lower than 3. The 2d6 result is found on the chart below.

## Point Generation

| 2d6 roll | Points | Maximum |
|---|---|---|
| 2 | 68 | 18 |
| 3 | 70 | 18 |
| 4 | 72 | 17 |
| 5 | 72 | 18 |
| 6 | 74 | 17 |
| 7 | 74 | 18 |
| 8 | 76 | 17 |
| 9 | 76 | 16 |
| 10 | 78 | 16 |
| 11 | 78 | 15 |
| 12 | 80 | 15 |

For example, Leon wants to create a character using this method. His 2d6 result is a

4. Consulting the chart, Leon notes that he has 72 points to work with, and no ability scores can exceed 17 (excepting racial bonuses, etc.) Leon is now free to assign his 72 points.

**Method X:** Players use character points to create their adventurer's statistics. A player divides 75 points among his PC's Strength, Intelligence, Wisdom, Dexterity, Constitution, and Charisma scores. Fighters can purchase 10 points of exceptional Strength for each extra character point spent. For example, it costs 21 of the 75 character points to give a fighter an 18/30 Strength (18+3=21). Racial minimums and maximums must be observed.

## Character Backgrounds

Now that the character's numbers have been generated, it's time to flesh out a background. This Player's Option book introduces several new elements to developing characters' histories and personalities. Two of these elements, traits and disadvantages, are detailed in chapter six. Briefly, traits are minor benefits or advantages that players can purchase with character points. These include: internal compass, keen eyesight, light sleeper, lucky, and precise memory.

Disadvantages are minor hindrances or inconveniences that yield bonus character points. Some disadvantages are: allergies, clumsy, colorblind, greedy, lazy, unlucky, and a number of phobias. Players might want to look ahead to the traits and disadvantages section of chapter six to get an idea of which traits and disadvantages they want to work into a character's background.

## Background Events

Another new aspect of character creation is determining the events that turned a player's character into an adventurer.

Below is a list of 20 sample events that might have sent a character on a life of adventure. After all, every character needs some reason to live such a dangerous life. The list can be expanded, and details can be added about each event. Recommended nonweapon proficiencies that could fit with the listed background event are included for reference and inspiration. Roll 1d20 to randomly determine a background, or choose one that suits the character.

**Table 1: Background Events**

| 1d20 | Event |
|---|---|
| 1 | Accused of a crime |
| 2 | Apprenticeship |
| 3 | Enslaved |
| 4 | Exiled |
| 5 | Failed business venture |
| 6 | Fell in love |
| 7 | Fled a disaster |
| 8 | Found or stole a valuable item |
| 9 | Homeless |
| 10 | Ideological differences |
| 11 | Joined the circus |

| | |
|---|---|
| 12 | Kidnapped |
| 13 | Killed someone |
| 14 | Made a powerful enemy |
| 15 | Orphaned |
| 16 | Ran away from home |
| 17 | Reformed |
| 18 | Touched by magic |
| 19 | Went to sea |
| 20 | Witnessed a crime |

**Accused of a crime:** The character is publicly accused of a crime he did not commit. It might be a case of mistaken identity, or the character could have been framed for a crime. The character was forced to flee and become an adventurer rather than face certain punishment. *Suggested NWPs:* Any.

**Apprenticeship:** The character entered into an apprenticeship—an arrangement where a practiced craftsman taught him a skill in exchange for money or services. Apprenticeships need not be limited to mundane trades; characters can enter into apprenticeships with other adventurers. Many a fighter began his career as a mere squire, and more than one young person with a talent for the Art signed with the local hedge wizard. *Suggested NWPs:* Vocational skills such as animal handling, animal training, blacksmithing, boat piloting, cobbling, engineering, gem cutting, sculpting, weaving, and so on. Adventuring skills such as blind-fighting or spellcraft also might be learned.

**Enslaved:** The character was a slave or indentured servant. The details of the character's escape are left to the player and the DM. It is likely such a character will carry a grudge against those who owned him or will strive fervently to free other slaves. *Suggested NWPs:* Survival, hunting, fishing, foraging, bowyer/fletcher, and weaponsmithing.

**Exiled:** For some reason—bad behavior, an unacceptable profession, an incompatible alignment, shady associates, etc.—the character is banished from his family. Or perhaps the character is cast out from the society in which he was raised. The offense could be a breach of some tribal or community law or religious taboo. With nowhere to turn, the character is forced to live by his wits. The PC might develop many skills, including thieving abilities. *Suggested NWPs:* Fire-building, fishing, tracking, hunting, healing, herbalism, set snares, and survival.

Failed business venture: Perhaps the character was a cobbler and opened a shoe store. Maybe he owned a tavern, was a brewer, or made a living painting portraits. No matter the character's profession, his business venture failed and he had to pursue another line of work—as an adventurer. *Suggested NWPs:* Any appropriate to the character's previous profession.

**Fell in love:** The character becomes attracted to someone, and their relationship propels the character toward an adventuring career. Perhaps the love interest is an adventurer, whom the character accompanies on quests. The love interest might be outside the character's social class, and either or both families could protest or attempt to end the courtship. The outcome of the romance is left to the player and the DM. Questing to find a lost love or to avenge the loss of one can make for powerful role-playing and exciting adventures. *Suggested NWPs:* Dancing, etiquette, gaming, musical instrument,

and so on.

**Fled a disaster:** The character's homeland suffered a tremendous disaster—an earthquake, flood, plague, or war. The character managed to escape, perhaps just barely. Without a home to return to, the character becomes an adventurer, maybe with the goal of preventing the spread or future occurrence of the disaster that cost his home. Or it could be he searches for loved ones lost when the disaster struck. *Suggested NWPs:* Hunting, fishing, set snares, fire-building, and survival.

**Found or stole a valuable item:** The character uncovered or stole something of value or interest to others. It could be gold; jewelry or gems; a minor magical item; a map to a dungeon, lost city, or treasure hoard; a prized horse and carriage; or a glass slipper. Whatever the item, someone wants it back. The previous owner might believe the character stole the item—whether the PC actually did. Or the owner might try to reward the observant character for recovering the item. Either way, this item can be the cause of a long-term relationship between the character and the owner. This background event also helps explain how a 1st-level rogue gained his abilities. *Suggested NWPs:* Appraising, forgery, gem cutting, heraldry, and other skills that allow the character to notice the item's true worth.

**Homeless:** The character has no place to live. Perhaps he sold the homestead to raise money for an adventuring career. Maybe his property was seized by unscrupulous means. The landlord could have foreclosed, or the land could have been confiscated by the crown for back taxes. With nothing to hold the character in one place, he sets out on a life of adventure—and, perhaps, revenge. *Suggested NWPs:* Agriculture, mining, carpentry, and local history.

**Ideological differences:** The character wasn't comfortable in the society in which he was raised. The character could be religious in an agnostic culture, lawfully-inclined in a chaotic society, or disgusted by his homeland's evil practices. One example of the latter is Drizzt Do'Urden and his loathing of the drow culture from which he came. The character leaves his society behind to find one that suits him better. *Suggested NWPs:* Any.

**Joined the circus:** Many are fascinated by the color, excitement, and romance of a traveling troupe of performers. The character was one such person, and he left home and hearth behind to take up a life with entertainers. *Suggested NWPs:* Juggling, jumping, musical instrument, tightrope walking, throwing, singing, dancing, tumbling, and ventriloquism.

**Kidnapped:** The character was kidnapped as a young child. The kidnappers could be evil relatives, people wandering through the character's homeland, monsters, or simply strangers who want to raise a family and can't have children of their own. The details are left to the player and DM. As many kidnappers might not make effective parents, the character likely would become self-sufficient. Perhaps the character is obsessed with finding his natural parents or discovering where he is from and who he really is. *Suggested NWPs:* Survival, hunting, fishing, foraging, bowyer/fletcher, and weaponsmithing.

**Killed someone:** Either through intent or accident, someone dies and the character is accused. The authorities and the victim's relatives are after the character, and if caught, the character will likely face death. *Suggested NWPs:* Skills such as disguise, survival, and forgery would be useful in evading capture.

**Made an enemy:** The character has an eternal foe. This foe could be a business competitor, a rival for a lover, a relative overcome by jealousy, or a villain the character defeated but did not kill. Whatever the case, this enemy caused the character to flee and take up the adventuring life. *Suggested NWPs:* Any.

**Orphaned:** The character's parents died when the character was young. Causes include: sickness, war, assassination, accident, or mysterious disappearance. Parents who mysteriously vanished might be alive, but they've been gone so long that everyone, including the character, believes them lost forever. Perhaps the character was raised in a group home or in a state or religious institution. Maybe the character became a street urchin with budding thief skills. The particulars are left for the player and the DM. *Suggested NWPs:* Any.

**Ran away from home:** The character fled home early in life. Possible reasons include: boredom, wanting to see the world, breaking free from an unhappy home life, and wanderlust. Perhaps someone searches for the character, and the character believes someone is hounding him. *Suggested NWPs:* Any.

**Reformed:** The character was a criminal who decided to change his lifestyle. Perhaps he saw how his villainous acts hurt others, or maybe he became a victim, too, and decided it was time to change professions. Because the character is likely wanted in one or more communities, he had to take on the adventuring life, traveling from place to place with no plans to settle down. Such an individual might go out of his way to help those victimized by crimes or to prevent young people from pursuing criminal careers. *Suggested NWPs:* Appraising, forgery, disguise, gaming, and gem cutting.

**Touched by magic:** The character became an adventurer because something magical happened in his life. Perhaps he was ripped from his home world or plane because he unknowingly triggered a portal. Maybe he was an animal who became a man because of a wizard's experiment. Or he could have been a priest killed in a disaster and reincarnated into a new form—and he must start a career from scratch. The possibilities are endless. *Suggested NWPs:* Any.

**Went to sea:** The character is from an ocean-going community or culture and decides to seek his fortune on the waves. The many lands and peoples he encounters open his eyes to the diversity in the world. *Suggested NWPs:* Boat piloting, rope use, seamanship, navigation, and weather sense.

**Witnessed a crime:** The character saw, heard, or has evidence that a terrible crime took place. However, turning in the culprits is not possible. The culprits might be powerful in local politics, they could be foreign spies or saboteurs, or the crime may be so out of character for them that simply no one would believe the character's outrageous accusation against them. In any case, the culprits would not be made to pay for their crimes and thus would be free to take vengeance against the witness. Perhaps the player character's family sent him away to avoid retribution. Or maybe the character fled on his own to protect others. *Suggested NWPs:* To flee the criminals, the character might need to learn disguise, reading lips, running, endurance, ventriloquism, navigation, boat piloting, charioteering, and seamanship.

# Chapter 2:

# Ability Scores

Once a player character's six ability scores have been established, it's time to introduce the Player's Option concept of *subabilities*. Each standard ability score—Strength, Intelligence, Wisdom, Dexterity, Constitution, and Charisma—is divided into two subabilities. These are more specific definitions of what makes up a character. For example, a character's Strength score is divided into the subabilities of Stamina, which reflects being able to physically exert oneself over a period of time, and Muscle, which measures the raw power needed to force open locked doors or overturn banquet tables.

To determine a character's subabilities, simply double the score of the parent ability (Strength, Wisdom, etc.) and divide that total between the subabilities. The scores for the two subabilities must be within four points of each other. Only whole numbers are allowed, no subability score can be lower than 3, and—with the exception of Strength—no subability score can be higher than 18. Racial modifiers to ability scores are exceptions to this rule. Also, subabilities can exceed racial ability maximums and minimums.

For example, Leon is determining the subabilities for his fighter. The fighter's six ability scores are:

| | |
|---|---|
| Strength 16 | Intelligence 12 |
| Dexterity 14 | Wisdom 8 |
| Constitution 12 | Charisma 11 |

Leon doubles the fighter's Strength score (16x2=32), and divides the 32 points as follows: Stamina—15, Muscle—17 (15+17=32). Leon records this on his character's record sheet.

| | |
|---|---|
| **Strength** 16 | Constitution 12 |
| Stamina 15 | Intelligence 12 |
| Muscle 17 | Wisdom 8 |
| Dexterity 14 | Charisma 11 |

Subabilities are used as the base numbers for many proficiencies in the *Player's Option* system. See chapter six for more information.

Subability scores also are used in place of the six standard ability scores when ability checks are called for. For example, if Leon's fighter wanted to lift a large piece of fallen masonry that is trapping a fellow adventurer, the DM normally would call for one Strength check to see if the fighter is capable of lifting the heavy block of stone, and another Strength check to see if the fighter can hold the block aloft long enough for the other character to crawl free. Without subabilities, the fighter stands an equal chance of succeeding at both attempts.

Using the same scenario with the *Player's Option* system, the DM would call for a Muscle check (Muscle score of 17) to see if the fighter has the sheer power to lift the stone block off his friend. Assuming that roll is successful, next a Stamina check (Stamina 15) would be needed to hold the masonry in the air long enough for his friend to move out from under it.

The 12 subabilities are listed below, along with their effects on characters.

## Strength

The subabilities derived from a character's Strength score are Stamina and Muscle, and these are the only subabilities that can have scores higher than 18—provided the character is a warrior. Such characters can have exceptional subability scores, just as they can have exceptional Strength scores. If a warrior qualifies for exceptional subability scores, roll percentile dice (1d100) and consult the charts under Stamina and Muscle. A warrior with an 18 Strength score might decide to have 18s in both subabilities, at which point he would roll percentile dice for both. Or, the warrior might have a 20 Stamina or Muscle, with the other subability having a score of 16—or any combination in between.

Characters from other classes can have scores of 18 in Strength subabilities, but cannot have exceptional subability scores, and do not roll percentile dice for these subabilities.

## Stamina

The Stamina subability score determines muscle efficiency. A character with a Stamina score higher than his Muscle score may not have masses of huge muscles, but the muscles he has will be rock hard. Characters like these may surprise others—not because they can lift four hay bales at once, but because they can lift one or two at a time for 10 hours straight.

**Table 2: Stamina**

| Stamina Score | Weight Allowance |
|---|---|
| 3 | 5 |
| 4–5 | 10 |
| 6–7 | 20 |
| 8–9 | 35 |
| 10–11 | 40 |
| 12–13 | 45 |
| 14–15 | 55 |
| 16 | 70 |
| 17 | 85 |
| 18 | 110 |
| 18/01–50 | 135 |
| 18/51–75 | 160 |
| 18/76–90 | 185 |
| 18/91–99 | 235 |
| 18/00 | 335 |
| 19 | 485 |
| 20 | 535 |
| 21 | 635 |
| 22 | 785 |
| 23 | 935 |
| 24 | 1,235 |
| 25 | 1,535 |

**Weight Allowance:** This is the weight in pounds a character can carry without being

encumbered (see Encumbrance, chapter seven, for more information). Characters carrying less than or equal to their weight allowance move at their full normal speed.

**Sprinting:** Stamina is used when a character needs to make a Sprinting check.

**Fatigue:** A character's Stamina influences when he becomes fatigued.

**Proficiencies:** Stamina is the base number for proficiencies such as swimming, carpentry, and stonemasonry.

## Muscle

The Muscle subability measures the sheer power a character can exert at a moment's notice. A character with a Muscle score higher than his Stamina score will look quite strong. Males will have bulging biceps, broad chests, and wide shoulders. While females don't generate the muscle mass of males, they will have well-defined, strongly toned forms.

**Table 3: Muscle**

| Muscle Score | Att. Adj. | Dam. Adj. | Max. Press | Open Doors | Bend Bars/ Lift Gates |
|---|---|---|---|---|---|
| 3 | –3 | –1 | 10 | 2 | 0% |
| 4–5 | –2 | –1 | 25 | 3 | 0% |
| 6–7 | –1 | 0 | 55 | 4 | 0% |
| 8–9 | 0 | 0 | 90 | 5 | 1% |
| 10–11 | 0 | 0 | 115 | 6 | 2% |
| 12–13 | 0 | 0 | 140 | 7 | 4% |
| 14–15 | 0 | 0 | 170 | 8 | 7% |
| 16 | 0 | +1 | 195 | 9 | 10% |
| 17 | +1 | +1 | 220 | 10 | 13% |
| 18 | +1 | +3 | 255 | 11 | 16% |
| 18/01–50 | +1 | +3 | 280 | 12 | 20% |
| 18/51–75 | +2 | +3 | 305 | 13 | 25% |
| 18/76–90 | +2 | +4 | 330 | 14 | 30% |
| 18/91–99 | +2 | +5 | 380 | 15(3) | 35% |
| 18/00 | +3 | +6 | 480 | 16(6) | 40% |
| 19 | +3 | +7 | 640 | 16(8) | 50% |
| 20 | +3 | +8 | 700 | 17(10) | 60% |
| 21 | +4 | +9 | 810 | 17(12) | 70% |
| 22 | +4 | +10 | 970 | 18(14) | 80% |
| 23 | +5 | +11 | 1,130 | 18(16) | 90% |
| 24 | +6 | +12 | 1,440 | 19(17) | 95% |
| 25 | +7 | +14 | 1,535 | 19(18) | 99% |

**Attack Adjustment:** This modifier is subtracted from or added to d20 rolls during combat. A bonus with a + sign makes an opponent easier to hit, while a penalty with a – sign makes an opponent more difficult to strike.

**Damage Adjustment:** This modifier is applied to damage rolls after successful physical attacks in combat.

**Maximum Press:** This is the most weight a character can lift over his head. He

cannot walk more than a few steps with it, nor can he hold it very long.

**Open Doors:** This indicates the chance a character has to force open a heavy door or one that is stuck closed. To open such a door, a player rolls 1d20. If the result is equal to or less than the number listed for the character's Muscle score, the door opens. A character who failed can try again, but each successive attempt takes more time and makes more noise. The numbers in parentheses are a character's chances to open a locked, barred, or magically held door. Only one attempt for each such door is allowed.

**Bend Bars/Lift Gates**: This represents the character's chance (rolled on 1d100) to bend iron bars, lift a vertical gate or portcullis, or perform a similar feat of Muscle power. If the number rolled on 1d100 is equal to or less than the listed score, the character bends the bars or lifts the gate. If the roll fails, the character cannot attempt the same feat again. The character could, however, attempt to bend the bars of a gate he failed to lift, or vice versa.

**Proficiencies:** One example of a proficiency that uses the Muscle score as a base number is jumping—an ability that utilizes the muscles' explosive power rather than endurance.

## Dexterity

This ability score is divided into the subabilities of Aim, which represents hand-eye coordination and manual acuity, and Balance, which denotes reflexes and overall agility. Leon chooses to use these Dexterity subabilities for his character:

| | |
|---|---|
| **Strength** 16 | **Dexterity** 14 |
| Stamina 15 | Aim 12 |
| Muscle 17 | Balance 16 |
| Constitution 12 | Wisdom 8 |
| Intelligence 12 | Charisma 11 |

## Aim

A character with a high Aim score might be an expert marksman or a sleight-of-hand artist.

**Table 4: Aim**

| Aim Score | Missile Adj. | Pick Pockets | Open Locks |
|---|---|---|---|
| 3 | –3 | –30% | –30% |
| 4 | –2 | –25% | –25% |
| 5 | –1 | –25% | –20% |
| 6 | 0 | –20% | –20% |
| 7 | 0 | –20% | –15% |
| 8 | 0 | –15% | –15% |
| 9 | 0 | –15% | –10% |
| 10 | 0 | –10% | –5% |
| 11 | 0 | –5% | 0% |
| 12–15 | 0 | 0% | 0% |
| 16 | +1 | 0% | +5% |

| | | | |
|---|---|---|---|
| 17 | +2 | +5% | +10% |
| 18 | +2 | +10% | +15% |
| 19 | +3 | +15% | +20% |
| 20 | +3 | +20% | +20% |
| 21 | +4 | +20% | +25% |
| 22 | +4 | +25% | +25% |
| 23 | +4 | +25% | +30% |
| 24 | +5 | +30% | +30% |
| 25 | +5 | +30% | +35% |

**Missile Adjustment:** This modifier is applied to the d20 combat roll whenever a character attacks with a missile weapon, such as firing arrows or hurling a spear. As above, negative modifiers are penalties to the die roll, and positive numbers are bonuses.

**Pick Pockets:** This modifier applies only to rogue characters who have the ability to pick another character's pockets (see chapter four).

**Open Locks:** Similarly, this modifier is used only by rogue characters with the open locks ability.

**Proficiencies:** The juggling, cobbling, pottery, rope use, seamstress/tailor, forgery, and gem cutting proficiencies all use Aim as their base number.

## Balance

A character possessing a high Balance score may be an acrobat or a tightrope walker. A new rule for the Player's Option system is that all unarmored warrior and rogue characters gain an additional +2 bonus to armor class while unencumbered. This bonus is in addition to any the characters might receive for high Balance scores.

**Table 5: Balance**

| Balance Score | Reac. Adj. | Def. Adj. | Move Silently | Climb Walls |
|---|---|---|---|---|
| 3 | –3 | +4 | –30% | –30% |
| 4 | –2 | +3 | –30% | –25% |
| 5 | –1 | +2 | –30% | –20% |
| 6 | 0 | +1 | –25% | –20% |
| 7 | 0 | 0 | –25% | –15% |
| 8 | 0 | 0 | –20% | –15% |
| 9 | 0 | 0 | –20% | –10% |
| 10 | 0 | 0 | –15% | –5% |
| 11 | 0 | 0 | –10% | 0% |
| 12 | 0 | 0 | –5% | 0% |
| 13–14 | 0 | 0 | 0% | 0% |
| 15 | 0 | –1 | 0% | 0% |
| 16 | +1 | –2 | 0% | 0% |
| 17 | +2 | –3 | +5% | +5% |
| 18 | +2 | –4 | +10% | +10% |
| 19 | +3 | –4 | +15% | +15% |
| 20 | +3 | –4 | +15% | +20% |

| | | | | |
|---|---|---|---|---|
| 21 | +4 | –5 | +20% | +20% |
| 22 | +4 | –5 | +20% | +25% |
| 23 | +5 | –6 | +25% | +25% |
| 24 | +5 | –6 | +25% | +30% |
| 25 | +5 | –6 | +30% | +30% |

**Reaction Adjustment:** This modifier is applied to a d10 to determine if a character is surprised by an unexpected encounter. The more positive the value, the less likely the character is to be surprised.

**Defensive Adjustment:** This modifier is applicable to a character's saving throws versus attacks that can be dodged, such as *lightning bolt* spells, hurled boulders, etc. It also modifies the character's armor class, representing the character's ability to dodge normal missile attacks and parry melee attacks. The lower the negative value, the more difficult the character will be to strike.

**Move Silently:** This concerns only those rogue characters who have the move silently ability. The higher the positive value, the easier the skill becomes for the character.

**Climb Walls:** This modifier also applies to those rogue characters with the climb walls ability.

**Proficiencies:** Balance is used as a base number for such proficiencies as tumbling, dancing, seamanship, tightrope walking, and charioteering.

## Constitution

Constitution is divided into the subabilities of Health, which is a measurement of a character's ability to resist diseases and other hardships, and Fitness, which indicates overall physical condition and the character's ability to endure punishment. Leon sets up his character's Constitution subabilities like this:

**Strength** 16
- Stamina 15
- Muscle 17

**Dexterity** 14
- Aim 12
- Balance 16

**Constitution** 12
- Health 12
- Fitness 12

Intelligence 12

Wisdom 8

Charisma 11

## Health

A character with a high Health score would seldom get sick and be little affected by allergies and other ailments.

**Table 6: Health**

| Health Score | System Shock | Poison Save |
|---|---|---|
| 3 | 35% | 0 |
| 4 | 40% | 0 |
| 5 | 45% | 0 |
| 6 | 50% | 0 |
| 7 | 55% | 0 |

| | | |
|---|---|---|
| 8 | 60% | 0 |
| 9 | 65% | 0 |
| 10 | 70% | 0 |
| 11 | 75% | 0 |
| 12 | 80% | 0 |
| 13 | 85% | 0 |
| 14 | 88% | 0 |
| 15 | 90% | 0 |
| 16 | 95% | 0 |
| 17 | 97% | 0 |
| 18 | 99% | 0 |
| 19 | 99% | +1 |
| 20 | 99% | +1 |
| 21 | 99% | +2 |
| 22 | 99% | +2 |
| 23 | 99% | +3 |
| 24 | 99% | +3 |
| 25 | 100% | +4 |

**System Shock:** This is the percentage chance (on a 1d100) that the character has to survive magical effects that age or alter his body—such as petrification (and reversing it), polymorphing, magical aging, etc. If the system shock result is equal to or less than the listed chance, the character survives the process of alteration.

**Poison Save:** This modifier applies to saving throws made versus poisons.

## Fitness

A character with a high Fitness score has great endurance and can suffer more damage than other characters while continuing to function.

**Table 7: Fitness**

| Fitness Score | Hit Point Adjustment | Resurrection Chance |
|---|---|---|
| 3 | –2 | 40% |
| 4 | –1 | 45% |
| 5 | –1 | 50% |
| 6 | –1 | 55% |
| 7 | 0 | 60% |
| 8 | 0 | 65% |
| 9 | 0 | 70% |
| 10 | 0 | 75% |
| 11 | 0 | 80% |
| 12 | 0 | 85% |
| 13 | 0 | 90% |
| 14 | 0 | 92% |
| 15 | +1 | 94% |
| 16 | +2 | 96% |

| | | |
|---|---|---|
| 17 | +2(+3) | 98% |
| 18 | +2(+4) | 100% |
| 19 | +2(+5) | 100% |
| 20 | +2(+5) 1 | 100% |
| 21 | +2(+6) 2 | 100% |
| 22 | +2(+6) 2 | 100% |
| 23 | +2(+6) 3 | 100% |
| 24 | +2(+7) 3 | 100% |
| 25 | +2(+7) 3 | 100% |

Parenthetical bonuses apply only to warrior characters. All other character classes are limited to a +2 maximum bonus per hit die.

1 All 1s rolled on hit dice are considered 2s.
2 All 1s and 2s rolled on hit dice are considered 3s.
3 All 1s, 2s, and 3s rolled on hit dice are considered 4s.

**Hit Point Adjustment:** This modifier is applied to the hit dice roll every time a character advances to a new experience level. No roll yields fewer than 1 hit point, regardless of any modifier.

This bonus ends when a character reaches 10th level (9th for warriors and priests). Hit points gained after this are given on the experience point table for each class. See the *Player's Handbook* for details.

**Resurrection Chance:** This is the percentage chance (on a 1d100) that a dead character has of being successfully brought back to life through magical *resurrection* or *raise dead* spells. If the roll is equal to or less than the listed chance, the character is brought back to life.

**Proficiencies:** Fitness serves as the base number for such proficiencies as Endurance.

## Intelligence

This becomes the subabilities of Reason, which measures a character's capacity for learning and deduction, and Knowledge, which shows a general level of education, experience, and the ability to remember information. Leon assigns his character's subability scores like this:

| | |
|---|---|
| **Strength** 16 | **Constitution** 12 |
| Stamina 15 | Health 12 |
| Muscle 17 | Fitness 12 |
| **Dexterity** 14 | **Intelligence** 12 |
| Aim 12 | Reason 11 |
| Balance 16 | Knowledge 13 |
| Wisdom 8 | Charisma 11 |

## Reason

This ability defines how well a character handles new information. A character with a high Reason score would be good at solving riddles and puzzles, and would be talented at

using deductive, logical thinking.

**Table 8: Reason**

| Reason Score | Spell Level | Max. # Spells | Spell Immunity |
|---|---|---|---|
| 3–8 | — | — | — |
| 9 | 4th | 6 | — |
| 10–11 | 5th | 7 | — |
| 12 | 6th | 7 | — |
| 13 | 6th | 9 | — |
| 14 | 7th | 9 | — |
| 15 | 7th | 11 | — |
| 16 | 8th | 11 | — |
| 17 | 8th | 14 | — |
| 18 | 9th | 18 | — |
| 19 | 9th | All | 1 |
| 20 | 9th | All | 2 |
| 21 | 9th | All | 3 |
| 22 | 9th | All | 4 |
| 23 | 9th | All | 5 |
| 24 | 9th | All | 6 |
| 25 | 9th | All | 7 |

**Spell Level:** This is the highest level of magical spells that can be cast by wizards with corresponding Reason scores.

**Max. # Spells:** This is the most spells per level that a wizard with that Reason score can memorize.

**Spell Immunity:** This is the level of illusion/phantasm spells that a character with that Reason score is immune to. All immunities are cumulative, so a character with a 21 Reason score is immune to first-, second-, and third-level illusion spells.

**Proficiencies:** Reason is used as the base number for such proficiencies as engineering, navigation, and spellcraft.

## Knowledge

This score is a measurement of the character's educational experiences—whether in a school or on the streets, his grasp of languages, and his memory capacity. A character with a high Knowledge score can speak many languages, knows something about several subjects, and can remember the slightest detail of a past event.

**Table 9: Knowledge**

| Knowledge Score | Bonus # Profs. | % Learn Spell |
|---|---|---|
| 3–8 | 1 | — |
| 9 | 2 | 35% |
| 10 | 2 | 40% |
| 11 | 2 | 45% |

| | | |
|---|---|---|
| 12 | 3 | 50% |
| 13 | 3 | 55% |
| 14 | 4 | 60% |
| 15 | 4 | 65% |
| 16 | 5 | 70% |
| 17 | 6 | 75% |
| 18 | 7 | 85% |
| 19 | 8 | 95% |
| 20 | 9 | 96% |
| 21 | 10 | 97% |
| 22 | 11 | 98% |
| 23 | 12 | 99% |
| 24 | 15 | 100% |
| 25 | 20 | 100% |

**Bonus # Proficiencies:** This is the maximum number of additional languages a character with the appropriate Knowledge score can learn. If you are using the character point system introduced in the previous chapter, this is the number of bonus character points the character gains when buying proficiencies. For example, Theodor the fighter has an Intelligence/Knowledge of 12, which gives him 3 bonus proficiencies under the standard rules, or 3 extra character points under the character point system.

**% Learn Spell:** This is the percentage chance (on 1d100) that a wizard can learn to cast a particular spell. If the roll is equal to or less than the listed chance, the wizard can learn the spell. If the roll is higher than the listed chance, the wizard can try to learn the spell later—after gaining an experience level.

**Proficiencies:** Knowledge is the base number used with proficiencies such as ancient and local history, ancient and modern languages, and reading/writing.

## Wisdom

Wisdom is divided into the subabilities of Intuition—which determines the character's awareness of his surroundings, grasp of a situation, and understanding of other people, and Willpower—which measures the character's strength of will and commitment. Leon decides his character has little Willpower. The character's statistics now read:

**Strength** 16
- Stamina 15
- Muscle 17

**Dexterity** 14
- Aim 12
- Balance 16

**Constitution** 12
- Health 12
- Fitness 12

**Intelligence** 12
- Reason 11
- Knowledge 13

**Wisdom** 8
- Intuition 10
- Willpower 6

Charisma 11

## Intuition

A character with a high Intuition score likely would be very perceptive and good at making educated guesses, and would be difficult to fool or lie to effectively.

**Table 10: Intuition**

| Intuition Score | Bonus Spells | % Spell Failure |
|---|---|---|
| 3 | 0 | 50% |
| 4 | 0 | 45% |
| 5 | 0 | 40% |
| 6 | 0 | 35% |
| 7 | 0 | 30% |
| 8 | 0 | 25% |
| 9 | 0 | 20% |
| 10 | 0 | 15% |
| 11 | 0 | 10% |
| 12 | 0 | 5% |
| 13 | 1st | 0% |
| 14 | 1st | 0% |
| 15 | 2nd | 0% |
| 16 | 2nd | 0% |
| 17 | 3rd | 0% |
| 18 | 4th | 0% |
| 19 | 1st, 3rd | 0% |
| 20 | 2nd, 4th | 0% |
| 21 | 3rd, 5th | 0% |
| 22 | 4th, 5th | 0% |
| 23 | 1st, 6th | 0% |
| 24 | 5th, 6th | 0% |
| 25 | 6th, 7th | 0% |

**Bonus Spells:** This is the number of additional spells that priest characters receive, according to their Intuition scores. Note that the extra spells are cumulative, and the priest can cast only those spells allowed by his experience level.

**% Spell Failure:** This is the percentage chance that a priest's spell will fail when cast. Those priests with low Intuition scores run the risk of having spells misfire.

**Proficiencies:** Intuition is the base number for such diverse proficiencies as tracking, healing, orienteering, weather knowledge, religion, and hunting.

## Willpower

This score gauges a character's strength of will, ability to resist magical forces, and sense of commitment to a cause. A character with a high Willpower would be difficult to harm with mind-affecting magic spells, could be quite stubborn, and would resist interrogation.

**Table 11: Willpower**

| Willpower | Magic Def. | Spell |
|---|---|---|

| Score | Adj. | Immunity |
|---|---|---|
| 3 | –3 | — |
| 4 | –2 | — |
| 5 | –1 | — |
| 6 | –1 | — |
| 7 | –1 | — |
| 8–14 | — | — |
| 15 | +1 | — |
| 16 | +2 | — |
| 17 | +3 | — |
| 18 | +4 | — |
| 19 | +4 | 1* |
| 20 | +4 | 2* |
| 21 | +4 | 3* |
| 22 | +4 | 4* |
| 23 | +4 | 5* |
| 24 | +4 | 6* |
| 25 | +4 | 7* |

**Magic Defense Adjustment:** This modifier applies to the character's saving throws versus magical spells that affect the victim's *mind—beguiling, charm, fear, hypnosis, possession, suggestion*, etc. This modifier is applied automatically, without any effort on the part of the character or player making the saving throw.

**Spell Immunity:** This grants those characters with extremely high Knowledge scores protection from the spells listed under each number below. These immunities are cumulative.

1. Immunity to: *cause fear, charm person or mammal, command, friends*, and *hypnotism* spells.
2. Immunity to: *forget, hold person, ray of enfeeblement*, and *scare*.
3. Immunity to: *fear*.
4. Immunity to: *charm monster, confusion, emotion, fumble*, and *suggestion.*
5. Immunity to: *chaos, feeblemind, hold monster, magic jar*, and *quest*.
6. Immunity to: *geas, mass suggestion*, and *rods of rulership*.
7. Immunity to: *antipathy/sympathy, death spell*, and *mass charm*.

**Proficiencies:** This score serves as the base number for such proficiencies as animal handling, animal training, riding—land-based, and riding—airborne.

## Charisma

Charisma is split into the subabilities of Leadership, which measures forcefulness of personality and how willing others are to follow the character's lead, and Appearance, which gauges physical attractiveness, presence, and poise. Leon decides his character will have these Leadership and Appearance scores:

**Strength** 16 **Intelligence** 12
Stamina 15 Reason 11

Muscle 17
**Dexterity** 14
Aim 12
Balance 16
**Constitution** 12
Health 12
Fitness 12
Knowledge 13
**Wisdom** 8
Intuition 10
Willpower 6
**Charisma** 11
Leadership 10
Appearance 12

## Leadership

A character with a high Leadership often may be a group's leader, or at least its spokesman. Generals and those who can calm or incite a mob with a few words all have good Leadership scores.

**Table 12: Leadership**

| Leadership Score | Loyalty Base | # of Henchmen |
|---|---|---|
| 3 | –6 | 1 |
| 4 | –5 | 1 |
| 5 | –4 | 2 |
| 6 | –3 | 2 |
| 7 | –2 | 3 |
| 8 | –1 | 3 |
| 9–11 | 0 | 4 |
| 12–13 | 0 | 5 |
| 14 | +1 | 6 |
| 15 | +3 | 7 |
| 16 | +4 | 8 |
| 17 | +6 | 10 |
| 18 | +8 | 15 |
| 19 | +10 | 20 |
| 20 | +12 | 25 |
| 21 | +14 | 30 |
| 22 | +16 | 35 |
| 23 | +18 | 40 |
| 24 | +20 | 45 |
| 25 | +20 | 50 |

**Loyalty Base:** This modifier is applied to henchmen's loyalty scores (see the *Dungeon Master® Guide*). This modifier can be crucial during battles, where good morale is vital.

**Max. # of Henchmen:** This is the maximum number of permanent allies and retainers a character can attract. This does not affect the number of hirelings, mercenaries, or other servitors a character can have.

**Proficiencies:** This score is used as the base number for such nonweapon proficiencies as gaming and disguise.

## Appearance

This determines the physical presence and attractiveness of the character. A character with a high Appearance score would be handsome or beautiful, perhaps even famous for outstanding looks (such as Helen of Troy).

**Table 13: Appearance**

| Appearance Score | Reaction Adjustment |
|---|---|
| 3 | –5 |
| 4 | –4 |
| 5 | –3 |
| 6 | –2 |
| 7 | –1 |
| 8–12 | 0 |
| 13 | +1 |
| 14 | +2 |
| 15 | +3 |
| 16 | +5 |
| 17 | +6 |
| 18 | +7 |
| 19 | +8 |
| 20 | +9 |
| 21 | +10 |
| 22 | +11 |
| 23 | +12 |
| 24 | +13 |
| 25 | +14 |

**Reaction Adjustment:** This number modifies the Reaction Roll made when a character interacts with NPCs and intelligent creatures for the first time (see the DMG). Obnoxious behavior can negate bonuses for a high Appearance score, just as solicitous manners can overcome a weakness.

**Proficiencies:** This score acts as the base number for proficiencies such as dancing and etiquette.

## Alternate Subability Method

Rather than simply assigning numbers to subability scores, players can determine the scores randomly. First, generate the basic ability score; for example, Leon rolls 3d6 for his character's Strength score and gets a 13. Second, the player assigns the base score to one of the subability scores; Leon assigns his roll of 13 to his character's Strength/Stamina score. Third, roll a die or flip a coin to see if the remaining subability score will be better or worse than the base score. Leon rolls 1d6 and gets a 4, so his character's Strength/Muscle score will be higher than Strength/Stamina. Last, add or subtract 1d4 to the base score to determine the what the second subability actually is; Leon rolls a 3, so his character's Strength/Muscle score is 16.

## Subability Checks

Subabilities are more specific definitions of a character's aptitudes. They can be used more often to determine the success of actions beyond simple proficiency checks. The concept of ability checks was introduced in the *Player's Handbook*. This concept is expanded with subabilities. Specific examples of the various subability checks follow. The lists are not intended to be all-encompassing, but simply guidelines of the uses of subability checks.

**Stamina:** This subability is used to ascertain a character's physical exertion over a period of time. Sample opportunities to call for Stamina checks include a character holding a heavy weight or propping up a collapsing ceiling. When a character is in pursuit of an NPC or monster that has the same movement rate, the Stamina check determines who will tire first. Other checks could involve long-term physical exertion such as swimming vast distances, defending the castle walls from attackers over the course of hours or days, or staying awake long enough to memorize spells for the next day—after a long day of adventuring.

**Muscle:** Times to call for Muscle checks include when characters try to pick up heavy objects, leap chasms, arm wrestle, and display feats of strength.

**Aim:** Potential times to use Aim checks include when characters enter games of skill, such as darts; when they try sleight-of-hand maneuvers; and when they try to catch things thrown at them, such as balls, coins, or books.

**Balance:** Balance checks can be called for when a character walks along a narrow ledge to reach a window, when he flees across a rope bridge while trying to avoid attackers' missile weapons, and when he catches a handhold after an enemy damages that rope bridge and causes it to collapse.

**Health:** Health checks can be used to determine a character's resistance to a disease, and to find out if a character catches the flu going around the kingdom. They also determine a character's resistance to intoxicants, drugs, or poisons.

**Fitness:** Fitness checks can be used to gauge an adventurer's resistance to longer-term hardships such as forced marches, food or water deprivation, and non-lethal torture.

**Reason:** Good times to call for Reason checks include when a character is searching for clues at the scene of a crime, when someone is trying to learn new information, or when a character is attempting to read a code or decipher a cryptic message.

**Knowledge:** Knowledge checks can be used when characters try to understand a strange language or recall bits of information they have seemingly forgotten.

**Intuition:** These checks are called for when adventurers think they are being followed, that their NPC friend is acting strangely, or when someone attempts to con them.

**Willpower:** Willpower checks are needed when a character's force of will is challenged, such as when he is offered a bribe, is interrogated, or is blackmailed. Other possibilities include when a character tries to persuade an NPC about an important issue or point, or when a character is tortured to surrender valuable information.

**Leadership:** Situations calling for Leadership checks include when an adventurer leads NPCs into battle, when one adventurer asks a favor of another, or when a character attempts to instill a belief or attitude into a crowd or mob.

**Appearance:** Appearance checks can be used in social circumstances where the involved character has no established reputation. Or the checks might determine if an NPC becomes romantically interested in the character.

One problem with ability checks as they now stand follows:

"Leon, see if your 17 Muscle fighter can lift that iron chest."

*(Rolling a d20)* "Missed it. I rolled a 19."

"Tomas, check if your 6 Muscle wizard can do it."

"Yes!—I made it with a 4!"

The above reflects that sometimes a character with a high score will fail, only to have a character with a lower score get lucky and succeed. Depending on the number of points in each subability score, the character can make additional attempts at feats. The rule is: for each point in a subability above 15, the player can roll an additional 1d20 for checks against that subability. For example, because Leon's fighter has a 17 Muscle, the character can make up to three checks—the initial check, plus two more. So if Leon's fighter wants to force open a trap door, Leon rolls 3d20. If any of the dice register a successful check, the fighter opens the door. Tomas' character, with a 6 Muscle only rolls 1d20.

This multiple d20 system does not eliminate the possibility of a character with a low ability score succeeding where a character with a higher ability score fails. But the system does reduce the number of times such an improbable incident will occur.

## Heightened Difficulties

An additional benefit of this system is that the DM can set particularly difficult checks for characters with high ability scores—requiring two or more successes on the characters' multiple d20 rolls.

For example, if the iron chest Leon's fighter wants to lift had been welded in place, the DM could claim that two or even all three of the fighter's d20 rolls be successful for the chest to come free. This further reinforces the idea that characters with low scores are not as capable as their comrades with higher scores.

For those occasions when a lone adventurer cannot succeed at an ability check due to insufficient dice, additional characters might be able to help. If the DM rules that more than one character can attempt the feat, roll the d20s of the character with the highest ability score, then add 1d20 for each additional character assisting the primary character.

This system also can be used to determine the outcome of direct ability-vs.-ability contests between characters. The winner of such a contest is the one who successfully rolls the highest result—if that result is equal to or under the ability score in question. For example, if two characters with 14 Aim scores compete to see who can hit a far-off boulder with thrown stones—and the results of the d20 rolls are a 14 and a 6—the character who rolled the 14 wins the contest and strikes the boulder first. Both characters' rolls succeeded, but the 14 is a higher degree of success than the 6. If the character with the 14 result had instead rolled a 15 or a 5, the other competitor would have won, in the first case because 15 is not a successful Aim check, and in the second because a 6 is higher than a 5.

Another common example of such a contest is an arm-wrestling match. Marshall has a ranger with a Strength of 15 and subability scores of Stamina 13 and Muscle 17. Brian

has a fighter with a Strength of 13 and subability scores of 13 in both Stamina and Muscle. These characters decide to arm wrestle to see who gets the first choice of treasure. The first ability check would be against Muscle to see if either character could overwhelm the other with a burst of Strength. Marshall and Brian roll 1d20, and both Muscle check results are 11. The characters have matched power for power.

The next check (and all subsequent checks) would be against Stamina to see which character tires first. Marshall rolls a 7 and Brian rolls a 12. Both are successes, but Brian's roll was higher. Brian's character wins the arm-wrestling match despite having lower Strength and Muscle scores. Simply put, Brian's character got lucky, and the next match between the characters could turn out differently.

### Abilties vs. Thief Skills

A note should be made regarding ability checks that mirror the class abilities of rogues. Characters with high Balance scores may, by the numbers, seem to be better at thieving skills than some rogues, especially low-level ones. DMs should take care not to let nonrogue characters steal the spotlight away from the real rogues. The climb walls ability is a good example. Most characters with above average Balance scores would have a relatively simple time climbing a craggy rock face or cliff, but only thieves can climb brick walls or sheer surfaces.

DMs who wish to grant characters with high ability scores some chance of success at feats similar to thieving abilities could require multiple successes for such characters to succeed.

# Chapter 3: Racial Requirements

*Player's Option* characters can be humans, elves, dwarves, gnomes, and halflings—or they might be half-elves, half-orcs, or even half-ogres. DMs can devise additional races for characters, too, so the choices can be as wide and as colorful as the campaign in which they adventure.

Players should consult the following table, which lists minimum and maximum ability scores for the common races. Minimum scores are listed to the left of the slashes, maximums to the right. Starting character statistics must fall within these ranges, though the statistics can increase and decrease during the course of play. For example, if an elf has his Dexterity score reduced to less than 6 because he fell afoul of a magical curse, the character is still an elf. If a halfling drank a potion that increased his Intelligence to 19, he is still a halfling.

**Table 14: Racial Requirements**

| Ability | Dwarf | Elf | Gnome | Half-elf | Half-orc | Half-ogre | Halfling | Human |
|---|---|---|---|---|---|---|---|---|
| Str | 8/18 | 3/18 | 6/18 | 3/18 | 6/18 | 14/18 | 7/18* | 3/18 |
| Dex | 3/17 | 6/18 | 3/18 | 6/18 | 3/17 | 3/12 | 7/18 | 3/18 |
| Con | 11/18 | 7/18 | 8/18 | 6/18 | 8/18 | 14/18 | 10/18 | 3/18 |
| Int | 3/18 | 8/18 | 6/18 | 4/18 | 3/17 | 3/12 | 6/18 | 3/18 |

| | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| Wis | 3/18 | 3/18 | 3/18 | 3/18 | 3/14 | 3/12 | 3/17 | 3/18 |
| Cha | 3/17 | 8/18 | 3/18 | 3/18 | 3/12 | 3/8 | 3/18 | 3/18 |

* Halfling fighters cannot possess exceptional Strength scores.

### Racial Ability Adjustments

Once the character's ability scores have been determined, the race chosen, and the Racial Requirements table consulted, modify the ability scores based on the Racial Adjustments table—and determine the subability scores as per the rules in chapter two.

**Table 15: Racial Adjustments**

| Race | Adjustments |
|---|---|
| Dwarf | +1 Con, –1 Cha |
| Elf | +1 Dex, –1 Con |
| Gnome | +1 Int, –1 Wis |
| Half-elf | None |
| Half-orc | +1 Str, +1 Con, –2 Cha |
| Half-ogre | +1 Str, +1 Con, –1 Int, –1 Cha |
| Halfling | +1 Dex, –1 Str |
| Human | None |

### Racial Level Limits

The Racial Level Limits chart lists the maximum experience levels attainable by the various races. For more on classes, see chapter four.

**Table 16: Racial Level Limits**

| Class | Dwarf | Elf | Gnome | Half-elf | Half-orc | Half-ogre | Halfling | Human |
|---|---|---|---|---|---|---|---|---|
| Bard | — | — | — | U | — | — | — | U |
| Cleric | 10 | 12 | 9 | 14 | 4 | 4 | 8 | U |
| Druid | — | — | — | 9 | — | — | — | U |
| Fighter | 15 | 12 | 11 | 14 | 10 | 12 | 9 | U |
| Illusionist | — | — | 15 | — | — | — | — | U |
| Mage | — | 15 | — | 12 | — | — | — | U |
| Paladin | — | — | — | — | — | — | — | U |
| Ranger | — | 15 | — | 16 | — | — | — | U |
| Thief | 12 | 12 | 13 | 12 | 8 | — | 15 | U |

**U** This symbol represents unlimited class advancement for characters of those races.
— A member of this race cannot choose this class.

## Exceeding These Limits

*The Dungeon Master Guide* included an optional rule where demihuman characters could exceed level limits if they possessed high prime-requisite ability scores. This rule is official in the *Player's Option* system. See the chart below for bonus levels granted to those characters with high scores in their class prime requisites.

**Table 17: Prime Requisite Bonuses**

| Ability Score | Bonus Levels |
|---|---|
| 14–15 | +1 |
| 16–17 | +2 |
| 18 | +3 |
| 19 | +4 |
| 20+ | +5 |

The bonus levels are added to the character's maximum experience level shown in the Racial Level Limits table.

Character Points Each race detailed below receives a number of character points that can be spent on racial skills and other abilities. This lets players personalize their characters. No longer must all dwarves have exactly the same abilities, skills, and bonuses. Players can purchase packages of abilities, or they can customize their characters.

Demihumans can save 5 character points from this process and apply them at any other point in the character creation process. Humans can save 10 points. Nonstandard races such as lizard men and thri-kreen cannot save any racial character points—any points not spent on racial abilities are lost.

## Racial Variants

Numerous off-shoot races can be player characters. For example, a player fond of dwarven characters could choose from the hill, mountain, gray, or deep varieties. Players who select such a character purchase the standard package of abilities for the subrace. Optionally, a player can customize a character by choosing individual abilities from the list for that race. Generally, buying a package of abilities is the most efficient way to spend character points.

**Racial Languages:** A character from a demihuman subrace receives an initial package of languages for no additional cost in character points. However, no character can know more languages than his or her Intelligence/Knowledge score allows (see Table 9). If a racial package offers more languages than a character can know, the player can choose which languages the character knows.

Dwarves Dwarves are a short, stocky race, averaging about 4–41_2' tall. They often have ruddy complexions, dark hair, and piercing, dark eyes. The natural life span for a dwarf is about 350 years. They are a serious lot, given rarely to frivolity. They prefer a good, hard day's work. Though sometimes considered dour or taciturn, few doubt the dwarves' courage or bravery. They have little talent for magic, but excel at fighting, war craft, and arts such as engineering.

Dwarves typically live in hilly or mountainous regions, enjoying the strength of the earth and rocks that make up their underground homes. Dwarves mine the earth for precious metals and gems, and they are particularly fond of gold.

Because of their resistance to magic, dwarves have difficulty using enchanted items. All magical items not specially suited to the dwarf's character class have a 20% (on

1d100 roll) to malfunction. A check for malfunction is made every time the dwarf attempts to use the item. If the check is passed, the item works until it is turned off, put away, or its duration expires. If the check fails, the magical qualities of the item cannot be called upon, though the item might function normally the next time the dwarf tries to use it. Malfunction checks apply to magical wands, rods, staves, rings, amulets, potions, horns, and jewels. The checks do not apply to dwarven clerics using clerical magical items, and to weapons, shields, armor, gauntlets, and girdles. If a dwarf possesses a *cursed* item and it malfunctions, the dwarf will recognize the nature of the item and can safely dispose of it.

The standard dwarven subraces are: hill, mountain, deep, and gray. A dwarven character might choose to be a fighter, cleric, or thief. A dwarf also can be multi-classed as a fighter/cleric or a fighter/thief.

**Players who choose dwarves for their characters have 45 character points to spend on racial abilities.** These points can be spent to customize a dwarf from the general skill list below, or they can be used to purchase a subrace's skill package. Only 5 points can be retained for use later in the character creation process.

## Deep Dwarves

**Character point cost: 45**

As their name implies, deep dwarves live farther underground than their hill or mountain relatives. They prefer the security and the isolation that living far beneath the earth provides.

The typical deep dwarf is 4–41_2' tall and weighs 120 pounds. They are large-boned, but thinner than their cousins who live closer to the surface. And they can move easily through the narrow tunnels they dig in the bedrock.

Deep dwarves seldom have contact with creatures from the surface—few such creatures can reach remote underground places—and the deep dwarves feel no need to dig tunnels to the surface. Most deep dwarves are neutral, lawful neutral, or chaotic neutral. Players may choose any alignment for their deep dwarf characters.

Languages: Deep dwarves can speak their own racial dialect, gray dwarf, illithid, troglodyte, deep gnome, and undercommon (the trade language of all Underdark races).

### Deep Dwarves' Special Abilities

| | |
|---|---|
| Infravision, 90' | Saving Throw Bonuses |
| Melee Combat Bonuses* | Mining Detection Abilities |

* Attack bonus applies vs. drow, troglodytes, and orcs.

### Deep Dwarf Racial Penalties

Deep dwarves suffer a –1 penalty to all rolls when in bright sunlight or within the radius of a *continual light* spell. *Light* spells and all other light sources have no effect on a deep dwarf.

## Gray Dwarves

**Character point cost: 45**

Also known as duergar, gray dwarves live far underground—at times even beyond the

deep dwarves. However, since they occasionally reside near each other, gray and deep dwarves tend to come into conflict over the resources of the Underdark.

An average gray dwarf is about 4' tall and weighs 120 pounds. The thinnest of the subraces, gray dwarves almost appear emaciated. Most are bald, and those who are not usually shave their heads. Their beards are white. Gray dwarves rarely venture above ground, as they find sunlight to be painful to their eyes.

Most gray dwarves are lawful evil in alignment, with neutral tendencies. Player character gray dwarves can be of any alignment.

**Languages:** Duergar begin play with knowledge of their own tongue, deep dwarf, dark elf, illithid, kuo-toa, troglodyte, and undercommon.

### Gray Dwarves' Special Abilities

| | |
|---|---|
| Infravision, 120' | Saving Throw Bonuses |
| Melee Combat Bonuses* | Stealth |
| Mining Detection Abilities | |

* No attack bonus applies , the character receives only the defensive benefits.

### Gray Dwarf Racial Penalties

Gray dwarves suffer a –1 penalty on all rolls when exposed to bright sunlight or *continual light* spells. Other light sources do not impair them. Other types of dwarves distrust duergar, and as such, duergar suffer an initial –2 penalty to reaction rolls from their cousins.

## Hill Dwarves

**Character point cost: 40**

Hill dwarves live in areas of rolling headlands—often dwelling underground, though they are known to have outposts on the surface.

A typical hill dwarf stands 4' tall and weighs about 150 pounds. He is well-muscled and stocky, with tan or brown skin, dark hair, and bright eyes. Hill dwarves prefer earth tones and seldom wear jewelry. They are the most common of all the dwarven varieties, as they adapt well to life above and below ground. Most hill dwarves are lawful good, but player characters can be of any alignment.

**Languages:** Hill dwarves can speak their own tongue as well as other dwarven dialects. In addition, hill dwarves can speak gnome, goblin, orc, and gnoll.

### Hill Dwarf Special Abilities

Hill dwarves have the following racial abilities: the dwarven saving throw bonuses versus poison and magical attack; the dwarven melee combat bonus; infravision to a range of 60 feet; and the dwarven mining detection abilities.

### Hill Dwarves' Special Abilities

| | |
|---|---|
| Infravision, 60' | Saving Throw Bonuses |
| Melee Combat Bonuses | Mining Detection Abilities |

### Hill Dwarf Racial Penalties

Hill dwarves are not accustomed to traveling over water. They suffer a –2 penalty to reaction rolls when they are in or adjacent to rivers, lakes, and seas.

## Mountain Dwarves

**Character point cost: 40**

This variety of dwarf lives beneath the mountains in isolated strongholds. Most mountain dwarves value their privacy and avoid contact with outsiders. A typical mountain dwarf stands 41_2' tall and weighs 170 pounds. Their hair is lighter than their hill dwarf cousins', and their skin tends to have a reddish tint.

Mountain dwarves are often wary of hill dwarves, as they are suspicious of their cousins' dealings with the outer world. Most mountain dwarves are lawful good, but player characters can be any alignment.

**Languages:** Mountain dwarves can begin with their own tongue, hill dwarf, gnome, hill giant, gnoll, bugbear, and common.

### Mountain Dwarves' Special Abilities

| | |
|---|---|
| Infravision, 60' | Saving Throw Bonuses |
| Melee Combat Bonuses | Mining Detection Abilities |

### Mountain Dwarf Racial Penalties

Like hill dwarves, mountain dwarves are not accustomed to traveling over water. However, they are comfortable around rivers and small lakes. They suffer a –2 penalty to reaction rolls only when on board sea-going vessels or when in large bodies of water.

## Dwarven Abilities

A character with leftover character points may select additional racial abilities after taking one of the standard subrace packages. Or, if the player wishes to create his own customized dwarven character, he can pick and choose from the list of dwarven abilities listed below. Abilities cost either 5 or 10 character points; refer to the descriptions below.

- **Axe bonus (5):** +1 to attack rolls with hand or battle axes.
- **Better Balance (10):** +1 to the Balance subability score. This allows a dwarven character to have more than a 4 point difference in the Dexterity subabilities.
- **Brewing (5):** +2 to the Brewing proficiency score. The dwarf must have this proficiency to gain this benefit.
- **Close to the earth (5):** Dwarves with this ability heal faster in subterranean settings. When this character is underground, he heals 2 points of damage overnight rather than the 1 point normally healed by other races. This bonus does not apply if the character is above ground.
- **Constitution/Health bonus (10):** A Constitution/Health score bonus of +1, because the dwarf is accustomed to the cold and often damp Underdark.
- **Crossbow bonus (5):** Because dwarves favor crossbows, they gain a +1 attack bonus with any crossbow. Hurled weapons are limited in tunnels, and other bows require large pieces of wood which are not readily accessible.
- **Determine stability (5):** The character is an expert at determining if the ground is stable. By concentrating for one round, the character can determine if there will be a

dangerous tremor, collapse, rockfall or slide when the character enters an area. The chance of success is 1–4 on 1d6.

- **Determine age (5):** By examining a building or ruins, the dwarf stands an excellent chance of determining the approximate age of the structure. The chance of success is 1–5 on 1d6.
- **Dense skin (10):** If the dwarf is struck by a blunt weapon, the character suffers only half the damage the attack would normally inflict.
- **Detect poison (5):** By sniffing food or drink, the dwarf can determine if it has been poisoned. The chance of success is 1–4 on 1d6.
- **Evaluate gems (5):** A dwarf with this ability can determine within 10% the value of any given gem.
- **Expert haggler (5):** This dwarf drives a hard bargain. Anything he purchases costs 10% less than the listed price.
- **Hit point bonus (10):** The dwarf gains an additional hit point each time the character attains a new level.
- **Illusion resistant (5):** These dwarves gain a +2 bonus on attempts to disbelieve illusions.
- **Improved Stamina (10):** +1 to the Stamina subability score. This allows a dwarven character to have more than a 4 point difference in the Strength subabilities.
- **Infravision (10):** Dwarves have infravision to 60 feet—the ability to see heat patterns given off by living warm-blooded creatures in the dark.
- **Mace bonus (5):** +1 to attack rolls with the footman's mace.
- **Meld into stone (10):** Once a day a dwarf with this ability can *meld into stone* as a priest of the same level.
- **Melee combat (10):** Dwarves have a +1 bonus to their attack rolls vs. orcs, half-orcs, goblins, and hobgoblins. Further, when ogres, half-ogres, ogre magi, trolls, giants, or titans fight dwarves, these aggressors suffer a –4 penalty on all attack rolls. Dwarves are small and have defensive tactics against these large foes.
- **Mining Detection Abilities (10):** A character with this skill is familiar with mining, tunneling and stonework. By concentrating for one round the character can:

  Determine the approximate depth underground, 1–3 on 1d6.
  Detect any sliding or shifting walls or rooms, 1–4 on 1d6.
  Detect any grade or slope in the passage they are passing through, 1–5 on 1d6.
  Detect stonework traps, pits, and deadfalls, 1–3 on 1d6.
  Detect new construction in stonework., 1–5 on 1d6.
- **More muscles (10):** +1 to the Muscle subability score. This allows a dwarven character to have more than a 4 point difference in the Strength subabilities.
- **Pick bonus (5):** +1 to attack rolls with military picks.
- **Saving Throw Bonuses (10):** Dwarves gain bonuses to saving throws vs. poison and against magical attacks from rods, wands, and spells based on their Constitution/Health scores. Determine the dwarf's Constitution/Health score and consult the chart below:

| **Score** | **Bonus** |
|---|---|
| 4–6 | +1 |

| | |
|---|---|
| 7–10 | +2 |
| 11–13 | +3 |
| 14–17 | +4 |
| 18–20 | +5 |

- **Short sword bonus (5):** +1 to attack rolls with short swords.
- **Stealth (10):** If the dwarf is not in metal armor, a –2 penalty is applied to opponent's surprise rolls if the dwarf is at least 90 feet ahead of a party of characters without this ability, or accompanied only by characters with equivalent stealth skills. The dwarf is also difficult to surprise himself and receives a +2 bonus to his own surprise rolls.
- **Stone tell (10):** Once a day a dwarf with this ability can use the stone tell ability, as a priest of the same level.
- **Warhammer bonus (5):** +1 to attack rolls with the war hammer.

## Elves

Elves tend to be taller than dwarves, and shorter and slimmer than humans. Their features are angular and finely chiseled, and although elves may appear thin and weak, they are actually quick and strong. When circumstances dictate, elves can be fierce warriors, taking any steps necessary to protect themselves, their homes, and their friends. Most elves are between 5 and 5 1/2' tall and weigh about 110 pounds. They prefer to live in natural settings such as secluded forests and groves. They are chaotic by nature, and other races sometimes consider elves frivolous and aloof.

Elves are an extremely long-lived race, averaging about 1,200 years. This may explain some of their attitudes—life is to be taken slowly and enjoyed; never rush about to accomplish things; there is plenty of time for all activities. Elves enjoy singing, dancing, and looking for the natural beauty in everything they see.

Perhaps because they live so long, elves find it difficult to make friends with the shorter-lived races. Some elves don't want to bother getting close to humans when those friends will die of old age so soon. However, elves who do make friends outside their race treat their comrades as equals. Friends—and enemies—are never forgotten.

Elves are fascinated by magic and devote time and energy to studying arcane forces. Even powerful human mages respect and admire elves' understanding of magic.

The standard elven subraces are: aquatic, dark, gray, high, and wood. Player character elves can be the following classes: fighter, mage, cleric, or thief. They also can take the following multi-class combinations: fighter/mage, fighter/thief, fighter/mage/thief, or mage/thief.

**Players who choose elves for their characters have 45 character points to spend on racial abilities.** These points can be spent to customize an elf from the general skill list below, or they can be used to purchase a subrace's skill package. Only 5 points can be retained for use later in the character creation process.

### Aquatic Elves

**Character point cost: 40**

Aquatic elves, also called sea elves, live in oceans, lagoons, inlets, bays, and other bodies of salt water. They patrol the shallows and depths and rule from their courts of living coral. Though not often seen, when they are encountered it is common to find dolphins among them.

Aquatic elves serve to keep the evil inhabitants of the depths in check. Sahuagin are particularly hated foes, as are sharks that are large enough to threaten sea folk.

Skin colors vary from silver-green to pale blue. Hair is usually green or blue-green, matching the kelp beds where most sea elves make their homes. Their coloring helps conceal the elves from their natural predators. Aquatic elves have gill slits like fish, and they process the air they need out of the water. Unlike most fish, aquatic elves can live for some time out of water.

Aquatic elves can move about on land for a number of days equal to their Fitness scores. However, the longer they spend out of water, the weaker they become. For every two days spent out of the water, aquatic elves suffer a –1 penalty to all ability scores, and to proficiency checks and attack and damage rolls. If any ability or subability score reaches zero, the elf dies. Weakened elves recover within two turns when they return to salt water. Elves who enter fresh water do not recover, but the process of dehydration halts. Aquatic elves can stay in fresh water indefinitely. However, if an aquatic elf leaves fresh water, the dehydration process starts again.

Most aquatic elves are chaotic good, but player characters can be any alignment.

**Languages:** Aquatic elves begin play with knowledge of their own tongue, kuo-toa, sahuagin, dolphin. merman, and undersea common.

### Aquatic Elves' Special Abilities

Confer Water Breathing
Resistance
Secret doors
Stealth
Trident Bonus

### Aquatic Elf Racial Penalties

Aquatic elves can be out of water only for a number of days equal to their Fitness scores. They cannot gain the elven attack bonus for bows, as such weapons are ineffective underwater.

## Dark Elves

**Character point cost: 45**

The dark elves, also known as drow, live underground. Nearly all of them are evil, and they have used their cunning to become masters of much of the Underdark. Most intelligent creatures shun them. In many ways, dark elves are the twisted, corrupt versions of their above-ground relatives.

Drow have jet black skin, the better to hide their movements underground. And they tend to be shorter than other elves. The only other physical difference drow exhibit is their eyes, which glow a feral red—evidence, perhaps, of the hatred that burns in their hearts and minds.

Very few dark elves are of good alignment, and these are usually player characters.

**Languages:** Dark elves begin play with: drow, elf, gray dwarf, illithid, undercommon, kuo-toa, bugbear, and orcish.

### Dark Elves' Special Abilities

Infravision, 120'
Resistance
Spell abilities
Stealth

Secret doors

### Dark Elf Racial Penalties

Dark elves suffer a –1 penalty on all rolls when exposed to bright sunlight or continual light spells. Lesser light sources do not bother them. All other elves hate dark elves, resulting in an initial reaction roll penalty of –2.

## Gray Elves

**Character point cost: 45**

Gray elves are considered the most noble and reclusive of elvenkind, devoting time to improving their minds. Also known as the faerie, this race has withdrawn from the world around them, stepping forth only to combat great evils. To some—even other elves—this retiring nature makes gray elves seem aloof and uncaring. Indeed, the faerie can be haughty, disdaining contact with their cousins and considering themselves to be the highest, purest, most noble form of elf.

Tall and slender, gray elves have amber or violet eyes and silver or pale golden hair. They prefer to dress in white, silver, or golden yellow with cloaks of dark tones such as deep blue or purple.

Most gray elves are chaotic good, though player characters can be any alignment.

Languages: Gray elves begin with six languages of their choice. The languages are subject to the DM's approval.

### Gray Elves' Special Abilities

| | |
|---|---|
| Bow bonus | Secret doors |
| Infravision, 60' | Stealth |
| Resistance | Sword bonus |
| Reason bonus | |

### Gray Elf Racial Penalties

Due to their reclusive and often haughty ways, gray elf characters suffer a –1 reaction roll penalty when dealing with other elves, and a –2 penalty when encountering other races.

## High Elves

**Character point cost: 40**

The most common type of elf, these are also the most open, friendly, and cooperative. High elves set the physical standards for elves, being about 5' tall and weighing about 110 pounds. High elves are the palest of all elves, with a skin tone resembling the color of fine cream. High elves usually have blond hair and blue eyes or darker hair, ranging from sandy brown to jet black, with intensely green eyes. High elves like to wear pastel shades. When out on a hunt or adventuring in the forest, high elves typically cover themselves in a cloak of forest green in the spring and summer and one of tan or russet in the autumn.

Most high elves are chaotic good, though as player characters they can be any alignment.

**Languages:** High elves begin with high elf, common, elf, gnome, halfling, goblin,

hobgoblin, orc, and gnoll.

### High Elves' Special Abilities

| | |
|---|---|
| Bow bonus | Secret doors |
| Infravision, 60' | Stealth |
| Resistance | Sword bonus |

### High Elf Racial Penalties

Because high elves are so friendly and open, they often take things—including illusions—at face value. High elves attempting to disbelieve something which is actually an illusion suffer a –2 penalty to the attempt.

## Sylvan (Wood) Elves

**Character point cost: 40**

Sylvan elves, or wood elves as they also are known, descended from the same stock as other elves. However, they prefer to live a more primitive lifestyle, more in touch with their roots in the primeval forests they have made their homes. They are geared toward simple survival, and they concentrate on their environment rather than on philosophical debates and the study of magic. Sylvan elves enjoy the beauty of a singing bird, the patterns of an intricate spider web, and their own practice of tattooing. They are the most temperamental and emotional elves.

Sylvan elves are more muscular than other elves, and their complexions are darker. They have yellow to coppery-red hair and brown eyes, though some rare cases of hazel or blue eyes are known. Any sylvan elf born with hazel or blue eyes is considered a good omen for the tribe, believed to be destined for personal greatness. Sylvan elves normally dress in browns and greens, the better to blend in with the forest.

Unlike most of their brethren, sylvan elves tend toward neutral alignments, though player characters can be of any alignment.

**Languages:** Sylvan elves begin with their own dialect, in addition to elf, centaur, pixie, dryad, treant, and brownie. Sylvan elves rarely learn the common tongue, as they wish to have as little to do with the outside world as possible.

### Sylvan Elves' Special Abilities

| | |
|---|---|
| Bow bonus | Secret doors |
| Infravision, 60' | Stealth |
| Resistance | Spear bonus |

### Sylvan Elf Racial Penalties

On rare occasions when a sylvan elf leaves his forest (most often as a player character), the elf's discomfort is visible. Anyone encountering a sylvan elf outside his home suffers a –1 reaction roll penalty, as the elf is uneasy around strangers.

## Elven Abilities

A character with leftover character points may select additional racial abilities after taking one of the standard subrace packages. Or, if the player wishes to create his own customized elven character, he can pick and choose from the list of elven abilities listed below. Abilities cost 5 to 15 character points; refer to the descriptions

below.

- **Aim bonus (10):** +1 to the Aim subability score. This negates the requirement that Dexterity subabilities must be within 4 points of each other. They can be within 5.
- **Balance bonus (10):** +1 to the character's Balance subability score. This negates the requirement that Dexterity subabilities must be within 4 points of each other. They can be within 5.
- **Bow bonus (5):** +1 on attacks with long or short bows.
- **Cold resistance (5):** +1 bonus on saving throws vs. cold- and ice-based attacks, as the elf's body is less susceptible to extreme temperatures.
- **Companion (10):** The elf gains the companionship of a cooshee or an elven cat. See the Animal Master kit for more specifics on companion animals.
- **Confer water breathing (10):** Once a day, the elf can confer the ability to breathe water upon another individual or creature. This ability lasts one hour for every level of the elf conferring the ability. For example, a 6th level aquatic elf thief could confer water breathing on another for six hours.
- **Dagger bonus (5):** +1 attack roll bonus with daggers.
- **Heat resistance (5):** +1 bonus on saving throws vs. heat- and fire-based attacks, as the elf's body is less susceptible to extreme temperatures.
- **Infravision (10):** 60' infravision range.
- **Javelin bonus (5):** +1 attack roll bonus when using a javelin.
- **Less sleep (5):** The elf requires only four hours worth of sleep to be rested. This is especially valuable to spellcasters.
- **Magic identification (10):** A 5% chance per experience level of identifying the general purpose and function of any magical item, reflecting their interest in the arcane. This is as per the bard ability—see The Player's Handbook for more information.
- **Reason bonus (10):** +1 to the Reason subability, due to gray elves' devotion to developing their intellects.
- **Resistance (10):** 90 percent resistant to sleep and charm-related spells.
- **Secret doors (5):** because of their acute senses, elves are quick to spot concealed doors and hidden entranceways. Merely passing within 10' of a concealed door allows an elf a one-in-six chance (a 1 on 1d6) to notice it. If actively searching, an elf's chances improve to a two-in-six chance (1 or 2 on 1d6) to find secret doors, and a three-in-six (1, 2, or 3 on 1d6) to notice a concealed door.
- **Speak with plants (10):** Once a day, the elf can use the *speak with plants* ability, as a priest of the same level.
- **Spear bonus (5):** +1 attack roll bonus when using a spear.
- **Spell Abilities (15):** Once a day the elf can cast *faerie fire, dancing lights,* and *darkness* as a priest or wizard of the same level. When the character reaches 4th level, he can add, *levitate, detect magic,* and *know alignment*.
- **Stealth (10):** When the elf is alone and is not wearing metal armor, he gains a bonus to surprise opponents. The opponent suffers a –4 penalty, a –2 if the elf has to open a door.
- **Sword bonus (5):** +1 on attack rolls using a short sword or a long sword.

- **Trident bonus (5):** +1 on attack rolls when using a trident.

## Gnomes

Distantly related to dwarves, gnomes are smaller—averaging 3–31_2' tall and weighing about 70 pounds. Gnomes have deep tan or brown skin and white hair. The most distinguishing feature are their noses, in which they take great pride. For some reason, all gnomes have very large noses—compared to the rest of their facial features.

The average life span for a gnome is 350 years. Gnomes tend to live in hilly meadows and rocky woodlands. Their small size makes them wary of larger races, though gnomes are not hostile unless the larger folk are evil.

Gnomes are much less dour than their dwarven relatives, with sly and lively senses of humor. Many people—mostly gnomes—say that gnomes have elevated practical jokes to an art form. Gnomes also love living things and finely wrought items of all types. But most especially they love gems and jewelry and are considered by many to be the best gem cutters and jewelers in existence.

Gnomes have some difficulty using enchanted items. All magical items used by a gnome—that are not specially suited to his class—have a 20% chance (on 1d100 roll) to malfunction. A check for malfunction is made every time the character attempts to use the item, and a malfunction affects only the current attempt. If the check is passed, the item performs until it is turned off, put away, or its duration expires. Malfunction checks apply to magical wands, rods, staves, rings, amulets, potions, horns, jewels, and all other items except weapons, shields, armor, gauntlets, illusionist trappings, girdles, and—if the gnome is a thief—items that mimic thieving abilities. Malfunction checks do not apply to gnome priests using clerical magical items.

Also like dwarves, if a gnome possesses a *cursed* item that malfunctions, he will recognize the nature of the item and can safely dispose of it.

The standard gnomish subraces are deep, rock, and forest gnomes. Gnome characters can choose from the following classes: fighter, thief, cleric, or illusionist. Gnomes also can be multi-classed, mixing any two—but not more—of the above classes.

**Players who choose gnomes for their characters have 45 character points to spend on racial abilities.** These points can be spent to customize a gnome from the general skill list below, or they can be used to purchase a subrace's skill package. Only 5 points can be retained for use later in the character creation process.

### Deep Gnomes

**Character point cost: 45**

Most surface dwellers consider deep gnomes, or svirfneblin as they call themselves, to be the gnomish equivalents of gray dwarves and dark elves—evil counterparts of their above-ground cousins. This is untrue. Deep gnomes are no more or less evil than their surface-dwelling cousins, and their notorious reputation is a result of ignorance and mistaken association.

Deep gnomes tend to be smaller than other gnomes, but their wiry frames are just as strong. They also prefer to wear cool tones that reflect their stony underground habitats. Most males are bald, while females tend to have stringy gray hair.

The majority of deep gnomes are neutral with good tendencies, but player characters can be of any alignment.

**Languages:** Deep gnomes begin with the following languages: svirfneblin, gnome,

common, undercommon, dark elf, kuo-toa, and the bizarre language of earth elementals.

### Deep Gnomes' Special Abilities

| | |
|---|---|
| Dart bonus | Mining detection abilities |
| Freeze | Saving throw bonus |
| Infravision, 120' | Stealth |
| Melee combat bonus* | |

* Svirfneblin only gain defensive adjustments; they have no attack roll bonuses versus particular enemies.

### Deep Gnome Racial Penalties

Due to their unfortunate reputation, deep gnomes suffer a –2 reaction roll penalty when initially encountering individuals of other races.

## Forest Gnomes

**Character point cost: 45**

Forest gnomes are less common than rock gnomes. They fill an important niche in the ecology of the woodlands, caring for small plants and animals that other races sometimes overlook. Unlike other gnomes, forest gnomes prefer to make their homes above ground in small log cabins or in large, hollow trees.

The smallest of gnomes, they average only 21_2' in height. They share the physique of rock gnomes—though their noses are not quite as large. Forest gnomes wear their hair and beards long, and the color runs from brown to black in their youth, fading to gray or white with age. Their skin tends toward a greenish cast to tan, rather like some tree barks, and their eyes are blue or brown.

Although most forest gnomes are neutral good, player characters can claim any alignment.

**Languages:** Forest gnomes speak their own dialect, gnome, treant, dryad, brownie, satyr, and pixie.

### Forest Gnomes' Special Abilities

| | |
|---|---|
| Animal friendship | Melee combat bonuses* |
| Forest movement | Saving throw bonus |
| Hide | |

* Forest gnomes may apply their defensive adjustment when fighting any man-sized or larger creatures; their racial enemies are orcs, lizard men, troglodytes, or any creature which they have directly observed damaging woodlands.

### Forest Gnome Racial Penalties

Forest gnomes cannot have infravision.

## Rock Gnomes

**Character point cost: 40**

Rock gnomes are the most common gnomes, and they can be encountered in a variety of

climates and environments. The most noticeable feature of the rock gnome is his nose. All gnomes have large noses, but rock gnomes sport the biggest noses of all. Rock gnomes love gems, especially diamonds bigger than their noses.

Rock gnomes stand about 31_2' tall and weigh about 70 pounds. Eye color is predominately blue, although green or brown are seen occasionally. Their hair is usually white or pale gray.

Rock gnomes are typically neutral good, but player characters can choose any alignment.

**Languages:** Rock gnome player characters start with: common, dwarf, gnome, halfling, goblin, kobold, and the simple languages of burrowing mammals—moles, badgers, etc.

**Rock Gnomes' Special Abilities**

| | |
|---|---|
| Infravision, 60' | Mining detection abilities |
| Melee combat bonuses | Saving throw bonus |

**Rock Gnome Racial Penalties**

None.

Gnome Abilities A character with leftover character points may select additional racial abilities after taking one of the standard subrace packages. Or, if the player wishes to create his own customized gnome character, he can pick and choose from the list of gnome abilities listed below. Abilities cost either 5 or 10 character points; refer to the descriptions below.

- **Animal friendship (10):** Once a day a gnome gains an *animal friendship* spell ability, as the priest spell, with respect to burrowing animals.
- **Melee Combat bonus (10):** +1 bonus on their attack rolls vs. kobolds and goblins—the gnomes' traditional rivals for space and resources. Also, gnolls, bugbears, ogres, half-ogres, ogre magi, trolls, giants, and titans suffer a –4 penalty on their attack rolls vs. gnomes.
- **Dagger bonus (5):** +1 to attack rolls with daggers.
- **Dart bonus (5):** +1 to attack rolls with darts, their preferred missile weapon.
- **Defensive bonus (5):** +1 to Armor Class when in their native underground environment.
- **Engineering bonus (5):** If the gnome has the engineering proficiency, he gains a +2 bonus to the proficiency score.
- **Forest movement (10):** The ability to *pass without trace* through their native woodland as the druidic ability.
- **Freeze (10):** the ability to "freeze" in place in their underground environment. This gives them a 60% chance not to be noticed by passersby.
- **Hide (10):** the ability to *hide in woods* with a chance equal to a thief of the same level's *hide in shadows* ability.
- **Infravision (10):** 60' infravision range.
- **Mining Detection Abilities (10):** A character with this skill is familiar with mining, tunneling and stonework. By concentrating for one round the character can:

Determine the approximate depth underground, 1–4 on 1d6.
Determine approximate direction underground, 1–3 on 1d6.
Detect any grade or slope in the passage they are passing through, 1–5 on 1d6.
Detect unsafe walls, ceilings, or floors, 1–7 on 1d10.

- **Short sword bonus (5):** +1 to attack rolls with short swords.
- **Saving Throw Bonus (5):** like dwarves, gnomes are resistant to most magic. This grants them a bonus to all saving throws vs. magical wands, staves, rods, and spells. This bonus is determined by the character's Health sub-ability score. For every 3 1/2 points of Constitution/Health, the gnome receives a +1 bonus. These bonuses are summarized on the chart below.

| Score | Bonus |
|---|---|
| 4–6 | +1 |
| 7–10 | +2 |
| 11–13 | +3 |
| 14–17 | +4 |
| 18–20 | +5 |

- **Potion identification (5):** A gnome with this ability has a percentage chance equal to his Wisdom score of identifying a potion by appearance and scent.
- **Reason bonus (10):** +1 bonus to the Reason subability.
- **Sling bonus (5):** +1 bonus "to hit" when using a sling.
- **Stealth (10):** If the gnome is not in metal armor, a –4 penalty is applied to opponent's surprise rolls if the gnome is at least 90 feet ahead of a party of characters without this ability, or accompanied only by characters with equivalent stealth skills. The gnome is also difficult to surprise himself and receives a +2 bonus to his own surprise rolls.

## Halfling

Most halflings are about 3' tall and weigh 60 to 70 pounds. They are generally plump, with round, broad, and often florid faces. They have curly hair atop their heads and on the tops of their typically bare feet. The average life expectancy of a halfling is 150 years.

Halflings are a sturdy and industrious people, generally quiet and peaceful. They enjoy all the creature comforts, and while not overly ambitious, they are friendly and open. Their homes are well-furnished burrows, and most of their work is done out in the sunshine. Halflings get along with the others races, including humans, and they can be found in practically any civilization.

The standard halfling subraces are: hairfoot, stout, and tallfellow. Halfling characters can be of the following classes: cleric, fighter, or thief. The race's multi-class options are limited to fighter/thief.

**Players who choose halflings for their characters have 35 character points to spend on racial abilities.** These points can be spent to customize a halfling from the general skill list below, or they can be used to purchase a subrace's skill package. Only 5 points can be retained for use later in the character creation process.

### Hairfoot Halflings

**Character point cost: 30**

The most common halfling, hairfoots prefer rural settings. They are a practical people, and there are many bakers, millers, farmers, and innkeepers in their society. Averaging 3' tall, hairfoots are stockier than their cousins. Their complexions run from pale peach to ruddy to dark brown, and their eyes are usually black or dark brown. Their hair can be blond, brown, red, black, and shades in between—though with few exceptions it is always curly. Hairfoots are distinguished from other halflings by their lack of facial hair.

Most hairfoots are lawful good, though player characters can be of any alignment.

**Languages:** Hairfoots can begin with any four halfling, human, or elf dialects.

### Hairfoots' Special Abilities

Attack bonus Stealth
Saving throw bonuses

### Hairfoot Racial Penalties

None.

## Stout Halflings

**Character point cost: 35**

Stouts are not as common as hairfoots, and they tend to be stockier. As a result, they also tend to be stronger. Stouts usually live apart from human societies, choosing instead to live near dwarves. There may be some dwarven blood somewhere in the stouts' ancient past.

Ruddy in complexion, stouts vividly blush when pleased or embarrassed. Their hair tends to be light, and their eyes usually are blue, gray, or green. They favor practical, sturdy clothes, such as well-cured leather. They are the most industrious of all halflings, and are even comfortable around bodies of water and boats.

Most stouts are lawful good, though players can choose any alignment for their characters.

**Languages:** Stouts can begin with any six halfling, human, or dwarven dialects.

### Stout Racial Abilities

Attack bonus Saving throw bonuses
Infravision, 60' Stealth
Mining detection abilities

### Stout Racial Penalties

Stouts suffer a –1 penalty on reaction rolls from elves because of the halflings' friendship with dwarves.

## Tallfellow Halflings

**Character point cost: 35**

These halflings are the tallest and slimmest of their kind, averaging a little over 4' tall. Their favorite locale is temperate woodlands. As such, they often live nearer to elves than humans.

They usually wear their hair long, sometimes covered with small caps. And they tend

to wear clothes of greens and tans to help them blend into the woods. Tallfellows are the best carpenters, and they often live in spacious above-ground wooden houses. When they need to travel, tallfellows prefer riding small ponies to walking.

Most tallfellows are lawful good, but player characters can be of any alignment.

**Languages:** Tallfellows begin with the following languages: common, halfling, elf, gnome, centaur and dryad.

### Tallfellow Racial Abilities

| | |
|---|---|
| Attack bonus | Secret Doors |
| Hide | Stealth |
| Saving throw bonuses | |

### Tallfellow Racial Penalties

Tallfellows suffer a –2 reaction roll penalty vs. dwarves, due to the halflings' friendship with elves.

A character with leftover character points may select additional racial abilities after taking one of the standard subrace packages. Or, if the player wishes to create his own customized halfling character, he can pick and choose from the list of halfling abilities listed below. Abilities cost either 5 or 10 character points; refer to the descriptions below.

- **Aim bonus (10):** +1 to the halfling's Aim subability score.
- **Attack bonus (5):** +1 attack bonus with hurled weapons and slings.
- **Balance bonus (10):** +1 to the Balance subability. This allows the character to have up to a difference of 5 in the Dexterity subability scores.
- **Detect evil (5):** Halflings are very perceptive. Once a day a halfling with this ability can detect evil in creatures or individuals. This ability does not function on items or locations.
- **Detect secret doors (5):** The halfling can detect secret and concealed doors, as an elf
- **Hide (10):** the ability to *hide in woods* with a chance equal to a thief of the same level's *hide in shadows* ability.
- **Health bonus (10):** +1 to the halfling's Health subability score.
- **Infravision (5):** Infravision with a 30' range, which indicates some stout blood in the character's lineage.
- **Mining Detection Abilities (5):** A character with this skill is familiar with mining, tunneling and stonework. By concentrating for one round the character can:
  Determine approximate direction underground, 1–3 on 1d6.
  Detect any grade or slope in the passage they are passing through, 1–3 on 1d4.
- **Reaction bonus (5):** +1 to reaction rolls due to other races' acceptance of halflings.
- **Saving Throw Bonuses (10):** Halflings have a high resistance to magical spells and poison. This natural block grants halfling characters a bonus to all saving throws vs. magical wands, staves, rods, and spells, and applies vs. any poisonous or toxic substances. This bonus is determined by the character's Constitution/Health score. For every 3 1/2 points of Health, the character receives a +1 bonus. These bonuses are summarized below. Halflings—unlike dwarves and gnomes—are not hindered when using magical items.

| Score | Bonus |
|---|---|
| 4–6 | +1 |
| 7–10 | +2 |
| 11–13 | +3 |
| 14–17 | +4 |
| 18–20 | +5 |

- **Stealth (10):** Like elves, halflings gain a bonus to surprise opponents, but only if the halfling is not wearing metal armor. The halfling can move so quietly that opponents suffer a –4 penalty to their surprise rolls. If the halfling must open a door or move aside some other obstruction, this penalty is reduced to –2.
- **Taunt (5):** Once a day the halfling can taunt someone, as per the 1st level wizard spell.

## Half-Elves

Half-elves are the offspring of human and elf parents. They average 5 1/2' tall and weigh about 150 pounds. They possess elements of both parents' heritages, and can be the following classes: cleric, druid, fighter, ranger, mage, specialist wizard, thief, or bard. Multi-class combinations are: cleric (or druid)/fighter, cleric (or druid)/fighter/mage, cleric/ranger, cleric (or druid)/mage, fighter/mage, fighter/thief, fighter/mage/thief, and mage/thief.

Half-elves can be any alignment.

Half-elves comprise a single subrace (see below).

**Players who choose half-elves for their characters have 25 character points to spend on racial abilities.** These points can be spent to customize a half-elf from the general skill list below, or they can be used to purchase the subrace's skill package. Only 5 points can be retained for use later in the character creation process.

### Half-Elf Standard Racial Abilities (20)

| | |
|---|---|
| Infravision, 60' | Resistance |
| Languages* | Secret Doors |

* Common, elf, gnome, halfling, goblin, hobgoblin, orc, and gnoll

If the player wishes to create his own customized half-elf character, he can pick and choose from the list of half-elf abilities listed below. Abilities cost either 5 or 10 character points; refer to the descriptions below.

- **Bow bonus (5):** +1 to attack rolls with any bows other than crossbows.
- **Cold resistance (5):** +1 bonus on saving throws vs. cold- and ice-based attacks, as the elf's body is less susceptible to extreme temperatures.
- **Detect secret doors (5):** because of their acute senses, half-elves are quick to spot concealed doors and hidden entranceways. Merely passing within 10' of a concealed door allows an elf a one-in-six chance (a 1 on 1d6) to notice it. If actively searching, an elf's chances improve to a two-in-six chance (1 or 2 on 1d6) to find secret doors, and a three-in-six (1, 2, or 3 on 1d6) to notice a concealed door.

- **Health bonus (10):** +1 bonus to the character's Health subability score; the score can be up to 5 points higher than the character's Fitness score.
- **Heat resistance (5):** +1 bonus on saving throws vs. heat- and fire-based attacks, as the elf's body is less susceptible to extreme temperatures.
- **Infravision (10):** Infravision with a range of 60'.
- **Less sleep (5):** The half-elf requires only four hours worth of sleep to be rested. This is especially valuable to spellcasters.
- **Resistance (5):** 30% resistance to sleep and charm spells.
- **Stealth (10):** When the half-elf is alone and is not wearing metal armor, he gains a bonus to surprise opponents. The opponent suffers a –4 penalty, a –2 if he has to open a door.
- **Sword bonus (5):** +1 to attacks with long swords or short swords.

Half-Orc Another example of a hybrid, half-orcs are products of human and orc parents. Of a height similar to half-elves, half-orcs usually resemble their human parent enough to pass for a human in public. Their skin ranges from peach to olive to deep tan, and their hair can be blond, red, brown, black, gray, and shades in between. Half-orcs can be members of the following classes: fighter, cleric, or thief. They can be multi-classed in any two classes, but not three. Half-orcs can be of any alignment.

**Players who choose half-orcs for their characters have 15 character points to spend on racial abilities.** These points can be spent to customize a half-orc from the general skill list below, or they can be used to purchase the subrace's skill package. Only 5 points can be retained for use later in the character creation process.

**Half-Orc Standard**
**Racial Abilities (10)**
Infravision, 60'
Languages*

* Common, orc, dwarf, goblin, hobgoblin, and ogre.

**Half-orc Penalties**

In human societies, half-orcs suffer a –2 reaction roll penalty.

If the player wishes to create his own customized half-orc character, he can pick and choose from the list of orc abilities listed below. Abilities cost either 5 or 10 character points; refer to the descriptions below.

- **Active sense of smell (5):** The character's sense of smell is sensitive enough to give a +1 bonus to surprise rolls.
- **Acute taste (5):** The character's sense of taste is so sensitive he gains a +2 bonus to saving throws vs. imbibed poisons.
- **Attack bonus (5):** +1 attack bonus with one weapon of the player's choice.
- **Damage bonus (5):** +1 damage bonus with one weapon of the player's choice.
- **Fitness bonus (10):** +1 bonus to the character's Fitness subability score, due to his hardy heritage. The character's Fitness score may be up to 5 points higher than his

Health subability score.

- **Infravision (10):** Infravision with a 60' range.
- **Mining Detection Abilities (5):** A character with this skill is familiar with mining, tunneling and stonework. By concentrating for one round the character can:
  Detect any grade or slope in the passage they are passing through, 1 on 1d4.
  Detect new construction in stonework., 1–2 on 1d6.
- **Stamina bonus (10):** +.1 bonus to the character's Stamina subability score. The character's Stamina score may be up to 5 points higher than his Muscle subability score.

Half-Ogre This hybrid comes from ogre and human parents. They average 7–8' tall, have ruddy complexions, dark hair, and dark eyes. They look like huge humans. Half-ogres can be fighters or clerics, and they cannot be multi-classed. Half-ogres can be any alignment.

**Players who choose half-ogres for their characters have 15 character points to spend on racial abilities.** These points can be spent to customize a half-ogre from the general skill list below, or they can be used to purchase the subrace's skill package. Only 5 points can be retained for use later in the character creation process.

**Half-Ogre Standard Racial Abilities (10)**
Languages*
Tough Hide

* Common, ogre, orc, troll, stone giant, and gnoll.

**Half-ogre Penalties**

Half-ogres qualify as Large creatures and suffer more damage from many weapons. Also, certain smaller races enjoy combat bonuses against half-ogres.

If the player wishes to create his own customized half-ogre character, he can pick and choose from the list of half-ogre abilities listed below. Abilities cost either 5 or 10 character points; refer to the descriptions below.

- **Attack bonus (5):** +1 attack bonus with one melee weapon.
- **Damage bonus (5):** +1 to damage rolls with one melee weapon
- **Fitness bonus (10):** +1 bonus to the character's Fitness subability score, due to his hardy heritage. The character's Fitness score may be up to 5 points higher than his Health subability score.
- **Hit point bonus (10):** One additional hit point whenever new hit points (for advancing to a new level) are rolled.
- **Infravision (5):** Infravision with a 30' range.
- **Muscle bonus (10):** +1 bonus to the character's Muscle subability score, due to his great size. The character's Muscle score may be up to 5 points higher than his Stamina subability score.
- **Poison resistance (5):** +1 to saving throws versus poison.
- **Tough hide (5):** Half-ogres have a natural Armor Class of 8. If the character wears

armor that would improve his AC to better than 8, this ability has no effect. If the character wears armor that gives him an AC of 8 or worse, he may add a +1 bonus to his Armor Class.

### Humans

Humans can advance without limit in all character classes. This is a standard human ability and costs no character points. **Humans receive 10 character points.** These can be spent on various weapon or nonweapon proficiencies or saved for use during the game. In addition, humans can spend the points to choose from the following abilities.

- **Attack bonus (5):** +1 to attack with any weapon of the human's choice.
- **Balance bonus (10):** +1 bonus to the character's Balance subability score. The character's Balance score may be up to 5 points higher than his Aim subability score.
- **Experience bonus (10):** +5% experience point bonus. This is cumulative if the human meets the class requirements to gain a 10% experience point bonus.
- **Health bonus (10):** +1 bonus to the character's Health subability score. The character's Health score may be up to 5 points higher than his Fitness subability score.
- **Hit point bonus (10):** One additional hit point whenever new hit points (for advancing to a new level) are rolled.
- **Secret doors (10):** A human with a trace of elven blood may have the ability to spot concealed doors and hidden entranceways. Merely passing within 10' of a concealed door allows the character a one-in-six chance (a 1 on 1d6) to notice it. If actively searching, the character's chances improve to a two-in-six chance (1 or 2 on 1d6) to find secret doors, and a three-in-six (1, 2, or 3 on 1d6) to notice a concealed door.
- **Tough hide (10):** A few rare human characters have a natural Armor Class of 8. If the character wears armor that would improve his AC to better than 8, this ability has no effect. If the character wears armor that gives him an AC of 8 or worse, he may add a +1 bonus to his Armor Class.

### Other Races

At the DM's option, players may choose almost any manner of being as a player character. For example, the Dark Sun® campaign allows players to run half-giant characters, dwarf/human crossbreeds, or feral halflings—all with ability scores ranging from 5 to 20 instead of 3 to 18. If a player has a specific character race from an unusual campaign world that he wishes to use, DMs can simply skip the selection of Racial Abilities and take the character race with all its benefits and hindrances exactly as it appears. Generally, players may not customize these unusual races, and they receive zero character points for selecting a non-standard race.

For the DM's convenience, a short list of common humanoid and monstrous character races is provided on page 42, with standard abilities and hindrances. These creatures appear in *The Complete Book of Humanoids* and *The Monstrous Manual*™, and more detailed descriptions of their lifestyles and societies can be found in those books. A player can choose one of these races for his character if the DM agrees, but the character gains no additional character points in this step.

The races described here include: aarakocra, alaghi, bugbear, bullywug, centaur, flind, giff, githzerai, gnoll, goblin, hobgoblin, kobold, lizard man, minotaur, mongrelman,

ogre, orc, satyr, swanmay, thri-kreen, and wemic.

## Ability Score Requirements

Just like demihumans, characters must qualify for these optional races by meeting certain ability score criteria. The ability score adjustments noted are applied after a character has met the required scores. Some of these adjustments can elevate a humanoid or monstrous character to ability scores of 19 or 20, or reduce a characteristic to 2.

| Race | Str | Dex | Con | Int | Wis | Cha |
|---|---|---|---|---|---|---|
| Aarakocra | 4/17 | 7/17 | 6/17 | 3/18 | 3/17 | 3/18 |
| Alaghi | 10/17 | 3/17 | 12/18 | 5/18 | 3/16 | 3/16 |
| Bugbear | 7/17 | 8/17 | 8/18 | 4/17 | 3/18 | 4/15 |
| Bullywug | 6/18 | 4/18 | 6/18 | 4/15 | 3/16 | 4/15 |
| Centaur | 11/18 | 5/18 | 10/17 | 3/16 | 3/17 | 3/18 |
| Flind | 7/17 | 6/18 | 6/18 | 3/16 | 3/16 | 4/17 |
| Giff | 14/18 | 3/15 | 10/18 | 3/15 | 3/16 | 3/17 |
| Githzerai | 3/18 | 3/18 | 3/18 | 3/18 | 3/18 | 3/18 |
| Gnoll | 5/17 | 5/18 | 5/18 | 4/15 | 3/16 | 4/15 |
| Goblin | 5/16 | 4/17 | 5/16 | 3/18 | 3/18 | 4/13 |
| Hobgoblin | 6/18 | 6/18 | 5/18 | 3/18 | 3/18 | 4/15 |
| Kobold | 4/17 | 4/18 | 5/16 | 3/17 | 3/18 | 3/14 |
| Lizard man | 8/18 | 3/18 | 6/18 | 3/17 | 3/18 | 3/16 |
| Minotaur | 10/18 | 5/14 | 10/18 | 5/14 | 5/18 | 5/18 |
| Mongrelman | 6/17 | 6/18 | 8/18 | 4/18 | 3/18 | 3/9 |
| Ogre | 14/18 | 3/8 | 12/18 | 4/10 | 3/9 | 4/10 |
| Orc | 5/17 | 3/17 | 8/18 | 3/16 | 3/16 | 5/14 |
| Satyr | 6/18 | 8/18 | 6/17 | 4/18 | 3/18 | 3/17 |
| Swanmay | 13/18 | 12/17 | 14/18 | 9/18 | 13/17 | 9/18 |
| Thri-kreen | 8/18 | 12/18 | 5/18 | 5/18 | 5/18 | 3/15 |
| Wemic | 10/17 | 7/18 | 11/18 | 3/18 | 3/18 | 3/18 |

## Racial Ability Score Adjustments

After selecting a race, modify the character's ability scores as shown below.

| Race | Adjustments |
|---|---|
| Aarakocra | +1 Dexterity,-1 Strength, –1 Constitution |
| Alaghi | +2 Strength, –2 Intelligence |
| Bugbear | +1 Strength,-1 Intelligence, –1 Charisma |
| Bullywug | +1 Dexterity,-1 Intelligence, –1 Charisma |
| Centaur | +1 Constitution, +1 Wisdom, –2 Dexterity |
| Flind | +1 Strength, –1 Charisma |
| Giff | +2 Strength, –1 Dexterity, –1 Intelligence |
| Githzerai | None |
| Gnoll | +1 Strength, –1 Intelligence, –1 Charisma |
| Goblin | –1 Strength, –1 Charisma |
| Hobgoblin | –1 Charisma |

| | |
|---|---|
| Kobold | –1 Strength, –1 Constitution |
| Lizard man | None |
| Minotaur | +2 Strength, +2 Constitution, –2 Wisdom, –2 Charisma |
| Mongrelman | –1 Intelligence, –1 Charisma, +1 one other score |
| Ogre | +2 Strength, +2 Constitution, –2 Intelligence, –2 Charisma |
| Orc | +1 Strength, –2 Charisma |
| Satyr | +1 Dexterity, +1 Constitution, –1 Intelligence, –1 Charisma |
| Swanmay | +1 Dexterity, +1 Wisdom |
| Thri-kreen | +1 Dexterity, +1 Wisdom, –1 Intelligence, –1 Charisma |
| Wemic | +1 Strength, –1 Dexterity |

**Humanoid and Monstrous Character Level Limits by Class**

| Race | Fighter | Ranger | Priest | Wizard | Thief | Bard |
|---|---|---|---|---|---|---|
| Aarakocra | 11 | – | 7 | – | 11 | – |
| Alaghi | 12 | – | Druid 12 | – | – | – |
| Bugbear | 12 | – | Cleric 8 | – | 9 | – |
| Bullywug | 10 | – | 7 | – | 9 | – |
| Centaur | 12 | 10 | Druid 14 | 12 | – | 12 |
| Flind | 12 | – | Cleric 9 | – | 11 | – |
| Giff | 11 | – | Cleric 8 | – | 9 | – |
| Githzerai | 9 | – | – | 12 | 15 | – |
| Gnoll | 11 | – | Cleric 9 | – | 11 | – |

| Thri-kreen | 16 | 12 | 12 | – | – | – |
| Wemic | 12 | – | 7 | – | – | 10 |

## Abilities and Restrictions

**a. Charge Attack:** The creature is capable of making a charge attack, gaining a +2 bonus to attack and inflicting double damage with an impaling weapon such as a spear, javelin, or lance. Aarakocra perform a diving attack, centaurs charge like knights, and bullywugs leap at their enemies.

**b. Move Silently:** The creature can move silently, as the thief ability, with a base success of 40%, +5% per level.

**c. Hide in natural settings:** The creature can hide in natural settings, just as a thief

can hide in shadows. The base success chance is 35%, plus 5% per level. If a flat percentage score appears next to this ability, use this score instead; for example, a satyr's abilities include c(90%), which means that a satyr has this ability with a 90% success chance.

**d. Infravision:** The character possesses infravision (the ability to see in the dark) to a range of 60 feet.

**e. Surprise opponents:** When alone or with a group of similarly stealthy creatures, the character gains a bonus on his chance to surprise his enemies. Bugbears inflict a –3 penalty on opponents' surprise checks. A bullywug using its chameleon power inflicts a –2 penalty to opponent's surprise checks, or a –6 if the bullywug attacks with a leap from a place of concealment.

**f. Amphibious:** The character is at home in either water or air environments. Combat penalties for fighting in water do not apply to the character, although using Type S or B weapons underwater is still very difficult. Bullywugs are true amphibians and can breathe water; lizard men are still air-breathers, but they can hold their breath for a number of rounds equal to 2_3 their Constitution score before checking for drowning.

**g. Leap:** The character's powerful leg muscles enable him to make astounding leaps, bounding up to 30 feet forward or 10 feet into the air. Leaping to close with an enemy is considered a charge attack, and the character suffers double damage if he lands on a spear or similar weapon set against a charge. Bullywugs gain the special ability to inflict double damage with a leap. Note that thri-kreen can actually leap 50 feet forward or 20 feet in the air, but they do not gain this ability until they reach 3rd level.

**h. Detect new construction:** The creature has natural skills for mining, and can spot new or unusual construction with the percentage score noted. This is similar to the dwarven or gnome abilities as described earlier in this chapter.

**i. Detect sloping passages:** The creature can note subtle grades or slopes in underground passageways and chambers with the percentage score noted.

**j. Detect sliding or shifting walls:** The creature can detect walls that move or shift with the percentage score noted.

**k. Attacked last:** The character comes from a race notorious for its cowardice and ineffectiveness in combat. Consequently, enemies are likely to dismiss the character as a negligible threat and concentrate their attacks on other, more impressive, members of the character's party unless the character displays some unusual prowess, powerful magic, or skill.

**l. Hard to surprise:** The monstrous character's keen senses make it very difficult to surprise him. The character receives a +2 bonus to all surprise checks.

**m. Tracking:** The character's sense of smell is so acute that he can track, as per the tracking proficiency, with a 50% chance of success. Normal modifiers for old or confused trails may apply.

**n. Spell immunity:** Minotaurs have the unique power of immunity to *maze* spells, due to their familiarity with labyrinths and other such places.

**o. Fearlessness:** Minotaurs also enjoy a +3 saving throw bonus versus fear, including *fear*, *scare*, *cause fear*, or *emotion* spells, dragon fear, and similar effects.

**p. Sound mimicry:** Mongrelmen have the ability to perfectly imitate any sound they hear. They cannot create magical effects such as a harpy's song, a sphinx's roar, or a *shout* spell by imitating these sounds, although they can duplicate the non-magical

aspects of these sounds exactly.

**q. Pick pockets:** Mongrelmen also have the ability to pick pockets as the thief ability, with a success chance of 70% plus 5% per level.

**r. Create magical pipes:** Satyrs can create pan pipes that can cast *charm*, *sleep*, or *cause fear* effects within a 60 foot radius. To gain this ability, the satyr must invest 4 character points in the music/instrument trait when first created, and then devote 2 character points to the Music proficiency at least three times. He can't spend more than 2 character points per level on the proficiency, so the earliest he can gain this ability is at 3rd level. The pipes themselves are easily crafted and have no magical properties; it's the satyr's unearthly skill that creates the magical effects.

**s. Magic resistance:** The character is magic resistant. Giff have a flat 10% magic resistance, while githzerai have a magic resistance of 5% per level—for example, a 6th-level githzerai has a magic resistance of 30%.

**t. Antennae:** A thri-kreen's antennae give it a sensitivity to motion and serve to lessen darkness-based combat penalties by 1 point while fighting enemies within 15 feet.

**u. Paralyzing bite:** At 5th level, a thri-kreen gains the ability to paralyze its prey with a bite. The victim must save versus poison or be paralyzed 2–16 rounds (1–8 rounds if larger than man-sized, or only 1 round if size H or larger.)

**v. Dodge missiles:** At 7th level, a thri-kreen gains the ability to dodge thrown or fired missiles with a roll of 9 or better on a d20.

**w. Racial weapons:** At 5th level, a thri-kreen automatically gains proficiency in the chatkcha, a crystalline throwing wedge commonly used by the mantis warriors. At 7th level, the character gains proficiency in the gythka, a thri-kreen polearm. Consider these weapons to be equal to a javelin and a bill-guisarme respectively for damage, range modifiers, etc.—but note that the chatkcha returns to its thrower if it misses its target.

**x. Swan form:** Swanmays may *polymorph* themselves into a swan form at will. While in swan form, they can only be struck by +1 or better weapons, can fly at the listed rate, and have a magic resistance of 2% per level. A swanmay's equipment and belongings remain behind when she transforms. The swanmay requires a magical token (a cloak, ring, or similar item) to perform her transformation, and if she loses it she can no longer transform until she gets it back.

## Penalties

**y. Claustrophobia:** Aarakocra are extremely claustrophobic and are uncomfortable indoors or underground. An aarakocra character suffers a –3 penalty to attack rolls in such settings.

**z. Size:** A number of monstrous characters enjoy the mixed blessings of being a Size Large (L) creature. While this permits them to wield large weapons in a single hand, or even use huge weapons with both hands, it also means that they suffer damage as large creatures.

**aa. Dehydration:** A character with this restriction is vulnerable to dehydration if he spends too much time out of the water. The character must wet his entire body (a water skin full will do) three times per day, or lose 2 points of Constitution per missed bath. If the character's Constitution falls to 0, he dies of dehydration.

**bb. Light:** Many humanoids are accustomed to darkness, and they find bright light to

be disorienting and painful. A character with this weakness suffers a –1 penalty to attacks in daylight or within the radius of *continual light* spells.

**cc. Racial enmity:** Some humanoids are the natural enemies of common demihuman races, who have evolved special fighting techniques to combat them. Dwarves gain a +1 bonus to attack rolls against orcs, goblins, and hobgoblins; gnomes gain a +1 bonus to attack rolls against kobolds and goblins. In addition, ogres suffer a –4 penalty to hit dwarves, and ogres, bugbears, and gnolls suffer a –4 penalty to hit gnomes.

**dd. Hideous appearance:** Mongrelmen are so warped in appearance that they have an effective Charisma of 1 (a –7 penalty) for purposes of Reaction Checks.

**ee. Easily distracted:** Satyrs are very susceptible to distraction. Encountering a female of 15 or higher Charisma causes the satyr to forget everything except the idea of wooing the woman for 1–6 full turns, or even more if she is at all friendly. Even a bitter enemy can fascinate the satyr if she makes any effort at all, and in all circumstances satyrs have to succeed in a saving throw versus spells to consciously harm a beautiful woman—or ignore her. A bottle of strong drink can have the same effect.

**ff. Inhuman form:** Some monstrous characters are restricted from wearing armor or some magical items by their body form. For example, thri-kreen and alaghi cannot wear armor; centaurs, wemics, or bullywugs can't wear magical boots or magical armor due to their unusual shapes; and so on. In a questionable case, the DM should decide if a character can use a piece of equipment or not using his best judgment of the situation.

## The Races

### Aarakocra

Aarakocra are a race of intelligent bird-men who live among the highest mountain peaks. The average aarakocra stands about five feet tall, with a wingspan of nearly 20 feet. An aarakocra's feet are powerful talons that can be used to grasp and manipulate objects, and it also has small wing-hands about halfway along the leading edge of each wing. Like all true avians, aarakocra have hollow bones, and most weigh no more than 80 or 90 pounds. The aarakocras' voices are not well-suited for common, and they punctuate their speech with caws, screeches, and whistles.

Aarakocra are strong and swift fliers, and they can make a special diving attack with a drop of 200 feet or more. They receive no penalties for aerial missile fire. Aarakocra avoid grappling or combat on the ground, but their talons and beak serve as formidable weapons in a pinch. As a race, aarakocra are extremely claustrophobic, and dislike being indoors or underground.

### Alaghi

Distant cousins of the yeti, alaghi are forest-dwelling humanoids with barrel chests, short legs, and long, powerful arms. Their necks are thick and short, and their heads tend to be broad and flat with wide jaws. Alaghi are covered from toe to crown in long, thick hair ranging in hue from charcoal gray to reddish brown. Alaghi stand well over six feet tall and weigh more than 300 pounds.

Most alaghi live as semi-nomadic hunter-gatherers. They tend to be shy and peaceful

creatures, with a driving sense of curiosity. Alaghi love riddles and games of strategy, especially a good game of chess. Alaghi tend to hoot and hiss when they speak, and their fearsome size and power can often frighten people who are not used to them.

## Bugbear

Bugbears are the largest variety of goblinkind, standing about seven feet tall with muscular frames. They have light yellow to light brown hides, with thick coarse hair and bestial eyes. Their ears are large and prominent, and their mouths are full of sharp fangs. Bugbears are true carnivores, with keen sight and hearing, and they can move with amazing stealth when they try.

Most bugbears live by plundering and ambush, taking slaves and eating anything they kill. A player character bugbear is an extremely unusual representative of his species who must struggle to control a vicious temperament and natural inclination to bully those weaker than himself. Even the most honorable bugbears can be fatally misled by avariciousness and hunger for power.

## Bullywug

Bullywugs are bipedal frog-like amphibians inhabiting swamps, marshes, and other dank locations. They are covered with smooth, mottled green hide, with huge frog-like faces and bulging eyes. Bullywugs are strong swimmers and comfortable in water or out of it, but they are vulnerable to dehydration once they leave their native swamps.

A player character bullywug is actually a member of an advanced variety of this species, since most bullywugs are savages and marauders of the worst sort. Common bullywugs are scarcely able to wield a stone spear or club, but advanced bullywugs are able to wear armor and use most human weapons with little trouble.

## Centaur

These powerful and noble creatures have the torso and upper body of a human and the lower body of a horse. They are a strong and proud race, easily offended and impulsive. Centaurs can make use of any human weapon, but they're especially fond of oaken clubs, longbows, and medium lances, the latter of which they can wield in the same fashion as a human rider on a medium warhorse.

Centaur society is generally pastoral and peaceful, but they can be fierce warriors when the need arises. Like many woodland creatures, they have a great respect for nature's balance, and try not to disturb the world they live in. Centaurs are on good terms with elves, gnomes, and halflings, but they are suspicious of humans and dwarves.

## Flind

Flinds are warlike humanoids with many of the worst traits of hyenas and similar scavengers. They are covered with mangy brown or reddish-brown fur, with bestial muzzles and long, muscular limbs. Flinds are closely related to gnolls, but are stronger, smarter, and more fierce than their cousins. Gnolls look upon flinds as leaders, heroes, and champions.

Unlike the chaotic pack-like society of most gnolls, flind society tends to be organized and less savage. Flinds are quick to resort to violence, just like gnolls, but unlike their lesser cousins they're much more likely to consider the consequences and

risks first, and then carefully plan their attack.

## Giff

The giff are a race of hulking, powerfully-muscled mercenaries that resemble bipedal hippopotami. Their legs are cylindrical and stocky, with a heavy torso and clumsy but strong thick-fingered hands. Their faces are very hippopotamus-like, with small eyes and ears, and their skulls are exceedingly dense and strong. Giff are not known as towering intellectuals, but they are immensely strong and loyal to their employers.

The life of soldiering has become the only occupation in giff society, and bands of giff hire out their services to all causes. Therefore, a giff considers it his only purpose in life to keep himself fit, strong, and ready for action. They are fascinated by weapons (the more complicated, the better) and the trappings of military life, such as regimental histories, parades, and other forms of spit and polish.

## Githzerai

Native to the chaotic plane of Limbo, the githzerai are a monastic race of travelers and traders who can be found in almost all the infinite planes. Githzerai appear human, but they tend to be thin and gaunt, with drawn faces and sharp features. They favor plain clothing and conservative tones.

Githzerai society is extremely chaotic, but it is not without its own laws and mores. An individual githzerai is usually strongly loyal to his race, even if he is completely out of contact with his fellows. It is not unusual for a githzerai to spend years at a time in a single plane, wandering and adventuring.

## Gnoll

Gnolls are hyena-like humanoids with mangy yellow or brown fur, drooling muzzles full of long, sharp teeth, and gaunt but powerful frames. They give the impression of starving scavengers, with the disposition to match, and they are among the most chaotic and faithless of all humanoids. Gnolls have a hard time seeing past the moment, and patience is a virtue unheard of in gnoll society.

Player character gnolls must work hard to overcome the strong (and generally well-justified) prejudices they will encounter in the world outside their band. Their short tempers and bestial habits are not much help in dispelling these beliefs. Despite these distasteful qualities, gnolls can be brave and fierce fighters and valuable companions—provided they're not given too many tests of honor, honesty, or loyalty.

## Goblin

Goblins are small humanoids standing about four feet tall, with long arms, bandy legs, and harsh mannerisms. A goblin's face is broad and flat, with a wide fang-filled mouth, pointed ears, and an olive or dull yellow coloration. Goblins are generally cowardly, opportunistic, and untrustworthy.

Goblin society is fairly savage, and each tribe has an exact pecking order. Moving up this ladder by pulling down those above them is the typical dream of most goblins, and cooperation with others of their kind is always halfhearted. Typically, a goblin will let others do his work or fighting for him any time he can, and then strike from ambush only after he's sure his enemies have been weakened to the point where they can't threaten

him. Or, if the wrong side is winning the fight, a goblin isn't above reevaluating his allegiances in the middle of a battle.

## Hobgoblin

Hobgoblins are stocky humanoids with hairy hides of dark red to gray, and they stand about six and a half feet tall. They have yellow eyes and sharp yellow teeth, and favor dressing in brightly colored outfits. Hobgoblins wage a perpetual war with all other intelligent creatures, especially the other humanoid races. And they are proud of their status as the pariahs of the humanoid cultures. They feel that they are only weakened by alliances or treaties with other creatures.

Hobgoblin society is built around war, with military organization, and they seek out conflict wherever they can find it. Unlike the giff, who believe in the "rules" of warfare, hobgoblins seek to terrify and antagonize their enemies at all times. A player character hobgoblin is a rare individual indeed, since association with "weaklings" and "inferiors" is taken as a sign of weakness and decadence in hobgoblin society.

## Kobold

The smallest and weakest race of goblinkind is the race of kobolds. A kobold stands about three feet in height, with a scaly hide of dark brown to rusty black, and glowing red eyes in a vaguely dog-like face. Kobolds tend to be cowards and whiners, but are quick to turn on their enemies when they find themselves with an advantage of numbers or position. Due to their lack of physical prowess, kobolds specialize in dirty tricks, distractions, and traps, using these to incapacitate or distract larger foes.

Kobolds strive to be taken seriously by larger races, and often try to make up for their shortcomings with ferocity and tenacity. Kobold PCs are unusual examples of the race, but even the most pleasant kobolds are still mean-spirited and spiteful from time to time.

## Lizard man

A lizard man is a reptilian humanoid standing between six and seven feet tall. They weigh between 200 and 250 pounds, and their hides are covered with tough scales of dark green to brown. Lizard men have long, dangerous claws and thick, powerful tails up to four feet in length. They are exceptional swimmers and can hold their breath twice as long as most other air-breathing creatures, but they are slow and somewhat clumsy on land.

Generally, lizard men are dim savages who have not even mastered the use of the most basic tools and weapons, but PC lizard men are members of a more advanced variety that is capable of using weapons and armor. Despite this, lizard men are barbarians by any definition of the word, and human society and behavior is baffling to them. Unlike some other barbarians, lizard men are likely to react to this with violence instead of curiosity.

## Minotaur

These are not the minotaurs of the Dragonlance® game setting, but instead standard minotaurs as described in the Monstrous Manual. Most are cursed humans, or the offspring of minotaurs and humans. Minotaurs are powerfully built and tower more than seven feet in height, with the head of a bull and the body of a human male. Minotaurs

revere physical strength above all else, and they believe that the strong should naturally rule the weak. Minotaurs view surrender as an admission of weakness, and are likely to fight to the death regardless of the circumstances.

Many minotaurs are brutal savages, but they are not always mindless killers. They are ruthless, harsh, and stubborn, but they can be surprisingly intelligent and introspective.

## Mongrelman

Mongrelmen combine the worst features of many species, including humans, orcs, gnolls, ogres, bugbears, and more questionable heritages. No two look alike, but all appear to be poorly constructed combinations of various humanoid races, with misshapen limbs of different shapes and proportions. Without exception, mongrelmen are hideously ugly, and most are ashamed of their appearance and go to great lengths to conceal their bodies from others.

Mongrelmen are often enslaved by evil societies, and ostracized even by good ones. Without a place in the world, they have developed great patience and a surprising degree of human kindness and compassion within their misshapen forms. They tend to avoid bloodshed when they can, staying in the shadows and living by petty theft and scavenging.

## Ogre

Ogres are great brutes standing more than nine feet tall, with thick torsos, heavy limbs, stringy hair, and warty hides. They are usually ill-tempered beings who enjoy violence for its own sake, indulging in all manner of cruelty to entertain themselves. Ogres are extremely strong and hardy, but their lack of mental prowess is the stuff of legend.

Ogres live by raiding and scavenging, taking what they want from those too weak to defend themselves. A player character ogre is rare in the extreme—the intelligence and character necessary to rise beyond the petty cruelties and appetites of their kind just isn't found in many ogres.

## Orc

Orcs resemble primitive humans, with gray-green skin and coarse hair. They stoop slightly, have low, jutting foreheads, snouts, canine teeth, and short pointed ears. They stand between five and a half and six feet tall, and often have powerful, stocky builds. Orcs are aggressive hunters and raiders who constantly seek to expand their territory at the expense of their neighbors.

Orcs respect skill in battle, and from time to time an orc champion approaches human standards of bravery and honor in battle. A player character orc is one of these heroes. Even the best orcs are quick to take offense and are somewhat bloodthirsty.

## Satyr

The half-human, half-goat satyrs are a race of pleasure-loving beings, Like the sylvan locations they dwell in, satyrs are personifications of nature, embodiments of all that is wild and carefree. Satyrs have the head, torso, and arms of a human, with the hind legs of a goat. Two sharp black horns jut through the coarse, curly hair on top of the head. They love to spend their days and nights in sport, and they never miss an opportunity to chase

after wood nymphs or other comely creatures.

Satyrs are an inoffensive race—they just want to have fun. And when one takes up the life of an adventurer, he's usually looking for entertainment. They don't understand seriousness or violence, and while they can fight with the best, they're more likely to view a battle as just another kind of contest or game. Satyrs are very impulsive, and are generally unreliable companions despite their good intentions.

## Swanmay

Swanmays are human females who are gifted with the magical power to transform themselves into swans. In human form, they are indistinguishable from other people, although they're frequently women of striking looks and grace. In swan form, they are great white birds of extraordinary beauty. All swanmays carry a magical token of some kind—a ring, cloak, or belt, for instance—that allows them to change shape.

Swanmays belong to a special sisterhood of druids and rangers, living in communal lodges in hidden forests. Their homes are always near silent lakes or marshes. They oppose poachers, raiders, and others who disturb the natural order of the land, and they act as friends and protectors of the forest folk. Many swanmays give up routine adventuring to guard their homes against the forces of evil, but a few—player character swanmays—wander the land to fight evil wherever they find it.

## Thri-kreen

The thri-kreen are a race of large, intelligent insects often referred to as mantis warriors. They roam the deserts and savannas, existing as nomadic hunters. Mature thri-kreen are roughly seven feet tall at the shoulder, with six limbs and a tough, sandy-colored exoskeleton. They have black compound eyes, short antennae, and a complicated jaw structure. The thri-kreen's uppermost four limbs are equipped with opposable claws that can grasp tools or weapons, or serve as weapons themselves. The thri-kreen language is made up of clicks and grindings, and they have difficulty learning the common tongue.

Thri-kreen are organized into hunting packs, and they constantly roam their territory. It's unusual for a thri-kreen to leave its pack-mates and travel alone, and even more unusual for one to take up with others not of its kind. A PC thri-kreen has probably lost its true family in some disaster or another, and accepts its companions as a substitute family.

## Wemic

Wemics are part human and part lion, combining the two as centaurs combine human and horse. The wemic's leonine body has a human torso where the lion's neck and head would be. The leonine body is covered with dusky golden fur, with a white underbelly, while the human half tends toward a tawny skin tone and a slight catlike cast to the face and eyes. Wemics are aboriginal nomads who live through hunting—they use fire and craft weapons and tools, but rarely build any kind of permanent dwelling. Wemics believe that everything in the world is a living thing, from the skies to the sun or earth, and they are very superstitious.

Wemics are playful and curious as cubs, and a small number never grow out of this stage. Wemic adventurers are most often characters of this sort, although other wemics

may choose to trade with humans or sell their services as guides, and come into contact with a player character party in that fashion.

## Racial Abilities and Restrictions

Naturally, each of the unique races described in this section have their own special powers, benefits, and hindrances. When a player selects a character, he must accept the standard abilities and restrictions of that race—there are no optional variations or abilities, such as those described for dwarves, elves, or the other standard demihuman races. The racial abilities are summed up on the chart below.

| Race | AC | hp | MV | Natural Attacks | Characteristics |
|---|---|---|---|---|---|
| Aarakocra | 7 | +0 | 6, Fl 36(C) | 1d3/1d3/1d3 (talons, beak) | a, y, ff |
| Alaghi | 4 | +9 | 12 | 2d6 (fist) | b, c, ff, z |
| Bugbear | 10 | +3 | 9 | — | d, e, z |
| Bullywug | 6 | +0 | 6, Sw 15 | — | a, c (75%), e, f, g, aa |
| Centaur | 5 | +4 | 18 | 1d6/1d6 (hooves) | a, z, ff |
| Flind | 10 | +2 | 12 | — | c |
| Giff | 6 | +4 | 6 | 2d6 (head butt) | s (10%), z |
| Githzerai | 10 | +0 | 12 | — | d, s |
| Gnoll | 10 | +2 | 12 | — | cc |
| Goblin | 10 | +0 | 6 | — | d, h (25%), bb, cc |
| Hobgoblin | 10 | +0 | 9 | — | d, h(40%), i(40%), j(40%),cc |
| Kobold | 10 | +0 | 6 | — | d, k, bb, cc |
| Lizard man | 5 | +0 | 6, Sw 12 | 1d3/1d3/1d6 (claws, tail) | f, aa |
| Minotaur | 6 | +6 | 12 | 2d6 (head butt) | d, l, m, n, o, z |
| Mongrelman | 5 | +0 | 9 | — | c (80%), p, q, dd |
| Ogre | 5 | +4 | 9 | — | z |
| Orc | 10 | +0 | 12 | — | d, h(35%), i(25%), bb, cc |
| Satyr | 5 | +0 | 18 | 2d4 (head butt) | c (90%), d, l, r, ee |
| Swanmay | 7 | +0 | 15, Fl 19(D) | — | x |
| Thri-kreen | 5 | +0 | 18 | 1d4 (x4), 2–5 (claws, bite) | g, t, u, v, w, ff |
| Wemic | 6 | +5 | 12 | 1d4/1d4 (claws) | g (50'), z, ff |

**AC** is the creature's natural Armor Class. If the creature wears armor that is superior to its natural defenses, it may use the better value as its AC. If the creature wears armor that is inferior to its natural AC, its AC improves by only 1 place. For example, a lizard man (AC 5) in leather armor (AC 8) is actually AC 4, since the leather armor provides a small measure of extra protection. However, a lizard man in plate mail (AC 3) is AC 3.

**HP** is the creature's bonus hit points at first level. After the character determines his hit points normally for his class and level, he may add this number to his hit point total.

**MV** is the creature's normal movement rate while unencumbered. Several monstrous character races allow flying or swimming as alternative means of movement.

**Natural attacks** describe any natural attacks the character can make without any weapons. Generally, a character must choose to either use his natural attacks or fight with a weapon in a round, but there are three exceptions: centaurs and wemics can attack with a weapon and use their natural attacks at the same time, and thri-kreen can attack with a weapon and use their bite at the same time.

# Chapter 4: Character Classes

The next step in creating a Player's Option hero is choosing a vocation. There are four basic types of characters in the AD&D game: warriors, wizards, priests, and rogues.

Each character receives a number of points to spend on class abilities. That means priests of the same faith no longer are carbon copies of each other. Warriors can have widely varying skills. Characters are limited only by their players' imaginations.

Character points are used to purchase skills, and the number of points available vary with classes.

Character classes share common terminology. Three of the most-used terms are:

**Experience points**—the measure of a character's learning. They are awarded by the DM after each adventure in response to a character's actions and accomplishments. When a character gains enough experience points, he advances a level and his abilities improve.

**Level**—refers to the stage of the character's development in his class. A beginning character is first level. When the character earns enough experience points, he advances to second, then third, and so on. Different classes advance at different rates.

**Prime requisite**—is the term that refers to the ability score most important to a particular class. For example, Strength is the prime requisite for fighters. A character needs to meet all ability score and prime requisite requirements to become a member of a certain class. Some classes have more than one prime requisite. Any character with a prime requisite score of 16 or greater receives an extra 10% bonus to experience point awards.

## Warriors

Warriors make their way in the world by the strength of their muscles and the swiftness of their swords. Warrior classes include the fighter, paladin, and ranger. Using the Player's Option system, all members of the warrior group:

- Have the ability to select any weapon and wear any type of armor available in the campaign.
- Roll d10s to determine their hit points from 1st to 9th level. Thereafter, they gain three hit points per level.
- Are prevented from using certain magical items.
- Can become proficient in "shield," which grants them an Armor Class bonus. See the

proficiencies section for more details.

- At higher levels make additional melee attacks in a combat round. The chart below details this progression.

**Table 18: Warrior Melee Attacks By Level**

| Level | Attacks/Round |
|---|---|
| 1–6 | 1/round |
| 7–12 | 3/2 rounds |
| 13+ | 2/round |

Use the table below to determine the rate at which they advance in levels.

**Table 19: Warrior Experience Levels**

| Level | Fighter | Paladin/ Ranger | Hit dice (d10) |
|---|---|---|---|
| 1 | 0 | 0 | 1 |
| 2 | 2,000 | 2,250 | 2 |
| 3 | 4,000 | 4,500 | 3 |
| 4 | 8,000 | 9,000 | 4 |
| 5 | 16,000 | 18,000 | 5 |
| 6 | 32,000 | 36,000 | 6 |
| 7 | 64,000 | 75,000 | 7 |
| 8 | 125,000 | 150,000 | 8 |
| 9 | 250,000 | 300,000 | 9 |
| 10 | 500,000 | 600,000 | 9+3 |
| 11 | 750,000 | 900,000 | 9+6 |
| 12 | 1,000,000 | 1,200,000 | 9+9 |
| 13 | 1,250,000 | 1,500,000 | 9+12 |
| 14 | 1,500,000 | 1,800,000 | 9+15 |
| 15 | 1,750,000 | 2,100,000 | 9+18 |
| 16 | 2,000,000 | 2,400,000 | 9+21 |
| 17 | 2,250,000 | 2,700,000 | 9+24 |
| 18 | 2,500,000 | 3,000,000 | 9+27 |
| 19 | 2,750,000 | 3,300,000 | 9+30 |
| 20 | 3,000,000 | 3,600,000 | 9+33 |

## Fighter

**Ability Requirements:** Strength 9
**Prime Requisite:** Strength
**Allowed Races:** All

Fighters are experts with weapons, and they are often masters of tactics and strategy. Perseus, Hercules, Hiawatha, Beowulf, and Sinbad are fighters of legend. Hannibal, Alexander the Great, Charlemagne, and Spartacus are real-world warriors.

The principal attribute of a fighter is Strength, as he needs to heft and use his

weapons and carry the weight of his armor for long periods. Good scores in Dexterity and Constitution also are desirable. Fighters can be of any alignment.

## Building a Fighter with Character Points

Fighters have 15 character points to spend on abilities. Each of the abilities below cost 5 to 10 character points. Any unspent points can be used to acquire nonweapon proficiencies or saved for use during the game. A standard fighter spends his character points to acquire the abilities of weapon specialization and gaining followers.

**1d12 for hit points (10):** Instead of rolling a 10-sided die to determine initial hit points and how many new hit points the fighter receives at each level, a 12-sided dice is rolled instead.

**Building (5):** The knowledge to construct heavy war machines, siege engines, and siege towers.

**Defense bonus (10):** +2 bonus to Armor Class if unarmored and unencumbered.

**Followers (5/10):** By purchasing this skill, a fighter can gain followers as described in the *Player's Handbook* if he establishes a stronghold and is at least 9th level. If this is purchased as a 10-point ability, the fighter can attract followers whenever he establishes a stronghold, regardless of level. Refer to the warrior section of the *Player's Handbook* for more details on followers.

**Increased movement (5):** A fighter's base movement score is 15 rather than 12.

**Leadership (5):** The ability to lead large numbers of troops into battle. The fighter is able to take charge of up to 100 soldiers per level. He knows how to use messengers and signals, is familiar with military terminology, and understands the mechanics of moving a large number of men.

**Magic resistance (10):** Gain a 2% Magic Resistance for each level. For example, a 9th level fighter would have an 18% Magic Resistance score.

**Move silently (10):** A fighter with this ability has a chance to move silently like a thief. This chance is equal to his Dexterity score plus his level. For example, an 8th level fighter with a 17 Dexterity score has a 24% chance to move silently. The fighter cannot wear armor above studded leather. Look to the thief table for penalties for additional armor.

**Multiple specialization (10):** This ability can be taken in place of the 5-point ability to specialize in a single weapon. A fighter with this ability can specialize in as many weapons as he desires. The character point cost must be met for each individual specialization.

**Poison resistance (5):** Fighters with poison resistance gain a +1 bonus to all saving throws versus poison.

**Spell resistance (5):** Fighters with spell resistance gain a +1 bonus to all saving throws versus spells.

**Supervisor (5):** The authority to supervise the construction of defensive works such as ditches, pits, fields of stakes, and hastily built wooden and stone barricades. With time permitting, the fighter also can supervise the building of semi-permanent fortifications.

**War machines (5):** The knowledge to operate heavy war machines and siege engines

such as ballistae, catapults, rams, bores, and siege towers.

**Weapon specialization (5):** This fighter has the ability to specialize in a particular weapon. The character point cost for acquiring the specialization must also be met (see page 118).

## Optional Restrictions

A fighter can gain bonus character points to spend on the above abilities by accepting a voluntary restriction on his normal abilities. The restrictions with their point values follow:

**Limited armor (5/10/15):** A fighter with this restriction is limited in his selection of armor. If the character is restricted to chain mail or lighter armor, this restriction gives him 5 CPs; if he is limited to studded leather or lighter armor, he gains 10 CPs; and if he cannot wear any armor at all, this restriction is worth 15 CPs. (The character can always use a shield.)

**Limited weapon selection (5):** A fighter with this restriction is limited in his choice of weapons. He can choose to gain proficiency only in melee weapons (no missile weapons allowed); he can choose to learn only cleric weapons (bludgeoning weapons); or he can choose to learn only thief weapons (club, dagger, dart, hand crossbow, knife, lasso, short bow, sling, broadsword, long sword, short sword, and staff).

**Limited magical item use (5+):** A fighter with this restriction distrusts magic and refuses to use certain categories of magical items. For each category that is barred to him, he gains 5 CPs . The categories are: potions, oils, and scrolls; rings, rods, staves, and wands, and miscellaneous magical items; weapons; and armor.

## Paladin

| | |
|---|---|
| **Ability Requirements:** | Strength 12 |
| | Constitution 9 |
| | Wisdom 13 |
| | Charisma 17 |
| **Prime Requisite:** | Strength, Charisma |
| **Allowed Races:** | Human |

The paladin is a noble and heroic warrior—often literally the knight in shining armor—a symbol of all that is right, good, and just in the world. Examples of paladins include Sir Lancelot, Sir Gawain, Sir Galahad of King Arthur's Round Table, and Roland and the 12 Peers of Charlemagne. For more on these men, see *Charlemagne's Paladins* Historical Reference book for the AD&D game. Such a warrior has high ideals to maintain at all times.

Only humans can become paladins. A paladin must be lawful good in alignment. Any paladin who changes alignment loses all his special powers. This loss might be temporary or permanent, depending on the circumstances. A paladin who consciously commits a chaotic act must find a lawful good cleric of at least 7th level, confess the act, and seek penance. If a paladin knowingly commits an evil act, the character's status as a paladin is forever lost. If such an act is committed by the paladin under duress (enchanted or

controlled by magic), the loss of status remains in effect until the paladin completes a major quest for the cause of good. The paladin gains no experience points for this quest, but if successfully completed, he regains the status and powers of his paladinhood. All paladins have the following restrictions:

- Cannot possess more than 10 magical items. Further, these items must not exceed one set of armor, one shield, four weapons (magical arrows and bolts don't count), and four other objects.
- Can never retain wealth. He can keep enough treasure to support himself, pay his henchmen, and so on, but all excess monies must be donated to worthy causes. Other characters do not qualify as worthy causes. In addition, 10% of all treasure garnered must be given to a lawful good religious institution of the paladin's choice.
- Cannot attract a body of followers. However, he can hire soldiers and specialists—so long as those individuals are lawful good.
- Will not abide the company of those he knows to be evil. Those of other alignments will be tolerated as long as they behave themselves.

Paladins receive 60 character points with which to purchase class abilities. Each of the abilities below cost 5 to 10 character points. Any unspent points can be used to acquire nonweapon proficiencies or saved for use during the game. A standard paladin spends his character points to acquire the abilities of circle of power 5, curative 10, detection 5, faithful mount 5, healing 5, health 5, protection from evil 5, saving throw bonus 10, and turn undead 10.

**Circle of power (5):** If the paladin has a *holy sword*, he can project a circle of power 10' in diameter. This circle dispels hostile magic at a level equal to the experience level of the paladin

**Curative (10):** Cure diseases of all types once a week for every five experience levels. For example, a 10th level paladin can use his *cure disease* ability two times a week. (This ability is ineffective against lycanthropy.)

**Detection (5):** Detect evil monsters or creatures up to 60' away by concentrating. A paladin can do this as often as he wishes, but each use takes one round.

**Faithful mount (5):** The paladin can summon a special steed at 4th level. This faithful steed might not be a horse—it may be any creature the DM deems appropriate. This steed is bonded to the paladin. However, this steed does not simply appear when called. The paladin likely must find his mount in a memorable way, such as on a quest.

**Healing (5):** The ability to heal himself or another by the *laying on of hands* once a day. The paladin can restore two hit points per his experience level.

**Health (5):** Immunity to all forms of disease. (Paladins are not immune to lycanthropy and mummy rot.)

**Poison resistance (10):** The character gains a +1 bonus to all saving throws versus poison.

**Priest spells (10):** The *Player's Handbook* states that at 9th level a paladin can cast priest spells from the following spheres: combat, divination, healing, and protection. However, by purchasing this ability, paladins can cast spells beginning at 4th level. Paladins do not gain extra spells for possessing high Intuition scores, nor can they cast

spells from cleric or druid scrolls. The spell progression chart for paladins appears below.

**Table 20: Paladin Spell Progression**

| Paladin Level | Casting Level | Spell level 1 | 2 | 3 | 4 |
|---|---|---|---|---|---|
| 4 | 1 | 1 | — | — | — |
| 5 | 1 | 1 | — | — | — |
| 6 | 2 | 2 | — | — | — |
| 7 | 2 | 2 | 1 | — | — |
| 8 | 3 | 2 | 1 | — | — |
| 9 | 3 | 2 | 2 | — | — |
| 10 | 4 | 2 | 2 | 1 | — |
| 11 | 4 | 2 | 2 | 2 | — |
| 12 | 5 | 3 | 2 | 2 | — |
| 13 | 5 | 3 | 2 | 2 | — |
| 14 | 6 | 3 | 2 | 2 | 1 |
| 15 | 7 | 3 | 3 | 2 | 1 |
| 16 | 8 | 3 | 3 | 3 | 1 |
| 17 | 9* | 3 | 3 | 3 | 1 |
| 18 | 9* | 3 | 3 | 3 | 2 |
| 19 | 9* | 3 | 3 | 3 | 3 |
| 20 | 9* | 4 | 3 | 3 | 3 |

* Maximum level of spell ability

**Protection from evil (5):** The paladin has a natural aura with a 10' radius. Within this aura, summoned or evil creatures suffer a –1 penalty to all attack rolls. Creatures affected by this aura know the paladin to be the source of their discomfort.

**Resist charm (10):** Paladins with this ability gain a +2 bonus to saving throws versus charm-like spells and abilities.

**Saving Throw Bonus (10):** Paladins with this ability gain a +2 bonus to all saving throws.

**Turn undead (10):** When the paladin attains 3rd level he can turn undead. This ability functions as if the paladin were a cleric two levels lower. For example, a 6th level paladin would turn undead as a 4th level cleric. See the Player's Handbook for information on turning undead.

**Weapon specialization (10):** This paladin can specialize in a particular weapon. The character point cost must be met in addition.

## Optional Restrictions

A paladin can gain bonus character points to spend on the above abilities by accepting voluntary restrictions on his warrior abilities. The restrictions are the same as those listed for Fighters.

## Ranger

| | |
|---|---|
| **Ability Requirements:** | Strength 13<br>Dexterity 13<br>Constitution 14<br>Wisdom 14 |
| **Prime Requisite:** | Strength, Dexterity, Wisdom |
| **Allowed Races:** | Human, elf, half-elf |

The ranger is a hunter and a woodsman who lives in the wilderness. Robin Hood, Orion, and Jack the Giant Killer all are examples of rangers. Rangers must be of one of these alignments: lawful good, neutral good, or chaotic good. They must abide by the following restrictions:

- Must retain his good alignment. If he intentionally commits an evil act, he loses all his ranger abilities and becomes a fighter of the same level. His ranger status never can be regained. If a ranger commits evil under duress or because he has no choice, he cannot gain experience points until he has cleansed himself. This may entail correcting the wrongs done by his evil act, avenging himself on those who forced him to the act, etc. The DM should determine the appropriate actions.
- Can retain only what treasure he and his mount can carry. All other treasure must be donated to a worthy cause.

Ranger characters receive 60 character points to purchase class abilities. Each of the abilities below costs 5 to 10 character points. Any unspent points can be used to acquire nonweapon proficiencies or saved for use during the game. A standard ranger spends his character points to acquire the abilities of empathy with animals, followers, hide in shadows, move silently, priest spells, special enemy, two-weapon style, and tracking proficiency.

**Table 21: Rangers' Spell-Casting Abilities**

| Ranger | Casting | Spell level | | |
|---|---|---|---|---|
| **Level** | **Level** | **1** | **2** | **3** |
| 8 | 1 | 1 | — | — |
| 9 | 2 | 2 | — | — |
| 10 | 3 | 2 | 1 | — |
| 11 | 4 | 2 | 2 | — |
| 12 | 5 | 2 | 2 | 1 |
| 13 | 6 | 3 | 2 | 1 |
| 14 | 7 | 3 | 2 | 2 |
| 15 | 8 | 3 | 3 | 2 |
| 16 | 9* | 3 | 3 | 3 |

* Maximum spell ability

**Table 22: Ranger Abilities By level**

| Ranger's Level | Hide in Shadows** | Move Silently |
|---|---|---|

| | | |
|---|---|---|
| 1 | 10% | 15% |
| 2 | 15% | 21% |
| 3 | 20% | 27% |
| 4 | 25% | 33% |
| 5 | 31% | 40% |
| 6 | 37% | 47% |
| 7 | 43% | 55% |
| 8 | 49% | 62% |
| 9 | 56% | 70% |
| 10 | 63% | 78% |
| 11 | 70% | 86% |
| 12 | 77% | 94% |
| 13 | 85% | 99%* |
| 14 | 93% | 99%* |
| 15 | 99%* | 99%* |

* Maximum percentile score
** Also used to determine the character's climbing score.

**Bow bonus (5):** A ranger with this ability gains a +1 attack bonus when using any type of bow.

**Climbing (10):** A ranger can climb trees, cliffs, and other natural formations. The ranger's climbing score is equal to his Dexterity/Balance score plus the hide in shadows percentage (see Table 22) for a character of his level. Note that a ranger does not have to have the hide in shadows ability to have a climbing ability, the two skill simply use similar numbers.

**Detect noise (10):** As the thief ability. Use the ranger's Intuition score plus his move silently percentage to determine his chance for success.

**Empathy with animals (10):** When dealing with a domestic or non-hostile animal, the ranger can approach and befriend it automatically. The ranger also can discern the health and nature of such animals. When approaching wild animals or those trained to attack, the animal must make a saving throw vs. rods to resist the ranger's friendly overtures. There is a –1 penalty to the roll for every three experience levels of the ranger. For example, if the approaching ranger is 7th level, the animal's saving throw penalty is –2. If the animal fails the save, the ranger can adjust the animal's reaction by one category.

**Find and remove wilderness traps (10):** These traps include pits, snares, etc. A ranger's chance for success is equal to his move silently percentage. See the table farther below.

**Followers (10):** At 10th level, the ranger attracts 2d6 followers. Use Table 19 in the Player's Handbook to determine what kind of creatures the ranger attracts. The ranger does not need to build a stronghold or fort.

**Hide in Shadows (5):** A ranger can hide in shadows, as the thief ability, in natural surroundings if he is wearing studded leather or lighter armor. See Table 22 for the ranger's chance of success. The ranger also can attempt to use this ability in other settings, but his chance of success is halved

**Move silently (5):** A ranger can move silently, as the thief ability, in natural

surroundings if he is wearing studded leather or lighter armor. See Table 22 for the ranger's chance of success. The ranger also can attempt to use this ability in other settings, but his chance of success is halved.

**Pass Without Trace (10):** By selecting this ability at character creation, a ranger gains the druid ability to *pass without trace* once a day.

**Priest spells (10):** Starting at level eight, a ranger can learn priest spells of the plant and animal spheres. He follows the normal rules for priest spells, though he does not gain extra spells for a high Wisdom/Intuition score. A ranger cannot use clerical scrolls. The ranger's spell progression is presented on Table 21.

**Sneak attack (10):** If a ranger successfully moves silently and hides in shadows, he can sneak-attack in natural settings, as the thief's backstab ability. The ranger strikes and does backstab damage as a thief of the same level.

**Speak with animals (5):** Once a day a ranger can *speak with animals*, as the spell.

**Special enemy (10):** Rangers focus their efforts on one exceedingly bothersome type of creature. A ranger must choose his special enemy before reaching 2nd level. Sample enemies include orcs, trolls, bugbears, and lizard men. The DM must approve the player's choice. From that point on, the ranger gains a +4 bonus to his attack rolls when encountering that type of creature. The ranger can attempt to hide the enmity he feels for these creatures, but he suffers a –4 penalty on reaction rolls vs. that type of creature. Further, the ranger should seek out such creatures over other foes in combat, unless there is some greater danger.

**Tracking proficiency (5):** The ranger gains the tracking proficiency, and the character's tracking skill automatically improves by +1 for every three levels. For example, a 10th level ranger improves his tracking score by +3.

**Two-weapon style (5):** A ranger can fight with two weapons and suffer no penalties to his attacks rolls. No shield can be used when a ranger fights in this manner. If the ranger wears armor heavier than studded leather, the standard penalties fro two-weapon fighting apply.

**Weapon specialization (10):** This ranger can specialize in a particular weapon. The character point cost must be met in addition.

### Optional Restrictions

A ranger can gain bonus character points to spend on the above abilities by accepting voluntary restrictions on his warrior abilities. The restrictions are the same as those for Fighters.

## Rogues

Rogues are scoundrels, living by their wits day to day—often at the expense of others. Not all rogues are outright criminals, but many of them possess a shady past they'd rather not have made public. Rogues have several special abilities, the success of which is determined by using percentile dice. Refer to the rogue section of the *Player's Handbook* for more information. There are two classes of rogues—thieves and bards. Both use the following table to dictate their level advancements. All rogues roll 1d6 for their hit points from 1st through 10th level. After that, rogues add 2 hit points per level.

### Thief

**Ability Requirements:** Dexterity 9
**Prime Requisite:** Dexterity
**Allowed Races:** All

The profession of thief is not a particularly honorable one. However, many famous folk heroes have been thieves, robbing from the corrupt and wealthy and giving to the poor and hungry. The thief can be a romantic figure, even a swashbuckling one. Examples are Oliver Twist, Hanse Shadowspawn, Ali Babba, Aladdin, and Bilbo Baggins.

Thieves are limited in their selection of weapons to: club, dagger, dart, hand crossbow, knife, lasso, short bow, sling, broad sword, long sword, short sword, and staff.

**Table 23: Rogue Experience Levels**

| Level | Rogue | Hit dice (d6) |
|---|---|---|
| 1 | 0 | 1 |
| 2 | 1,250 | 2 |
| 3 | 2,500 | 3 |
| 4 | 5,000 | 4 |
| 5 | 10,000 | 5 |
| 6 | 20,000 | 6 |
| 7 | 40,000 | 7 |
| 8 | 70,000 | 8 |
| 9 | 110,000 | 9 |
| 10 | 160,000 | 10 |
| 11 | 220,000 | 10+2 |
| 12 | 440,000 | 10+4 |
| 13 | 660,000 | 10+6 |
| 14 | 880,000 | 10+8 |
| 15 | 1,100,000 | 10+10 |
| 16 | 1,320,000 | 10+12 |
| 17 | 1,540,000 | 10+14 |
| 18 | 1,760,000 | 10+16 |
| 19 | 1,980,000 | 10+18 |
| 20 | 2,200,000 | 10+20 |

Thieves receive 80 character points to spend on skills from the following list. Skills cost 5 to 15 points. Any unspent points can be used to acquire nonweapon proficiencies or saved for use during the game. Many of the skills can be improved as thieves advance levels. This is explained after the skill section.

Skills marked with an asterisk (*) can be improved as a thief advances in level. Refer to the appropriate table.

**Backstab (10):** Thieves are practiced in the art of quietly eliminating guards and sentries. If a thief strikes a target from behind with surprise, the thief gains a +4 bonus on his attack roll, and the blow does additional damage. Table 24 defines the extra damage:

**Table 24: Backstab Damage Multiplier**

| Thief's Level | Damage Multiplier |
|---|---|
| 1–4 | x2 |
| 5–8 | x3 |
| 9–12 | x4 |
| 13+ | x5 |

**Bribe* (5):** A thief can bribe an official with gifts of money or merchandise. Only one bribe can be attempted per target. If the attempt fails, the DM should make a reaction roll for the target to determine how he counters the bribe.

**Climb walls* (5):** This skill lets thieves climb smooth or vertical surfaces.

**Defense bonus (10):** +2 bonus to Armor Class when unarmored and unencumbered.

**Detect illusion* (10):** Thieves can see detect illusions within their line of sight, up to 90 feet away. They perceive the illusion as a translucent image, seeing through it as though it were a light mist.

**Detect magic* (10):** Thieves can spot magical radiations within their line of sight, up to 60 feet away. They can determine the intensity of the magic—dim, faint, moderate, strong, and overwhelming.

**Detect noise* (5):** This is the ability to hear sounds others usually can't.

**Escaping bonds* (10):** There comes a time in every thief's career when his luck runs out and the he is apprehended. The ability to escape bonds such as ropes, leather thongs, manacles, chains, and even straight jackets is a feat of contortion and determination. The thief must roll to break every device binding him. If he's tied at the wrists and at the ankles, then he must make two successful rolls to free himself. This skill takes five rounds to use. A thief might hurry his efforts, but he suffers a –5% penalty for each round he tries to shave. Locked items also require the thief to successfully pick the locks. A failure on any attempt means that the thief cannot loose that bond or pick the lock.

**Find/remove traps* (10):** Many people try to protect their important belongings from thieves with small mechanical traps or alarms. As a result, thieves have developed skills to find and disarm these traps.

**Followers (5/10):** By purchasing this skill, a thief can gain followers as described in the *Player's Handbook* if he establishes a stronghold and is at least 10th level. If this is purchased as a 10-point ability, the thief can attract followers whenever he establishes a stronghold, regardless of level. Refer to the thief section of the Player's Handbook for more details on followers.

**Hide in shadows* (5):** A thief can attempt to disappear in shadows, bushes, and crannies. A successful thief will be effectively invisible as long as he remains all but motionless. Slow, deliberate movements are allowed.

**Move silently* (5):** This is the ability to move without making noise. The movement rate of a thief attempting this is reduced to 1/3 his normal rate.

**Open locks* (10):** A thief can try to pick all types of locks using skill, tools, finesse, and luck. If a thief fails to open a lock, he cannot attempt to open that lock again until advancing a level.

**Pick pockets* (10):** A thief uses this skill to pilfer small items from the pouches, pockets, belts, sleeves, packs, etc. of others. A failed attempt means the thief did not

come away with an item, but it does not indicate the thief was caught in the act. To determine if a thief's attempt was noticed, subtract three times the victim's experience level from 100. If the thief's roll was equal to or higher than this number, the attempt was noticed. For example, if the thief tried to pick the pocket of a 5th level fighter and failed—and the thief's roll was 85 or higher—the thief is noticed. (5x3 = 15. 100–15 = 85.)

**Read languages* (5):** A thief needs every edge he can get, and the ability to read languages can help.

**Scroll use (5/10):** At 10th level, a thief can use magical spell scrolls. By purchasing this skill as a 10-point ability, he has a chance to read scrolls at any level. If a thief fails to accurately read the scroll, usually something detrimental occurs, such as the spell backfiring. Consult Table 25 for the thief's chance to read a scroll:

**Table 25: Thief Scroll Use**

| Thief Level | % Chance |
|---|---|
| 1–2 | 10% |
| 3–4 | 20% |
| 5–6 | 30% |
| 7 | 40% |
| 8 | 50% |
| 9 | 60% |
| 10 | 70% |
| 11+ | 80% |

**Thieves' cant (5):** Thieves use slang terms when referring to their illegal operations. This lets them converse about such dealings in the open without others knowing what they are talking about.

**Tunneling* (10):** A thief might need to dig a tunnel to get to a cache of riches. His success at tunneling depends on several factors. The tunneling table below shows the time required to dig through 10 feet of earth with adequate tools. Every 10 feet, the thief must make a skill check, failure meaning that the front of the tunnel collapses. It can be re-dug at the loose earth rate.

**Table 26: Tunneling**

| Type of earth | Modifier | Time |
|---|---|---|
| Sand/loose earth | –10% | 5 hours |
| Packed earth | — | 10 hours |
| Rock | +10% | 30 hours |

**Table 27: Thieving Skill Base Scores**

| Skill | Base Chance |
|---|---|
| Pick Pockets | 15% |
| Open Locks | 10% |
| Find/Remove Traps | 5% |
| Move Silently | 10% |
| Hide in Shadows | 5% |
| Detect Noise | 15% |

| | |
|---|---|
| Climb Walls | 60% |
| Read Languages | 0% |
| Detect magic | 5% |
| Detect illusion | 10% |
| Bribe | 5% |
| Tunneling | 15% |
| Escape bonds | 10% |

**Weapon specialization (15):** This thief can specialize in a particular weapon. The character point cost for gaining proficiency and specialization in the weapon must be met in addition.

**Skill points:** After a thief's skills are selected, consult the thieving tables to determine base scores for certain abilities and how to modify those abilities based on race, Dexterity, and armor or lack thereof.

Next, allocate 60 additional discretionary points among the thief's "scored" skills. These skills include: pick pockets, open locks, find/remove traps, move silently, hide in shadows, detect noise, climb walls, read languages, detect magic, detect illusion, bribe, tunneling, and escape bonds.

Further, each time a thief advances a level, he is awarded 30 discretionary points to divide among those abilities.

### Table 28: Thieving Skill Racial Adjustments

| Skill | Dwarf | Elf | Gnome | Half-elf | Half-orc | Halfling | Human |
|---|---|---|---|---|---|---|---|
| Pick Pockets | — | +5% | — | +10% | — | +5% | — |
| Open Locks | +10% | –5% | +5% | — | — | +5% | — |
| Find/Remove Traps | +15% | — | +10% | — | +5% | +5% | — |
| Move Silently | — | +5% | +5% | — | — | +10% | — |
| Hide in Shadows | — | +10% | +5% | +5% | — | +15% | — |
| Detect Noise | — | +5% | +10% | — | +5% | +5% | — |
| Climb Walls | –10% | — | –15% | — | — | –15% | — |
| Read Languages | –5% | — | — | — | — | –5% | — |
| Detect Magic | +5% | +10% | +5% | +5% | — | +5% | — |
| Detect Illusion | +5% | — | +10% | +5% | –5% | — | — |
| Bribe | –5% | +15% | +5% | +5% | +10% | — | — |
| Tunneling | +10% | –10% | +5% | –5% | — | +5% | — |
| Escape Bonds | — | — | — | — | — | +10% | — |

### Table 29: Thieving Skill Dexterity Adjustments

| | Aim, Balance, or Dexterity | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| **Skill** | **9** | **10** | **11** | **12** | **13–15** | **16** | **17** | **18** | **19** | **20** | **21** | **22** |
| Pick Pockets | –15% | –10% | –5% | — | — | — | +5% | +10% | +15% | +20% | +20% | +25% |
| Open Locks | –10% | –5% | — | — | — | +5% | +10% | +15% | +20% | +20% | +25% | +25% |
| Find/Remove Traps | –10% | –10% | –5% | — | — | — | — | +5% | +10% | +15% | +20% | +20% |
| Move Silently | –20% | –15% | –10% | –5% | — | — | +5% | +10% | +15% | +15% | +20% | +20% |
| Hide in Shadows | –10% | –5% | — | — | — | — | +5% | +10% | +15% | +20% | +25% | +30% |

| Tunneling | –10% | –5% | — | — | — | — | — | +5% | +10% | +15% | +20% | +30% |
| Escape Bonds | –15% | –10% | –5% | — | — | — | +5% | +10% | +15% | +20% | +25% | +30% |

**Table 30: Thieving Skill Armor Adjustments**

| Skill | No Armor | Elven Chain | Padded or Studded Leather |
|---|---|---|---|
| Pick Pockets | +5% | –20% | –30% |
| Open Locks | — | –5% | –10% |
| Find/Remove Traps | — | –5% | –10% |
| Move Silently | +10% | –10% | –20% |
| Hide in Shadows | +5% | –10% | –20% |
| Detect Noise | — | –5% | –10% |
| Climb Walls | +10% | –20% | –30% |
| Tunneling | +10% | –5% | –10% |
| Escape bonds | +5% | –5% | –5% |

## Bard

**Ability Requirements:** Dexterity 12
Intelligence 13
Charisma 15
**Prime Requisite:** Dexterity, Charisma
**Allowed Races:** Human, half-elf

AD&D game bards are loosely derived from Celtic poets who sang their tribes' histories. Examples include the Pied Piper of Hamelin, Alan-a-Dale, Will Scarlet, and Homer. A bard should be glib of tongue, light of heart, and fleet of foot.

A bard is a jack-of-all-trades, but a master of none. He fights as rogue, but he can use any weapon. A bard can wear any armor up to, and including, chain mail, but he cannot use a shield.

All bards are skilled singers, vocalists, and musicians. A bard character automatically begins play with the proficiencies of Singing and Musical Instrument, in the instrument of the player's choice. The character does not have to expend character points for these bonus proficiencies, but he may choose to use CPs to increase his level of skill by raising his proficiency scores or acquiring the appropriate traits (see Chapter Six).

Bards have 70 character points to spend on skills from the following list. Skills costs 5 to 15 points. Any unspent points can be used to acquire nonweapon proficiencies or saved for use during the game. Many of the skills can be improved as bards advance levels. This is explained after the skill section.

**Table 31: Bard Scroll Use**

| Bard Level | % Chance |
|---|---|
| 1–2 | 10% |
| 3–4 | 20% |
| 5–6 | 30% |
| 7 | 40% |

| | |
|---|---|
| 8 | 50% |
| 9 | 60% |
| 10 | 70% |
| 11+ | 80% |

**Table 32: Bard Spell Progression**

| Bard | Spell level | | | | | |
|---|---|---|---|---|---|---|
| **Level** | **1** | **2** | **3** | **4** | **5** | **6** |
| 1 | — | — | — | — | — | — |
| 2 | 1 | — | — | — | — | — |
| 3 | 2 | — | — | — | — | — |
| 4 | 2 | 1 | — | — | — | — |
| 5 | 3 | 1 | — | — | — | — |
| 6 | 3 | 2 | — | — | — | — |
| 7 | 3 | 2 | 1 | — | — | — |
| 8 | 3 | 3 | 1 | — | — | — |
| 9 | 3 | 3 | 2 | — | — | — |
| 10 | 3 | 3 | 2 | 1 | — | — |
| 11 | 3 | 3 | 3 | 1 | — | — |
| 12 | 3 | 3 | 3 | 2 | — | — |
| 13 | 3 | 3 | 3 | 2 | 1 | — |
| 14 | 3 | 3 | 3 | 3 | 1 | — |
| 15 | 3 | 3 | 3 | 3 | 2 | — |
| 16 | 4 | 3 | 3 | 3 | 2 | 1 |
| 17 | 4 | 4 | 3 | 3 | 3 | 1 |
| 18 | 4 | 4 | 4 | 3 | 3 | 2 |
| 19 | 4 | 4 | 4 | 4 | 3 | 2 |
| 20 | 4 | 4 | 4 | 4 | 4 | 3 |

Skills marked with an asterisk (*) can be improved as a bard advances in level.

**Alter moods (5):** When performing before a non-hostile group, the bard can alter the group's mood. This can be achieved via an inspiring poem, a tragic tale, a collection of jokes, or a lively tune. Everyone hearing the bard's performance must make a saving throw vs. paralyzation. For every three experience levels the bard possesses apply a –1 modifier to each roll. If the save fails, the group's current attitude can be shifted one level in the direction chosen by the bard. See the reactions section of the *Dungeon Master Guide* for more details.

**Animal friendship (10):** Once a day, the bard can cast the equivalent of an *animal friendship* spell by singing a soothing song.

**Charm resistance (5):** Bards with this ability gain a +1 bonus to all saving throws versus charm-like spells and effects.

**Climb walls* (5):** This skill lets bards climb smooth or vertical surfaces.

**Counter effects (10):** Bards are able to counter the effects of songs and music used as magical attacks by performing a counter song. All characters within 30' of the bard are immune to such attacks. For example, the bard's adventuring party would be immune to the effects of a harpy's song. The bard can perform no actions other than a slow walk

while countering magic with his music. If he is struck in combat or fails any saving throw, the effect of his counter song ends. More details of this power can be found in the *Player's Handbook.*

**Detect magic* (10):** Bards can spot magical radiations within their line of sight, up to 60 feet away. They can determine the intensity of the magic—dim, faint, moderate, strong, and overwhelming.

**Detect noise* (5):** This is the ability to hear sounds others usually can't.

**History (10):** In his travels, a bard learns a great many things. The bard can read and write his native language and knows his area's local history. In addition, a bard has a 5% chance per level to identify the general purpose, function, and history of any magical item he comes across. The bard need not touch the item, but he must examine it closely.

**Pick pockets* (10):** A bard uses this skill to pilfer small items from the pouches, pockets, belts, sleeves, packs, etc. of others. A failed attempt means the bard did not come away with an item, but it does not indicate the bard was caught in the act. To determine if a bard's attempt was noticed, subtract three times the victim's experience level from 100. If the bard's roll was equal to or higher than this number, the attempt was noticed. For example, if the thief tried to pick the pocket of a 7th level wizard and failed—and the thief's roll was 79 or higher—the thief is noticed. (7x3 = 21. 100–21 = 79.)

**Rally friends (5):** The bard can inspire his compatriots who are about to enter battle. If the bard knows the nature of the threat they face, the bard can spend three full rounds rallying his friends with one of the following effects: a +1 bonus on attack rolls, a +1 bonus to saving throws, or a +2 bonus on Morale rolls during the upcoming battle. The range is 10' per level of the bard, and the duration is one round per level of the bard.

**Read languages* (5):** A bard needs every edge he can get, and the ability to read languages could put him ahead of his competitors.

**Sound resistance (5):** Bards gain a +2 bonus to saving throws vs. sound-based magical attacks such as: harpy's song, dragonne's roar, sphinx's roar, the shout spell, yeth hound howl, and sirine song.

**Scroll use (5/10):** At 10th level, any bard can use magical spell scrolls. By purchasing this skill as a 10-point ability, he has a chance to read scrolls at any level. If a bard fails to accurately read the scroll, usually something detrimental occurs, such as the spell backfiring. Consult Table 31 for the bard's chance to read a scroll.

**Weapon specialization (10):** This bard can specialize in a particular weapon. The character point cost must be met in addition.

**Wizard spells (10):** Bards are dabblers in magic, studying it in a rather disorganized fashion. They cannot specialize in a school of magic. They can cast spells once they reach 2nd level, and they begin with one to four spells in their spell books. A bard's spell-casting level is equal to his actual experience level. The bard's spell progression chart follows.

After a bard's skills are selected, consult the table below to determine base scores. If the bard has skills from the table, record the appropriate scores. These skills can improve as the bard gains levels.

**Skill points:** Next, allocate 20 discretionary points among the bard's "scored" skills. If the bard possesses only one of those skills, all 20 points are allotted to it. If the bard did not select any of those skills, the 20 points can be spent on nonweapon proficiencies or

saved for use during the game.

Each time a bard advances a level, he is awarded 15 discretionary points to divide among those abilities.

**Table 33: Bard Skill Base Scores**

| Climb walls | Hear noise | Pick pockets | Read languages | Detect magic |
|---|---|---|---|---|
| 50% | 20% | 10% | 5% | 10% |

Priests A priest is a follower and advocate of a particular fantasy deity—most often one of a group, or pantheon, of deities. He acts in a manner appropriate to his deity, and uses his powers and skills to help others advance the beliefs of his religion.

All priest characters can cast spells granted them by their deity, wear many types of armor, and use many weapons.

Priest spells are divided into Spheres of Influence, which mirror the interests of the priest's deity. A priest either has Major or Minor access to a sphere. Major access means that a priest potentially can cast any spell in that sphere. Minor access indicates that the priest can cast only first- through third-level spells from that sphere. The spell progression for a priest is presented below.

## Clerics

**Ability Requirements:** Wisdom 9
**Prime Requisite:** Wisdom
**Allowed Races:** All

Clerics are the most common type of priest character, and they generally are good-aligned. Clerics are sturdy soldiers in the service of their deity. They can wear any type of armor and carry a shield, but they are restricted to using only blunt, bludgeoning weapons. They can use many magical items, including magical versions of their armor and weapons.

Spells are the cleric's primary tool. Normally, a cleric spends character points to gain major access to the spheres of all, astral, charm, combat, creation, divination, guardian, healing, necromantic, protection, summoning, and sun, as wall as minor access to the elemental sphere.

**Table 34: Priest Spell Progression**

| Priest | Spell level | | | | | | |
|---|---|---|---|---|---|---|---|
| **Level** | **1** | **2** | **3** | **4** | **5** | **6*** | **7**** |
| 1 | 1 | — | — | — | — | — | — |
| 2 | 2 | — | — | — | — | — | — |
| 3 | 2 | 1 | — | — | — | — | — |
| 4 | 3 | 2 | — | — | — | — | — |
| 5 | 3 | 3 | 1 | — | — | — | — |
| 6 | 3 | 3 | 2 | — | — | — | — |
| 7 | 3 | 3 | 2 | 1 | — | — | — |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 8 | 3 | 3 | 3 | 2 | — | — | — |
| 9 | 4 | 4 | 3 | 2 | 1 | — | — |
| 10 | 4 | 4 | 3 | 3 | 2 | — | — |
| 11 | 5 | 4 | 4 | 3 | 2 | 1 | — |
| 12 | 6 | 5 | 5 | 3 | 2 | 2 | — |
| 13 | 6 | 6 | 6 | 4 | 2 | 2 | — |
| 14 | 6 | 6 | 6 | 5 | 3 | 2 | 1 |
| 15 | 6 | 6 | 6 | 6 | 4 | 2 | 1 |
| 16 | 7 | 7 | 7 | 6 | 4 | 3 | 1 |
| 17 | 7 | 7 | 7 | 7 | 5 | 3 | 2 |
| 18 | 8 | 8 | 8 | 8 | 6 | 4 | 2 |
| 19 | 9 | 9 | 8 | 8 | 6 | 4 | 2 |
| 20 | 9 | 9 | 9 | 8 | 7 | 5 | 2 |

* Usable only by priests with 17 or greater Wisdom scores
** Usable only by priests with 18 or greater Wisdom scores

All priests gain 1d8 hit points for levels 1–9. Thereafter, priests earn 2 hit points per level.

**Table 35: Priest Experience Levels**

| Level | Cleric | Druid | Hit dice (d8) |
|---|---|---|---|
| 1 | 0 | 0 | 1 |
| 2 | 1,500 | 2,000 | 2 |
| 3 | 3,000 | 4,000 | 3 |
| 4 | 6,000 | 7,500 | 4 |
| 5 | 13,000 | 12,500 | 5 |
| 6 | 27,500 | 20,000 | 6 |
| 7 | 55,000 | 35,000 | 7 |
| 8 | 110,000 | 60,000 | 8 |
| 9 | 225,000 | 90,000 | 9 |
| 10 | 450,000 | 125,000 | 9+2 |
| 11 | 675,000 | 200,000 | 9+4 |
| 12 | 900,000 | 300,00 | 9+6 |
| 13 | 1,125,000 | 750,000 | 9+8 |
| 14 | 1,350,000 | 1,500,000 | 9+10 |
| 15 | 1,575,000 | 3,000,000 | 9+12 |
| 16 | 1,800,000 | 3,500,000 | 9+14 |
| 17 | 2,025,000 | 500,000* | 9+16 |
| 18 | 2,250,000 | 1,000,000 | 9+18 |
| 19 | 2,475,000 | 1,500,000 | 9+20 |
| 20 | 2,700,000 | 2,000,000 | 9+22 |

* See the Player's Handbook section on hierophant druids.

A cleric receives 125 character points to spend on skills and abilities from the following list. Skills cost 3 to 15 points. Any unspent points can be used to acquire

nonweapon proficiencies or saved for use during the game.

**Access to spheres:** Access to a sphere of spells costs 3 to 15 character points, as shown on the table below:

| Sphere | Minor | Major | Sphere | Minor | Major |
|---|---|---|---|---|---|
| All | 3 | 5 | Healing | 5 | 10 |
| Animal | 5 | 10 | Law | 5 | 10 |
| Astral | 3 | 5 | Necromantic | 5 | 10 |
| Chaos | 3 | 5 | Numbers | 5 | 10 |
| Charm | 5 | 10 | Plant | 5 | 10 |
| Combat | 5 | 10 | Protection | 5 | 10 |
| Creation | 5 | 10 | Summoning | 5 | 10 |
| Divination | 5 | 10 | Sun | 3 | 5 |
| Elemental | 10 | 15 | Thought | 5 | 10 |
| Air | 3 | 5 | Time | 5 | 10 |
| Earth | 3 | 5 | Travelers | 3 | 5 |
| Fire | 3 | 5 | War | 3 | 5 |
| Water | 3 | 5 | Wards | 5 | 10 |
| Guardian | 3 | 5 | Weather | 3 | 5 |

**Casting reduction (5):** The cleric's spell casting time is reduced by 1. All spells still retain a minimum casting time of 1.

**Detect evil (10):** Clerics with this ability can see emanations of evil from creatures or objects within a path 10 feet wide by 60 feet long. It takes one round to scan a direction, and the cleric cannot be attempting other actions.

**Detect undead (10):** Clerics can detect all undead within a path 10 feet wide by 60 feet long. It takes one round to scan a direction, and the cleric cannot be attempting other actions. Clerics cannot detect undead through stone or other thick materials.

**Expert healer (5):** This ability allows the character to cast one *cure light wounds* spell a day in addition to the number of spells the priest can normally cast.

**Followers (5/10):** By purchasing this skill, a cleric can gain followers as described in the *Player's Handbook* if he establishes a stronghold and is at least 8th level. If this is purchased as a 10-point ability, the cleric can attract followers whenever he establishes a stronghold, regardless of level. Refer to the priest section of the Player's Handbook for more details on followers.

**Hit point bonus (10):** Clerics with this ability use 1d10 to determine their hit points rather than 1d8.

**Know alignment (10):** This ability allows the character to cast the *know alignment* spell once a day. This is in addition to the number of spells the priest can normally cast.

**Resist energy drain (5):** Priests with this ability gain a +1 bonus to saving throws vs. the energy drain spell and the level-draining attacks of undead. If the attack does not normally allow a saving throw, this ability has no effect. This ability's saving throw bonus does apply to characters protected by the negative plane protection spell.

**Spell duration increase (10):** The duration of all non-instantaneous spells cast by the cleric increases by 1 round for every two experience levels of the cleric. For example, a 6th level cleric has his spells' durations increased by 3 rounds.

**Turn undead (10):** The cleric is granted power over undead, such as zombies, skeletons, vampires, and liches. Clerics can drive away these creatures, and as clerics advance in faith and experience levels, they can destroy some forms of undead. Below is the chart for turning undead.

**Warrior-priests (10):** Priests who select this ability use the warrior Strength and Constitution bonuses for exceptional scores. For example, a priest could have an 18/30 Strength, and he could gain bonus hit points for having a Constitution score greater than 16.

**Weapon allowance (5):** A priest with this ability can choose a favored edged weapon of his deity. For example, a cleric of the elven deity Corellon Larethian could use a long sword, or a priest of the Norse god, Odin might wield a spear. The character must still purchase proficiency in the allowed weapon.

**Weapon specialization (15):** This priest can specialize in a particular weapon. The character point cost must be met in addition.

**Wizardly priests (15):** These priests gain access to one school of wizard spells and can cast them as if they were clerical spells. The priests must continue to observe the number of various level spells they can cast each day.

### Table 36: Turning Undead

| Type or Hit Dice | Level of Priest | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| **of Undead** | **1** | **2** | **3** | **4** | **5** | **6** | **7** | **8** | **9** | **10–11** | **12–13** | **14+** |
| Skeleton or 1 HD | 10 | 7 | 4 | T | T | D | D | D* | D* | D* | D* | D* |
| Zombie | 13 | 10 | 7 | 4 | T | T | D | D | D* | D* | D* | D* |
| Ghoul or 2 HD | 16 | 13 | 10 | 7 | 4 | T | T | D | D | D* | D* | D* |
| Shadow or 3–4 HD | 19 | 16 | 13 | 10 | 7 | 4 | T | T | D | D | D* | D* |
| Wight or 5 HD | 20 | 19 | 16 | 13 | 10 | 7 | 4 | T | T | D | D | D* |
| Ghast | — | 20 | 19 | 16 | 13 | 10 | 7 | 4 | T | T | D | D |
| Wraith or 6 HD | — | — | 20 | 19 | 16 | 13 | 10 | 7 | 4 | T | T | D |
| Mummy or 7 HD | — | — | — | 20 | 19 | 16 | 13 | 10 | 7 | 4 | T | T |
| Spectre or 8 HD | — | — | — | — | 20 | 19 | 16 | 13 | 10 | 7 | 4 | T |
| Vampire or 9 HD | — | — | — | — | — | 20 | 19 | 16 | 13 | 10 | 7 | 4 |
| Ghost or 10 HD | — | — | — | — | — | — | 20 | 19 | 16 | 13 | 10 | 7 |
| Lich or 11+ HD | — | — | — | — | — | — | — | 20 | 19 | 16 | 13 | 10 |
| Special | — | — | — | — | — | — | — | — | 20 | 19 | 16 | 13 |

T = automatically turns that type of undead, D= destroys that type of undead.
D* =an additional 2d4 creatures are turned

## Specialty Priests

Specialty priests are encountered in campaigns where DMs develop or import a mythos or a particular pantheon of deities. The many possible types of specialty priests go beyond the scope of this book. However, players and DMs interested in designing these priests should consult the *Player's Handbook*, the *Complete Priests Handbook*, and the *Legends & Lore* book. One example of a specialty priest, the druid, is presented below.

## Druids

**Ability Requirements:** Wisdom 12

| | |
|---|---|
| | Charisma 15 |
| **Prime Requisite:** | Wisdom, Charisma |
| **Allowed Races:** | Human, half-elf |

The druids of history lived among the Germanic tribes of Western Europe and Britain during the days of the Roman Empire. They acted as advisors to tribal chieftains. They believed the earth was the mother of all things, and they revered it, the sun, the moon, and certain trees as deities.

Druids in the AD&D game are nature priests, protecting pristine woodlands from the depredations of monsters and civilization. They are only loosely based on their historical namesakes.

A druid is allowed to wear only leather armor and use only wooden shields—natural materials. A druid may use only the following weapons: club, sickle, dart, spear, dagger, scimitar, sling, and staff.

A druid's standard selection of spells includes major access to the spheres of all, animal, elemental, healing, plant, and weather, and minor access to divination. A druid can use magical items allowed to priests, except for books and scrolls.

A druid has 100 character points to purchase skills. Skills costs 5 to 15 points. Any unspent points can be used to acquire nonweapon proficiencies or saved for use during the game.

**Access to spheres:** The standard druid selection (see above) costs 60 character points. Or, the druid can purchase spheres individually just as clerics do (see page 57).

**Bonus spell (5):** Once per day the druid can cast an *animal friendship* spell. This is a bonus spell and does not count against the druid's spell total for the day.

**Cold resistance (5):** +2 saving throw bonus vs. cold- or ice-based attacks.

**Communicate with creatures (10):** A druid can acquire the languages of woodland creatures, at the rate of one language per level. For example, a fourth level druid could have four such languages. Some woodland creatures include: centaurs, dryads, elves, fauns, satyrs, gnomes, dragons, lizard men, manticores, nixies, pixies, sprites, and treants.

**Elemental spell bonus (5):** When the druid casts spells from the elemental sphere, all level-based variables (range, duration, etc.) are calculated as if the druid were one experience level higher than the character's actual level.

**Hit point bonus (10):** Druids with this ability use 1d10 to determine their hit points rather than 1d8.

**Identify (5):** At 3rd level, a druid can accurately identify plants, animals, and clean water.

**Immunity to charm (5/10):** According to the Player's Handbook, at 7th level a druid becomes immune to charm spells cast by woodland creatures. However, by purchasing this ability for 10 points, a Player's Option druid gains this immunity immediately.

**Immunity to disease (10):** A druid with this ability is immune to natural diseases.

**Pass without trace (5):** At 3rd level, a druid with this ability can *pass without trace*, as per the spell, at his normal movement rate.

**Purify water (5):** This ability allows the character to cast one *purify food and drink* spell a day in addition to the number of spells he can normally cast.

**Fire/Electrical Resistance (5):** a +2 bonus to all saving throws vs. fire and electrical attacks.

**Hide in Shadows (5):** A druid can hide in shadows, as the ranger ability, in natural surroundings. See Table 22 in the ranger section for the chance of success.

**Move silently (5):** A druid can move silently, as the ranger ability, in natural surroundings. See Table 22 in the ranger section for the chance of success.

**Secret language (5):** Druids can speak a secret language only they know, and they use it to converse with each other.

**Shapechange (10/15):** According to the Player's Handbook, at 7th level a druid gains the ability to shapechange. However, by purchasing this skill for 15 character points, a *Player's Option* druid gains the following shapechanging abilities:

At 5th level, a druid can change into a bird once a day.
At 6th level, he can also change into a reptile once a day.
By 7th level a druid can also change into a mammal.

The size and shape assumed by the druid can vary from that of a bullfrog or small bird to that of a black bear. The druid can assume the forms of normal creatures only. When assuming a new form, a druid is healed of 10–60% of any damage he has suffered (round down). The druid also assumes the creature's physical characteristics (armor class, movement mode and rate, etc.). The druid's clothing and one item held in each hand also become part of his new shape—these reappear when the druid resumes his bipedal form.

**Weapon specialization (15):** This druid can specialize in a particular weapon. The character point cost must be met in addition.

## Wizards

Wizards command staggering energies and make dangerous opponents. The power to control magical energies comes from the mind, and as such, Intelligence is very important.

Wizards cannot wear armor, as it not only interferes with the forces they control, but also goes against their way of thinking. They are limited in the number of weapons that they can wield in combat. Permissible weapons are: knife, dagger, staff, darts, and slings.

All wizards have the ability to cast numerous offensive, defensive, and informative spells. The spell progression chart for wizards is below. Just as there are spheres of clerical spells, there also are schools of wizard magic. There are eight schools, and details on them can be found in the *Player's Handbook*.

Wizards also possess the capacity to use magical items such as wands, rods, staves, rings, scrolls, and potions. Finally, wizards can create new magical spells and items—from scrolls and elixirs to mighty weapons.

### Mage

**Ability Requirements:** Intelligence 9
**Prime Requisite:** Intelligence
**Allowed Races:** Human, half-elf, elf

Mages are more versatile than specialist wizards, who are limited to casting spells from certain schools. Mages can cast spells from any school of magic. Examples of mages from legend and literature are: Merlin, Gandalf, Medea, and Circe.

## Table 37: Wizard Spell Progression

| Wizard | Spell Level | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| **Level** | **1** | **2** | **3** | **4** | **5** | **6** | **7** | **8** | **9** |
| 1 | 1 | — | — | — | — | — | — | — | — |
| 2 | 2 | — | — | — | — | — | — | — | — |
| 3 | 2 | 1 | — | — | — | — | — | — | — |
| 4 | 3 | 2 | — | — | — | — | — | — | — |
| 5 | 4 | 2 | 1 | — | — | — | — | — | — |
| 6 | 4 | 2 | 2 | — | — | — | — | — | — |
| 7 | 4 | 3 | 2 | 1 | — | — | — | — | — |
| 8 | 4 | 3 | 3 | 2 | — | — | — | — | — |
| 9 | 4 | 3 | 3 | 2 | 1 | — | — | — | — |
| 10 | 4 | 4 | 3 | 2 | 2 | — | — | — | — |
| 11 | 4 | 4 | 4 | 3 | 3 | — | — | — | — |
| 12 | 4 | 4 | 4 | 4 | 4 | 1 | — | — | — |
| 13 | 5 | 5 | 5 | 4 | 4 | 2 | — | — | — |
| 14 | 5 | 5 | 5 | 4 | 4 | 2 | 1 | — | — |
| 15 | 5 | 5 | 5 | 5 | 5 | 2 | 1 | — | — |
| 16 | 5 | 5 | 5 | 5 | 5 | 3 | 2 | 1 | — |
| 17 | 5 | 5 | 5 | 5 | 5 | 3 | 3 | 2 | — |
| 18 | 5 | 5 | 5 | 5 | 5 | 3 | 3 | 2 | 1 |
| 19 | 5 | 5 | 5 | 5 | 5 | 3 | 3 | 3 | 1 |
| 20 | 5 | 5 | 5 | 5 | 5 | 4 | 3 | 3 | 2 |

All wizards roll d4s to determine their hit points when they advance from 1st through 10th levels. Thereafter, a wizard gains 1 hit point per level.

## Table 38: Wizard Experience Levels

| Level | Wizard | Hit dice (d4) |
|---|---|---|
| 1 | 0 | 1 |
| 2 | 2,500 | 2 |
| 3 | 5,000 | 3 |
| 4 | 10,000 | 4 |
| 5 | 20,000 | 5 |
| 6 | 40,000 | 6 |
| 7 | 60,000 | 7 |
| 8 | 90,000 | 8 |
| 9 | 135,000 | 9 |
| 10 | 250,000 | 10 |
| 11 | 375,000 | 10+1 |
| 12 | 750,000 | 10+2 |
| 13 | 1,125,000 | 10+3 |
| 14 | 1,500,000 | 10+4 |

| | | |
|---|---|---|
| 15 | 1,875,000 | 10+5 |
| 16 | 2,250,000 | 10+6 |
| 17 | 2,625,000 | 10+7 |
| 18 | 3,000,000 | 10+8 |
| 19 | 3,375,000 | 10+9 |
| 20 | 3,750,000 | 10+10 |

Wizards have 40 character points to spend on skills from the following list. These abilities range from 5 to 15 character points. Any unspent points can be used to acquire nonweapon proficiencies or saved for use during the game.

**Access to schools:** It costs 5 points per school to which the wizard has access. For example, if a wizard wanted to have access to six schools, the cost would be 30 character points. Normally, wizards spend 40 points to cast spells from the eight standard schools: abjuration, alteration, conjuration/summoning, enchantment/ charm, divination, illusion/phantasm, invocation/evocation, and necromancy. Note that the spells that make up the optional schools of alchemy, geometry, and elemental magic (from the *Tome of Magic*) are generally included in the standard schools of magic.

**Armored wizard (15):** This wizard can cast spells while wearing the armor of his choice.

**Automatic spells (5):** When a wizard with this spell gains access to a new level of spells, the character automatically gains a spell of that level for the character's spellbook.

**Casting reduction (5):** The casting time of all the mage's spells is reduced by 1. If a spell's original casting time is 1, it is not reduced.

**Combat bonus (10):** A wizard with this ability uses the rogue THAC0 chart.

**Detect magic (10):** Characters purchasing this ability can *detect magic* once a day for every two levels. For example, a 7th level mage can *detect magic* three times a day. This is in addition to any *detect magic* spells the mage might carry. The character can spot magical radiations within his line of sight, up to 60' away. He can determine the intensity of the magic—dim, faint, moderate, strong, and overwhelming.

**Extend duration (10):** The duration of all non-instantaneous spells increases by 1 round for every two experience levels of the wizard. For example, if a 6th level wizard casts a spectral hand spell, it will last 15 rounds rather than 12 rounds.

**Hit point bonus (10):** These wizards use 1d6 for determining hit points rather than 1d4.

**Warrior hit point bonus (5):** A wizard with this ability can enjoy the benefits of a high Constitution score as if he were a fighter. For example, if this wizard had a Constitution score of 18, he would gain 4 bonus hit points a level, rather than 2.

**Priestly wizards (15):** These wizards gain access to one sphere of priest spells and can cast them as if they were wizard spells. These characters must continue to observe the number of various level spells they can cast each day.

**Read magic (5):** Characters purchasing this ability can *read magic* once a day for every two levels. For example, a 4th level mage can *read magic* twice a day. This is in addition to any *read magic* spells the mage might carry.

**Resistance to sleep and charm (5):** This wizard gains a +1 bonus to all saving throws versus sleep and charm spells, if the spell or effect allows a saving throw.

**Weapon specialization (15):** This wizard can specialize in a particular weapon. The character point cost for gaining proficiency and then specialization must be met in addition to this cost.

## Optional Restriction

**Limited magical item use (5+):** A wizard with this restriction disdains enchanted items as a crutch for the weak and refuses to use certain categories of magical items. For each category that is barred to him, he gains 5 CPs . The categories are: potions, oils, and scrolls; rings, rods, staves, and wands, and miscellaneous magical items; and all weapons and armor.

## Specialist Wizards

Specialist wizards, such as illusionists, are those who choose to concentrate their studies on one particular magic school. The 12 schools of magic are: Abjuration, Alchemy, Alteration, Conjuration/Summoning, Divination, Enchantment/Charm, Geometry, Illusion, Invocation/Evocation, Necromancy, Shadow and Song. (In addition, the *Tome of Magic* describes elemental wizards and wild mages.) For each school of magic, there is an opposition school or schools. Specialist wizards can never cast any spells from as opposing school. The chart that details all the requirements, opposition schools, races eligible for each specialization, and minimum ability scores follows.

**Table 39: Specialist Wizard Requirements**

| School | Races | Score | Opposition schools |
|---|---|---|---|
| Abjuration | H | 15 Wis | Alteration & Illusion |
| Alchemy | H, 1/2 E, G | 15 Int | Illusion & Necromancy |
| Alteration | H, 1/2 E | 15 Dex | Abjur. & Necromancy |
| Conj./Summ. | H, 1/2 E | 15 Con | Gr. Divin. & Invocation |
| Divination | H, 1/2 E, E | 16 Wis | Conj./Summ. |
| Ench./Charm | H, 1/2 E, E | 16 Cha | Invoc. & Necromancy |
| Geometry | H, E, 1/2 E | 15 Int | Enchantment/Charm & Illusion |
| Illusion | H, G | 16 Dex | Necro., Invoc., & Abjuration |
| Invoc./Evoc. | H | 16 Con | Ench./Charm & Conj./Summ. |
| Necromancy | H | 16 Wis | Illusion & Ench./Charm |
| Shadow | H | 15 Int | Abjur. & Invocation/Evocation |
| Song | H, E, 1/2 E | 14 Int | Divination, Invoc./Evoc., Necromancy |

H= Humans, 1/2 E=half-elves, E=elves, G=gnomes

All specialist wizards (illusionists, enchanters, and so on) gain 30 character points to buy skills. The skills below cost 5 to 15 points each. Any remaining points can be spent on nonweapon proficiencies or saved for use during the game.

**Access to schools:** A specialist wizard automatically has access to all schools of magic that are not specifically noted as opposition schools for his specialty. (Note that spells from opposition schools that happen to be included in alternate schools such as song magic, alchemy, or elemental magic are still not available to the specialist. Wild

magic is available only to wild mages.)

**Armored wizard (15):** This wizard can cast spells while wearing the armor of his choice.

**Automatic spells (5):** Each time the specialist wizard is able to learn a new level of spells, he can select one spell from his specialty school to learn automatically (without a check).

**Bonus spells (10):** Specialist wizards gain one additional spell per spell level. The extra spell taken must belong to the wizard's school of specialization. For example, a 5th level mage can cast four 1st level spells, two 2nd level spells, and one 3rd level spell. But a 5th level specialist wizard can cast five 1st level spells, three 2nd level spells, and two 3rd level spells—provided the added spells are from his chosen school.

**Casting reduction (5):** The casting time of all the wizard's spells from his chosen school is reduced by 2. All spells have a minimum casting time of 1.

**Combat bonus (10):** A wizard with this ability uses the rogue THAC0 chart.

**Detect magic (10):** Characters purchasing this ability can *detect magic* once a day for every three levels. For example, a 7th level mage can *detect magic* twice a day. This is in addition to any *detect magic* spells the mage might memorize. The character can spot magical radiations within his line of sight, up to 60' away. He can determine the intensity of the magic—dim, faint, moderate, strong, and overwhelming.

**Extend duration (10):** The duration of all non-instantaneous spells from the wizard's chosen school increases by 1 round for every experience level of the caster. For example, if a 6th level necromancer casts a spectral hand spell, it will last 18 rounds rather than 12 rounds.

**Intense magic (5):** If a specialist wizard casts a spell from his chosen school, the targets of that spell suffer a –1 saving throw penalty.

**Learning bonus (5):** A +15% bonus when attempting to learn new spells belonging the wizard's school of specialization.

**No components (10):** The ability to designate one specialty-school spell per character level as a spell that does not require material components. For example, a 3rd-level specialist may have a total of three spells in his spellbook that do not require material components.

**Range boost (5):** The reach of all ranged spells (spells with a range other than 0, self, or touch) from the wizard's chosen school is increased by 25%. For example, the 1st level wizard spell charm person has a range of 120 yards. That range is increased to 150 yards.

**Read magic (5):** Characters purchasing this ability can *read magic* once a day for every two levels. For example, a 4th level mage can *read magic* twice a day. This is in addition to any *read magic* spells the mage might memorize.

**Research bonus (5):** When attempting to research and create a new spell of his specialized school, treat the spell as one level lower than its actual level.

**Saving throw bonus (5):** +1 bonus on saving throws vs. spells cast at them from their school of specialization. This bonus can be purchased several times with a cumulative effect.

## Optional Restrictions

**Learning penalty (5):** A specialist wizard with this restriction suffers a penalty of –

15% to all learn spell rolls outside his own specialty.

**Limited magical item use (5+):** A wizard with this restriction disdains enchanted items as a crutch for the weak and refuses to use certain categories of magical items. For each category that is barred to him, he gains 5 CPs. The categories are: potions, oils, and scrolls; rings, rods, staves, and wands, and miscellaneous magical items; and all weapons and armor.

**More opposition schools (5+):** A specialist wizard with this restriction may choose to take additional opposing schools, gaining 5 character points for each additional school in opposition to his specialty. Only standard schools (i.e., those described in the *Player's Handbook*) can be selected as additional opposition schools.

## Psionicist

A psionicist receives 35 character points to spend on class abilities. Abilities cost 5 to 15 points. Any unspent points can be saved to buy proficiencies or saved for use in the game.

All psionicists use Table 78: Psionicist Saving Throws and MTHAC0s from Table 77: THAC0s & MTHAC0. Psionicists use the THAC0s from Table 77 unless they purchase better combat abilities during character creation. All psionicists use Table 79: Psionicist Experience Levels. Psionicists use Table 80: Psionic Progression unless they purchase better psychic abilities during character creation. All of these tables appear in Chapter 9 Psionics of this book.

Psionicist roll six-sided dice to determine hit points unless they purchase larger hit dice.

Unless stated otherwise, a character can take each ability only once and only when the character is first created.

**Armor Use (5/10):** The psionicist can employ small shields and padded, leather, studded leather, or hide armor. As a 10-point ability the psionicist can use small or medium shields, any of the armor types listed above, plus brigandine, chain mail, ring mail, scale mail, or metal lamellar armor. If the psionicist does not take this ability, he can wear no armor and cannot employ shields.

**Attack Mode of Choice (10):** The psionicist develops extra skill in using one particular psionic attack mode and gains a +1 bonus to mental attack rolls when using that attack mode. This ability is useless without the contact ability.

**Combat Bonus (10):** The psionicist uses the priest THAC0 chart.

**Contact (5/10):** The psionicist receives the contact proficiency and gains attack modes as shown on the Psionic Progression table in the *Skills & Powers* book. As a 10-point ability, the psionicist receives extra attack modes as though he was two levels higher than his actual level. For example, a 1st-level psionicist would receives two attack modes. The character can never have more than five attack modes. If the psionicist does not take this power, he can purchase the contact proficiency any time he has five character points available.

**Followers (5/10):** The psionicist becomes a contemplative master at 9th level. A 1st level psionicist arrives each month to study with the master. Students serve without pay if they receive at least 10 hours of training each week (they leave to seek new masters if they do not receive sufficient training). The maximum number of students the master attracts is equal to one half the master's Charisma score, rounded down. If the master

builds a sanctuary, he can attract a number of students equal to his Charisma score. As a 10-point ability, the psionicist becomes a renowned teacher and can attract students at any level, subject to the limits noted above. If the psionicist does not choose this ability, he never attracts followers, but can hire servants and henchmen for pay just as any other character can.

**Guarded Mind (5/10):** The psionicist can block or resist attempts to usurp his will and gains a +1 bonus to all saving throws against spells from the enchantment/charm school. As a 10-point ability, the psionicist gains a +2 bonus to all saving throws against spells from the enchantment/charm school.

**Hit Point Bonus (10):** Psionicists with this ability roll eight-sided dice for hit points rather than six-sided dice. The psionicist still gains only two extra hit points per level at 10th level and beyond.

**Mental Defense (5/10):** The psionicist can close his mind to psychic contact and gains defense modes as shown on the Psionic progression table in the *Skills & Powers* book. The psionicist also receives a +2 bonus to his mental armor class. As a 10-point ability, the psionicist receives extra defense modes as though he was two levels higher than his actual level. For example, a 1st-level psionicist would receives two defense modes. The character can never have more than five defense modes. If the psionicist does not take this power, he has an open mind, just as if he were a non-psionic character. If the psionicist does not choose this ability at the beginning of play, he can purchase the five-point version whenever he has five character points to spend. The 10-point version is available only at the beginning of play.

**Penetrating Mind (10):** The psionicist can penetrate physical barriers with his mind more readily than other psionicists can. It takes two inches of lead or iron, four inches of obsidian, or two feet of rock to block the psionicist's clairsentient and telepathic powers. Note that most psionic powers require line of sight; this ability does not negate a blocked line of sight (see *Skills & Powers*, page 150). This ability has no effect on psionic combat and does not allow the psionicist to ignore magical or psychic barriers that block psionic powers.

**PSP bonus (10):** The psionicist has a potent mind and rolls eight-sided dice for psionic strength points instead of six-sided dice. The psionicist still gains only three extra PSPs plus his Wisdom bonus per level at 10th level and beyond.

**Psychic Adept (10):** The psionicist receives extra powers according to the table below instead of the Psionic Progression table in the *Skills & Powers* book. The two disciplines the psionicist chooses at first level count as primary disciplines (see *Skills & Powers*, page 154).

### Psychic Adept Power Progression

| Exp. Level | Total Disciplines | Total Sciences | Total Devotions |
|---|---|---|---|
| 1 | 2 | 2 | 4 |
| 2 | 3 | 2 | 6 |
| 3 | 3 | 3 | 8 |
| 4 | 3 | 3 | 10 |

| | | | |
|---|---|---|---|
| 5 | 3 | 4 | 11 |
| 6 | 4 | 4 | 12 |
| 7 | 4 | 5 | 13 |
| 8 | 4 | 5 | 14 |
| 9 | 4 | 6 | 15 |
| 10 | 5 | 6 | 16 |
| 11 | 5 | 7 | 17 |
| 12 | 5 | 7 | 18 |
| 13 | 5 | 8 | 19 |
| 14 | 5 | 8 | 20 |
| 15 | 5 | 9 | 21 |
| 16 | 5 | 9 | 22 |
| 17 | 5 | 10 | 23 |
| 18 | 5 | 10 | 24 |
| 19 | 5 | 11 | 25 |
| 20 | 5 | 11 | 26 |

**Range Boost (5/10):** The ranges of all powers within the psionicist's primary discipline increase by 25%. If the psionicist is a psychic adept he has two primary disciplines. At base cost (5), the ranges of only one discipline's powers increase. For a cost of 10 character points, the ranges of powers for both disciplines increase. All powers with ranges of 0, self, or touch remain unaffected by this ability.

**Warrior Hit Point Bonus (5):** The psionicist gains bonus hit points from a high Constitution score as if he were a warrior.

**Weapon Specialization (15):** The psionicist can specialize in the use of a particular weapon. This ability is useless unless the character also chooses the weapon use ability (below), even if the psionicist chooses to specialize in a martial art or nonlethal combat. The character-point cost for gaining proficiency and specialization in the weapon must be met when the character chooses weapon proficiencies.

**Weapon Use (5/10):** The psionicist can employ the following small weapons: hand crossbow, dagger, dart, dirk, knife, scourge, sickle, and short sword. As a 10-point ability the psionicist can use any of the weapons above, plus the following slightly larger weapons: short bow, club, light crossbow, hand/throwing axe, javelin, quarterstaff, sling, spear, and war club. If the psionicist does not take this ability, he can employ no weapons at all, relying instead on his mental powers in combat.

**Psionics and sub abilities:** If the rules for sub abilities are in play, Constitution/Fitness, Intelligence/Reason, and Wisdom/Intuition determine a psionicist's PSP total. Wild talent checks use the same set of scores.

Wisdom/Willpower determines a character's base MAC, and Intelligence/Reason determines a character's MAC modifier.

**Weapon Proficiencies:** Once the psionicist has purchased class abilities he receives 6 character points for weapon proficiencies. The psionicist can spend these points as follows:

| Ability | Character Point Cost |
|---|---|
| Proficiency in a single weapon from the psionicist list. | 3 |
| Proficiency in a single weapon from the warrior list. | 4 |
| Designating a weapon of choice. | 3* |
| Weapon Expertise (one weapon) | 4* |
| Weapon Specialization (one weapon) | 8** |
| Learning a fighting style | 1 |

* in addition to the cost for proficiency in the weapon.
** in addition to the costs of proficiency in the weapon and the ability to specialize

Psionicists can learn these fighting styles: one-handed weapon, weapon and shield, two weapon, missile, horse archer, thrown weapon/sling, and special.

**Nonweapon Proficiencies:** Once the psionicist has purchased class abilities he receives 6 character points for nonweapon proficiencies. The psionicist can choose proficiencies from the general and psionicist groups. Refer to the *Skills & Powers* book, Chapter 6, and to the chart below:

| ***General Group*** | | | |
|---|---|---|---|
| **Proficiency** | **Cost*** | **Initial Rating** | **Relevant Ability** |
| Contact** | 5 | N/A | Wisdom/Intuition |
| Mental Armor** | 3 | N/A | Wisdom/Willpower |
| *Psionicist Group* | | | |
| Gem Cutting | 3 | 6 | Dexterity/Aim |
| Harness Subconscious** | 6 | 7 | Wisdom/Willpower |
| Meditative Focus** | 5 | 8 | Wisdom/Intuition |
| Musical Instrument | 2 | 7 | Charisma Leadership |
| Reading/Writing | 2 | 8 | Intelligence/Knowledge |
| Rejuvenation** | 3 | 6 | Wisdom/Willpower |

* Cost in character points
** Proficiency described in Chapter 9 of the *Skills & Powers* book.

**Buying Wild Talents:** Any character can purchase a wild talent as a trait for 9 character points. The character need not make a wild talent check, but must roll randomly to determine what the wild talent is (see *Skills & Powers*, page 156). Note that a character could make a normal wild talent check and use a character point to reroll if the check fails.

## Multi-Classed and Dual Classed Characters

All the rules from the *Player's Handbook* and the *Dungeon Master Guide* still apply to multi-classed and dual-classed

characters. However, character points can enhance these divided heroes.

## Multi-classed PCs

Multi-classed characters are demihumans with two or more professions-fighter/thief, cleric/wizard, thief/wizard/fighter, etc. Such a character gets to spend the full allotment of CPs granted by each class. The points from each class must be spent buying abilities from that class's list only. The character receives, however, only one class's allowance of CPs for purchasing proficiencies; he gets the largest number allowed by his various classes. He can choose proficiencies from any of those allowed to any of his classes. When character points are awarded for advancing a level, they must be divided by the number of classes the character has (retain fractions, don't round them up or down).

## Dual-classed PCs

Dual-classed characters are humans who change their current classes and adopt new professions. For example, a 5th level fighter might put away his sword and become a 1st level wizard. When he—and any other character—changes professions, any unspent character points are lost. The 1st level wizard spends his new character point allotment normally, as if he were adventuring from scratch. When the wizard's new level exceeds that of his first class, he can freely use the abilities of both classes—following all the normal game rules for such a character.

## Non-Adventurers

*Player's Option* rules gives DMs the opportunity to expand nonplayer characters. No longer will every blacksmith, jeweler, or horse-trainer have a THAC0 of 20 and be limited to 1d6 hit points. A DM's cast of regularly-appearing NPCs can have more substance.

## NPC Tiers

Important NPCs should be created using the *Player's Option* rules. This includes generating the six ability scores, determining the 12 subability scores, and deciding the race. Character points should be allotted for weapon and nonweapon proficiencies. NPCs who are not adventurers should not be awarded class-based character points. Instead, the DM should determine how experienced the NPCs are. Three levels of expertise are defined below.

**Apprentice:** These NPCs likely are young people who have not yet mastered their trade. Roll 1d6+2 to determine their hit points (plus or minus any Constitution modifiers that apply). Give these NPCs 10 character points to purchase proficiencies, traits, and disadvantages. Any character points unspent from the purchase of racial abilities also may spent in this way.

**Skilled:** These NPCs tend to be young to middle-aged adults. Roll 1d8+4 to determine their hit points and add any Constitution bonus. Skilled NPCs also 15 character points to spend, plus any unspent from the purchase of racial abilities.

**Master:** NPCs such as these have been at their profession a number of years. Masters have 20 character points, plus any unspent from the purchase of racial abilities. Master NPCs can be quite hardy. Roll 2d6+6 to determine their hit points. Add any Constitution bonus.

If DMs advance an important NPC from one level to the next, simply supply the NPC

with an additional 5 character points and add 2 to 6 to the NPC's hit point total. DMs can expand this system if they wish, creating even more experienced NPCs.

# Chapter 5: Character Kits

Many AD&D game players are familiar with the character kits in the *Player's Handbook* Rules Supplement series. *Player's Option* kits are different. They are packages of descriptions, proficiencies, benefits, and hindrances that help flesh out characters. In short, the kits give adventurers background and depth.

*Player's Option* kits are available to more characters than previouly published kits are. No longer are fighters and thieves the only ones who can become swashbucklers. And rogues aren't the only characters who can excel as acrobats. With some exceptions, a character of any class can choose any kit. Many *Player's Option* kits are linked to the social ranks system presented below.

Selecting a character kit is free—it has no character point cost. However, it carries a character point benefit. A character with a kit can purchase any of the recommended weapon and nonweapon proficiencies listed for 1 character point less than the cost detailed in the proficiency section.

## The Social Ranks System

Rogues, fighters, wizards, and priests can come from any background—from being the 10th son in a peasant family to the first-born of a noble house. As such, they can be of any social rank.

If a campaign is set in a large kingdom's capital, a character with the noble kit could be a member of one of the nation's rich, powerful families—perhaps even the favored offspring of the rulers. His relatives, however, might not be too happy that he spends so much time knee-deep in the filthy muck of dungeons, hacking atrocious beasts to bits for a living. That is hardly a suitable "noble" image. Another character might have the barbarian kit, and the player must decide how his rough and rugged fur-clad character came to be in a large city at the time the campaign starts.

A character's initial social rank should not limit his advancement in society. A peasant hero might always feel uncomfortable when standing before his king. But if his heroic deeds warrant such an appearance, he should be granted the opportunity. The only limit on how high a character can rise in society—and in social rank—is set by his actions.

Social rank is tied to many character kits. Players can take three approaches to selecting a kit. A player can roll at random to determine his character's kit; simply pick a kit, then roll on the social rank table underneath that kit; or, he can roll on the social rank table below and see what kit possibilities open up for his character.

To determine social rank first, roll 2d6 on the chart below. Samples of people who might fit into various classes follow. Some DMs might allow players to choose a rank that fits their character concept.

**Table 40: Social Ranks Table**

| 2d6 roll | Social rank |
|---|---|
| 2–3 | Lower class |
| 4–7 | Lower middle class |
| 8–10 | Upper middle class |
| 11–12 | Upper class |

**Lower class:** Freed slaves, vagabonds, indentured servants, criminals, migrant laborers, beggars, herdsmen, peddlers, actors, men-at-arms, manual laborers, tradesmen, money-changers, fishermen, petty officers, freemen, peasants, messengers.

**Lower middle class:** Artisans, bakers, petty merchants, junior officers, scribes, brewers, cobblers, landless knights, minor landowners, merchants, weavers, farmers, minstrels, gardeners, miners, dockhands, sailors, blacksmiths, shop owners, bodyguards, sculptors, healers, gamblers, tailors, animal trainers, carpenters, leather workers, stonemasons.

**Upper middle class:** Local officials, jewelers, sages, senior officers, minor nobles (bannerets, barons) guild masters, herbalists, historians, armorers, wealthy merchants, astronomers, major landowners, navigators, weaponsmiths, composers, scholars, minor military commanders, nobles (earls), ship captains, architects, engineers, shipwrights.

**Upper class:** Great landowners, generals, marshals, senior officials, knights, viziers, nobles (counts, dukes), royalty, diplomats, financiers.

**Table 41: Character Kit Table**

**Roll percentile dice to determine an adventurer's kit.**

| | | | |
|---|---|---|---|
| 01–03 | Acrobat | 49–51 | Outlaw |
| 04–06 | Amazon | 52–55 | Peasant Hero |
| 07–09 | Animal Master | 56–58 | Pirate |
| 10–12 | Assassin | 59–62 | Pugilist |
| 13–16 | Barbarian | 63–65 | Rider |
| 17–19 | Beggar | 66–68 | Savage |
| 20–22 | Cavalier | 69–72 | Scholar |
| 23–25 | Diplomat | 73–76 | Scout |
| 26–29 | Explorer | 77–79 | Sharpshooter |
| 30–32 | Gladiator | 80–83 | Soldier |
| 33–35 | Jester | 84–86 | Smuggler |
| 36–39 | Mariner | 87–89 | Spy |
| 40–42 | Merchant | 90–93 | Swashbuckler |
| 43–45 | Mystic | 94–96 | Thug |
| 46–48 | Noble | 97–00 | Weapon Master |

Kits There are a few rules for players to follow when selecting character kits.

A player may not choose a kit that is barred to his character's class or race. In the case of multi-classed characters, if the kit is barred to any of the character's classes, he may not select that kit.

A player can have only one kit per character, and the selection must be made during

character creation. The only exception is if these rules are added to an already existing AD&D game campaign. In this case, the DM and players can agree on an appropriate kit for each character.

Once a kit is chosen, the player cannot later change it. For example, if a character has the peasant hero kit, and over the course of a long, successful campaign he becomes the ruler of his homeland, he does not now assume the noble kit. He remains a peasant hero. Characters cannot change their pasts.

Remember, a character with a kit can purchase any of the recommended weapon and nonweapon proficiencies (but not recommended traits) listed for 1 character point less than the cost detailed in the proficiency section.

In general, any of the following kits can be used with any character class. Some combinations, such as paladin/thug are not allowed. Let common sense, the campaign setting, and the DM serve as guides. These kits also can apply to the NPCs inhabiting a DM's campaign. If a player wants to randomly select a kit, he can use Table 41. The table also can be used to generate NPCs.

## Acrobat

An acrobat is a general term for performers of amazing physical feats. These include jugglers, tumblers, jesters, and tightrope-walkers. Whatever their specialty, these characters make a living by entertaining others. Acrobats often travel in groups or with circuses or carnivals. These shows wander from town to town and castle to castle. All levels of society wish to be entertained. As such, successful acrobats find themselves in much demand.

A life on the road is not an easy one, however, and many acrobats often turn to other avenues to make money. Their dexterous skills make them valuable adventurers, especially if some larceny or petty theft is involved.

**Social ranks:** Acrobats most often occupy the middle tier of a society. Most lower-ranked members of a society have not the time to develop skills, like those of the acrobat. They must concentrate on putting food on the table. Roll 2d6 to determine an acrobat's social rank at the campaign's beginning.

| 2d6 roll | Social rank |
|---|---|
| 2–8 | Lower Middle Class |
| 9–12 | Upper Middle Class |

**Requirements:** To take this kit, a character must have a minimum Dexterity/Balance of 14 and a minimum Strength/Stamina of 12. The acrobat kit is barred to half-ogres, as well as any optional PC race that is size large (restriction z from the Other Races section of Chapter Three).

**Weapon proficiencies:** Small, light weapons are preferred by acrobats, as bulky or heavy ones would hinder their agile maneuvers. Suggested weapons include the knife, dagger, short sword, club, and hand axe. Thrown weapons and those with long hafts or handles also are common choices among acrobats, as the weapons can be used to juggle or pole-vault. These weapons include: quarterstaff, dart, javelin, and spear.

**Recommended nonweapon proficiencies:** Disguise, juggling, jumping, musical instrument, tightrope-walking, and tumbling.

**Equipment:** Acrobats prefer to be lightly armed and armored to allow for the fullest

range of movement.

**Recommended traits:** Ambidexterity, double-jointed, glibness.

**Benefits:** If unarmored, acrobats receive a +2 bonus to tumbling, tightrope-walking, and jumping proficiency checks. In addition, they gain a +2 bonus to Armor Class versus hurled missile weapons—provided they have room to dodge the attack and are not otherwise prevented from moving freely.

**Hindrances:** Any acrobat who wears armor heavier than studded leather (AC 7) suffers a –1 penalty to tumbling, tightrope-walking, and jumping proficiency checks per point of armor class better than AC 7. For example, an acrobat wearing chain mail—AC5—suffers a –2 penalty. Note that Dexterity or magical bonuses to Armor Class do not increase this penalty. An acrobat wearing studded leather armor, a *ring of protection +2*, and having a 15 Dexterity would incur no penalty despite his AC 4 rating.

**Wealth:** Acrobats receive the normal amount of starting cash appropriate to their class.

## Amazon

In Amazon cultures, the women are the leaders, rulers, generals, and warriors, while the men are the cooks, cleaners, homemakers, and simple laborers—if not the outright slaves or property of the women. Such matriarchal societies may be large or small, savage or friendly. Amazon women can be seen as brusque, rude, haughty, or domineering by those from male-dominated cultures. The Amazons of legend were fierce combatants and famous riders and breeders of magnificent horses. As such, many Amazons prefer light armor, weapons, and equipment.

**Social ranks:** Amazon women can come from any economic background. Roll 2d6 to determine the rank of an Amazon female. Males are considered lower class.

| 2d6 roll | Social rank |
|---|---|
| 2 | Lower class |
| 3–5 | Lower middle class |
| 6–10 | Upper middle class |
| 11–12 | Upper class |

**Requirements:** Female characters of any demihuman or humanoid race can choose this kit.

**Weapon proficiencies:** Amazons can choose from: battle axe, bow (any), club, dagger, hand or throwing axe, javelin, knife, lance, spear, staff, sword (any). Men are allowed only one initial weapon proficiency, and it must be from the above list.

**Recommended nonweapon proficiencies:** Riding (land-based), rope use, engineering, navigation, endurance, animal training, animal handling, armorer, bowyer/fletcher, hunting, running, set snares, survival, tracking.

**Equipment:** Amazons can begin with only the following types of armor: shield, leather, padded, studded leather, scale mail, hide, banded mail, or bronze plate mail. Better armor can be had once a character has ventured to other cities.

**Recommended traits:** Allure, animal empathy, keen senses, obscure knowledge.

**Benefits:** Amazons are fierce, eager competitors. Many male opponents underestimate them. As a result, in any melee combat where an Amazon is fighting a male opponent, the Amazon gains a +2 bonus to her first attack and damage roll.

Thereafter combat is run normally.

**Hindrances:** Amazons suffer a –2 reaction roll penalty from NPCs of male-dominated societies. Over time, this penalty should be reduced or eliminated if the NPCs become accustomed to the strong-willed ways of the Amazon.

**Wealth:** Amazons begin the game with the amount of money appropriate to their classes.

## Animal Master

Animal masters have an affinity with nature's creatures. They can be trainers, keepers, or guardians of animals. Good-aligned animal masters protect and care for animals, evil ones use simple creatures to their own advantage. Many animal masters spend much of their time outside with their furred, feathered, or scaled friends. Animal masters could include rangers, huntsmen, falconers, and druids.

**Social ranks:** Animal masters tend to be earthy folks from the lower echelons of a community. Roll 2d6 to determine an animal master's rank.

| 2d6 roll | Social rank |
|---|---|
| 2–5 | Lower Class |
| 6–11 | Lower Middle Class |
| 12 | Upper Middle Class |

**Requirements:** To take this kit, a character must have a minimum Constitution/Fitness of 10 and a minimum Wisdom/Intuition of 12. This kit is open to all player character races.

**Weapon proficiencies:** Animal masters can use any weapon appropriate to their class.

**Recommended nonweapon proficiencies:** Animal lore, survival, agriculture, animal training, animal handling, fire-building, fishing, herbalism, hunting, mountaineering, riding (any), swimming, set snares, tracking.

**Equipment:** Standard for the character's class.

**Recommended traits:** Animal empathy, empathy, climate sense.

**Benefits:** When this kit is chosen, the player and DM must determine a suitable animal companion for the character. There are several factors to consider: 1) the climate and terrain of the animal master's homeland, where he acquired the companion; 2) the character's alignment, as companions are attracted only to animal masters of like demeanor; 3) the character's race (dwarves and gnomes might attract burrowing or underground creatures, while elves would attract forest creatures) and; 4) the availability of compatible creatures. All animal companions should be size S (small). An animal companion is similar to a wizard's familiar in that it has a bond with the animal master. The master can issue it simple verbal commands, and the animal can convey its needs and emotions.

After making a list of available and compatible creatures, the player should choose one creature as a companion. DMs might prefer the animal to be selected randomly. If this is the case, roll 1d20 and consult the chart below.

**Table 42: Animal Companions**

| Roll | Companion | Roll | Companion |
|---|---|---|---|

| | | | |
|---|---|---|---|
| 1 | Badger | 11 | Raccoon |
| 2 | Dog | 12 | Opossum |
| 3 | Wolf | 13 | Fox |
| 4 | Snake | 14 | Skunk |
| 5 | Brush rat | 15 | Cat |
| 6 | Owl | 16 | Falcon |
| 7 | Ferret | 17 | Monkey |
| 8 | Raven | 18 | Squirrel |
| 9 | Otter | 19 | Hawk |
| 10 | Pig | 20 | Woodchuck |

**Hindrances:** The animal master must protect his companion, not send it into dangerous areas to spring hidden traps. Should an animal master lose his companion through carelessness or by capriciously placing the animal in danger, he loses 10% of his current experience point total, and he loses his affinity to that species. No other creature of that type will serve as a companion for that animal master. No penalties are assessed if the animal dies through natural causes, accidentally, or while following orders of a reasonable nature. (However, it's reasonable for animals with combat skills to defend their masters.)

**Wealth:** Standard as per the character's class.

## Assassin

This kit is intended for evil aligned characters, as the act of killing for pay cannot be justified as a good act. In any society there exists an element that wishes to dispose of rivals, business competitors, and any others deemed to be in the way. It is to this element that the assassin, a hired killer, caters. Unlike simple warriors or soldiers, the assassin relies on anonymity and surprise to earn his living. A successful assassin may not even be seen by his target. Slipping out of the darkness or a crowd of friends, the assassin does his dark deed and disappears.

**Social ranks:** Assassins tend to be well-off, as their services are expensive. Further, they often are educated, which helps them fit into different segments of society to stalk their prey. Roll 2d6 to determine an assassin's rank.

| **2d6 roll** | **Rank** |
|---|---|
| 2–3 | Lower Class |
| 4–6 | Lower Middle Class |
| 7–11 | Upper Middle Class |
| 12 | Upper Class |

**Requirements:** To take this kit, a character must have a minimum Intelligence/Reason of 10 and a minimum Wisdom/Willpower of 12. The assassin kit is barred to paladins, rangers, and druids. This kit is open to all player character races. The character must have evil alignment.

**Weapon proficiencies:** An assassin can use any weapon allowed to his class. However, many assassins have one weapon with which they prefer to perform their acts of murder. As he grows more notorious, evidence of a particular weapon becomes the assassin's calling card.

**Recommended nonweapon proficiencies:** Etiquette, riding (any), healing, disguise, forgery, modern languages, tracking, reading lips. If the DM allows poison, the assassin must have the herbalism proficiency to use various toxins. Herbalism gives the character the knowledge to use natural plants and herbs to produce a variety of poultices, salves, and toxic compounds. Poison strengths and rules are listed in the *Dungeon Master Guide*.

**Equipment:** An assassin must be able to move quickly and quietly, and travel as lightly as possible. Light armor and small, easily concealed weapons are common accouterments.

**Recommended traits:** Alertness, ambidexterity, glibness, precise memory.

**Benefits:** The assassin's knowledge of poisons allows him a 5% chance per level to identify toxic substances. If the assassin has the herbalism proficiency, a +10% bonus is added to the final number. The means of identifying poisons include sight, smell, taste, or by a victim's symptoms. An assassin with the healing proficiency can treat poison victims with a +1 bonus to his proficiency check.

**Hindrances:** Assassins suffer a –4 reaction roll penalty whenever they encounter someone who knows their profession.

**Wealth:** Assassins receive 150% of the amount listed for their chosen class.

## Barbarian

The barbarian is perhaps the most common fantasy-fiction archetype. Powerfully built, immensely strong, and clad in furs and skins, the barbarian often is seen as a muscle-bound bully. However, barbarians are more than that. They arrive in the campaign's setting from some distant, primitive land where people must still fight the environment at every turn just to survive. Playing a barbarian is all about working the mystique of a primitive culture into a more "civilized" world.

**Social ranks:** Barbarians might be wealthy in their own villages, but they won't be high on the social or economical ladder of the civilized community they are now a part of. Roll 2d6 to determine the barbarian's rank.

| **2d6 roll** | **Rank** |
|---|---|
| 2–8 | Lower Class |
| 9–12 | Lower Middle Class |

**Requirements:** Barbarians must have minimum Strength/Stamina and Constitution/Health scores of 13. The barbarian kit is barred to paladins, clerics, and bards. This kit is open to all player character races.

**Weapon proficiencies:** Barbarians prefer simple, large, and dependable weapons. Suggested weapons include: axe (all), sword (all), club, dagger, knife, war hammer, mace, sling, spear, javelin, long bow, and quarterstaff. The following weapons are likely inappropriate for barbarians—at least until they are immersed in a new culture—crossbow (all), polearms (all), flail (all), lances (all).

**Recommended nonweapon proficiencies:** Endurance, animal handling, animal training, bowyer/fletcher, fire-building, fishing, riding (land-based), hunting, mountaineering, running, survival, tracking.

**Equipment:** A barbarian cannot initially purchase armor heavier than splint mail, banded mail, or bronze plate mail. Of course, once exposed to superior forms of armor in the campaign, the barbarian may choose to purchase other armor types.

**Recommended traits:** Alertness, direction sense, immunities, keen senses, light sleeper, weather sense.

**Benefits/Hindrances:** Barbarians are intense, and NPCs tend to have very strong reactions to them. People either are drawn by the barbarian's animal magnetism or repulsed by his primitive qualities. This effect comes into play when NPCs meet barbarians for the first time. If the NPC's reaction roll result is 8 or less, an additional –2 bonus is applied to the result. For example, if the character is acting indifferently toward a shopkeeper and the shopkeeper's reaction result is a 7, the shopkeeper is *indifferent*. However, since the character is a barbarian, the –2 bonus applies, lowering the shopkeeper's result to a 5—a *friendly* response. The shopkeeper has been won over by the barbarian's presence. However, if the shopkeeper's reaction roll was a 14 or higher, the modifier becomes a +2 penalty, resulting in a 16—*threatening*—score. For more information on reaction results, see the *Dungeon Master Guide*.

**Wealth:** A barbarian begins with the standard amount of money for his class, but all of it must be spent before play begins. The DM might allow the Barbarian to retain a few silver pieces or a handful of coppers, but not much more.

## Beggars

Beggars earn a living off the generosity of others. They are a raggedy lot who make others pity them or who deceive others into giving them money. A beggar might dress in rags and huddle on a street corner, calling out to strangers for coppers so he can buy food. Perhaps he pretends to be maimed, old, or senile, and begs coins from those more fortunate. Some beggars might actually be down on their luck and in need of a generous handout. But most of them are capable of working. A few have begging perfected to a fine art. These are swindlers who create elaborate schemes to separate the wealthy from their money. Swindlers might coerce businessmen to invest in a nonexistent company, con lords and ladies into betting on imaginary horse races, and romance people into marriages that leaves the marks copperless and abandoned. Beggars adventure to get out of town if city guards are giving them too much trouble or if they want to score treasure

**Social ranks:** Beggars usually occupy the lower tier of society. Roll 2d6 to determine his social rank at the beginning of the campaign.

| **2d6 roll** | **Social rank** |
|---|---|
| 2–7 | Lower Class |
| 8–12 | Lower Middle Class |

**Requirements:** Beggars must be chaotic in alignment and have a Charisma/Leadership score of at least 10. This kit is barred to all optional races except kobolds, goblins, and mongrelmen, as well as paladins, rangers, druids, and wizards of all types.

**Weapon proficiencies:** Beggars prefer small weapons that can be concealed. That way they look defenseless. These weapons include daggers, knives, saps, and slings. However, when adventuring they use any weapons allowed their character class.

**Recommended nonweapon proficiencies:** Disguise, forgery, gaming, ventriloquism, seamstress/tailor.

**Equipment:** While begging, these characters dress in rags or whatever other clothing

is appropriate to their scam. However, when adventuring they don the best armor and weapons they own.

**Recommended traits:** Glibness, impersonation, inherent immunity to cold, inherent immunity to heat.

**Benefits:** Beggars receive one free nonweapon proficiency at the time of character creation—if the proficiency comes from the above recommended list.

**Hindrances:** These characters are not accepted into upper middle class and upper class social circles—at least in the community in which the beggar is plying his trade. This equates to a –4 reaction roll penalty if the beggar is trying to socialize with the upper crust.

**Wealth:** Beggars begin with the normal starting gold for their character class.

Cavalier This kit is appropriate only for good-aligned characters, as cavaliers are of brave heart and honorable bearing. They are the devoted heroes of the realm. Warriors, wizards, and clerics who love their country, their sovereign, and their people can be cavaliers. Cavaliers are the noblest of nobles, but they do not use their positions in society simply to further their own ends. They strive to aid the less fortunate, protect their ruler, and save their country—whenever the need arises. Cavaliers can be independent, or they might be employed as agents of the state, perhaps taking orders from the king or queen.

Social ranks: Though anyone with the right intentions and determination can be a cavalier, it is more likely these individuals come from the higher echelons of a community. Roll 2d6 to determine a cavalier's rank.

| **2d6 roll** | **Rank** |
|---|---|
| 2 | Lower Class |
| 3 | Lower Middle Class |
| 4–7 | Upper Middle Class |
| 8–12 | Upper Class |

**Requirements:** Cavaliers must have a minimum score of 13 in their class's prime requisite. Also, all cavaliers must a minimum Charisma/Leadership of 14. Cavaliers can be humans, elves, half-elves, or dwarves; this kit is barred to rangers, thieves, druids, and bards.

**Weapon proficiencies:** Cavaliers can choose any weapons allowable by their class. Swords and lances are especially appropriate for warrior cavaliers, as they are suitably noble weapons for cavaliers to carry.

**Recommended nonweapon proficiencies:** Etiquette, riding (any), heraldry, history (local or ancient), languages (modern or ancient), animal handling, dancing, reading/writing, artistic ability, and gaming.

**Equipment:** Cavaliers can equip themselves how they choose. However, a cavalier must purchase a mount as soon as he can afford one. Not only does a handsome mount increase the cavalier's noble bearing, one will likely come in very handy on his many travels.

**Recommended traits:** Allure, artistic ability, glibness, lucky, music/singing, or music/instrument.

**Benefits:** So good-hearted and strong-willed is the cavalier that he gains a +2 saving throw bonus against all mind-affecting magics. Such magics include, but are not necessarily limited to: *charm person, friends, hypnotism, sleep, irritation, ray of enfeeblement, fear, confusion, geas, command, enthrall, cloak of bravery,* and *symbol.*

**Hindrances:** Most cavaliers have a strong sense of honor, meaning they will only fight fairly and chivalrously. For example, during a combat on a high cliff-top, the cavalier's foe might slip over the edge and manage to catch onto a handhold. The cavalier could not leave the miscreant to that fate, nor would he loosen his foe's grip on the cliff. Rather, the cavalier would help the foe up, and then continue the combat. Neither would a cavalier kill any enemy no longer capable of self defense or one who had surrendered in good faith. Because of this code, a cavalier can be difficult to play properly.

**Wealth:** Unless the cavalier comes from the lower class, he begins with 150% of the starting cash for his profession. If he comes from the lower class, he begins with the normal starting cash.

## Diplomat

In any campaign that involves government and politics, diplomats and other courtiers are bound to appear. Diplomats can bring important messages to neighboring countries. They might—as adventurers—explore uncharted regions and act as emissaries. Or they could be attached to a foreign court as their lord's representative, advising the foreign ruler of the attitudes and policies of the diplomat's homeland. Diplomats also act as their rulers' eyes and ears in a distant court.

**Social ranks:** Diplomats are groomed from the higher stations in society. Roll 2d6 to determine their rank.

| **2d6 roll** | **Rank** |
|---|---|
| 2–6 | Upper Middle Class |
| 7–12 | Upper Class |

**Requirements:** A diplomat must have a minimum Intelligence/Knowledge score of 10 and minimum Wisdom/Intuition and Charisma/Appearance scores of 12. The diplomat kit is barred to half-orcs, half-ogres, and any of the optional races except centaurs, githzerai, satyrs, and swanmays.

**Weapon proficiencies:** A diplomat can wield any weapons that fit his character class. However, since a diplomat is usually a peaceful individual, if he wears heavy armor and carries lots of weapons he might be viewed suspiciously. Diplomats are at their best appearing inoffensive.

**Recommended nonweapon proficiencies:** Dancing, etiquette, heraldry, history (any), languages (any, numerous preferred), reading lips, and riding (any).

**Equipment:** A diplomat can equip himself however he desires. However, his possessions should be of superior quality and appearance.

**Recommended traits:** Allure, alertness, artistic ability, glibness, music (any), obscure knowledge, and precise memory.

**Benefits:** Since the diplomat's nature is to put others at ease, he receives a +2 bonus to all reaction rolls.

**Hindrances:** Diplomats are often far from home, essentially at the mercy of a foreign ruler. If the diplomat delivers a message that the ruler doesn't appreciate, the ruler may

take out his anger on the messenger. During wartime, diplomats live especially dangerous lives, as they frequently must travel across enemy lines and battlefields to perform their duties.

**Wealth:** Diplomats begin with double the amount of gold allotted to their class.

## Explorers

Explorers live to see what's over the next mountain or to sail beyond the countries at the edge of a map. They yearn to discover new places, people, and wonders. And their wanderlust drives them ever on. They make perfect adventurers, never staying in one town for more than a few days or weeks. And they are always eager to explore ruins, abandoned temples, and cave complexes. Many explorers are demihumans who, not fitting into human-dominated towns, turned to traveling. Others are half-breeds, such as half-elves, half-orcs, and half-ogres, who found more acceptance in the wilderness than in either of their parent's communities. Of course, there are human explorers, too, these leaving their homes simply because they had to know what's out there.

**Social ranks:** Explorers come from all walks of life. Roll 2d6 to determine social rank at the beginning of the campaign.

| 2d6 roll | Social rank |
|---|---|
| 2–3 | Lower Class |
| 4–6 | Lower Middle Class |
| 7–10 | Upper Middle Class |
| 11–12 | Upper Class |

**Requirements:** Explorers must have a minimum of 12 for Wisdom/ Willpower and Intelligence/Knowledge scores. This kit is open to all player character races and classes.

**Weapon proficiencies:** These characters can select any weapon proficiencies allowed their adventuring classes.

**Recommended nonweapon proficiencies:** Direction sense, fire-building, fishing, survival, weather sense, seamanship, local history, ancient history, reading/writing.

**Equipment:** Explorers are practical and try to carry all of their arms, armor, and belongings with them. They prize extra-dimensional spaces and magical carts and boxes such as*: bags of holding, Heward's handy haversacks, quivers of Ehlonna, portable holes, mouse carts, flatboxes*, and more.

**Recommended traits:** Internal compass, inherent immunity to cold, inherent immunity to heat, keen eyesight, keen hearing, precise memory.

**Benefits:** Explorers gain the survival nonweapon proficiency at no cost, and they can choose any two terrain types to apply it to. Possible terrains are: arctic, woodland, desert, steppe, mountain, and tropical.

**Hindrances:** These characters cannot stay in one place too long, calling no place home unless "home" is a ship or a covered wagon. Therefore, explorers cannot spend more than a few weeks at best in any given city or keep.

**Wealth:** Explorers begin with the maximum amount of gold allowed their character class.

## Gladiator

Gladiators are trained to fight people and creatures for others' entertainment. Most are flashy, outlandish showmen whose battle tactics often cater to the crowd first, their survival second. Gladiators can be slaves who are forced to fight, or they can be free

men who choose to make a living this way. If this kit is used in a campaign, there must either be a culture that publicly allows this activity, or else the fights might be illegal—held in secret places and backed by society's shady element. Legal or not, the gladiator definitely makes his living in an urban setting. If the campaign doesn't revolve around, or at least contain, a sizable city, this kit could be inappropriate.

**Social ranks:** Gladiators can come from almost any economic background, though it is more likely they come from the lower rungs of the community. Roll 2d6 to determine the rank of a gladiator.

| 2d6 roll | Rank |
|---|---|
| 2–6 | Lower Class |
| 7–10 | Lower Middle Class |
| 11–12 | Upper Middle Class |

**Requirements:** A gladiator must have Strength/Muscle and Constitution/Fitness scores of 13 or greater. This kit is barred to satyrs and swanmays. In addition, paladins, rangers, wizards, thieves, and bards may not choose this kit.

**Weapon proficiencies:** Only melee and hurled missile weapons—no bows, slings, etc.—can be used by such a character, as gladiatorial combats are not about firing arrows at one another. A gladiator who kills an opponent without endangering his own life in mortal combat is not much of a showman. Possible gladiator weapons include: daggers, swords (all, but short swords are most common), scimitars, spears, tridents, polearms (all), war hammers, maces (all), scourges, nets, and whips.

**Recommended nonweapon proficiencies:** Blind-fighting, endurance, gaming, jumping, tumbling, armorer, weaponsmithing, healing, and rope use.

**Equipment:** Gladiators can have whatever weapons fit their classes. However, they are initially limited in armor types. Gladiators cannot begin with anything greater than studded leather.

**Recommended traits:** Fast healer, immunities, keen senses, light sleeper, lucky.

**Benefits:** Gladiators enjoy a +1 bonus on attack rolls with one particular melee weapon. For example, a gladiator could choose a +1 attack bonus with the short sword.

**Hindrances:** As gladiators are trained to make combats last a long while and to play to any crowd, they suffer a +1 penalty to their initiative rolls. They take this time to show off, display their weapon prowess, or bait their opponent.

**Wealth:** Standard as per the character's class.

Jester Comedians, clowns, jokesters, and tricksters—these make up the jester kit, and those individuals who fit this kit live to make others laugh. Jesters strive to perfect their humor—whether it be slapstick, dark comedy, or simple ribald jokes. Some dress in gaudy costumes and adorn themselves with bells and shiny buttons. Others dress like the common man and blend in with the crowd. They spend their nights in kings' courts, at nobles' parties, or in crowded taverns, and they tailor their humor to their audience. They adventure to gain wealth and friends—and to acquire material for their next performances. The most noted jesters are gnomes because of their exaggerated visages.

**Social ranks:** Jesters are found at every level in society, though the majority of them come from the middle class. Roll 2d6 to determine social rank at the beginning of the

campaign.

| 2d6 roll | Social rank |
|---|---|
| 2 | Lower Class |
| 3–7 | Lower Middle Class |
| 8–11 | Upper Middle Class |
| 12 | Upper Class |

**Requirements:** Jesters must have a minimum Intelligence/Reason of 12 and a minimum Charisma/Leadership of 13. Dwarves, elves, and any of the optional PC races except for kobolds or goblins may not choose this kit. Only bards and thieves may choose this kit.

**Weapon proficiencies:** These characters can select any weapon proficiencies allowed their adventuring classes.

**Recommended nonweapon proficiencies:** Singing, etiquette, modern languages, reading/writing, ventriloquism, juggling, disguise, jumping.

**Equipment:** While adventuring, jesters outfit themselves with weapons and armor allowed their character class. However, they are ever on the lookout for unusual clothes, props, noise-makers, and accouterments that can be used in their act.

**Recommended traits:** Precise memory, obscure knowledge, lucky, keen hearing, empathy.

**Benefits:** Jesters enjoy a +1 bonus to Charisma when they are working an audience.

**Hindrances:** Jesters are often not taken seriously. When trying to conduct business deals or when socializing, NPCs have a –1 reaction roll penalty toward them.

**Wealth:** Jesters begin with the normal amount of gold allowed their character class.

## Mariner

Mariners are devoted to the sea. They may be young, old, poor or wealthy enough to own the ship they sail. They travel the world's oceans because they love it. They live for trading, exploring, and discovering new lands.

**Social ranks:** Mariners tend to be educated individuals from families with a reasonable amount of gold. Roll 2d6 to determine the rank of a mariner.

| 2d6 roll | Rank |
|---|---|
| 2–6 | Lower Middle Class |
| 7–10 | Upper Middle Class |
| 11–12 | Upper Class |

**Requirements:** A mariner must have a minimum Intelligence/Knowledge score of 9. The mariner kit is prohibited for dwarves, aarakocra, alaghi, bullywugs, centaurs, mongrelmen, ogres, orcs, satyrs, swanmays, thri-kreen, and wemics.

**Weapon proficiencies:** Mariners can be versed in any weapons applicable to their classes. However, weapons such as spears, pole-arms, and nets are practical.

**Recommended nonweapon proficiencies:** Weather sense, navigation, fishing, seamanship, swimming, rope use.

**Equipment:** Mariners can carry whatever equipment they desire, however much of it should be useful in their trade. Further, these individuals tend to wear little or no armor,

as heavy armor is not practical on a ship. They prize *rings of protection* and *bracers of defense*.

**Recommended traits:** Keen senses, light sleeper, lucky.

**Benefits:** Mariners enjoy a +2 bonus on reaction rolls from sailors, ship captains, and aquatic races. And they gain a +1 to hit bonus with nets.

**Hindrances:** Because mariners are so at home on the sea, they are often uncomfortable on land. When there is no water in sight, they are out of their element, and they suffer a –2 reaction roll penalty.

**Wealth:** Standard for the character's class.

## Merchants

Merchants are vital to any civilization, for they buy, sell, or barter the goods and services that a society demands. Merchants include local fish-mongers, street vendors, shop keepers, caravan owners, and more. Some have permanent stores established in a thriving business district. Others travel to distant lands to bring back rare treasures. Adventurers are natural merchants, as they often visit many strange and exotic places and acquire unusual and valuable goods. Merchant adventurers have an outlet to sell many of the material treasures such as tapestries, statuary, gems, and jewelry they often accumulate.

**Social ranks:** Merchants come from many walks of life. Roll 2d6 to determine the rank of a merchant. Optionally, grant that merchant the appropriate business and income.

| 2d6 roll | Rank | Business |
|---|---|---|
| 2–3 | Lower Class | Works for someone else |
| 4–7 | Lower Middle Class | Owns a stall or rents a storefront |
| 8–10 | Upper Middle Class | Owns a storefront |
| 11–12 | Upper Class | Owns a large storefront |

**Requirements:** A merchant must have minimum Intelligence/Knowledge and Charisma/Appearance scores of 9. This kit is closed to paladins, rangers, druids and all charcters of the following races: alaghi, minotaur, mongrelman, ogre, satyr, swanmay, thri-kreen, and wemic.

**Weapon proficiencies:** Merchants can wield any weapons appropriate to their classes. However, a merchant who wears heavy armor and carries several large weapons might make their customers nervous—unless the merchant is in the business of selling arms and armor.

**Recommended nonweapon proficiencies:** Appraising, carpentry, cobbling, etiquette, reading/writing, modern languages, local history, forgery, tailoring, weaving.

**Equipment:** Merchants can carry whatever equipment they desire, however much of it should be useful in their trade. Many merchants make sure they have plenty of leather sacks and other containers to store goods they might acquire. They prize *bags of holding* and *flatboxes*.

**Recommended traits:** Glibness, keen senses, precise memory, alertness, obscure knowledge.

**Benefits:** Because they are often welcomed into communities, merchants receive a +1 reaction roll bonus in city settings. In addition, merchants with the appraising proficiency gain a permanent +2 bonus to that skill.

**Hindrances:** While they are initially welcomed for the goods and services they bring, not all merchants are forthright in their business dealings. Any merchant who is publicly accused of cheating his customers (whether the accusation is true), loses the reaction bonus above. Further, he suffers a –2 penalty to all reaction rolls until his innocence is proven.

**Wealth:** A merchant begins with the maximum amount of gold allotted to his class.

## Mystic

Thoughtful and introspective, the mystic seeks to find the answers to the mysteries of the universe by traveling across the globe. Nonviolent by nature, the inquisitive mystic seeks only truth, and he avoids confrontations when possible. However, if the mystic must battle his way to enlightenment, he will do so. Mystics are usually found among cultures that place a high value on art, philosophy, and scholarship. As seekers of knowledge, mystics often become adventurers while they search for the answers they seek.

**Social ranks:** Mystics tend to be well-educated, coming from the more affluent segments of society. Roll 2d6 to determine the rank of a mystic.

| 2d6 roll | Rank |
|---|---|
| 2–7 | Upper Middle Class |
| 8–12 | Upper Class |

**Requirements:** A mystic must have a minimum Wisdom/Intuition score of 13. This kit is closed to thieves and bards. Only characters of the following races can choose this kit: human, elf, half-elf, gnome, halfling, aarakocra, alaghi, centaur, githzerai, swanmay, and wemic.

**Weapon proficiencies:** Mystics can wield any weapons appropriate to their classes. However, most prefer lighter weapons which do not weigh them down.

**Recommended nonweapon proficiencies:** Astrology, astronomy, religion, etiquette, languages (modern or ancient), history, (local or ancient), reading/writing, heraldry, riding (any), herbalism, healing, gem cutting, musical instrument, navigation.

**Equipment:** Mystics can select whatever equipment they desire and can afford. However, these characters are known to travel unencumbered, so care should be taken in what they purchase and acquire.

**Recommended traits:** Artistic ability, empathy, obscure knowledge, ancient history, precise memory.

**Benefits:** A mystic can temporarily boost one of his 12 subability scores by +2. If the mystic is a ranger with a 16 Balance score, by meditating the score can be temporarily increased to an 18. If the mystic is a warrior trying to boost a Muscle score of 18/30, the bonus counts as 20% rather than 2 points—each point equates to 10%. The mystic warrior's Muscle is temporarily increased to 18/50. To gain this subability bonus, the mystic must meditate, building up his body and mind for this feat. The subability score remains boosted for one-third of the mystic's meditation time. If the Mystic mediated for three uninterrupted hours, he could boost a subability score for one hour.

**Hindrances:** The process of meditation requires effort. While a mystic could meditate in the cabin of a ship, he could not do so if that ship were in the midst of a terrible storm. Attacks or very loud noises also disrupt meditation. The time spent in

meditation does not alleviate the mystic's need for food and sleep. So it is unlikely that a mystic could spend three days in meditation in preparation for an adventure. Further, a mystic cannot gain multiple meditation bonuses at one time.

**Wealth:** A mystic is interested in knowledge, not material items. As such, he cannot own more than he can carry. A mount is an exception, as such a beast is useful in taking the mystic to new places.

## Nobles

Nobles are those born to the highest ranks of society. They are rich, dress well, and they usually spend money frivolously. They are the privileged few the common people idolize. And they are the symbols of what others often consider the best in the world.

This leads many nobles to believe they are better than everyone around them—not just in wealth or social standing, but in manner and abilities. This sense of superiority can manifest itself as overwhelming pride, arrogance, and condescending snobbery. These nobles use their wealth, standing, and power to take what they want from those weaker than themselves. They can be as brutal, savage, and unthinking as the horrific monsters they slay.

Not all nobles are like this, however. Some feel a certain sense of stewardship for the unwashed hordes. These nobles consider it their duty to do all in their power to better the world—as long as their lifestyles are not jeopardized. They can be chivalrous toward members of the opposite sex, and they might occasionally stop to chat with peasants. These nobles mean well, but they may be out of touch with what is important in the lives of the common people.

Nobles need not be played as brutal tyrants or out-of-touch fops and dandies, but there are plenty of wealthy individuals who fit those two archetypes.

**Social ranks:** Nobles are only found in the upper echelons of society. Roll 2d6 to determine the rank of a noble.

| 2d6 roll | Rank |
|---|---|
| 2–4 | Upper Middle Class |
| 5–12 | Upper Class |

**Requirements:** Nobles need only meet the requirements of their adventuring class. This kit is open to all classes and races except mongrelmen.

**Weapon proficiencies:** Any allowed by their adventuring class.

**Recommended nonweapon proficiencies:** Etiquette, heraldry, riding (any), dancing, languages (ancient or modern), history, (local or ancient), reading/writing, religion, gambling, musical instrument, animal handling, hunting, and gaming.

**Equipment:** Regardless of his class, he must purchase a mount and tack, as no self-respecting noble would allow himself to be seen on foot when out and about. Further, all armor, weapons, clothes and accouterments must be of the finest quality.

**Recommended traits:** Allure, artistic ability, glibness, lucky, music (any).

**Benefits:** Because of his superior manner of dress, speech, and decorum, NPC nobles will recognize the player character's status and accord him the proper respect. Player character nobles receive a +2 reaction roll bonus when interacting with individuals from the upper class and upper middle class.

**Hindrances:** Because the noble demands the finest things in life, he pays more money for meals, board, equipment, etc. In addition, many vendors recognize the noble as being wealthy and raise their prices accordingly. A noble must add 25% to the price of any item or service he wishes to purchase.

**Wealth:** Nobles begin with twice the normal starting gold of their class to reflect their higher level of resources.

## Outlaw

These characters spit in the face of authority and scoff at the mention of "the law." They are men and women wanted by the campaign's government officials and law-enforcement authorities.

Some outlaws are the heroic Robin Hood type. They become outlaws because they oppose an evil, corrupt, or tyrannical regime. These outlaws are more concerned with justice than the strict letter of the law. And while they willingly break laws, they do it for the common good—robbing from the rich to give to the poor, smiting the minions of the vile administration, and generally making life as uncomfortable as possible for those who've turned the law to their own wicked ends.

Other outlaws are bandits and highwaymen who inhabit the fringes of many civilizations hoping to rob innocent passersby of their hard-earned valuables. These despicable louts truly give the term "outlaw" a bad name.

**Social ranks:** Outlaws typically come from the poorer segments of society. Roll 2d6 to determine an outlaw's social rank.

| 2d6 roll | Rank |
|---|---|
| 2–7 | Lower Class |
| 8–12 | Lower Middle Class |

**Requirements:** As many Outlaws must leave the comforts of civilization behind to avoid capture, they must be hardy souls. All outlaws must have minimum Strength/Stamina and Constitution/Health scores of 12. This kit is open to all races and classes, but paladin outlaws require special approval from the DM.

**Weapon proficiencies:** Outlaws can wield whatever weapons are allowed by their class. However, they tend to favor missile weapons because they like to strike at the forces of the law from a safe distance.

**Recommended nonweapon proficiencies:** Rope use, set snares, survival tracking, fire-building, riding (any), animal lore, bowyer/fletcher, hunting, running, local history, disguise, tumbling.

**Equipment:** Characters who are on the run, such as outlaws, are apt to be lightly equipped to allow for quick, quiet movements.

**Recommended traits:** Alertness, internal compass, glibness, impersonation, keen senses, light sleeper, lucky.

**Benefits:** Outlaws have a designated hideaway, a place where they can feel safe. Possible locations include a grove in the local forest, a hidden valley, the city's sewer system, or a nearby dungeon. The DM and player should work out the specifics.

**Hindrances:** Outlaws always have someone out to get them—usually the collective force of the campaign's law enforcers. They might have some player characters after them, too, if the bounty on their head becomes tempting enough.

**Wealth:** Standard for the character's class.

### Peasant Hero

A Peasant hero is the "local kid done good." Whatever his class, whatever his ambitions, this character always remembers that his roots are in the soil of his home—be it a bustling village, a quiet hamlet, or a lone farm miles from the nearest neighbors. He might leave his home and become a great general, a mighty wizard, a noble priest, or a master thief—but his home will always be foremost in his heart. A peasant hero might fight against tyrannical nobles who are oppressing the common people, or he could simply yearn for the wealth of the nobles—so he can return to his village and build homes, temples, schools, and more.

**Social ranks:** Peasant heroes come from the poorest of families. Roll 2d6 to determine the hero's social rank.

| 2d6 roll | Rank |
|---|---|
| 2–9 | Lower Class |
| 10–12 | Lower Middle Class |

**Requirements:** This kit is open to all classes and races. There are no abilty score requirements.

**Weapon proficiencies:** Although a peasant hero can wield any weapon allowed by his adventuring class, favored weapons include: dagger, short sword, quarterstaff, spear, short bow, club, hand axe, knife, sickle, sling, and staff sling.

**Recommended nonweapon proficiencies:** Agriculture, fishing, animal handling, animal lore, blacksmithing, carpentry, cooking, cobbling, fire-building, pottery, stonemasonry, weaving.

**Equipment:** See "Wealth" below.

**Traits:** Animal empathy, empathy, immunities, climate sense.

**Benefits:** The disadvantaged often make it through the rough times by helping each other. Therefore, in his homeland, a peasant hero always will be given shelter and any other help his fellows can give. They will hide him and his friends from an evil ruler's troops, heal his wounds, and feed and clothe him. Of course, this is conditional—if the peasant hero has given up his down-to-earth ways or mistreats his former friends, he'll find all doors in the village closed to him.

**Hindrances:** As he is viewed as something of a hero, a peasant hero will find the people of his homeland coming to him for assistance. If livestock are disappearing from the pens, or the village elder has been jailed for speaking against the nobles, or if another peasant is accused of crime he didn't commit, the peasant hero will be called upon to help.

**Wealth:** Peasant heroes begin with half the starting maximum gold allowed for their adventuring class.

### Pirate

Like mariners, pirates love the ocean. However, pirates also love wealth. Evil pirates are the scum of the seas. They'll attack a ship and kill the crew to a man—unless there is a nobleman or wealthy heiress on board they can hold for ransom. These buccaneers have no lofty goals and fight for no cause other than to net the next ship full of booty.

Privateers are neutral- or good-aligned pirates who are usually commissioned by a government to prey on the shipping of that government's enemy. Privateers are often granted Letters of Marque that state they are in the employ of their king or queen. As representatives of a nation, privateers are expected to behave with a code of honor. They accept surrenders, treat prisoners well, and are always deferential to any noble captives—especially those of the opposite sex.

**Social ranks:** Pirates usually come from the middle rungs of the social ladder. Roll 2d6 to determine the rank of a pirate.

| 2d6 roll | Rank |
|---|---|
| 2–7 | Lower Middle Class |
| 8–12 | Upper Middle Class |

**Requirements:** A life on the sea is rigorous and demanding. Pirates must have minimum Constitution/Health and Dexterity/Balance scores of 12. The pirate kit is prohibited for dwarves, aarakocra, alaghi, bullywugs, centaurs, ogres, orcs, satyrs, swanmays, thri-kreen, and wemics. This kit is open to all classes.

**Weapon proficiencies:** Pirates can be versed in any weapons applicable to their classes. However, rapiers and cutlasses are suggested for swashbuckling characters.

**Recommended nonweapon proficiencies:** Navigation, fishing, seamanship, rope use, gambling, tightrope walking, direction sense, swimming, weather sense.

**Equipment:** Pirates tend to avoid large weapons and heavy armor. Characters who are weighted down have a hard time climbing around in the ship's rigging and are likely to drown if they are pitched overboard during a storm or a fierce battle.

**Recommended traits:** Alertness, glibness, light sleeper.

**Benefits:** Pirates are accustomed to the pitch and roll of a ship and have an advantage when engaged in melee on deck. They gain a +1 bonus to their attack rolls while fighting at sea. Pirates also have a designated hideaway. Such locations include deserted isles, hidden anchorages, a sea-cave complex beneath the port city, etc.

**Hindrances:** Pirates suffer a –2 penalty on reaction rolls when they enter a port. If a pirate behaves in a manner appropriate to the setting, this penalty may be reduced and then eliminated upon subsequent visits. Pirates often make a lot of enemies. Hence, pirates are sometimes hunted by those they plundered. Pirate characters should never get too complacent—there's always somebody not too far away who wants the character's loot or head to show that this sea wolf will prowl the oceans no more.

**Wealth:** Standard for the character's class.

## Pugilist

Pugilists are characters who prefer to fight with their bare hands. They might make a living by fighting in a ring. Or perhaps they specialize in martial arts. They are strong, tough, and fit into any society that allows professional or street fights. Pugilists make excellent adventurers, as they have quick reflexes and are good in a brawl with monsters. Adventuring gives them an additional outlet for their physical side, and it affords them opportunities to travel to new communities and find new fights. Players might want to consult the Combat and Tactics book for information on unarmed combat and martial arts.

**Social ranks:** Most pugilists come from poorer families in bad parts of town where

people learned to fight to get what or simply to defend themselves. Roll 2d6 to determine a pugilist's social rank at the beginning of the campaign.

| 2d6 roll | Social rank |
|---|---|
| 2–10 | Lower Class |
| 11–12 | Lower Middle Class |

**Requirements:** Pugilists must have minimum Strength/Muscle and Dexterity/Balance scores of 14. This kit is barred to the following races: aarakocra, alaghi, bullywug, centaur, lizard man, minotaur, swanway, thri-kreen, and wemic. The kit is open to all classes except wizards.

**Weapon proficiencies:** These characters can select any weapon proficiencies allowed their adventuring classes. However, they prefer to fight with their hands. Proficiency and specialization in any form of unarmed combat (punching, wrestling, or martial arts) is recommended for the pugilist.

**Recommended nonweapon proficiencies:** Blind-fighting, endurance, running.

Equipment: Pugilists prefer to fight in loose-fitting street clothes and unencumbered. They seek magical bracers and rings to make themselves more difficult to be struck. They will wear armor while adventuring—if their character class allows it.

**Recommended traits:** Keen eyesight, keen hearing, keen sense of touch, light sleeper, ambidexterity.

**Benefits:** Normally, when a character makes an unarmed attack against an armed opponent or a monster with natural attacks, his foe gains an immediate attack of opportunity with a +4 bonus to his attack roll. This makes it very dangerous for unarmed heroes to attack most enemies. However, pugilists are skilled at fighting armed opponents and monsters with their bare hands; they are treated as if they were armed when making unarmed attacks.

**Hindrances:** Pugilists are admired when they are in a ring and the crowd is cheering them on. However, people from the middle and upper class prefer not to associate with the ruffians. A pugilist's Charisma is effectively lowered by 1 when dealing with those from the middle class and by 2 when speaking to people from the upper class.

**Wealth:** Pugilists begin with the normal amount of gold allowed their character class.

## Rider

A rider is a character who has developed a bond with his mount. When the character was younger, he became friends with this animal, and the rider and his mount grew up together and grew close. They are now all but inseparable. In fact, they share such a bond they can sense each other's location and general health. Perhaps the rider is an elf who was born in the deep wilderness and who rides into the campaign's city on a giant boar. Maybe the rider is a halfling lass who—with her giant lizard mount—leaves her village behind in pursuit of adventure.

**Social Ranks:** Riders can come from most walks of life. Roll 2d6 to determine the rider's social rank.

| 2d6 roll | Rank |
|---|---|
| 2–4 | Lower Class |
| 5–10 | Lower Middle Class |

**Requirements:** Riders must have a minimum Charisma/Leadership of 13. This kit is open to the standard player character races, and to flinds, githzerai, goblins, kobolds, orcs, and swanmays. The kit is open to all classes.

**Weapon proficiencies:** Riders can select any weapons that fit with their adventuring professions. Weapons designed to be used while mounted are ideal. These include: lances, bow (any), horseman's flail, horseman's mace, horseman's pick, spear, bastard sword, long sword, scimitar, morning star.

**Recommended nonweapon proficiencies:** Animal lore, animal training, animal handling, riding (any), rope use, charioteering, heraldry, bowyer/fletcher.

**Equipment:** Riders can select any weapons, armor, and other equipment that fits their adventuring class.

**Recommended traits:** Animal empathy, empathy, alertness, keen hearing.

**Benefits:** When this kit is chosen, the player and DM must determine a suitable mount for the character. There are several factors to consider: 1) the climate and terrain of the character's homeland, where he acquired the mount; 2) the character's race (halflings would have a difficult time riding elephants, while half-ogres would be too big for a pony) and; 3) the availability of the mount. A rider's mount is similar to a wizard's familiar in that the pair have a bond. Each will know the general state of health of the other, the direction the other is in, and the distance by which they are separated. Depending on its degree of intelligence, the mount might be able to understand if its friend is in danger. Many a rider has escaped certain death on the back of a mount that risked its own life to save him.

After making a list of possible mounts, the player should select one. DMs might prefer the mount to be selected randomly. If this is the case, use the following method.

Roll 1d6. A result of 1–3 indicates the player should roll on the natural creatures table; 4, flying creatures; 5, giant land creatures, and; 6, underwater creatures. Then roll 1d8 on the appropriate mount table.

**Table 43: Mounts**

| Natural Creatures | | Flying Creatures | |
|---|---|---|---|
| 1 | Horse/pony | 1 | Griffon |
| 2 | Bull | 2 | Huge raven |
| 3 | Camel | 3 | Hippogriff |
| 4 | Buffalo | 4 | Huge bat |
| 5 | Mule | 5 | Giant owl |
| 6 | Cave bear | 6 | Pegasus |
| 7 | Stag | 7 | Giant wasp |
| 8 | Elephant | 8 | Giant eagle |

| Giant Land Creatures | | Underwater Creatures | |
|---|---|---|---|
| 1 | Giant beetle | 1 | Hippocampus |
| 2 | Giant lizard | 2 | Giant crab |
| 3 | Giant boar | 3 | Sea horse |
| 4 | Giant weasel | 4 | Dolphin |

| | | | |
|---|---|---|---|
| 5 | Giant frog | 5 | Killer whale |
| 6 | Giant badger | 6 | Sea lion |
| 7 | Giant goat | 7 | Giant otter |
| 8 | Giant skunk | 8 | Giant ray |

**Hindrances:** If a rider neglects or mistreats his mount, the DM might declare that the mount flees—bolts during the night, kicks its way out of a stable, flies away, etc. If this occurs, the rider can never again experience an empathic rapport with a animal. Further, when the rider's mount dies, the rider immediately suffers 2d6 points of damage, due to the emotional loss resulting from the death of a close friend. This damage can be healed. However, if the mount's death occurred as a result of the rider's negligence, aside from suffering the physical damage, the rider must attempt a saving throw vs. spells. Failure means the rider operates as if he were under a feeblemind spell for the next 2d6 hours.

**Wealth:** A rider begins with the amount of money allowed his adventuring class. He must purchase tack and animal feed with this before using what is left to purchase weapons, armor, and equipment.

## Savage

Savages are characters from primitive societies, individuals who lived on their own or in extended families. They differ from barbarians in that they have no established villages or communities. They live off the land by hunting and foraging. They do not herd animals or establish farms. Savages find their way into adventuring groups simply by crossing paths with player character heroes. They are quick to become a part of an adventuring family, and they are comfortable traveling and exploring. However, savages are uncomfortable in towns, and they are suspicious of civilized trappings.

**Social ranks:** Since savages do not come from a society, their starting social rank is essentially lower class.

| **2d6 roll** | **Social rank** |
|---|---|
| 2–11 | Lower Class |
| 12 | Lower Middle Class |

**Requirements:** Savages must have a minimum Constitution/Fitness score of 13. This kit is open to all races except githzerai and swanmays, and to all classes except paladins.

**Weapon proficiencies:** At the time of character creation, a savage must choose from the following wooden weapons: quarterstaff, spear, bow, and club. As the character gains in levels and adventures with others, he can pick up more civilized weapons, such as maces, swords, and daggers.

**Recommended nonweapon proficiencies:** Animal lore, hunting, running, set snares, survival, tracking, fishing, swimming.

**Equipment:** Savages begin without any metal equipment. Their weapons are limited to those listed above, and they can wear nothing greater than hide armor. All of their possessions must come from nature, such: as deerskin sacks, buffalo hide blankets, vine rope, woven baskets, clay jugs, stone arrowheads, etc.

**Recommended traits:** Keen eyesight, keen hearing, keen sense of touch, keen sense of taste, light sleeper, ambidexterity.

**Benefits:** Savages gain +1 to any three nonweapon proficiencies scores, provided

they are selected from the recommended list above.

**Hindrances:** Player characters with this kit are uneasy in cities. They suffer a –2 initiative penalty when traveling within the confines of a town or keep.

**Wealth:** Savages are allowed to spend up to the normal wealth allowed their character class on the weapons, hide armor, and equipment mentioned in this kit. However, whatever is not spent vanishes. Savages begin play with no money.

## Scholar

A scholar is driven by his incessant drive for knowledge about a particular topic or family of topics. Adventuring scholars might want to study underground ruins, abandoned temples, mythical beasts, giant insects, haunted woods, or monsters. When not traveling (and taking copious notes at every opportunity), he's likely to be found poring over books, maps, scrolls, and clay tablets. Scholars choose to adventure because they know they can learn more by studying something up close than by reading about it in musty libraries.

**Social ranks:** Scholars are well-educated and come from rather affluent families. Roll 2d6 to determine a scholar's social rank.

| 2d6 roll | Rank |
|---|---|
| 2–6 | Upper Middle Class |
| 7–12 | Upper Class |

**Requirements:** A scholar must have a minimum Intelligence/Knowledge of 13. This kit is open to all standard player chacter races and to: centaurs, githzerai, and swanmays. Fighters may not be scholars.

**Weapon proficiencies:** Those that fit with the scholar's adventuring class.

**Recommended nonweapon proficiencies:** Reading/writing, history (any), languages (any), heraldry, astrology, astronomy, herbalism, engineering, gem cutting, religion, spellcraft, brewing, etiquette, musical instrument.

**Equipment:** Scholars always must be prepared to record some interesting new bit of knowledge. Therefore, all scholars must carry quills, ink, scrolls, and a journal or diary with which to write down any intriguing new facts or theories.

**Recommended traits:** Artistic ability, keen eyesight, keen hearing, precise memory, obscure knowledge.

**Benefits:** Scholars gain a +1 bonus either to Intelligence or Wisdom checks (player's choice)—including proficiency checks based on Intelligence or Wisdom.

**Hindrances:** Since scholars spend so much time reading, theorizing, and studying, they suffer when it comes to physical combat. All scholars suffer a –1 penalty on their initiative rolls when fighting.

**Wealth:** Standard for the character's class.

## Scout

Scouts are those characters who are most at home in the wilderness. They can be hunters, loggers, trappers or furriers. Or they might be employed by the campaign's military forces to patrol the country's borders and keep a furtive eye on the nation's enemies. As a rule, they are brave—even daring. Few others would voluntarily cross into enemy territory to ascertain troop movements or the locations of the monsters' stronghold. Wilderness is not limited to forests. Any geographic region that is untouched

by civilization qualifies. Such areas can include the desert, arctic tundra, tropical rain forests, mountain valleys, or even natural cave complexes—perhaps leading to the Underdark.

**Social ranks:** Scouts come from the lower tiers of society. Roll 2d6 to determine a scout's social rank.

| 2d6 roll | Rank |
|---|---|
| 2–5 | Lower Class |
| 6–12 | Lower Middle Class |

**Requirements:** Scouts must be able to discern a dangerous situation from a lethal one. All scouts need a minimum Wisdom/Intuition score of 12. This kit is open to all races and classes.

**Weapon proficiencies:** Scouts can be proficient in any weapons that fit with their adventuring class. Since they are frequently outnumbered by foes, most scouts select missile weapons to help them even the odds.

**Recommended nonweapon proficiencies:** Tracking, survival, fire-building, hunting, mountaineering, rope use, set snares, swimming, carpentry, direction sense, weather sense.

**Equipment:** Scouts do not enter the wilderness unprepared. Scouts must purchase adequate clothing for the season, rations and water, flint and steel, rope, bedroll, a small hammer, and pitons. They can purchase any weapons, armor, and other equipment with any gold they have remaining.

**Recommended traits:** Alertness, fast healer, impersonation, keen eyesight, keen hearing, keen sense of touch, light sleeper.

**Benefits:** Scouts gain a +1 bonus to all nonweapon proficiency checks while in the wilderness or natural cave settings.

**Hindrances:** Scouts are ill at ease in urban or dungeon settings. They suffer a –1 penalty on all nonweapon proficiency checks when in such locales.

**Wealth:** Standard for the character's class.

## Sharpshooter

Sharpshooters devote their time and effort to becoming extremely proficient with missile weapons. They might be experts with thrown weapons such as the dagger or hand axe. Some make their living as trick-shot artists in carnivals and circuses. Sharpshooters may be military specialists assigned to attack and dispose of enemy officers, wizards, airborne foes, or even enemy sharpshooters. Others might be classic archers, able to split an opponent's arrow in a target or knock a foe's weapon from his hand.

**Social Ranks:** Sharpshooters usually come from middle-classed families who have money to spend on weapons and lessons. Roll 2d6 to determine the social rank.

| 2d6 roll | Rank |
|---|---|
| 2–6 | Lower Middle Class |
| 7–12 | Upper Middle Class |

**Requirements:** A sharpshooter must have a minimum Dexterity/Aim of 13.

Bugbears, lizard men, minotaurs, ogres, and wemics cannot become sharpshooters. This kit is barred to wizards and priests (although the DM may allow some specialty priests, such as druids, to become sharpshooters).

**Weapon proficiencies:** More than half of a sharpshooter's initial weapon proficiencies (or at least six character points) must be allocated on missile weapons. Expenditures for missile weapon specialization or style specializations involving missile weapons count toward the requirements.

**Nonweapon proficiencies:** Bowyer/fletcher, hunting, heraldry, riding, weaponsmithing.

**Equipment:** A sharpshooter's first concern is making sure he has enough arrows or other missile weapons. After that, he can purchase whatever armor and equipment is appropriate to his adventuring class.

**Traits:** Ambidexterity, keen eyesight, keen hearing, lucky.

**Benefits:** Sharpshooters gain a +1 bonus to attack and damage rolls with one particular missile weapon. The weapon must be chosen at the time of the character's creation. This bonus does not apply to a hurled missile weapon when it is used in melee combat. For example, if a sharpshooter threw a spear at an oncoming hobgoblin, he could apply the bonus. If he waited until the hobgoblin closed to melee range, the bonus is no longer applicable.

**Hindrances:** Because a sharpshooter concentrates on missile weapons, he suffers a –1 penalty on initiative rolls for melee combat.

**Wealth:** Standard for the character's class.

### Smuggler

Characters who earn a living by fencing questionable goods and moving material about behind the backs of government officials are considered smugglers. They are opportunists who have the right connections to guide stolen or suspicious property about from place to place—at a considerable profit to themselves. Smugglers rarely steal things themselves. They consider that much more risky than transporting the goods and feigning ignorance about the goods' origins. And they rarely keep materials they believe stolen—better to move the objects on to another city. A few smugglers work as fences on the side. Smugglers love the adventuring life because it gives them the opportunity to travel and the chance to move goods. A smuggler might jump at the opportunity to delve into a dungeon when the authorities are on the lookout for a matched set of emeralds he has in his belt pouch.

**Social ranks:** Most smugglers come from the middle class. Roll 2d6 to determine their rank.

| **2d6 roll** | **Social rank** |
|---|---|
| 2–8 | Lower Middle Class |
| 9–12 | Upper Middle Class |

**Requirements:** Smugglers must have a minimum Wisdom/Willpower score of 12, as they must have enough common sense to help them stay ahead of the law. This kit is open to all races and classes, but paladin smugglers require special approval from the DM.

**Weapon proficiencies:** These characters can select any weapon proficiencies

allowed their adventuring classes.

**Recommended nonweapon proficiencies:** Appraising, forgery, gem cutting, ancient history, artistic ability, etiquette, pottery, ancient languages, reading/writing.

**Equipment:** Smugglers seek magical bracers and rings to make themselves more difficult to be struck or seen. They will wear armor while adventuring—if their character class allows it. However, they prefer to travel in loose-fitting street clothes and unencumbered.

**Recommended traits:** Keen sense of touch, glibness, impersonation, lucky, obscure knowledge, precise memory.

**Benefits:** If a smuggler chooses the appraising nonweapon proficiency, he gains a +2 bonus to that proficiency score.

**Hindrances:** Smugglers on occasion run afoul of the law—or of individuals who try to pass goods via the character. When this happens, a smuggler might have to rely on his fellow adventurers for protection.

**Wealth:** Smugglers begin with the maximum amount of gold allotted to their character class to reflect the money they earn from their shady dealings.

### Soldier

A Soldier is a professional warrior. He might be a field officer, a career sergeant, or a sellsword. Any character class can be a soldier. Warriors and clerics can lead troops into battle; wizards can decimate enemy armies with their powerful, offensive spells; and rogues can infiltrate enemy-occupied positions and gain valuable intelligence. If a player is interested in this kit, he should discuss with the DM whether the soldier is a member of a standing military organization or is a mercenary. If the character is a member of a military force, his military rank also must be decided.

**Social ranks:** Soldiers come from all walks of life. However, those from more influential families tend to rise higher in the military career ladder. If the soldier is part of an organized unit, roll 2d6 to determine his social and military rank.

| 2d6 roll | Rank | Military Title |
|---|---|---|
| 2–5 | Lower Class | Man-at-arms/foot soldier |
| 6–9 | Lower Middle Class | Sergeant/horse soldier |
| 10–11 | Upper Middle Class | Lieutenant |
| 12 | Upper Class | Captain/commander |

**Requirements:** Soldiers must have a minimum Constitution/Fitness score of 12, as military life is not easy. This kit is open to any player character race except; aarakockra, alaghi. githzerai, minotaur, mongrelman, satyr, swanmay, thri-kreen, and wemic. The kit is open to all classes.

**Weapon proficiencies:** Soldiers can be proficient in weapons that fit their adventuring class.

**Recommended nonweapon proficiencies:** History (ancient or local, emphasis on military events), fire-building, direction sense, animal handling, cooking, heraldry, riding (land-based), seamanship, swimming, disguise, armorer, blind-fighting, bowyer/fletcher, charioteering, endurance, navigation, survival, weaponsmithing, reading/writing.

**Equipment:** Soldiers must spend more than half of their starting wealth on weapons and armor. They can wear any armor and use any weapons allowed their adventuring

profession.

**Recommended traits:** Keen eyesight, keen hearing, light sleeper.

**Benefits:** At the time of character creation, the soldier gains one free nonweapon proficiency, provided it is selected from the recommended list above. In addition, a soldier acquires one weapon at no cost—a gift of the military.

**Hindrances:** A soldier can purchase only those weapons, armor, and other pieces of equipment that can be carried on his back or on his mount.

**Wealth:** Standard for the character's class.

### Spy

In any campaign there is bound to be intrigue, conspiracies, and insidious plots. Uncovering these secrets is the job of the spy. As the scout crosses enemy lines and infiltrates dangerous wilderness areas to learn vital information, so does the spy wend his way through all levels of society. He attends parties or sits in smoky taverns, drinking, dancing, or gambling—all the while noting who is speaking to whom, what is being discussed, (and what isn't being discussed), who's present and who's absent, and what are the latest rumors and gossip. Spies often choose to become adventurers, as that profession is the perfect cover. Few think twice when a new group of heroes comes into town. In most campaigns, adventurers are just accepted—if not granted a few favors in case their unique talents are ever needed. This allows spies to go almost anywhere without arising suspicion.

If this kit is chosen, the player should discuss with the DM exactly who the spy is supposed to be spying on, and who the spy's employer is. It is possible that the spy is between missions, or is seeking additional income as an adventurer. Spies tend to be educated and versatile. Roll 2d6 to determine the social rank of a spy character.

| 2d6 roll | Rank |
|---|---|
| 2–4 | Lower Middle Class |
| 5–12 | Upper Middle Class |

**Requirements:** Spies must be able to think on their feet and smoothly talk their way out of situations in which their cover may be blown. Therefore, all spies must have minimum Intelligence/Reason and Charisma/Appearance scores of 13. The spy kit is barred to half-ogres, as well as any optional PC race that is size large (restriction z from the Other Races section of Chapter Three), and thri-kreen. The kit is open to all classes.

**Weapon proficiencies:** Spies are only limited in weapon choice by their adventuring class. However, depending on their cover identity, spies may be limited in the weapons they carry. For example, a spy impersonating a wizard cannot bring his favorite bastard sword along as part of the disguise. Many spies prefer small, easily concealed, or easily disguised weapons (a walking cane can double as a club or hide a thin blade). This lets spies defend themselves if they are discovered. Such weapons include: club, dagger, knife, and darts. If the campaign involves much courtly intrigue, "ceremonial" weapons such as various swords also qualify.

**Recommended nonweapon proficiencies:** Disguise, forgery, dancing, etiquette, heraldry, riding, local history, modern languages, herbalism, reading/writing, appraising, gaming, musical instrument, reading lips, spellcraft.

**Equipment:** The spy's cover identity may dictate what equipment he can carry

without appearing incongruous.

**Recommended traits:** Alertness, empathy, glibness, impersonation, light sleeper, lucky, music (any), precise memory.

**Benefits:** Because of the spy's suave charm, he receives a +2 bonus for all NPCs' reaction rolls.

**Hindrances:** The foremost problem with being a spy is that if his cover identity is blown and he is captured, the penalty is often death. It is also possible that old foes may later determine the spy's true identity and seek revenge against him.

**Wealth:** Standard for the character's class.

## Swashbuckler

A swashbuckler is the lightly armed and armored hero with a flashing blade and rapier wit. Most at home in a city-based campaign (dungeons tend to ruin their expensive, foppish attire), the swashbuckler seems to have stepped right out of Dumas' *The Three Musketeers*. Swashbucklers may be dull bureaucrats, wheezing aristocrats, or meek scribes during the day—but at night they don their fanciest clothes, gird on their blades, and venture out into the darkening city for an evening of raucous revelry, flippant conversation, and a helping of derring-do. Despite a generally flippant (some might say arrogantly sarcastic) attitude, most swashbucklers have a strong sense of honor. Anyone who dares insult the swashbuckler, his comrades, or a member of the opposite sex may well find a blade at his throat.

**Social ranks:** Swashbucklers are more affluent than common fighters. Roll 2d6 to determine a social rank.

| 2d6 roll | Rank |
|---|---|
| 2–7 | Upper Middle Class |
| 8–12 | Upper Class |

**Requirements:** Swashbucklers should be witty, and they should be light on their feet for those occasions when their wit goes unappreciated. As such, all swashbucklers need minimum Dexterity/Balance and Intelligence/Reason scores of 12. This kit is closed to the optional player character races, and to rangers and druids.

**Recommended weapon proficiencies:** Swords are the traditional weapons of most swashbucklers, especially rapiers and sabres. However, they can use any weapons that fit their adventuring professions.

**Recommended Nonweapon proficiencies:** Tumbling, etiquette, dancing, riding, blind-fighting, musical instrument, appraising, gaming, tightrope walking, jumping.

**Equipment:** A swashbuckler can wear any armor and weapons allowed to his class, though they should be flashy and of good quality.

**Recommended traits:** Ambidexterity, artistic ability, glibness, music, lucky.

**Benefits:** When unarmored or wearing armor no heavier than studded leather, swashbucklers gain a +2 armor class bonus. This bonus is in addition to any other AC modifiers such as a high Dexterity and magical defensive items. (This is equal to the optional defensive bonus class ability, and the two cannot be combined.) Also, due to their roguish charm, swashbucklers gain a +2 reaction roll bonus from NPC members of the opposite sex.

**Hindrances:** As the swashbuckler seeks out adventure, so too does adventure find

him. Life, and the DM, should conspire to make reality interesting for the character. For example, if a swashbuckler is fleeing the outraged sibling of one of his paramours, his flight might carry him across the path of a defenseless peasant who is being harassed by a gang of ruffians. Or, if a swashbuckler leaps overboard to escape the buccaneers who shanghaied him, he discovers that the waters are infested with sahuagin riding sharks.

**Wealth:** Standard for the character's class, plus 20% to reflect his affluent background.

Thug This kit is recommended only for non good-aligned characters. As the outlaw makes his home and living on the fringes of civilization, the thug makes his way in cities. A thug knows the streets and alleys, and he knows the shadowy places best. In the darkest parts of town he lies in wait for unsuspecting prey—such as travelers new to the city, those who become lost in the maze of streets and alleys, and those on their way home after having a bit too much to drink. Thugs might be street ruffians, members of press gangs, gang enforcers, or barroom rowdies. In any case, they tend to be loud, obnoxious, and prone to violence.

**Social ranks:** Most thugs come from low-income families, and it is this background that leads them to their questionable lifestyle. Roll 2d6 to determine a thug's social rank.

| 2d6 roll | Rank |
|---|---|
| 2–8 | Lower Class |
| 9–12 | Lower Middle Class |

**Recommendations:** Thugs must have minimum Strength/Muscle and Charisma/Appearance scores of 10. This is barred to aarakocra, kobolds, satyrs, and swanmays. Only fighters and thieves may select this kit.

**Weapon proficiencies:** Small or easily concealed weapons are the thug's favorites, as they can be carried most anywhere. These include: daggers, dirks, hand axes, knives, blowguns, and slings. However, thugs can carry any weapon that is allowed by their adventuring class.

**Recommended nonweapon proficiencies:** Blind-fighting, endurance, gaming, jumping, rope use, running.

**Equipment:** Most thugs like to wear as little armor and carry as few pieces of equipment as possible—as they like to move about unencumbered. However, some thugs prefer wearing bulky armor and carrying big weapons to intimidate others.

**Recommended traits:** Fast healer, keen eyesight, keen hearing, keen sense of touch, light sleeper.

**Benefits:** Due to their rough-and-tumble lifestyle and penchant for street brawls, thugs gain a +1 bonus to all damage rolls.

**Hindrances:** Thugs are often wanted by the local law enforcers. In a relatively confined area such as a city, a thug can never relax. Around the next corner might be a member of the constabulary—or the thug's next victim.

**Wealth:** Standard for the character's class.

Weapon Master A weapon master is a character who, regardless of class, has chosen to devote most of his combat training to a single weapon. A weapon master's goal is to

blend weapon and self into one whirling, deadly union—one lethal entity. Weapon masters might display their prowess as part of a circus or carnival show—knocking lit cigars out of unsuspecting peoples' mouths—or juggling three short swords while blind-folded. Or, weapon masters might have inherited the family heirloom weapon, and mastering it is a family tradition that the character feels he must live up to.

**Social ranks:** Weapon masters come from families that can afford weapon instructors. Roll 2d6 to determine a weapon master's social rank.

| 2d6 roll | Rank |
|---|---|
| 2–4 | Lower Middle Class |
| 5–9 | Upper Middle Class |
| 10–12 | Upper Class |

**Requirements:** Only fighters, priests, and thieves can become weapon masters. Further, they must have minimum Strength/Stamina and Dexterity/Aim scores of 13. The kit is open to all races.

**Weapon proficiencies:** Weapon masters always choose a melee weapon to study and excel in. The character must begin play with expertise or specialization in at least one melee weapon.

**Recommended nonweapon proficiencies:** Blind-fighting, juggling, weaponsmithing, bowyer/fletcher, endurance.

**Equipment:** A weapon master cannot wear any armor heavier than chain mail. The weapon master begins play with one weapon ot the type he has mastered at no cost.

**Recommended traits:** Ambidexterity, double-jointed, keen eyesight, keen hearing, lucky.

**Benefits:** A weapon master is so skilled with one melee weapon that he can, as he enters combat, display his amazing level of skill. This causes all opponents who see the display to suffer a –2 initiative penalty for the first two rounds of combat.

**Hindrances:** So total is the weapon master's devotion to his weapon that he cannot become proficient with weapons of another type. For example, if the character's choice weapon is a mace, he can only gain proficiencies in bludgeoning weapons. If the chosen weapon is a sword, he can only wield slashing weapons without suffering penalties to hit.

**Wealth:** Standard for the character's class.

## Creating New Kits

To design additional kits, DMs should answer these questions.

What role does this kit to serve in the campaign?

What makes this unique from all other kits?

In what ways is it similar to any other kits?

What levels of society would generate characters that would choose this kit?

**Requirements:** What does a character need to take this kit? What minimum of ability does this kit require?

**Weapon proficiencies:** Does this kit give access to weapons not normally allowed certain classes? If so, why? Are certain weapons associated with this kit?

**Recommended nonweapon proficiencies:** What skills would PCs with this kit likely need?

**Equipment:** Does this kit grant access to equipment not normally available to some classes. If so, why?

**Recommended traits:** What characteristics fit an individual with this kit?

**Benefits:** What extra ability or modifier does this kit grant characters? Is this benefit too powerful for a kit? Is it too weak? Compare this kit's benefits with the other kit benefits in this chapter.

**Hindrances:** What penalty or modifier compensates for the above benefit without weakening the character too much or leaving him too powerful?

**Wealth:** Is the starting cash of the character affect by this kit? If so, how much?

Once these questions have been answered, a DM should have a pretty good idea of the compatibility of a new kit. The most important decision to make is determining if this kit unbalances the game. Contrast and compare it with other kits. It's much easier to fix the kit now than try to repair a campaign after an unbalanced kit has damaged it.

The next step is to experiment with the kits in play. Outside the normal campaign, put this kit through its paces. Run different character classes through an encounter or two to see if it works the way it was intended. If it does, introduce it to campaign and have fun. If it doesn't, head back to the drawing board.

# Chapter 6: Nonweapon Proficiencies

Nonweapon proficiencies are an important part of role-playing a character. The Skills and Powers book offers several new proficiencies and ways in which they can be employed during a game. The new rules are tailored to the character point system.

The use of proficiencies has been modified slightly from straight ability checks, providing more flexibility and a little more advantage to characters with less than, say, a 15 or 16 score in a certain ability. Now proficiencies can develop during the course of a game. Though characters will often start out with less likelihood of success when using proficiencies, they will have many opportunities to develop those skills beyond the limits inherent in the old ability score system.

In addition, players can select or create traits for their characters, which are innate advantages such as talents and keen perceptions. A list of traits is presented in this chapter. Countering the strengths of the traits is a selection of disadvantages, which also provide opportunities for more elaborate role-playing—as well as creating countless situations for a little comic relief.

## Proficiencies and the Point System

The point system lets players give their characters a wider variety of skills and abilities than are available with the standard rules. However, skills that are not related to a character's class are still more difficult and expensive to obtain than those tied directly to the adventurer's area of expertise.

Character points help determine an adventurer's initial proficiencies. Players can also assign character points earned during play to improve their heroes' chances of success

with proficiencies, as well as to add new proficiencies.

Unlike the original proficiency rules, the *Skills and Powers* system gives each proficiency a rating—a possibility for success. This is influenced by a character's ability score (see Table 44: Ability Modifiers to Proficiency Scores). It is a more realistic approach, since proficiencies can be gradually improved. In these rules there is a significant difference in performance between someone with a beginning level of proficiency and someone who is an expert.

In this step of the character creation process, all player characters receive an additional allotment of character points, based on their classes, to purchase their initial non-weapon proficiencies. In addition, any leftover points from race or class ability selection in the previous chapters can be used here. Finally, characters may add their CP bonuses for their Intelligence scores to their total of character points at this time. The number of CPs awarded to each type of character in this step appears in the table below.

Characters may also choose disadvantages at this point, which can give them bonus CPs to spend in acquiring extra skills or traits.

| | |
|---|---|
| Warriors: | 6 |
| Wizards: | 8 |
| Priests: | 8 |
| Rogues: | 6 |

## Selecting Proficiencies

When a character is created or converted from the standard AD&D game rules to the *Skills and Powers* system, character points must be expended for each proficiency selected. The more points spent, the better the character will be at using that particular proficiency.

Table 45: Nonweapon Proficiency Groups lists the proficiencies available. It is broken into five categories—general proficiencies, and those relating to the priest, rogue, wizard, and warrior classes. Players can choose proficiencies from any of the lists, though the costs for some will be increased because they don't relate to a character's class.

Additionally, some characters, because of high Intelligence scores, can add bonus proficiencies at the time of character creation.

## Character Point Costs

A character point cost is indicated for each specific entry—that is the expenditure in points required for players to add that skill to their characters' repertoires. The cost is normal if the proficiency is selected from the general list or the list relating to a character's class. If it is selected from a different character class list, the initial cost for the proficiency is increased by 2.

For example, Wingo the thief decides to spend character points on an assortment of proficiencies, including fishing (for a cost of 3) from the general group, disguise (for a cost of 4) from the rogue group, and cryptography (listed cost 3) from the wizard's group. His cost in points is as stated for the general and rogue proficiencies, but he must pay 5

character points, not 3, to acquire the skill from the wizard group.

## Relevant Abilities

Each proficiency on Table 45 is listed with one or two of the character abilities and/or subabilities that are most essential for the use of this skill. To acquire the proficiency at the normal cost, the character must have a score of at least 9 in each of the relevant abilities.

A character with lower ability scores is still allowed to purchase the skill. However, the cost in character points is increased. Add 1 to the cost for each point needed to bring the relevant abilities up to a 9.

For example, Wingo wants to become proficient at riding horses. His 15 Dexterity score is no problem, but his 7 Wisdom score gives him some difficulties. Since the normal cost for the riding proficiency is 2 character points, and Wingo would need to add 2 more points to raise his Wisdom to 9, he must pay 4 points for the riding proficiency. The additional cost does not actually improve Wingo's Wisdom score, it merely allows him to gain the riding proficiency.

## Campaign Considerations/Training

The DM is encouraged to provide a rationale for acquiring proficiencies. Certain skills might not be available because they relate to vocations not employed by the cultures of the campaign environment. Riding and blacksmithing, for example, would be unavailable in a setting based on the pre-Columbian Aztecs, while seamanship might be unknown to a mountain-dwelling people or a character born into a tribe of desert nomads. Of course, the DM need only introduce a traveler from a different culture to teach or otherwise introduce a new skill to the setting.

In other cases, the DM could disallow certain proficiencies at the time characters are generated. Adding proficiencies later is simply a matter of the players finding ways for their characters to learn the new skills—the mountain herder who signs on as a deckhand for an ocean-crossing vessel will have plenty of opportunities to learn seamanship.

An NPC who possesses a proficiency generally will have enough knowledge to impart a basic level of skill to an nonproficient character. The amount of time this requires varies, but it should be a matter of at least several weeks of intensive training, or a much longer time of general exposure and experience.

In general, a teacher cannot raise a student's skill to a higher level than his own, but here, too, are exceptions. Characters who receive proficiency bonuses for high ability scores do not have to consider these bonuses when comparing their levels to their teacher's.

## Bonus Proficiencies

Characters with average to high Intelligence scores can gain bonus nonweapon proficiencies. The "# of languages" rating for a character, found in the AD&D game rules, is treated as bonus character points. Bonus character points from Intelligence cannot be spent earlier in the character creation process.

These points can be used only to acquire languages or acquire or improve nonweapon proficiencies which use the Intelligence score as one of the proficiency's relevant abilities. However, there is one exception—warriors can use these bonus character points

as described here, or they can use them to purchase or improve weapon proficiencies.

For example, Wingo the thief has an Intelligence score of 15, while Bluto the warrior has an Intelligence score of 12. Table 4 (in the PHB) shows that Wingo is allowed to learn four languages, while Bluto is limited to three. Wingo thus gains 4 character points that must be used for Intelligence-based nonweapon proficiencies. He could purchase ventriloquism (from the rogue group) or cooking (from the general group), since each of these uses Intelligence as a relevant ability.

Bluto, on the other hand, could use his 3 bonus character points to purchase cooking, or add them to his normal character points to purchase the armorer proficiency (from the warrior group). Alternately, Bluto could use his bonus character points to purchase or improve an additional weapon proficiency.

### Improving Proficiencies

Once an adventurer possesses a proficiency, spending character points can improve the adventurer's performance when that proficiency is used. The section on using proficiencies describes how to determine an initial rating—which varies for the different proficiencies and can be modified by character ability scores.

This initial rating can be improved by spending additional character points during the course of an adventurer's career. For the most part, new characters will have a beginning level of proficiency, though the DM and player may agree on a rationale to explain a novice character's high degree of proficiency. A young woman who embarks on a life of adventure, for example, after being raised beside her father's potter's wheel, might have a significant level of accomplishment at the pottery skill.

Spending character points can improve an adventurer's proficiency performance. This is a one for one exchange—1 character point increases the character's chance of success by one. A nonweapon proficiency only can be increased through character points once each level.

As a general rule, adventurers can add 1 character point to a given proficiency each time they advance a level of experience. They don't have to use the point at the time they reach the new level.

For example, Bellerana the wizard advances from 2nd to 3rd level. She spends 1 character point to improve her rope use proficiency. And she spends another to improve spellcraft.

It is possible to create exceptions to this limitation. A character who ceases adventuring for a while, and devotes much of that time to farming or laboring in a blacksmith shop, might continually improve his agriculture or blacksmith proficiency even while he does not advance in levels in his character class.

## Maximum Ratings and Automatic Failure

Characters cannot improve their unmodified ratings in nonweapon proficiencies above 16. This can be modified upward by the characters' relevant ability scores, or by a trait that improves their score in that specific proficiency.

Regardless of how high a character's modified proficiency rating becomes, a roll of 20 on a proficiency check is always a failure.

## Acquiring Character Traits

Not everything an individual does is a matter of training, practice, and education.

Certain things, such as artistic talent or naturally keen senses, are inherent. These inherited characteristics might be combined with skills to provide a high level of mastery, but the talents themselves cannot be learned—characters have them or they don't. The greatest masters in any field of endeavor, of course, combine a high level of natural talent with extensive training. A combination of a trait with a high level of nonweapon proficiency can allow a character to simulate this level of accomplishment. The greatest minstrels of the realm, for example, possess the trait of musical ability, probably both vocal and instrumental. Additionally, they have gained through practice and learning, a high proficiency in playing musical instruments.

In the *Skills and Powers* rules, talents and other inherent abilities are represented as traits. These traits can confer significant game advantages on a character, and can often amplify the effects of related nonweapon proficiencies. Since they are significant enhancements, they are also relatively difficult to acquire.

Character points must be spent at the time of character creation if players want to select traits. Once a trait is assigned to a character, it is regarded as permanent. Unlike proficiencies, traits cannot be improved as a character develops. For the most part additional traits cannot be gained by a character who already has been involved in adventuring (though if the judge deems it appropriate, a rationale can be devised to explain why a character suddenly discovering a hitherto unknown trait).

### Selecting Character Disadvantages

When a character is created, the ability scores of that PC include inherent advantages and disadvantages. A character will be strong or weak, fast or slow, brilliant or stupid, handsome or ugly. These categories are general, and players have a great deal of freedom in interpreting the numbers for their characters.

Some disadvantages are more specific than these character abilities, and they provide background for players who like to role-play. A player whose character passionately fears spiders, or becomes tongue-tied in social situations, has specific suggestions about role-playing.

At the time of character creation, a player can select one or two disadvantages. The choice is purely optional—no character *must* have a disadvantage. Unlike traits and proficiencies, disadvantages do not cost character points—instead, each disadvantage *awards* a certain number of points that the player can use to provide a character with other traits, proficiencies, and racial or class abilities, or can save for later use.

Some disadvantages can be chosen at one of two levels—the disadvantage of allergies, for example, can be taken at a moderate or a severe rating. Characters who choose the severe disadvantage will have lower chances of resisting the effects of the disadvantage during play.

A character can never gain more than 15 character points by acquiring disadvantages.

Certain disadvantages will contradict traits, and these cannot be selected—a character with keen eyesight cannot choose the colorblind disadvantage, for example. These conflicts should be judged with common sense.

### Using Proficiencies in Play

The normal procedure is used for making proficiency checks—i.e., a player rolls a d20 against his character's chance of success. However, the procedure for determining a character's rating for success has been modified.

When characters initially acquire proficiencies, their chance for success when they

attempt proficiency checks is somewhat limited. Table 45 lists, for each nonweapon proficiency, the starting rating for success when a character uses it in play. Note that there are still many opportunities for automatic success, so the check is only required on the most challenging tasks.

This base chance of success can be modified by a high or low score in a relevant ability. Each proficiency on Table 45 lists one or two abilities (including subabilities) that are beneficial in the use of that skill. In cases where two abilities are listed, the player can choose which ability modifies the proficiency. The modifiers are listed on Table 44.

For example, Blutor the fighter buys an animal handling proficiency, which has as its initial chance of success a 5. Blutor has a Wisdom/Willpower of 16, however, so this +3 increases his initial animal handling chance to a roll of 8 or less on a d20.

As usual, a character must have the proper tools and other materials, and a suitable amount of time to get the job done. No successful proficiency check is going to allow a weaver to render a beautiful blanket out of raw wool in a single afternoon. The proficiency descriptions give details on the use of each skill, as guidelines for the DM.

**Table 44:**
**Ability Modifiers to Proficiency Scores**

| Ability/ Subability | Proficiency Modifier |
|---|---|
| 3 | –5 |
| 4 | –4 |
| 5 | –3 |
| 6 | –2 |
| 7 | –1 |
| 8–13 | 0 |
| 14 | +1 |
| 15 | +2 |
| 16 | +3 |
| 17 | +4 |
| 18+ | +5 |

## Table 45: Nonweapon Proficiency Groups

**GENERAL**

| Proficiency | Cost* | Initial Rating | Ability |
|---|---|---|---|
| Agriculture | 3 | 7 | Intelligence/Knowledge |
| Animal Handling | 3 | 7 | Wisdom/Willpower |
| Animal Training | 4 | 5 | Wisdom/Willpower, Charisma/Leadership |
| Blacksmithing | 4 | 6 | Strength/Muscle, Intelligence/Knowledge |
| Boat Piloting | 2 | 6 | Strength/Muscle, Intelligence/Reason |
| Brewing | 3 | 8 | Intelligence/Knowledge |

## Effects of Traits

Traits often benefit characters' use of proficiencies, improving their chances for success. These improvements are explained in the trait descriptions, together with which proficiencies they modify.

The role that traits play on proficiencies should be factored into the number needed for success and should be listed on the character sheet.

**Table 46: Traits**

| Trait | Cost (CPs) |
|---|---|
| Allure | 4 |
| Alertness | 6 |
| Ambidexterity | 4 |
| Animal Empathy | 4 |
| Artistic Ability | 4 |
| Climate Sense | 4 |
| Double-jointed | 4 |
| Empathy | 4 |
| Fast Healer | 6 |
| Glibness | 4 |
| Impersonation | 5 |
| Inherent Immunity/Poison | 6 |
| Inherent Immunity/Disease | 5 |
| Inherent Immunity/Cold | 4 |
| Inherent Immunity/Heat | 5 |
| Internal Compass | 5 |
| Keen eyesight | 5 |
| Keen Hearing | 5 |
| Keen Smell | 6 |
| Keen Taste | 4 |
| Keen Touch | 4 |
| Light Sleeper | 5 |
| Lucky | 6 |
| Music/Singing | 5 |
| Music/Instrument | 4 |
| Obscure Knowledge | 4 |
| Precise Memory | 4 |

## Automatic Success

Nearly all proficiencies include skills that will not require rolls for success. Many of these are functions of crafts and trades, and may have little use in the game beyond their

economic functions. Given a shop, raw materials, and plenty of time, a potter can make a pot, a leather worker can make a tent, and a cobbler can make a pair of shoes or boots without rolling to see if the attempt is successful.

### Modifying Proficiency Rolls

As before, DMs are free to modify proficiency rolls for factors that will influence success—for good or for ill. If a task is unusually difficult, apply a penalty to the proficiency rating. Standard negative modifiers are –2 for a somewhat difficult task, –4 for a moderately difficult task, and –8 for something where success is a real long shot.

As a general rule, a proficiency should not be modified to greater than 19, or less than 2; a roll of 20 is always a failure on a proficiency check. Conversely, a roll of 1 always should be successful. Remember, if automatic success is assured, no roll is necessary.

Modifiers should be considered for some of the following factors:

**Time:** If the task must be performed in a hurry, the difficulty is naturally increased. Some proficiency checks that might be automatic successes under most circumstances could require checks simply because they must be performed under a deadline. A cobbler always can make a pair of shoes, but if they need to be done in two hours, a proficiency check might be called for.

**Materials:** Tasks performed in the field might require jury-rigging of equipment or materials, and these can influence success—or require a check where the task might otherwise by automatic. Our cobbler will need to make a check if he's going to repair a mangled boot in the depths of a wilderness forest; the same repair in his shop would be an automatic success.

**Danger:** Doing a task under a shower of arrows, or under the threat of imminent attack, adds a strong element of tension to the proficient character. A task might again be rendered more difficult than usual, or require a check instead of automatic success, when there is a serious hazard nearby.

**Uniqueness:** If an unskilled character tries to perform a new task, a check might be required. If our cobbler is required to make a pair of silken slippers studded with rubies, for example, he might have to experiment a bit before he gets it right. A unique problem can also modify a task that would already require a check. An animal handler used to breaking and training horses might suffer a –4 penalty if asked to do the same with a pegasus.

**Intricacy:** A task that is more involved than any the character has attempted before may require a check, perhaps with a penalty assigned. A character with the agriculture proficiency is normally able to plant and harvest crops—no proficiency check is necessary. However, if the character is placed in charge of a farming project where land must be cleared, irrigation arranged, pests controlled, and precise timing used on the harvest, an agriculture proficiency check probably will be required.

## Proficiencies and Level Advancement

Each time a character advances a level, he gains character points (the DM decides how many, see Chapter One) to use on weapon and nonweapon proficiencies or to hold for use during the game. A character can add only one new weapon or nonweapon proficiency per level advancement unless that character has a special class ability that allows otherwise. For example, Blutor has just reach 7th level and currently has 5

character points. He can spend these point on one weapon proficiency or one nonweapon proficiency, but not both. If he has points left after buying a proficiency, he can spend them to improve his other proficiencies or same them to use during the game.

### Use of Proficiencies by Nonproficient Characters

In general, characters will not be able to perform a task unless they have some level of proficiency in it. However, the DM can allow nonproficient adventurers to attempt proficiency tasks, under a few circumstances. In general, the tasks performed must be very simple, and the character will not be able to perform them very well. Tasks that nonproficient characters attempt would generally fall into the automatic success category if they were attempted by a proficient character. A nonproficient character must roll a successful check using the proficiency's initial success rating, modified by the character's relevant ability. If a trait is relevant to the use of the proficiency (see proficiency descriptions), a nonproficient character with that trait can claim this modifier when attempting a check.

Several considerations might allow these types of checks:

**Life or Death:** A non swimmer who falls in the water might be allowed to make a swimming proficiency check. Success means the character is able to stay afloat, perhaps moving slowly toward shore. Note that this would be an automatic success for any character with the swimming proficiency. If modifiers exist that would require a proficient character to check (the PC is encumbered, or the water is very rough) then the nonproficient character will certainly fail.

**All the Time in the World:** A character who does not have the agriculture proficiency, but is willing to spend two weeks planting a small plot of land, should be allowed to make a proficiency check. Success means some kind of useful crop.

**Excellent Instruction:** If the blacksmith's arm is broken, but he can sit next to the forge and describe to the novice every step of the procedure, the nonproficient character should be allowed a proficiency check to create a simple object such as a horseshoe or a nail. Anything that would require the blacksmith to make a proficiency check, however, would be beyond the skills of the nonproficient character.

### Using Disadvantages

Disadvantages work well to enhance the role-playing of a character, and as such they should be the player's responsibility to remember and employ. A character with an irritating personality, for example, can be role-played in such a way that the DM never has to do anything to enforce the disadvantage. Good role-players will create their own trouble, so to speak.

However, some aspects of disadvantages require DM input. Somewhere amid copious volumes of notes, the DM should keep a list of each character's disadvantages, making sure than none of them are overlooked. For example, if a character has a phobia of spiders, the DM can insure there will be a chance every once in awhile to encounter some big, hairy-legged arachnids.

If a disadvantage falls to the player's responsibility, and that player tends to ignore it, the DM should create a few situations where the disadvantage is impossible to overlook. For example, if the player does not role-play the character's irritating personality disadvantage, NPCs might suddenly become enraged at the character for imagined slights—insults that the NPCs claim result from the PC's irritating personality.

## Moderate/Severe Disadvantages

A character with a moderate disadvantage checks against ability or sub-ability scores, while a character with a severe disadvantage rolls at half of the ability scores, rounded up.

For example, a character with a Wisdom/Willpower score of 17 would need to roll a 9 or less to resist the effects of a severe disadvantage, whereas a roll of 17 or lower would resist the effects of a moderate disadvantage.

**Table 47: Disadvantages**

| | Character Point Bonus | |
|---|---|---|
| **Disadvantage** | **Moderate** | **Severe** |
| Allergies | 3 | 8 |
| Bad Tempered | 6 | — |
| Bruise Easily | 8 | — |
| Clumsy | 4 | 8 |
| Colorblind | 3 | — |
| Compulsive Honesty | 8 | — |
| Cowardice | 7 | 15 |
| Deep Sleeper | 7 | — |
| Fanaticism | 8 | — |
| Greed | 7 | — |
| Irritating Personality | 6 | — |
| Lazy | 7 | — |
| Powerful Enemy | 10 | — |
| Phobia: Crowds | 4 | 10 |
| Phobia: Darkness | 5 | 11 |
| Phobia: Enclosed Spaces | 5 | 11 |
| Phobia: Heights | 5 | 10 |
| Phobia: Magic | 8 | 14 |
| Phobia: Monster (specific) | 4 | 9 |
| Phobia: Snakes | 5 | 10 |
| Phobia: Spiders | 5 | 10 |
| Phobia: Undead | 8 | 14 |
| Phobia: Water | 6 | 12 |
| Tongue-tied | 6 | — |
| Unlucky | 8 | — |

## Removing Disadvantages

If the DM is agreeable, a player can remove a character's disadvantage by spending character points. Disadvantages rated as moderate can be eliminated, while severe disadvantages can be reduced to moderate at one level advancement for a character, and then removed at a subsequent advancement.

The cost to remove a disadvantage is 1 character point more than the points gained when the disadvantage is first acquired. For example, the colorblind disadvantage gains 3 character points. Removing this disadvantage costs 4 points.

A severe disadvantage is reduced to a moderate disadvantage for 1 more character

point than the difference between the severe and moderate costs. For example, severe allergies award 8 character points, moderate allergies 3—a difference of 5 points. Thus, the cost to reduce severe allergies to moderate is 6 character points.

## Proficiency Descriptions

The proficiencies are arranged alphabetically. Each description suggests tasks of varying difficulty that characters can accomplish with that skill, as well as an overview of materials and time required.

Tasks that are automatically successful are suggested, but these are not complete lists. They are intended to give players and DMs an accurate idea about a skill's area of expertise.

The AD&D *Player's Handbook* includes descriptions of many of these proficiencies. The *Skills and Powers* entries are designed to complement the *Player's Handbook*, adding details and rules that have been modified by the character point system.

**Agriculture:** This skill includes automatic success at planting, harvesting, storing crops, using an existing irrigation system, tending animals, and butchering. Tasks that require proficiency checks include designing or making an irrigation system, and weed and pest control. The animal empathy and climate sense traits each provide +2 bonuses to relevant agriculture proficiency checks.

**Ancient History:** Characters with this proficiency are familiar with the legends, rulers, and writings of a specific historical period in the campaign world. They will recognize, without a proficiency check, items, scrolls, artwork, etc. of that period. They will know the main historical figures, such as kings and powerful villains, and the major circumstances of those individuals' lives and deaths. With a successful proficiency check they will recall lesser figures, such as lords, knights, and heroes, and recall legendary tales, important sigils, and perhaps be able to decipher a small bit of text, symbols, or hieroglyphics. The obscure knowledge trait provides a +3 to this character's proficiency rating.

**Ancient Languages:** Adventurers with this proficiency are familiar with at least one ancient language—i.e. they have the reading/writing proficiency with the chosen languages. If confronted with an example of a historically-related language, they can decipher about a paragraph of that tongue with a successful proficiency check. For each character point spent on this proficiency (after initially acquiring it) add one additional ancient language to the list of languages a character knows fluently. The precise memory trait provides a +2 to this proficiency rating.

**Animal Handling:** This proficiency allows characters to automatically steer carts, plow horses, etc. With a successful proficiency check, they can soothe domesticated animals and beasts of burden which become agitated or frightened. The characters receive a +1 bonus to proficiency checks made with any of the animal-riding proficiencies, and they receive a +2 bonus to their proficiency rating if they have the animal empathy trait.

**Animal Lore:** Adventurers with animal lore have a store of knowledge about animal

behavior, and without any proficiency check will know the basic feeding and social habits (i.e. herding, nesting, etc.) of animals with which they have past experience.

With a proficiency check, a character can determine whether an observed animal is intending to attack or to flee, or predict that animals will come along a trail at a certain time of day. This character gets a +2 bonus to checks made using the set snares proficiency.

The character can imitate the calls of wild animals (except for very large creatures). A successful check means that the imitation is virtually perfect, and even fools animals of the same type. A failed check might fool other characters, but will not deceive the animals.

**Animal Training:** When players choose this proficiency, they must declare what type of creature their characters will learn to train. Suggestions include dogs, falcons, parrots, horses, pigeons, elephants, and ferrets. More exotic animals can be chosen at the DM's option. Monsters with animal intelligence are another possibility, though they can be difficult to control—in effect, requiring more frequent proficiency checks.

Training of an animal requires a rather lengthy period of time—a matter of weeks, at least, for even the most basic tasks. A character who spends this amount of time will succeed at the training (no check necessary). Such tasks include dogs being trained to stay, come when summoned, and guard a specific location; pigeons returning to the roost; falcons hunting and killing game; and horses bearing saddles and obeying simple riding commands.

More elaborate tasks also take time to teach, and these require proficiency checks: dogs patrolling a circuit, or retrieving specific objects; and horses performing the maneuvers of a knightly charger are examples.

A character with the animal empathy trait gains a +1 bonus to this proficiency rating.

**Appraising:** This skill allows the character to make generally accurate (+ or –10%) assessments of common objects, including items made of precious metals and gemstones. The character can also assess, to + or –25%, the value of objects of art, tapestries, furniture, weapons, etc.—provided a variety of these items are present in the game world. These assessments require no proficiency checks, and the DM can roll (d20 or d100) to determine the accuracy of the appraisal.

A character who passes a proficiency check will be able to identify a forgery of a valuable object, to make a very accurate assessment of the value of a common item (within 5%), or to make a general assessment of the worth of an uncommon item, including artifacts. The DM may wish to roll this check, and on a roll of 20 the character makes a wildly inaccurate assessment.

**Armorer:** A character with this proficiency can make the types of armor typically available in the campaign world. The armorer requires the proper raw materials (plate metal, tough leather, etc.) and enough time to do the job properly. Time ranges from about two weeks for a shield to 20 weeks for a suit of plate mail armor. No proficiency check is required generally, though if the armorer tries to rush the job or work with less than adequate materials a proficiency check should be rolled to determine if the character is successful.

The armorer can also make field repairs to armor that has been damaged through use. These repairs always require proficiency checks, and if the check fails the armor or shield is lost.

**Astrology:** This character has a general understanding of the movement of celestial bodies, and the influence of that movement upon the beings of the campaign world. The astrologer can identify numerous constellations, and knows many of the legends behind their naming. The character can make limited predictions for the future, always in vague terms—whether these are accurate is up to the DM. A character with this proficiency gains +2 on all checks made using the navigation proficiency, providing the stars can be seen. A character with the trait of empathy gains a +1 bonus to the astrology proficiency rating.

**Astronomy:** A character proficient in this skill has a detailed knowledge of the relative movement of stars, moons, and planets. The character can predict with complete accuracy the arrival of eclipses, comets, and other cosmic phenomena (evening and morning stars, full moons, etc.) The astronomer can identify numerous stars and constellations, and gains a +3 bonus to all checks made using the navigation proficiency, providing that the stars can be seen.

**Blacksmithing:** A character with the blacksmithing proficiency can handle a forge, bellows, hammer and tongs, to create tools and other objects out of iron. The character cannot make weapons or armor, but can make—without a proficiency check—simple items such as horseshoes, nails, brackets and buckles. By making a successful proficiency check, the character can create intricate objects such as wire cages and locks. A blacksmith can make an iron hoop for a wheel that has been made by a carpenter; this combination of proficiencies is required for a strong wheel.

**Blind-fighting:** This allows characters to ignore many of the problems inherent in fighting without being able to see. In total darkness, the character suffers –2 (not –4) to attack rolls, and suffers no penalties to AC versus melee attacks. In starlight or moonlight, the character suffers only a –1 penalty to attack rolls.

When moving in darkness, the character is allowed to make a proficiency check at the beginning of a round; success means no movement penalties are assessed because of the darkness, while failure means the normal penalty applies.

When in combat with an invisible creature, the character with blind-fighting proficiency suffers only a –2 to attack rolls, but gains no benefit toward discovering the creature.

**Boat Piloting:** This proficiency is useful for negotiating challenging waters with a rowboat, canoe, or small dory. When shooting a rapids, trying to stay afloat in a storm, or trying to row upstream against a strong current, the character will succeed without a proficiency check—unless the water conditions are very extreme. In this case, the DM will require an appropriately modified roll; a successful roll means that the character negotiates the challenge and no further checks are necessary (until the next stretch of rapids, etc.). Failure does not necessarily mean that the boat sinks, but it gets swept away

by the current, or turned about, or moderately swamped—with everything and everyone inside getting wet. If the rough water continues, the character must make additional proficiency checks (every 1–6 rounds). The character's proficiency rating suffers a –1 modifier for each failed check, indicating the difficulty of steering a boat that is slowly filling with water.

The character also knows the basics of sailing, and can effectively maneuver a single-masted sailboat. As above, challenges will require proficiency checks, with failed checks leading to increasingly dire straits.

**Bowyer/Fletcher:** This character can make bows and arrows (but not arrowheads) of the types available in the campaign world. Given appropriate materials, the character can successfully make a bow or 2–12 arrows in a day. (Note that finding the right branch for the bow, or the proper shafts and feathers for the arrows might take several days of searching!)

Weaponsmiths are required to make good steel arrowheads. If none are available, the character can fire harden the wooden tips of his arrows, but these weapons suffer a –1 penalty on all damage rolls, and any arrow that misses its target is 50% likely to be broken.

**Brewing:** This category includes the brewing of malt beverages, the making of wine, and the distilling of stronger drink. A character can perform all the basic functions of the brewer's art without requiring a proficiency check. If the brewer chooses to make the check, failure means that a batch has been wasted, but success means that a particularly fine vintage has been created.

**Carpentry:** This character knows the basics of working with wood and can create—with no check required—small structures, fences, platforms, cabinets, carts and wagons. The carpenter can make wooden wheels, but a blacksmith must form the iron rim or the wheel will have a very short life expectancy.

A carpenter might build a short footbridge, a wooden clock, or a dumbwaiter system—these tasks will require a proficiency check. Larger projects such as major bridges, boats, or catapults, require the aid of a character with the engineering proficiency.

**Charioteering:** A character with this skill can move a chariot at its normal speed, and effectively drive it over a smooth, wide road. The proficient character requires no check to drive or steer the chariot, including traveling across relatively flat, open countryside, charging into battle, and performing the turns, stops, and starts that might be required on the battlefield.

By making a proficiency check, the character can guide the chariot through obstacles such as deep fords, steeply-climbing terrain, ditches, and rough or rocky ground. Also, with a successful check, the character can add 1/3 to a chariot's movement rate for the duration of a charge or a march. However, failure of this check means that the chariot moves at its normal rate, but that the horses fatigue in half the normal time. Characters with the animal empathy trait gain a +1 bonus to their ratings with this proficiency.

Note that certain obstacles are simply impassable to chariots, including walls, water

too deep (or too muddy on the bottom) to ford, thick forests, and mountainous terrain.

**Cobbling:** A character with this skill can makes shoes, boots, and sandals. No checks are normally required, but if the character attempts a field repair of damaged footwear, or tries to fashion shoes from wood or leather that has been scrounged up, a successful check is needed.

**Cooking:** This character knows the basics of food preparation, and he can generally cook, bake, fry, and so forth without a proficiency check. Checks are required if the character attempts to prepare truly gourmet meals, or tries to make a palatable dinner out of unpalatable ingredients—grubs, roots, and bark, for example.

**Cryptography:** The character with this proficiency has some training and skill in deciphering hidden messages and codes. In its basic form, the character is allowed to make a proficiency check when confronted with a coded message. If successful, the DM can reveal a general overview of the secret missive.

This proficiency is more fun when used as an aid to role-playing. Ideally, the use of the cryptography proficiency requires a great deal of involvement from the player—and a certain amount of puzzle design by the DM—instead of simply passing a check and demanding that a coded message be explained by the DM.

Rather, a character with the cryptography proficiency should have the chance of recognizing a code concealed within a written or spoken message, or perhaps hidden by some other medium—an intricately woven tapestry or sculpted piece of heraldry, for example. The DM will usually roll this check secretly, announcing that the character observes something unusual.

If the character notices the encoded sigil, the DM should describe it in considerable detail—word for word, if it is a written message. The character can make an additional proficiency check during the course of the decoding; if successful, the DM can provide a significant clue—a name, place, or date that is mentioned, for example. The bulk of the decoding should still be performed by the player.

**Dancing:** The character knows and can perform the moves of many types of dances, including some that involve precise and detailed steps. All dances common to the character's society will be familiar. Rare, archaic, or unusual dances will be known with a proficiency check. Also, characters who have had a chance to observe an unknown dance can perform it (–2 modifier, +1 for each time after the first that it is seen performed).

Truly spectacular dances—the kind that win character's campaign-wide acclaim—combine elements of dance proficiency with skills of tumbling, tightrope walking, and jumping.

**Deep Diving:** A character with this proficiency can add 10 feet per round to his speed of descent when diving into the water, or from the surface. Thus, a character with the deep diving proficiency can descend 30 feet per round, plus modifiers for encumbrance, running start, and height. Likewise, a character with the deep diving proficiency can surface at a rate of 30 feet (not 20 feet) per round.

This proficiency provides characters with the ability to hold their breath for 2/3 their Constitution scores in rounds, not the 1/3 allowed to most characters. Effects of exceeding the allotted time are the same, regardless of proficiency ratings.

**Disguise:** Characters trained in this proficiency can conceal their appearance through makeup and costuming. If they seek simply to alter their appearance without concealing size, sex, or race—for example, to go out in a city without anyone discovering what they look like—they can succeed without a proficiency check.

If the task is more difficult—the character in disguise meets and talks with an acquaintance, for example—a successful proficiency check is required. Characters who try to alter the appearance of their sex, race, or size, must make successful proficiency checks with a –2 penalty for each category.

Characters who attempt to disguise themselves as specific persons must make proficiency checks when they encounter and speak with someone who knows the other individuals. All of these checks suffer an inherent –2 penalty.

Note that the talent of impersonation (see traits) can improve a character's success with the disguise proficiency.

**Endurance:** A character with this proficiency can perform continual strenuous physical activity for twice as long as a normal character before becoming exhausted. If the character is ever required to make a Strength/Stamina check or a Constitution/Fitness check, the character can add his endurance score to his success number. If the fatigue rules from the *Player's Option: Combat & Tactics* book are in play, the endurance proficiency is treated differently (see *Combat & Tactics*, Chapter One).

**Engineering:** This proficiency is required for the design and construction of objects and installations of all sizes. Note that carpentry, stonemasonry, blacksmithing, or other proficiencies also might be necessary for the actual building. Characters can design and supervise the building of houses, boats, small bridges, palisades, and towers—of up to about 30 feet high without proficiency checks.

Characters with this skill can try to design large bridges, fortresses, ships, war machines, locks and dams, and other more complicated projects. Plans for these types of objects generally require at least a week—more if an exceptionally large project is being attempted. Complicated tasks require successful proficiency checks before a workable design can be made. If a check fails on a roll of less than 20, however, the engineer will be aware of the failure and can seek to create a new design—go back to the drawing board, so to speak. On a roll of 20, the design is flawed but the danger will not be discovered until after the object is built.

**Etiquette:** Characters with this skill are familiar with the typical manners of formal interaction—at least as they relate to the culture in the campaign world. They know what fanfares are required to greet royal visitors, how to seat the lords and ladies at a table, how to organize the reception line, and how everyone is to be addressed. None of these tasks require a proficiency check.

When dealing with a foreign or completely unknown culture, the characters must pass proficiency checks to correctly gauge the required etiquette. The check should be

modified—+2 if the foreigners are the same race as the character, +1 or more if the character has had some time to observe the foreigners.

Characters with the empathy trait gain a +2 bonus to their rating with this proficiency.

**Fire-building:** A character with this proficiency can build a fire in 1d20 minutes, as long as there is dry wood and some small bits of tinder. Add another d20 minutes for each of these factors: the wood (or tinder) is wet, it's raining or foggy, or the winds are strong. A proficiency check is required if conditions are bad and the character is forced to work without shelter.

**Fishing:** A character with this proficiency knows how to catch fish with hook and line, net, and spear. If fish are present in a body of water, a successful proficiency check means the character has caught something. Typically, with a successful check, the fisherman he will catch 1d6 fish in an hour. This number can be doubled if many fish are present. It is reduced to one fish per hour if the character is seeking large quarry—such as sturgeon, muskellunge, giant carp, or salt-water fish.

**Forgery:** This proficiency indicates a skill at creating false documents, mimicking the handwriting of others, and detecting forgeries. No check is required if the character is simply trying to duplicate a style of writing—the issuing of an anonymous military decree, for example. Characters trying to duplicate the signatures of specific individuals must see those signatures; the DM rolls the proficiency checks secretly to see if the forgeries are successful. If a character writes a longer message in a specific hand, the DM rolls the check with a –2 modifier. The DM should also roll the check if a character seeks to determine if another document is a forgery. On a 20, the character makes the wrong assumption, whereas a failure with less than 20 means that the character is not sure of the truth or falsehood of the sample.

**Gaming:** A character with this proficiency is familiar with all manner of gambling games. A successful proficiency check means the character will win a given game being played with NPCs—although cumulative negative modifiers should be assigned for each NPC with the gaming proficiency. Subtract 1 for each proficient NPC, with –2 for those with higher than basic gaming expertise.

The character might try to cheat, which confers a +3 to the gaming proficiency score and requires a check. If the proficiency check rolled is a 20, the character gets caught cheating, even if no NPCs have the gaming proficiency. Add one to this spread for each NPC with gaming proficiency—i.e., if two others have this skill, the cheater will be caught on a roll of 18–20.

**Gem-cutting:** A character with this proficiency each day can work 1d10 uncut stones into finished gems. The worker needs good light and an assortment of chisels, hammers, and hard cutting blades.

The gem cutter can do decent work without a proficiency check; the stones cut will be valued in the typical range for that type of gem. However, if the cutter seeks to do a unique and very high-quality job, a proficiency check is called for. Failure means the stone is destroyed, but success results in a gem of double the usual value.

**Healing:** Characters with this proficiency can perform first aid on fresh wounds and can supervise the recovery of themselves and others. If the characters tend a wound on the round immediately after it is inflicted, a successful proficiency check means that 1d3 points of damage have been restored (to a maximum of the damage inflicted the previous round). If they tend a wound within one hour of its infliction, they can heal 1 point with a successful check. No character can benefit from this proficiency more than once a day.

This proficiency can also help with long-term healing and resisting poison and disease; these procedures are detailed in the *Player's Handbook*.

**Heraldry:** These characters are familiar with the heraldic symbols of their own lands, and those of neighboring lands. The characters can make proficiency checks when confronted with unusual or rare symbols; success means that they can identify the symbols. A character with the obscure knowledge trait gains a +2 bonus to the use of this proficiency.

**Herbalism:** This skill indicates that a character is familiar with the uses of natural plant products for good and ill. If a character spends a day searching the woods, and makes a successful proficiency check, enough herbs, fungi, roots, leaves, pollen, and pulp has been gleaned for 2d6 doses.

The most common use of these herbs is as an aid to healing; one dose of herbs can be used in conjunction with the healing proficiency (by the herbalist or another healer). This dose adds +1 point to the wounds cured by a successful healing proficiency check. Even if the healing check fails, the herbs still restore the 1 hit point. With no healing proficiency, the herbs can still be used, but the herbalist needs to roll a successful check to restore the 1 hit point.

The herbs also can be used to create a poison, either ingested or injected. A single use of poison requires two doses of herbs. The lethality or other effects of the poison (paralysis, unconsciousness, delusions, etc.) must be worked out with the DM.

**Hunting:** The hunting proficiency allows a character to find game and get reasonably close to it. The actual kill is handled using rolls to hit and for damage. Hunting is a proficiency that always requires a successful proficiency check when it is used.

If the check is successful, the hunter will reach a position within 1d100 + 100 yards of the quarry. Generally it will take about 2–12 daylight hours to reach this position, though an abundance or scarcity of game can decrease or increase this time at the DM's option. Night hunting might be possible for characters with infravision.

The hunter also possesses a basic skill at removing skin from an animal, and butchering the carcass into usable meat. These tasks require no checks.

**Juggling:** A character with this proficiency can juggle up to three small objects without a proficiency check. Additional objects can be added, but a check is required; use a –1 modifier for each item beyond the fourth. Checks are also required for spectacular feats, such as juggling lighted torches or whirling scimitars, with failure meaning that 1d4 items are dropped. The potential for damage or disaster is left to the DM.

This skill is primarily useful for entertainment or diversions, though characters with

the juggling proficiency have a chance to catch small objects—such as darts or daggers—that are thrown at them. They must be facing the source of the attack to make such an attempt, and they must make a proficiency check with a –2 modifier. Failure means they are automatically hit by the thrown objects.

**Jumping:** This skill means that a character has unusual abilities to jump across distances, leap incredible heights, and vault with a pole.

A human or elven character with the jumping proficiency can perform a running broad jump of 20 feet without a proficiency check; a jump of more than 20 feet requires a check, with a –1 modifier for each foot above 20. The jumper can do a standing broad jump of 8 feet without a check; longer jumps require proficiency checks with the same penalties.

The character can high jump 4 feet without a check, higher obstacles require a check, with a –1 modifier for every 6" of additional height. If jumping from a standing start, the beginning height is 3 feet, not 4 feet.

Dwarves, gnomes, and halflings are more limited in their jumping ability. For these characters, the basic distances in each category are reduced to 75% of the listed amount—e.g. 15 feet instead of 20 for the broad jump.

A vaulting pole must be at least as tall as the character using it, but no more than twice as tall. The character can vault over obstacles up to the height of the pole. If the obstacles are within 2 feet of the pole's length, however, the character must make a proficiency check. The vaulter can also jump across a space no more than 11_2 the width of the pole's length. If the gap is greater than the length of the pole, a proficiency check is required.

Leather working: The character with this skill can skin animals, tan leather, and work that leather into clothing, armor, backpacks and saddlebags, harnesses, etc. These tasks are automatic successes, but the leather worker will have to make a proficiency check when attempting unusual jobs—making a leather patch for a boat hull, for example, or making a usable tent of scraps of hide.

**Local History:** The character knows all about the background of a specific area in the campaign world and can use this knowledge to entertain and enlighten others, gaining a +2 bonus to the reaction rolls of NPCs from that area. If a specific question comes up—the identity of a knight's banner seen in the distance, for example—the character can make a proficiency check, with success indicating the correct tidbit of information. A character with the obscure knowledge trait gains a +3 bonus to the proficiency rating.

**Mining:** A character with the mining proficiency can select the site of a mine and supervise its excavation and operation. Mining proficiency checks are best made for a player by the DM, since the character will not learn for some time whether his suppositions about a potential mine were accurate.

The *Player's Handbook* contains a more detailed description of how to role-play a miner's proficiency use.

**Modern Languages:** The character has learned one or more languages, other than his

native tongue, that are contemporary to the campaign world. For each additional character point spent on modern Languages, the character can speak one additional language.

**Mountaineering:** A character with this proficiency is skilled in the use of hammer and pitons (spikes) to secure a route up a mountainside. He also knows how to use the rope and brackets that can link a party of climbers. A proficient character can make a route across a steep section of rocks, and by the use of ropes allow other, non-proficient characters to follow.

No proficiency check is required unless the DM declares that a route is very perilous—steeply pitched, with few hand- and foot-holds, and those that exist are tiny or loose. If a character connected to the mountaineer by rope falls, the mountaineering character can make a proficiency check; success means that the other's fall has been arrested. Failure means that the other character continues to fall, and failure by a roll of 20 means that the mountaineer is pulled down, too.

Characters with the mountaineering proficiency can add their proficiency rating to their percentage chance of climbing any surface; this includes thieves using the climb walls special ability.

**Musical Instrument:** The character can play a specific type of musical instrument, adding an extra instrument for every character point expended on this proficiency after its initial purchase. The skill enables the character to play the instrument very well, though a proficiency check might be required when attempting a very difficult piece.

A character with the music/instrumental trait knows how to play two instruments immediately (when this proficiency is selected). For each character point spent, two (not one) additional instruments can be learned.

**Navigation:** Characters with the navigation proficiency know how to fix their locations on the seas and oceans of the campaign world by observing celestial clues. Characters with a sextant (not necessarily available in all campaigns) and a compass, and who can see the stars or observe a sunrise or sunset, will know where they are—no proficiency check is necessary. Such a skilled character can navigate across entire oceans without becoming lost, though bad weather can obscure the celestial clues and blow a vessel far off course.

If a character does not have the proper tools, or is forced to work with only a general idea of direction (fog obscures the sunset, for example), the DM should secretly make the proficiency check. Success means the character is reasonably accurate in plotting the day's course. Failure means an off-course error that varies by the extent of the failure—a roll of 20 has the character going practically the exact opposite direction!

**Orienteering:** This is the ability to keep one's bearings on roadless, trackless land. Proficient characters will not get lost as long as they can either see the sky or have the use of a compass. This means that they can maintain track of a given direction, keeping themselves and their companions traveling in a straight line.

Characters who possess a map and can track their direction of travel can arrive at specific points—towns, ferry crossings, bridges, monuments, wells, springs, etc.—

without proficiency checks.

If the map is slightly erroneous, or lacking in crucial details, the characters will have to make successful proficiency checks to accurately arrive at a specific point. This check can be modified for increased difficulty based on poor weather or major problems with the map.

**Painting:** A character with this proficiency is skilled at rendering images with oil, brush, and canvas. The artist can create reasonable portrayals of people, landscapes, and monsters, and he possesses a knowledge of perspective, shading, and composition. If this proficiency is coupled with the artistic talent trait, the character receives +2 to his base painting score and can create stunningly realistic works, capable of stirring profound reactions in observers—and perhaps worth gold to wealthy NPCs.

**Pottery:** The character can create ceramic vessels—jars, bottles, plates, bowls, etc.—of whatever type are in use in the campaign world. A serviceable piece of crockery can be made without a proficiency check. If the character attempts to make a fine-quality piece, it will take about three days for an average-sized object—and a successful proficiency check. Failure means the object is useless; success indicates the degree of excellence, with a roll of 1 indicating that the character has created a work of unique value.

A character with the artistic talent trait gains a +2 to the pottery proficiency rating. Masterpieces of pottery are sculpted by these talented characters.

**Reading/Writing:** The character is literate in a language that is contemporary to the campaign world, provided that the character can speak it (see the modern languages proficiency), For each additional character point spent on reading/writing, the character is literate in one additional language.

**Reading Lips:** Characters possessing this proficiency have a chance to understand the speech of those they can see but not hear. The speaker must be clearly visible, less than 30 feet away, and well-illuminated—characters cannot lip-read with infravision. If the speaker is addressing the lip reader and intends to be understood, no proficiency check is necessary. If lip readers attempt to "overhear" speech not directed to them, proficiency checks are required. Success means the gist of the words come through. The trait of empathy adds +2 to checks using this skill.

**Religion:** A character with this proficiency is familiar with the basic tenets of the major and minor faiths practiced in the campaign world. Observing an act of religious significance—a blessing of warriors before battle, for example—means the character understands the importance of the ritual without a proficiency check. Checks are required to understand the activities of unique or foreign religions. Additional character points spent on this proficiency can expand a character's knowledge to include other religions, or can increase the level of detailed knowledge about the faiths already studied.

**Riding, Airborne and Riding, Land:** The riding proficiencies are well-detailed in the *Player's Handbook*. Characters using the Skills and Powers rules can add +2 to their

proficiency score in either category of riding if they possess the trait of animal empathy, and +1 if they have the additional proficiency in animal training. These modifiers are cumulative.

**Rope Use:** A character with this proficiency can tie knots of all kinds without a proficiency check. The character adds +2 to all mountaineering proficiency checks that involve rope and also gains +10% to climbing chances—if the climb involves a rope.

If the character is tied up with ropes, or seeks to untie a permanent knot, a proficiency check is required. Success means that the bonds or knots come undone in 2d6 minutes.

**Running:** Characters can add 1_3 their normal top speed to their movement rates for up to 1 turn. After this, they must spend a turn resting, or 6 turns engaged in normal activity before they can sprint again.

Also, characters can jog steadily, moving at twice their normal movement rates over the course of a day. Eight hours of rest is mandatory after such a stint. Following rest, the characters can make proficiency checks. Success means they can run normally during the upcoming day; failure indicates they cannot use the running ability that day.

**Sculpting:** The character with this proficiency can render realistic objects out of stone and clay. A high level of sculpting proficiency, coupled with the artistic talent trait, means the character can create statues, statuettes, busts, and other objects of rare and valuable beauty.

**Seamanship:** These characters are trained to help operate galleys and sailing ships. They can row, hang rigging, steer a helm, patch canvas, and repair hulls (with tar or pitch). This proficiency does not allow characters to navigate.

The captain of a vessel, who presumably possesses this skill at a high level, must make proficiency checks to avoid certain hazards of the sea. Such a seaman might take the ship into a reef-lined bay with no difficulty if a local pilot is there to act as a guide. But if the captain has to pick a path through coastal breakers, a failed check might mean a bump on the bottom of the hull, or that the ship has run aground. Bad weather and treacherous currents can penalize these proficiency checks, while fair breezes and superb visibility should convey positive modifiers.

**Set Snares:** A character with this skill can place small traps and snares along a game trail—a useful aid to gaining food in a non-civilized setting. Given proper materials—supple branches, bowstring or heavy thread—the character can make two snares in an hour without a proficiency check. The character can check the snares after eight hours, rolling a proficiency check for each. These checks can be modified by +2 if the character has the animal lore proficiency, and an additional +2 for the animal empathy trait. Success means that a small animal, such as a rabbit or partridge, has been snared. The checks can be modified up or down by the DM, to reflect the population of animals in the area.

The character can create a larger snare, such as a pit trap, by making a proficiency check. An 8' deep, 6' square pit requires at least eight hours to make if the ground is soft and a decent shovel is available. Rocky ground, larger pits, and makeshift equipment can

increase this time dramatically. Whether anything falls into the large pit is a matter of the DM's interpretation and generosity.

**Singing:** The character knows and can perform the many types of songs, including some that involve complex or difficult notes. All songs common to the character's society will be familiar. Rare, archaic, or unusual songs will be known with a proficiency check. Also, characters who have had a chance to hear an unknown song can perform it (–2 modifier, +1 for each time after the first that it is heard).

The character can compose his own songs, including choral works, with a successful proficiency check. If the character also has the Music/Singing Talent, the character can add +2 to his base score.

**Spellcraft:** A character with this proficiency gains no actual spell use abilities, but does possess significant knowledge about spellcasting. Observing or overhearing a spell being cast, or a getting a good look at the spell components, lets the character make a proficiency check. Success means the enchantment is recognized. Modify the check by +2 if the character can both see and hear, and add another +2 if the spell components are spotted.

Wizards using this proficiency gain +2 to checks made if the spell being studied is one from their own specialty or school. Characters with this proficiency can also make checks to determine if an item is enchanted.

**Stonemasonry:** A character with this skill knows how to excavate stone from quarries, cut that stone into blocks, make bricks, mix mortar, lay stone or brick, and carve simple designs and symbols into stone. The mason can lay cobblestones or bricks for roads and courtyards, and the work can include small arches and cantilevered platforms. None of these tasks require proficiency checks. The character's tools include hammers, chisels, trowels, block and tackle, plumb lines, shovels, and wedges. If fully equipped, a typical mason can build a wall, 10' long, 5' high and 1' thick, in one day—if the stone is already cut. The character can erect walls, buildings, pillars, stone abutments for bridges, etc.

The character can step up the work by making a proficiency check. Also, if the stonemason doesn't have the benefit of the engineering proficiency, checks must be made for wall sections higher than 10', and for structures involving arches or elaborate corners.

A dwarven character receives a +2 bonus when taking this proficiency.

**Survival:** A character with this proficiency has a basic knowledge of the dangers and challenges in certain wilderness terrain: arctic, woodland, desert, plains, or tropical. Mountains are not usually a separate terrain type—a mountain range may be tropical, wooded, snow-covered, etc.

Survival skill means the character has a good chance of finding food or water in that environment—if there is any to be found. The character can roll a proficiency check once a day for each category. Success means food, water, or shelter is found. Typically it will take 1d6 hours to find water, and 2d6 turns to forage enough food for one person.

A character with this skill also understands the perils inherent in sudden storms and dangerous topical features—avalanches, quicksand, sandstorms, and landslides, for

example. The DM might allow a player to roll a proficiency check when one of these dangers appears on the horizon—success means the character has noticed the menace.

**Swimming:** This useful proficiency allows characters to swim according to the AD&D game rules for water movement (see the *Player's Handbook* for more information). Characters without this proficiency are considered untrained swimmers, and they can do little more than hold their breath and float. Proficient characters can perform most swimming tasks without any checks.

For each character point added to this proficiency after its initial purchase, swimmers can add 1 to their movement rates in water.

**Tailoring:** A character with this proficiency can sew garments out of all types of cloth—wool, cotton, silk, and well-tanned leather being the most common in the typical campaign world. The character can use needle and thread. The amount of time required for a job naturally varies by its complexity, but proficiency checks are only required if the tailor is attempting to make something truly unique and spectacular—a coronation gown for the queen, perhaps.

The tailor can also make field repairs on clothing that has been damaged by the vagaries of adventuring. These repairs typically require proficiency checks, with failure indicating that the patch will hold for only a very short time. A halfling character gains a +1 to this proficiency rating.

**Throwing:** Characters with this proficiency add 10' to each range category of thrown weapons, and increases the damage or the attack roll by +1 each time they throw a weapon. The player can elect to improve either the damage or attack roll, but the choice must be announced before the attack is made.

For each character point spent on this proficiency (after its initial purchase) a character adds another 5' to thrown weapon ranges. For every 4 additional character points spent, another +1 on the damage or attack rolls is gained—this can be used as a +2 on one or the other, or split as a +1 to attack and +1 to damage.

**Tightrope Walking:** The character with this proficiency can balance on ropes, wires, slender beams, and other narrow, perilous surfaces. A typical movement rate is 60 feet a round, though an upward angle will slow this. Ascents and descents of 45 degrees or more are not possible.

The character does not require a proficiency check if the surface is at least 4" wide. Narrower surfaces require checks, with failure indicating a fall. If walking on a flat surface more than an inch wide, the character receives a +3 modifier to the check. A balance pole adds another +2 modifier, though high winds or a moving surface can contribute significant negatives.

If the character makes an attack or suffers damage while balanced on a rope, a proficiency check is required. Failure signals a fall. Subtract the number of points of damage the character suffered from the proficiency rating when this check is made. Attacks made while on the rope suffer –5 penalties on attack rolls. Also, a character walking on a tightrope has limited maneuverability and therefore does not gain an AC bonus for Dexterity.

**Tracking:** The detailed tracking procedure described in the *Player's Handbook* is modified as follows for the *Skills and Powers* rules:

No characters suffer the integral –6 penalty to their ability scores; this difference is reflected in the proficiency rating itself.

Rangers gain a +5 bonus to their tracking rating.

Characters with the animal empathy trait gain +2 to their proficiency score when tracking non-domesticated animals.

Characters with the animal lore proficiency gain +2 to their proficiency rating when tracking animals—either wild or domesticated.

**Tumbling:** Characters with this proficiency can roll, somersault, stand on their hands, flip forward and backward, and otherwise perform feats of acrobatics. They can only perform tumbling feats if unencumbered or lightly encumbered.

Tumbling characters can improve their AC by 4 on a given round if: they avoiding attacks directed against them, win initiative, and elect not to attack that round. A tumbling character can move up to 20 feet, or remain in one place, during the course of this evasion. In unarmed combat a character with tumbling ability improves attack rolls by +2.

The character can attempt to dodge through obstacles or escape through narrow apertures, but successful proficiency checks are required. If the character topples from a height of 60 feet or less, a successful proficiency check results in suffering only half damage from the fall.

**Ventriloquism:** Characters using this skill can make others believe that sounds and voices are coming from somewhere else. Such a character must pass a proficiency check to deceive an audience. This roll might be modified by some of these factors: the intelligence of the listeners (+/–3); the distance from the ventriloquist to the apparent source of the sound (not more than 20 feet); the believability of the ventriloquist's words and sounds; whether the audience can observe the proficient character; and the length of the ventriloquism display.

**Weaponsmithing:** This proficiency allows a character to create metal weapons. The Player's Handbook gives the time and material cost requirements for various types of weapons.

A character who seeks to create a truly exceptional weapon, can make a proficiency check after the item is completed. If the check fails, the weapon is useless, melted down for its bare metal; if the check succeeds, the character has created a weapon that is worth 50% more than the typical example. These are the kinds of weapons selected by wizards for enchantment.

Dwarves get a +1 bonus to their rating with this proficiency.

**Weather Knowledge:** A character with this proficiency has a knowledge of winds, humidity, clouds, and seasons and can accurately predict the immediate weather simply by looking at the sky. With a proficiency check the character can predict what will happen during the next 12 hours. Modify the check up to +/–6, with a 0 modifier to

predictions for the weather six hours ahead.

**Weaving:** A character with this skill can weave yarn into cloth, and he can create tapestries, cloaks, and other large swaths from thread. The character can spin wool into yarn with a spinning wheel, and he needs a loom to artfully weave that yarn. A character with the artistic talent trait can use this skill to create exceptionally beautiful cloth. Halflings get a +1 bonus to their rating with this proficiency.

## Trait Descriptions

**Allure:** This trait allows a character to attract romantic attention from NPCs, at the player's option. The character can conceal the trait any time, but when it is in effect it can modify the reaction rolls of NPCs who might be affected—perhaps by as much as +3. The trait is only effective if there is a reasonable chance of the PC drawing romantic attention from the NPC—at the very least the NPC must be of the opposite sex and of at least young adult age.

A character with the allure trait can receive one henchman above the normal maximum—if at least one of the henchmen has a romantic interest, however unrequited and hopeless, with the player character. Elves can purchase this trait for 1 less character point than the listed amount.

**Alertness:** These characters are blessed with a combination of peripheral vision, good hearing, and mental stamina that makes them very resistant to surprise. Such characters receive a +1 bonus when the DM determines if the alert characters and their party must roll for surprise.

**Ambidexterity:** This character is equally skilled with the use of either hand. This trait carries over into training, so that the PC can use weapons, bear a shield, and perform acts of strength equally well with the right or left hand. The character is good at the two weapon fighting style, suffering no penalty for the first hand, and only a –2 penalty for off-hand use.

**Animal Empathy:** The character possesses an inherent ability to relate to animals. The character will generally receive a positive reaction from domesticated animals, and can soothe the fears of captive wild animals with remarkable consistency. For example, with a successful Wisdom/Willpower check, the character can encourage a domesticated animal to approach, or silence a barking watchdog. The character, as a rule, cannot persuade wild animals to lose their fear of humans. Also, the trait is useless if the character attempts to deceive an animal into approaching for the cause of harming it—i.e. the cow won't be persuaded to walk over to the fence so that the character can butcher it.

**Artistic Ability:** The character has talent with the use of brushes and paint, charcoal sketching, and the sculptor's knife. Even without any related proficiency the character can render realistic maps and mold simple objects from clay. When this trait is coupled with training, the character can create works of real artistic merit. Whether these have worth in monetary terms or as relating to the character's status in the campaign world are circumstances that must be adjudicated by the DM. As a general rule, the character's work as a potter, tailor, weaver, painter, blacksmith, leather worker, or sculptor will fetch

1–50% more than the typical cost for such products.

**Climate Sense:** This trait provides a character with an innate sense of impending (within one hour) changes in the weather. The DM might require a Wisdom/Intuition check before the character can make the determination. Other circumstances may be obvious enough that the character will know with certainty that the temperature will fall drastically, or that a tremendous rainstorm is about to begin.

**Double-jointed:** The character has a unique ability to wriggle out of ropes, manacles, brackets, chains, and other bonds. The bound character can make a Dexterity/Agility check when attempting to twist free of the bonds. Such an escape requires 1d6 rounds for each limb that is bound. If the character is secured by metal brackets or chains, the check is made at 1_2 (rounded up) of the Agility score. Halflings add a +1 bonus to their modified Agility score when using this proficiency.

**Empathy:** The character with this trait has an innate ability to sense the motivations, emotions, and possibly the intentions, of others. If the character can observe a group of NPCs for 1d6 rounds, the DM can allow a Wisdom/Intuition Check. Success means that the character has understood something significant about the discussion or plans of those NPCs. The empathetic character does not have to speak the language of the NPCs (though the DM can allow a +2 modifier if the tongue is known).

If the NPCs are of a very different race (such as monsters), the check can be modified to 1_2 the character's Wisdom/Intuition score. However, the DM can also add positive or negative modifiers if the character has an extra long or short time to observe, or watches from an especially advantageous or disadvantageous position.

**Fast Healer:** This highly useful trait allows a character to recover 1 hit point of damage within 2–12 turns of receiving a wound. Also, the character naturally heals at a rate of 2 hit points, not 1, per day.

**Glibness:** The character has the knack of dissuading the suspicions of NPCs. The PC must speak the same language as those he is trying to impress, and players are encouraged to role-play the glibness attempt.

Situations where this might arise include characters trying to talk their way past the guards at a city gate, turning aside the hostility of a bullying thug, or disarming the suspicions of a merchant who suspects the PCs of thievery. Characters can make Wisdom/Intuition checks to see if their glibness is successful.

Of course, if the guards are looking for a smuggler that fits one of the characters' descriptions, or the bully really wants to beat up, say, a blond elven rogue, or the merchant saw the fellow steal a bracelet, no glibness attempt is possible.

Halflings can purchase this trait for 1 less character point than the listed amount.

**Impersonation:** This trait represents the acting talent in the modern world—the character has a natural ability to fall into a role, and to project that role believably to others. A character with the impersonation trait gains a +2 bonus to all rolls made using the disguise proficiency.

Additionally, the character can assume a disguise immediately—i.e., without benefit of costume or makeup. Such an impromptu disguise cannot alter the character to assume a specific identity, nor can it alter the appearance of his race or, except under unusual circumstances, sex.

**Inherent Immunity/Poison:** This trait enhances the character's natural resistance to poisons—inhaled, ingested, and injected. The character receives a +1 bonus to all saving throws versus any kind of toxin. Additionally, the damage done by virulent poisons is reduced by –1 point per die (to a minimum of 1), and the duration of paralytic and other temporary poisons is reduced by 1 round (or turn) per die rolled.

Dwarves can purchase this trait for 1 less character point than the listed amount.

**Inherent Immunity/Disease:** The character with this trait has a strong resistance to diseases of all types. When a saving throw is allowed against a possible infection, the character gains a +3 bonus. If there is an infection, the duration of the disease is reduced—by one day, week, etc.,—for each die rolled to determine this time period. This immunity does not apply to magical enchantments and curses, such as lycanthropy.

**Inherent Immunity/Cold:** This character is able to remain comfortable in temperatures that most find chilling, and he can sometimes avoid the worst effects of cold-based attacks such as white dragon breath. In game terms, the character gains a +2 bonus to saving throws against cold attacks (but only physical cold; not, for example, against the chilling touch of a wight).

Additionally, the character can reduce his level of encumbrance caused by winter garments. In those cases where the DM might require some penalty for a party that must bundle up in furs, parkas, mittens, and boots, the character with this trait can dress one level of encumbrance lighter and still avoid the effects of the weather.

**Inherent Immunity/Heat**: Like the immunity to cold, this trait confers an advantage on the character in certain types of climates, and improves saving throw chances against fire- and heat-based attack forms. The saving throw bonus is a +1, and applies to saving throws against such magical infernos as red dragon breath and against the effects of lava or normal fire.

The DM can determine the benefits conferred by this trait against environmental heat, such as deserts and tropical weather. In general, under these types of conditions, a character with this type of immunity can travel twice as far as his companions without suffering fatigue.

**Internal Compass:** Characters with this trait have a general idea of where they are, and in which direction they are facing when out of doors. In the wilderness, this means that their chance of becoming lost is reduced by 5%. When using the navigation proficiency, characters with this trait receive a +1 bonus to their proficiency score.

**Keen Eyesight:** These characters have "eagle eyes." That is, they can perceive details at about twice the range of characters with normal vision. Keen eyesight does not improve a character's ability to see in the dark, nor does it convey unique peripheral

vision. However, if a group of companions make out a party in the distance, the keen-eyed character might be able to tell the whether the party consists of humans or goblins. When the others can discern the race of the distant party, this character can tell how they're armed and how they're dressed.

A character with the keen eyesight trait receives a +1 bonus on all rolls to hit with a missile weapon at long range.

Elves can purchase this trait for 1 less character point than the listed amount.

**Keen Hearing: This** trait means that the character possesses excellent aural acuity—able to hear the proverbial pin drop. In cases where hearing can be a factor in avoiding surprise, this character receives a +1 bonus. This applies whenever the PC approaches an ambush, unless background noise (a waterfall, bustling marketplace, windstorm, etc.) could be expected to drown out the inadvertent sounds of the ambushers.

If the character is a thief, this trait adds +10% to every attempt to *detect noise*. Halflings can purchase this trait for 1 less character point than the listed amount.

**Keen Olfactory Sense:** This valuable trait elevates the character's sense of smell to an uncanny level. In any case where the character might detect an approaching encounter by smelling the other party, this character gets a +1 bonus on chances of being surprised. In addition, this trait gives the character a +2 bonus when using the hunting proficiency. At the DM's discretion, the character can make a Wisdom/Intuition check to determine whether food or drink has been poisoned or otherwise tainted.

**Keen Taste Sense:** This trait allows characters to detect foreign substances and unnatural alterations in anything they taste. Characters can make Wisdom/Intuition checks with a +3 modifier. Success means they realize some sort of alteration has been done to the food or drink. Halflings can purchase this trait for 1 less character point than the listed amount.

**Keen Touch Sense:** A character with this trait has unusually sensitive tactile senses, able to feel the difference between a silver and gold piece, for example. If the character with this trait is a thief, this inherent advantage gives a +5% bonus to pick pockets and open locks attempts. Gnomes can purchase this trait for 1 less character point than the listed amount.

**Light Sleeper:** This character will awaken at the slightest disturbance—a significant advantage to a small party on the trail where companions would quickly fatigue from alternating watch duty through the night. The character will awaken if he hears any unusual noise, such as the unmuffled footsteps of someone approaching the camp. This includes the approach of anyone wearing metal armor, or creatures carrying weapons or conversing.

If the sleeping character is approached by someone who is working very hard at being stealthy, the DM can allow the light sleepers to make Wisdom/Intuition checks; success means they become aware of the intruder, while failure means they continue to sleep. This latter category includes NPCs in leather armor, and monsters with natural stealth and which are not encumbered by weapons and armor.

If a light sleeper is approached by a thief who is successful at a *move silently* attempt, then the sleeping character is not allowed the Intuition check, since there is no sound to alert the sleeper.

**Lucky:** The luck that seems to bless this character is not a matter of improving the odds of various die rolls, nor of gaining increased benefits to other game situations. Rather, it is that this character seems to have a knack for being in the right place at the right time. The DM may require a Wisdom/Intuition check to determine if the character will be lucky.

If the party is searching for a way to cross a deep, placid river—and the lucky character can make an Intuition check, the party will stumble upon a boat hidden in the reeds by the shore.

**Music/Singing:** This trait provides the character with a finely-pitched, well-modulated voice—the kind of singing voice that everyone likes to hear. If this talent is combined with the singing proficiency, the character can impress nobles and commoners alike with musical performances, perhaps becoming a bard or minstrel of some repute. This talent also adds +2 bonus to the character's singing proficiency score.

**Music/Instrument: The** character with this trait has the manual dexterity and musical sensibility to skillfully operate an instrument such as a harp, flute, lyre, drum, etc. While the trait does not convey the knowledge of how to play any instrument—that must come from a proficiency—this inherent talent assures that the character may quite possibly rise to a significant level of fame for his musical performances. The character can more readily learn to play musical instruments as note in the musical instrument proficiency description.

**Obscure Knowledge:** The character with this trait is the fantasy version of the trivia buff. The character has a mind that grasps, permanently, little bits of information from here and there—items that, at first blush, might not have any useful application. The typical procedure for the character using this trait would require an Intelligence/Learning check. If the check is successful, the character has stored away some trivial bit of information about a topic at hand.

The use of this trait is up to the DM, though the player can make requests when an opportunity arises. For example, as the character approaches Castle Dunleven, the player might ask the DM if his character remembers anything about the castle or its occupants. If the Intelligence/Learning check is successful, the DM can inform the character that Lord Dunleven is an elderly widower, who has a beautiful daughter whom he jealously guards against any potential suitors. Or, just as likely, the character might remember that Dunleven is known for its fine wines or cheeses, and that the vintage of five years back is particularly prized. Gnomes can purchase this Trait for 1 character point less than the listed amount.

**Precise Memory:** This trait indicates a character who has a "photographic memory." For example, once seeing a piece of heraldry, the character will remember what house or noble that symbol represents. If this character looks at a map, and has the time to study it

in detail, he can be expected to remember that map with a great deal of accuracy. In most circumstances this memory is fairly automatic. But in cases of intricate detail, or if a long time lapses since the character first observed something, the DM can require an Intelligence/Learning check before providing the player with the information.

This trait refers primarily to the recollection of things that the character has seen written down or rendered in artwork. If the character has the reading/writing proficiency, it applies also to things that he has read.

## Disadvantage Descriptions

**Allergies:** This disadvantage is typically a hay fever problem, where the character is subject to sneezing outdoors. The actual campaign environment makes a great deal of difference—in winter settings, this isn't much of a problem, for example. The DM should be careful to create some settings where the character's allergies are in fact a disadvantage.

The game effects of allergies can come up in several ways. A Wisdom/Willpower check can be called upon to stifle a sneeze when the character's party is setting up an ambush along a forest trail. If the character suffers from severe allergies, his Strength/Stamina score and Constitution/Health scores must be reduced by 1–6 points when the pollen count is high.

Other allergies can be created. A character who is allergic to mold, for example, might suffer these same effects when in a damp, underground location. As well, he might suffer double damage from mold-based attacks. An allergy to bee stings or to certain types of food or animals are less likely to affect the game, but the DM could offer to negotiate a lower character point bonus for the character who has a lesser allergy as a disadvantage.

**Bad Tempered:** This character has difficulties with the niceties of social interaction, and is quick to take insult at any number of slights—real or imagined. The DM should require the player to make Wisdom/Willpower checks when the character is given some cause to be insulted. If the check fails, the character is likely to shoot off his mouth in a rude fashion. (Usually, the bad temper will not cause the character to attack others, and certainly not with weapons). However, it is not inconceivable that the character's remarks will insult the NPC to the point where combat results. More often, however, the character's bad temper will cause a non-violent situation—negotiations with a merchant are broken off, a nobleman who was thinking of hiring the PCs changes his mind, or a guardsman denies the party entrance to a city or castle. Dwarves receive 1 extra character point when they choose this disadvantage.

**Bruise Easily:** This disadvantage can be a real drawback for a character who spends a lot of time in harm's way. Every time the character suffers damage from a blunt weapon, or a mishap such as a fall, he suffers 1 extra point of damage for each die of damage rolled. This damage is not as long-lasting as normal damage, recovering at a rate of 1 hit point per turn after the fight. However, if a character's hit points are reduced to zero, and some of the points of damage are bruise damage, he is rendered unconscious but not dead—much like the damage inflicted by punching.

**Clumsy:** The character with this disadvantage has the unfortunate habit of dropping

things, tripping, or knocking things over at inopportune times. The DM will occasionally require the character to make a Dexterity check. Failure means the character loses his grip, stumbles, or trips. The check can be required as often as the DM desires, though as a general rule two or three times a gaming session probably will be adequate.

**Colorblind:** This relatively innocuous disadvantage means that the character cannot distinguish colors. For game purposes, he sees things in black, white, and shades of gray.

**Compulsive Honesty:** The character with this disadvantage cannot tell a lie and cannot behave in a deceitful fashion. He tends to be blunt rather than tactful, even if this means insulting someone who he and his companions are trying to impress.

The character could participate in a deception—but only if it is a matter of life and death. Even then, the character must make a Wisdom/Willpower check every time he is called upon to speak a falsehood or to act out a role in front of witnesses. Failure of the role means that the character shrugs and comes clean—*"You're right, my lord. I'm not here in the marketplace to shop for rugs, but to steal the plans for the castle's defenses."*

**Cowardice**: This is a hefty disadvantage for an adventuring character. The character might want to be brave and to fight heroically, but an inner voice of caution constantly suggests the merits of flight or concealment. Halflings receive 1 extra character point when they choose this disadvantage.

When a violent encounter begins, the character must pass a Wisdom/Willpower check to overcome his cowardice. The roll is 1/2 the character's Wisdom/Willpower if this is a severe disadvantage. If the check is successful, the character can behave in any fashion for the duration of the encounter. If the check fails, however, the character will seek to leave, to hide behind friends, or to otherwise cravenly attempt to avoid the fight.

The character is allowed to make another Wisdom/Willpower check each subsequent round during the encounter. He flees or hides as long as he fails, but as soon as he passes the check he can perform normally—and is exempt from any further checks. (Of course, if he tried to hide behind his friends, a second violent encounter might occur immediately after the first is resolved!)

**Deep Sleeper:** The character with this disadvantage will only awaken when disturbed by a very loud noise, or by physical prodding, shaking, etc. When the character does wake up, it will take 1–6 rounds before he is capable of any action other than groggily sitting up and trying to figure out what's going on.

**Fanaticism:** This can be a substantial disadvantage for a character, though it requires a significant role-playing commitment on the part of the player. The fanaticism can be dedication to a particular cult, religion, or god, or it can be more worldly-based, in the sense of overwhelming loyalty to a state, to a military presence, or to a particular leader.

Whatever their sources, the different types of fanaticism have several things in common. If a certain code of behavior is called for by the belief, then the character must conform to that behavior—even if it conflicts with the immediate goals of the PC and his companions. While fanaticism is not necessarily evil, it may certainly become tiresome to those who do not share the fanatic's beliefs.

**Greed:** A character with this disadvantage is compelled to seek riches by whatever means possible. His greed will interfere with the sharing of expedition spoils, and may cause the character to alienate powerful NPCs who would otherwise be inclined to help.

Alternately, a character with this disadvantage can be described as greedy for power. In this case, he will seek to control others by persuasion, threats, and even force. He will seek to amass as many henchmen as possible, and he will not hesitate to employ these agents to add to his base of power. Dwarves receive 1 extra character point when they choose this disadvantage.

**Irritating Personality:** This disadvantage can make it difficult for the character to obtain cooperation and aid from others. During encounters with NPCs, the DM should require the character to make a Wisdom/Willpower check to resist the effects of the disadvantage. A failed check means the irritating aspects of the PC's personality rise to the surface.

It is best to role-play the specifics of the character's behavior—is a fighter exceptionally critical, does a wizard laugh at inappropriate times, or does a thief behave in a very uncouth fashion? The player is free to devise the irritating elements of the character's persona, and if encounters are role-played the disadvantage will take care of itself.

**Lazy:** A lazy character will never do any more work than is absolutely necessary. He will rely on his companions to do things such as build campfires, cook, and keep watch through the night. The character will generally neglect details of preparedness in favor of catching a few minutes more sleep. However, if he really wants to do something that does not have a clear and urgent need (digging a trench around a camp in case an attack is made against them, for example) the character can roll a Wisdom/Willpower check. A –4 modifier applies to the character's Willpower score, however, and failure of the check means that the character decides the time could be better used by catching a little shut-eye—or at least by lying in the shade somewhere.

**Phobias:** A character who is consistently afraid of one particular thing (or category of things) can have a real problem while adventuring. The phobia disadvantages are worth varying degrees of character points, based on the frequency of encountering that which the character fears, and whether the player chooses a disadvantage that is moderate or severe.

The effects are generally the same. If the character is threatened by a violent encounter with the object of the phobia, he must roll a Wisdom/Willpower check (1/2 Wisdom/Willpower, if the phobia is severe). If successful, the character can function normally, but if the check fails he must flee or otherwise seek to avoid the encounter for 1–6 rounds. After this time, check again, and continue to do so each 1–6 rounds until a check succeeds.

The DM can modify the Willpower checks for phobic characters. Someone who hates enclosed places but is being pursued by a dragon, for example, might overcome the phobia in favor of saving his life—perhaps gaining a +5 modifier to the phobia check.

**Phobia—Crowds:** The character becomes panicked when surrounded by people, demihumans, humanoids, etc. Shopping in marketplaces, dining at massive feasts, and celebrating at festivals are all problems. The character must make a successful Wisdom/Willpower check to enter such a setting. If a crowd gathers, the character must check as soon as the DM judges that the PC is in the midst of a throng. If the character fails the Willpower check, he will seek a private nook or cranny to get out of sight, or try to leave the premises altogether. Even if he passes, the success only lasts 2–12 turns—then the character must make another check.

**Phobia—Darkness:** A real drawback for a dungeon crawler, this disadvantage compels a character find or create, some source of light when surrounded by utter darkness. The character will be reluctant to enter darkened settings, only doing so after a successful Wisdom/Willpower check. He can repeat the check every 1–6 turns, if necessary, perhaps modified by persuasion or cajolery by comrades. The check is not necessary if some light is present, though the character still will be nervous and uncomfortable in a role-playing sense.

If the character passes the check, he can force himself to enter the darkness. He also must check if suddenly immersed in darkness—for example, if the party's torches are suddenly doused within the dungeon. Failure of this check can result in the character fleeing headlong down a corridor or freezing, terrified, in place (clinging to a subterranean cliff, perhaps). If circumstances do not dictate one or the other, flip a coin to determine which reaction the character suffers.

**Phobia—Enclosed Spaces:** This has effects similar to the darkness phobia, though of course the presence of light is immaterial—this phobia can strike in a lighted room or in a narrow, winding tunnel. In general, when the ceiling is no more than two feet overhead, and the walls are within two feet of the character's outstretched hands, he'll have trouble. As with the fear of darkness, the character must check Wisdom/Willpower before entering an enclosed area.

**Phobia—Heights:** This character has difficulty climbing ladders and ropes, perching on walls, and negotiating steep, cliff-side trails. He will be eager to look for another way around if such a climb is called for, but if he makes a successful Wisdom/Willpower check he can overcome his fear. If the check fails, however, the character will do everything possible to avoid the climb. Another check is allowed 2–12 turns later.

**Phobia—Magic:** The character with this fear is nervous about all things magical—spells, creatures, and items. Although he may wear and use magical items that do not have visible effects (including magical weapons and armor, rings of protection, and the like), he will not ingest potions, wear a ring of invisibility, or learn or cast spells.

If attacked by a magic-wielder using a spell with visible effects, the character must make a Wisdom/Willpower check or flee as described in the introduction to the phobia section. The appearance of a magical creature, such as a genie, lycanthrope, or undead, will also force this check.

**Phobia—Monster:** The player and DM must agree upon a specific monster the

character fears. It must be a not-infrequently encountered creature in the campaign world—perhaps goblins, orcs, ogres, trolls, giants, etc. When the character encounters the feared monster, a check as described above is required.

**Phobia—Snakes:** This is similar to the monster phobia, except that it relates to all sorts of snakes and worms. It includes creatures, such as medusae, which have snakelike parts.

**Phobia—Spiders:** Like the monster phobia, this character has a problem with arachnids of all shapes and sizes, naturally including the monstrous varieties. Additionally, this character must make a Wisdom/Willpower check with a –4 modifier if ensnared in a web spell. Failure means the character panics to such an extent that he enwraps himself in the web for the maximum duration of the spell's effect.

**Phobia—Undead:** As with the other specific creature phobias, this fear requires a Wisdom/Willpower check at the beginning of an encounter. Further, the character must pass a check before he can enter a location where he reasonably expects undead to be. This latter check can be repeated at 2–12 turn intervals, if necessary.

**Phobia—Water:** This character cannot have a swimming proficiency. He fears boats and narrow footbridges, and he will not be compelled to enter water that is much deeper than his waist.

**Powerful Enemy:** A powerful enemy is a disadvantage that must be incorporated into the background and story of a campaign—obviously, with a lot of input from the DM. A character with a powerful enemy acquired that bitter foe before the start of the campaign. The enemy can be a monster, or perhaps a high level wizard or cleric, or it can be a nobleman, demihuman ruler, or perhaps a bandit chieftain. The reason for this vendetta should be defined by the DM, and can go back even to before the character's birth—a family feud, for example, or a need to remove the last heir to a line.

Whatever the enemy's nature, it must be powerful and pervasive enough to affect the character wherever he goes in the campaign. While this does not mean that the PC's life is one long chase scene, he will need to keep a wary eye over his shoulder. The enemy will routinely send agents after the character. Also, the enemy should have good conduits of information, being able to keep general tabs on the PC in city, town, and perhaps even wilderness environments.

**Tongue-Tied:** This disadvantage crops up when the character tries to discuss important topics with companions and NPCs. The character has the tendency to incorrectly state facts, forget names, and just generally say the wrong thing. The main effect of the disadvantage is to enhance role-playing, though the DM should modify NPC reaction rolls, typically by –2.

**Unlucky:** The character with this disadvantage does not suffer penalties on his die rolls. However, he has the knack for being in the wrong place at the right time. He can be in a city of 10,000 people—and if there's one person he doesn't want to see, chances are

good that individual is approaching around the next corner. If this character makes a pass at a young woman, she turns out to be the Captain of the Guard's daughter. And if only one member of the party loses his bedroll in a downpour, the unlucky PC is naturally the one to sleep on the cold, muddy ground.

# Chapter 7:
# Weapon Proficiency & Mastery

The weapon proficiency rules of the AD&D game have been expanded with the *Skills and Powers* campaign. Now there is more flexibility in selecting weapon proficiencies, and there are opportunities to develop those proficiencies to high degrees of expertise.

Fighters can still specialize in specific types of weapons, gaining bonuses for specialization. Character points can be used to advance the weapon specialization to mastery, which gives a fighter significant advantages in the use of a weapon.

Characters of other classes, through the use of character points, can gain lesser levels of accomplishment in favorite weapons—this is called weapon expertise.

## Weapon Proficiencies and the Character Point System

Character points tailor various levels of advancement, making improved combat abilities available to all characters. While it is relatively easy for fighters to become accomplished in weapons use, it is more difficult for—and requires more dedication from—characters of different classes who wish to become truly accomplished with a weapon.

In this step of the character creation process, all player characters receive a final allotment of character points to purchase their initial weapon proficiencies. Any leftover points from the previous chapters can be used here, or saved for use during play or to acquire abilities later in the character's career. The number of CPs awarded to each type of character in this step appears below.

Warriors: 8
Wizards: 3
Priests: 8
Rogues: 6

## Selecting Weapon Proficiencies

Weapon proficiencies can be acquired when a character is first created, and additionally during the course of that character's adventuring career.

A warrior (including multi-classed warriors) must pay 2 character points for each

weapon proficiency slot. A character who is not a warrior must spend 3 character points for each weapon proficiency slot.

**Table 48: Weapon Proficiency CP Costs**

| Class | Cost |
|---|---|
| Warrior | 2 |
| Rogue | 3 |
| Priest | 3 |
| Wizard | 3 |

### Character Class Restrictions

Non-warrior characters are normally restricted by the rules dictating the types of weapons they can acquire proficiencies for. However, by spending extra character points for a weapon proficiency slot, a character can purchase a proficiency that he would otherwise not be able to possess.

A rogue or a priest can acquire a proficiency for a weapon that is normally restricted to a warrior's use. One additional character point must be spent when the slot is purchased—the slot will cost 4 points, instead of the 3 rogues and priests usually pay.

A wizard can spend 2 additional character points to become proficient in a weapon normally allowed to a priest or a rogue. If the wizard wishes to become proficient with a weapon that is normally limited to fighters, however, he must spend 3 extra character points.

For example, if a wizard wishes to purchase a proficiency in the short bow, he must pay 5 character points (since the short bow can be used by a rogue, he adds 2 points to his base cost of 3 character points per slot). If he wants to learn to use the longbow, however, he'll have to pay 3 extra character points (for a total of 6), since this weapon is normally limited to warriors.

## Using Weapon Proficiency Slots

A character can learn to use a weapon through several different means. Weapon proficiency slots also can be used to acquire abilities in unarmed combat, skill with shields, and advanced levels of proficiency such as weapon mastery or weapon expertise.

There are varying levels of ability in weapons use described in the *Skills and Powers* rules. The lowest is nonproficiency, then weapon familiarity, weapon proficiency, and weapon expertise. Characters can advance additionally through the levels of weapon specialization, weapon mastery, and, ultimately, weapon grand mastery. Primarily this progression is used by fighters, but characters of other classes can advance to high levels of accomplishment by the expenditure of additional character points.

### Weapon Groups

Many weapons are categorized into groups, either tight groups, or broad groups. Often a weapon will be part of a tight group, and that tight group will in turn be part of a broad group. A character's proficiency with a weapon or group will often convey weapon familiarity with other related weapons.

Table 49 illustrates weapons in their various tight and broad groups. Note that there is significant overlap in many categories—a broadsword is listed in the ancient, Roman, and medium tight groups because it can be used in a variety of cultures and styles.

If a character knows several different fighting styles (explained later in this chapter) he can use a weapon in any of the styles he knows. If he has only learned one style, however, his proficiency only applies when he uses that weapon with the appropriate

style.

## Table 49: Weapon Groups

As noted in previous chapters, weapons can be classified into *tight* and *broad* groups. All weapons in a tight group are considered to be related to one another; a character proficient in one automatically has familiarity with the rest. Note that a weapon proficiency includes stone or bone versions of the same weapon.

In the listing below, broad groups are noted in bold type, and tight groups are in italics.

**Axes, Picks, and Hammers**
*Axes:* battle axe, hand/throwing axe, hatchet, two-handed axe, sword-axe, mace-axe
*Picks:* horseman's pick, footman's pick, pick
*Hammers:* war hammer, maul, sledge
*Unrelated:* adze

***Bows***
Short bow, composite short bow, long bow, composite long bow

**Clubs, Maces, and Flails**
*Maces:* footman's mace, horseman's mace, mace-axe
*Clubs:* club, great club, war club, ankus, morning star
*Flails:* horseman's flail, footman's flail

***Crossbows***
Hand crossbow, light crossbow, heavy crossbow, pellet bow, cho-ku-no

***Daggers & Knives***
Dagger, stiletto, jambiya, main-gauche, parrying dagger, knife, katar

***Lances***
Light, medium, heavy, jousting

**Polearms**
*Spear-like polearms:* awl pike, partisan, ranseur, spetum
*Poleaxes:* bardiche, halberd, voulge
*Bills:* bill, bill-guisarme, glaive-guisarme, guisarme-voulge, hook fauchard
*Glaives:* glaive, fauchard, naginata, nagimaki, fauchard-fork
*Beaked:* bec de corbin, lucern hammer
*Unrelated:* military fork, tetsubo, lajatang

**Spears & Javelins**
*Spears:* spear, long spear, awl pike
*Javelins:* javelin, pilum, dart
*Unrelated:* harpoon, trident, brandistock

**Swords**
*Ancient:* broadsword, sapara, khopesh, sword-axe, short sword
*Roman:* broadsword, drusus, gladius, spatha
*Middle Eastern:* short sword, scimitar, great scimitar, tulwar
*Oriental:* cutlass, katana, wakizashi, no-dachi, ninja-to
*Short:* short sword, gladius, drusus, sapara, dagger, tulwar
*Medium:* broadsword, long sword, cutlass, sabre, falchion, estoc
*Large:* bastard sword, claymore, two-handed sword, great scimitar, no-dachi
*Fencing weapons:* rapier, sabre, main-gauche, parrying dagger

***Chain & Rope Weapons***
Chain, kau sin ke, kusari-gama, kawanaga, chijikiri

***Martial Arts Weapons***
Sai, jitte, nunchaku, sang kauw, three-piece rod, bo stick

**Firearms**
*Hand match weapons:* arquebus, hand gunne
*Matchlocks:* arquebus, caliver, musket
*Wheellocks:* arquebus, belt pistol, horse pistol
*Snaplocks and Flintlocks:* musket, belt pistol, horse pistol

If a weapon does not appear in the preceding listings, it belongs to no weapon group. For example, weapons such as the bolas, the boomerang, or the mancatcher are so unique in their employment that nothing even comes close to being similar.

Proficiency and Weapon Familiarity If A character who is not proficient in a type of weapon suffers penalties on attack rolls when using that weapon. The penalties vary by character class—for example, fighters are much more likely to understand an unfamiliar weapon than wizards. The penalties are shown on Table 50: Nonproficiency Attack Penalties.

However, in some cases a character can be familiar enough with a weapon that he does not suffer all nonproficiency penalties. This is called weapon familiarity. And while the character cannot fight as effectively as someone with a weapon proficiency, neither is he as inept as a nonproficient character.

A character is assumed to be familiar with weapons that are related to ones with which he is proficient. Weapons in the same tight group as a character's weapon of proficiency are familiar to that character. If a character has proficiency in an entire tight group of weapons, he is familiar with all weapons in a related broad group.

**Table 50: Nonproficiency Attack Penalties**

| Class | Nonproficiency | Familiarity |
|---|---|---|
| Warrior | –2 | –1 |
| Wizard | –5 | –3 |
| Priest | –3 | –2 |
| Rogue | –3 | –2 |

| | | |
|---|---|---|
| Psionicist | –4 | –2 |
| Nonclassed NPC | –4 | –2 |

A character using a weapon with which he is not proficient cannot perform any special combat maneuvers, such as disarms or parries, with that weapon. He is limited to basic attacks, with the die roll penalties shown above. If he hits, however, he makes a normal roll for damage.

## Weapon Proficiencies

A single weapon proficiency slot can be used to acquire proficiency in a specific type of weapon. Such proficiency means that the character can wield that weapon normally, without penalties on his rolls to hit or damage.

### Weapon Group Proficiencies

By spending 2 proficiency slots (4 character points), a warrior can gain a proficiency in all the weapons in a specific tight group. If that tight group is part of a broad group, then the character also possesses weapon familiarity with all weapons in the broad group.

By spending 3 slots (6 character points), a warrior can learn a broad group weapon proficiency. He is assumed to be fully proficient in every weapon in that broad group.

This group proficiency option is only available to warriors. All other characters must spend a single proficiency slot to become proficient with a specific type of weapon.

## Special Weapon Proficiencies

Weapon proficiency slots can be spent to gain several types of bonuses that are not, technically, "weapon proficiencies." These are all relevant to combat situations, however, and improve the character's chances to defend or to attack effectively—both with and without a weapon.

### Shield Proficiency

A weapon proficiency slot can be spent to gain a shield proficiency. Warriors can gain this proficiency by spending 1 slot; other characters must spend 2 weapon proficiency slots to become proficient in shield use. Obviously, a character must be able to use a shield to acquire this proficiency.

Shield proficiency improves a character's AC against one or more attacks per round from in front or from the side faced by the shield. This proficiency does not help against rear attacks or attacks coming from the flank opposite the shield.

Like other weapon proficiencies, the shield proficiency must be taken for a specific type of equipment—listed on Table 51: Shield Proficiency Effects. The bonuses conferred vary by the type of shield the character chooses, and are added to the normal AC benefits of carrying a shield. The Number of Attackers category indicates how many attacks, per round, the shield proficiency can help against. If a character with a buckler, for example, is attacked by three enemies at once, his shield proficiency will only benefit his AC against one of those attacks. The player should designate which enemy he will guard against before attack rolls are made.

**Table 51: Shield Proficiency Effects**

| Shield Type | AC Bonus | #Attackers |
|---|---|---|

| | | |
|---|---|---|
| Buckler | +1 | One |
| Small | +2 | Two |
| Medium | +3 | Three |
| Body | +3/+4 vs. missiles | Four |

### Armor Proficiency

A character can spend a weapon proficiency slot to buy the armor proficiency, which indicates that he has become used to wearing a protective shell. Unlike the shield proficiency, the armor proficiency does not improve armor class. Instead, it reduces the encumbrance penalties for the wearing of a particular kind of armor. Thus, a character who is fully proficient with the use of his plate mail, for example, can move around a lot more easily and quickly than can a character who does not have this proficiency.

A character with the armor proficiency suffers only half the normal encumbrance load of his armor. For example, full plate armor weighs 70 pounds. However, if a character is proficient with that type of armor, the armor has the encumbrance effect of only 35 pounds. Naturally, the armor retains its full weight for all other purposes—such as swimming!

### Fighting Style Specialization

Fighting styles represent broad categories of battle tactics that can be employed by characters. They are described in detail in the Combat and Tactics book. Even without that volume, however, players of the Skills and Powers rules can spend weapon proficiencies on fighting styles, gaining some bonuses in battle.

There is a difference between knowing a style and specializing in that style. Every character with a weapon proficiency knows at least one fighting style—the style used with that weapon. There is no cost to acquire the fighting style; it comes with the proficiency. Indeed, if a weapon can be used with two or more different styles, the character is assumed to know all of those styles. A long sword, for example, can be used with the one-handed weapon fighting style, the weapon and shield fighting style, or the two-handed weapon fighting style. Thus, a character with proficiency in the long sword knows all three of these fighting styles.

Character classes put some limitations on learning fighting styles. Table 52 shows the classes that can normally learn a specific style. While a rogue, for example, can use a long sword, he does not automatically learn the two-handed weapon style with this blade.

A character can spend an additional character point when he purchases a weapon proficiency to learn a style that is not normally provided to his character class. The rogue, for example, spends 3 character points for his long sword proficiency slot, but only learns it as a one-handed weapon. If he spends a 4th character point, he can learn the two-handed style or the weapon and shield style as well; or he can spend a total of 5 character points and learn the long sword and all three of its styles.

**Table 52: Fighting Styles by Character Class**

| Fighting Style | Eligible Classes |
|---|---|
| One-handed Weapon | All |
| Weapon and Shield | Warriors, Priests |
| Two-handed Weapon | Warriors, Priests, Mages |
| Two Weapon | Warriors, Rogues |
| Missile | Warriors, Rogues |
| Horse Archer | Warriors, Rogues |

| | |
|---|---|
| Thrown Weapon/Sling | All |
| Special* | Varies |

*This category includes styles specific to certain weapons and/or cultural backgrounds. Examples include the net and trident style used by some Roman gladiators, or the twin sais of a skilled ninja.

A character can spend a weapon proficiency slot to specialize in the use of one of these fighting styles, as long as he already knows that style. Warriors can specialize in as many styles as they wish to purchase. Priests and rogues can only specialize in one style. Wizards can specialize in a single fighting style, but only by paying an extra character point to acquire the weapon proficiency slot.

Each of the styles has specific benefits when acquired as a specialization. These are described below:

## One-handed Weapon

The character can use his empty hand as a secondary weapon, using it to punch, grab, throw, etc. while he is wielding his one-handed weapon. Normal penalties for using two weapons apply.

A character who specializes in the one-handed weapon style of battle gains an AC bonus of +1 when he fights with a weapon in one hand, and no shield or weapon in his other hand. By spending 2 additional character points, the character can improve this AC bonus to a maximum of +2.

If the character is also familiar with the two-handed weapon style, and is wielding a weapon that can be used either way, he can switch back and forth at the start of every round of combat.

## Weapon and Shield

A character who specializes in this style can gain a +1 benefit to his AC (in addition to his regular shield effects) or a +1 on his attack roll during any melee round when he holds a shield and wields a weapon. Alternately, this benefit can be superseded by the more detailed shield rules in the *Combat and Tactics* book.

## Two-handed Weapon

A character who specializes in the two-handed weapon style improves (lowers) the speed factor of a weapon by 3—if that weapon is wielded with two hands. In addition, if the character is using a one-handed weapon with two hands, the weapon gains a +1 bonus to all damage rolls.

## Two Weapon

The proficiency slot spent to specialize in this difficult style requires 1 additional character point when it is first acquired—except for rangers, who can buy it for the same cost as any other fighting style specialization.

A character who specializes in the two weapon style counters some of the penalties inherent in using two weapons. Normally, a character suffers a –2 to attacks with the primary hand, and –4 to attacks with the secondary hand; this specialization reduces the penalty to 0 for the primary hand, and –2 for the secondary hand. Additionally, if a

character has the trait of ambidexterity coupled with this specialization, he suffers no penalty for either hand.

The secondary weapon must be one size smaller than the primary weapon—unless the primary weapon is size S. If a character spends 2 additional character points on this specialization, however, he can learn to use two weapons of equal size, so long as each of the weapons can be wielded in one hand.

### Missile

A character who specializes in the missile fighting style gains a significant bonus. He can move up to half his normal movement rate and still make all of his allowed missile attacks during a turn. Or he can move his full movement rate and make half as many attacks.

Additionally, a character who has specialized in this fighting style gains a +1 bonus to his AC when attacked by missile fire, but only if the specialist character is also using a missile weapon and attacking on that round.

### Horse Archery

A character who specializes in the horse archery fighting style can shoot with accuracy even while mounted. The normal penalties for shooting from the saddle are reduced by 2. Thus, archers suffer no penalty if the horse is moving at up to half its normal speed, and they suffer only a –2 penalty if the horse is moving faster.

### Thrown Weapon

A character who specializes in this fighting style gains the same bonuses as a character who specializes in the missile fighting style.

### Special

There are numerous types of fighting styles that originated and were perfected in different historical and geographical areas. A character can spend a proficiency slot to specialize in one of these types, though the DM is the final arbiter of what types of fighting styles might be allowed. Players are encouraged to do a little research before they try to build a case for a specific fighting style.

Some suggested benefits for the use of one of these styles include:

–1 bonus to Armor Class.

+1 bonus to hit or damage rolls.

The character can ignore penalties for fighting with two weapons.

The character gets a free kick or punch as well as his weapon attack.

### Weapon Specialization and Mastery

Gaining a weapon proficiency indicates that a character is trained in the use of that particular weapon, but he is not at the pinnacle of accomplishment. Fighters, and possibly other characters, can devote a great deal of effort and energy (reflected in character points) to improve their skills with a weapon beyond the standard of basic proficiency.

In the *Skills and Powers* rules, characters of all classes can improve their skills with weapons. The cost in character points is higher for non-fighter classes, but if a player wants his wizard character to emulate the wizard Gandalf and wield a mighty blade such

as Orcrist, it is possible.

## Ranks of Weapon Mastery

The rules of this section begin with the assumption that a character has already acquired a weapon proficiency.

Two additional levels of mastery (high mastery and grand mastery) might be available to single-classed fighters. These are described in the Combat and Tactics book.

## Weapon of Choice

A character can designate a specific weapon as his favorite. He must be proficient with that weapon already, and even if the proficiency he possesses applies to an entire tight or broad group, the weapon of choice must be designated.

Characters of all classes can designate a weapon of choice. Warriors can do so for a cost of 2 character points, rogues and priests for 3 points, and wizards must spend 4 points.

A player can declare a weapon of choice when he first creates a character, or at any point thereafter—as long as he has the character points. They should receive some training or extensive practice from a warrior who is proficient in the same weapon and has a higher experience level than the trainee. Alternately, any character can train someone if he possesses a higher level of weapon mastery (weapon expertise or better) with that weapon.

A character receives a +1 bonus on all attack rolls when using his weapon of choice.
Weapon Expertise

Weapon expertise is a more limited version of weapon specialization. Unlike specialization, however, it is available to non-warriors. Before gaining weapon expertise, the character must be proficient in the use of the selected weapon. It may or may not already be the character's weapon of choice (see above).

Weapon expertise costs a ranger, paladin, or multi-classed warrior 2 character points (or 1 if the weapon is already the character's weapon of choice). Rogues and priests must spend 4 character points (or 3, if the weapon is already the weapon of choice). Wizards can purchase weapon expertise for a cost of 5 character points, though if the weapon is already the character's weapon of choice the cost is only 4 additional points.

As with weapon of choice, a player can declare a weapon of expertise when he first creates a character, or at any point thereafter—as long as he has the character points. If the selection is made by an active character, he should receive extensive training from a warrior who is proficient in the same weapon and has a higher experience level than the trainee.

Weapon expertise allows a character to gain extra attacks as if a weapon specialist. At first level, an expert with a long sword can attack three times every two rounds. Weapon expertise does not confer extra attack or damage bonuses, though the character may receive an attack benefit if he has weapon expertise in the use of his weapon of choice, as explained above.

## Weapon Specialization

A character receives extra bonuses for using a specific weapon by spending character points on specialization. Single-classed fighters can become weapon specialists at any

point in their careers simply by spending a second weapon proficiency slot on a weapon with which they are already proficient.

Characters of a fighter subclass, or multi-classed fighters, can specialize in weapon use, though at an increased cost in character points. In addition, other characters must achieve certain minimum levels of experience before they can attain a weapon specialization. These costs, and the minimum experience level, are shown on Table 53: Gaining Weapon Specialization.

**Table 53: Gaining Weapon Specialization**

| Character Class | Character Point Cost | Minimum Level |
|---|---|---|
| Fighter | 2 | 1 |
| Multi-class Fighter | 4 | 2 |
| Ranger/Paladin | 4 | 3 |
| Priest | 6 | 5 |
| Rogues | 8 | 6 |
| Wizards | 10 | 7 |

A character who receives a weapon specialization during a campaign must be trained by a character with a specialization (or higher) level of skill in that same weapon. The training requires a number of months equal to the character point cost to purchase the specialization, and this training is a full-time occupation.

The effects of weapon specialization vary by the type of weapon, as follows. If a specialist weapon (such as a spear) can be used as a melee or a missile weapon, the character gets the appropriate benefits for each type of use.

**Melee Weapons:** The character gets a +1 bonus to attack rolls and +2 to damage rolls when using the weapon. Also, the character gets one extra attack every two rounds. At first level, for example, a specialist with the long sword would be able to make three attacks every two rounds.

**Missile Weapons:** This category includes slings and thrown weapons. The character gains a +1 attack bonus at all range categories. In addition, specialists enjoy an increased number of missile attacks. This is detailed in the *Player's Handbook*. At the DM's option, players can elect to use the more detailed specialist attack rules in the Combat and Tactics book.

Also, a character who specializes in any type of bow or crossbow gains a benefit for a new range category: point blank. Point blank shots inflict +2 points of damage. Point blank ranges are 30' for bows, and 60' for crossbows. In addition, if the character has a missile loaded and aimed, he can shoot at the beginning of a melee round—even before initiative is determined.

## Unarmed Combat Specialization

A character can choose to specialize in a type of unarmed combat—either punching (pummeling in the *Combat and Tactics* book), wrestling, or martial arts. Fighters, multi-classed fighters, and fighter subclasses can elect to specialize in unarmed combat. Like any other specialization, the type of unarmed combat chosen is the character's only area of specialization—he cannot also specialize in a weapon.

Specialists in unarmed combat receive a +1 bonus on attack rolls and a +2 on damage rolls. In addition, they receive the same number of extra attacks any other specialist receives—typically one extra attack every two rounds.

Unarmed combat procedures, levels of skill, and specialization are covered to a much greater extent in Combat and Tactics . That book also introduces a fast, detailed system for martial arts combat.

## Weapon Mastery

Weapon mastery designates those characters who strive toward the ultimate level of skill with their weapon of specialization. Weapon masters are generally individuals of considerable reputation and note in their campaign worlds, often sought by younger characters for their knowledge. Many of these masters take apprentices, acting as mentors for the training and development of aspiring masters. Other weapon masters live solitary, even hermit-like lives, obsessing on some important task that will allow no interference from the rest of the world.

The most common weapons employed by masters are swords, though bows, axes, and spears are also allowed. If a player wishes his character to master in a different weapon, he must create (with DM input) a rationale for a strong cultural or campaign historical background. An archetype such as William Tell, for example, can be used to justify a mastery in the crossbow in a medieval-type campaign. If the DM will not allow a weapon to be mastered, the player should be informed before the character specializes in that weapon.

A fighter character must have reached a minimum of 5th level before he can become a weapon master; other characters must progress even farther. The minimum level for weapon mastery in every character class is 4 higher than the minimum for specialization, shown on Table 54. A character must possess weapon specialization in the weapon he will attempt to master. When these criteria are met, character points must be spent based on the character's class (see Table 54 below) to gain a mastery.

In addition, the character must find an existing master and be trained in weapon mastery. The master will often demand a significant payment for this training, or else require that the apprentice perform a quest or some other task before he will be accepted as a student. Training for weapon mastery requires twice as many months as training for weapon specialization (i.e. *twice* the character point costs to gain the mastery, shown on Table 54).

**Effects of Mastery:** A master's attack and damage bonuses with a melee weapon are both +3. With a missile weapon, the attack bonus becomes a +2 at all ranges beyond point blank. At point blank range the attack and damage bonuses are each +3.

**Table 54: Gaining Weapon Mastery**

| Character Class | Character Point Cost | Minimum Level |
|---|---|---|
| Fighter | 2 | 5 |
| Multi-class Fighter | 8 | 6 |
| Ranger/Paladin | 8 | 7 |

## Monsters and Weapon Mastery

No player would be so unfair as to feel that his

character should benefit from weapon mastery rules, while the monsters retain their previous level of mediocre skill. (Well, okay—no DM would want to allow this!) In a campaign where characters can achieve levels of specialization and mastery, so, too, can the monsters. As with PCs, the development of specialization and mastery skills for monsters should reflect an unusual level of dedication and training.

## Determining Monster Weapon Mastery

Naturally, not all monsters have even the basic requirements for one of their number to become a weapon master.

While the final adjudication of monster weapon mastery is up to the DM, some basic elements should be taken into account:

### Weapons

The monster in question must use an actual weapon—mastery cannot be obtained in the use of fangs, claws, breath weapons, etc. Neither can simple weapons such as clubs or thrown boulders be effectively mastered.

Additionally, the weapon must be fairly common in that monster's culture. Such weapons are usually listed in the monster description as part of the monster type's combat repertoire. Some examples: a goblin might become a master in the spear or short sword; a wemic, the javelin or short sword; troglodytes have been known to specialize in their unique javelin; tritons, the trident; kuo-toa, the pincer staff or harpoon; and gnolls, the pole arm or battle axe.

## Intelligence

As a general rule, a monster must have a minimum Intelligence score of 8 to master a weapon. The higher the intelligence, the greater the likelihood of encountering a weapon master among a group of the creatures.

If the creatures are known to be very intelligent, one of them might reach the level of mastery. Only monsters of high intelligence or greater can aspire to grand mastery.

Additionally, intelligence should be the primary indicator of how many specialists and masters might be encountered in the monsters' population. The relatively stupid goblins will have very few individuals even of specialist level, while the exceptionally intelligent githyanki will likely include a number of masters and probably a grand master in each sizable tribe.

### Population

As with characters, the greater the number of monsters in a campaign world, the greater the odds that one or more of them will reach the highest levels of weapon mastery available. Though this does not rule out the case of the solitary firbolg giant being a grand master in the use of the halberd, it is more likely that such a skilled individual will be the chieftain of a tribe—or at least the important bodyguard standing alertly at the high chief's side.

For those monsters ranked with improved hit dice for their subchiefs, battle leaders, captains, etc, the specialists and masters will invariably fall among the improved HD members of the band. If there is more than one type of elite monster, the lowest of these will be no more than specialists, with the masters and grand masters found among the second and third tiers.

## Restrictions

Undead cannot become weapon masters. Likewise lycanthropes, highly chaotic creatures, and those of good alignment and a generally pacifistic nature will be very unlikely to generate weapon masters from among their numbers. Monsters of low intelligence (or less) will be incapable of any level of weapon mastery.

## Effects of Monster Weapon Mastery

Monster weapon masters should be more than just beasts with increased attack and damage chances—though, naturally, they should receive all the benefits commensurate with their level of weapon skill. Additionally, the DM might create some special combat benefits for a monster weapon master, reflecting the general tactics of that monster in play. A troglodyte who masters the use of his javelin, for example, might modify it by barbing the head and attaching some kind of light rope. If the weapon hits a target, the monster can reel in the victim—unless that victim can work free with a successful Strength check. However, the victim still suffers extra damage from the weapon.

Beyond these battle considerations, however, monster weapon masters should add important story and role-playing elements to the campaign. Because of their increased power and fearsome reputations, these creatures will be generally feared and obeyed by the lesser monsters of their clan. They will command these lackeys, sending them on raids or posting them to guard the lair.

Through encounters with these lackeys, the player characters should learn details about the weapon master. Beyond his mere existence, the monster should become a fearsome figure to the PCs. Perhaps its extermination can be used as the impetus behind an ongoing campaign adventure.

## Equipment

Every adventurer wants to outfit himself with the best equipment—and plenty of it. The delicate balance of equipment versus encumbrance is a routine problem for any character. So, too, is the matter of finding those items the character desires, and coming up with the money (or other barter) needed to acquire them.

This chapter presents new ways that characters can earn money, and some simple, accurate options for recording the amount of equipment carried—both as bulk and weight. Equipment is discussed in terms of campaign environments, with different tables ranging from the primitive to periods of the late Renaissance.

## Money, Equipment, and Character Points

Character points can have a number of effects on the ways that characters earn, maintain, and spend their treasure.

A player can exchange his character's money for character points when that character is first created (after initial funds are determined, of course), and then a maximum of once per level, including first level, throughout that character's career. This opportunity is not cumulative—if a player makes no money/point exchange before his character reaches second level, he can still only make one such exchange before the character becomes third level. Within the bounds of this restriction, however, a player can make such an exchange whenever he wants—he doesn't need to wait until the moment of level advancement.

The procedure for making this exchange is always the same: The player determines how much total wealth the character has, as defined in Character Wealth, Treasure, and

Money, below. He can only make the exchange if the total is at least 30 gp, except that a character can always make the exchange with his initial funds.

This total wealth is divided by three. One character point costs one third of the character's wealth, and he can buy a maximum of three points by spending all of the character's money. The deductions occur immediately, though the character does not get to spend or give away his lost wealth. The DM will decide the exact campaign situation. Coins and gems are stolen, for example, while livestock falls to disease, trade goods rot, ships sink, etc.

Character points, as a general rule, cannot be expended for money or items of equipment. However, the DM can make an exception during character creation. If a player wishes to start out with an unusual amount of wealth, he can cash in a single character point for an extra roll on the Initial Character Funds Table in the *Player's Handbook*.

## Character Wealth, Treasure, and Money

A character's financial worth can be counted in many ways—only two of which are relevant in making a trade for character points as described above.

The most obvious, of course, remains the metal coins, precious baubles, and ornamented jewelry that have been standards of wealth for millennia. In game terms, this treasure is represented by a value measured in gold pieces.

Secondly, wealth can be measured in personal possessions (including weapons, armor, and magical items), all manner of trade goods, livestock and beasts of burden, wagons, tack and harness, boats and ships.

The total of these two categories equals the character's wealth for purposes of the money-for-points trade explained above. When making this total, however, the character is allowed to hold one weapon and one other possession (armor, magical item, horse, etc.) out of the equation.

The DM should insure that players are straightforward about their wealth when making such an exchange. There are several forms of wealth discussed below which are not relevant for purposes of the money/character point trade. However, a player who converts most of his assets into another form (purchasing an estate for 10,000 gp, for example, in the process spending everything but his last 60 gp) should not be allowed to immediately trade 20 gp increments for character points. In this case, the land and holdings should count toward the total, and immediately suffer a 1/3 devaluation of their worth. Flooding, earthquakes, tornadoes, or locusts are a few suggested DM tools for accomplishing this price decrease.

### Different Forms of Wealth

There are several other kinds of character wealth not totaled into the assets when trading for character points. But they can still represent important aspects of a character's financial status.

## Land and Holdings

In many medieval societies, land is the clearest measure of a character's wealth. Large holdings will often include obligations for taxes from those who live on the land. At the same time, a character such as a knight who owns an estate of his own will likely owe some type of fealty to a higher lord, who will in turn owe loyalty to a king.

Although the taxes levied (and owed) by such a character will probably be measured in gold pieces, the land and buildings themselves exist as they are. Any attempt to render their worth into coinage will be only vaguely accurate, at best.

In addition, any kind of estate or holding will require maintenance of its buildings and lands, as well as the hiring and feeding of a potentially very large staff of servants to perform a variety of tasks.

The specifics of these costs are beyond the scope of this book (See *The Castle Guide* for more information). Players should be aware that owning lands is not simply a matter of gaining a piece of property for their characters and then sitting back and watching the money roll in.

## Titles

Titles of nobility can signify wealth in several different ways. Occasionally, a title will include a straightforward annual salary in gold pieces. More often it will entitle the owner to a certain amount of tax revenue, based on those who labor under the titled character's protection. It is even possible that the gaining of a title may cost a character money, depending on the deeds and needs of the titled character and his liege.

Sometimes a title will include the right to own an estate (see Land and Holdings above). Even if an estate is not included, a newly titled character may be forced to purchase an appropriate piece of property to do justice to his exalted rank.

## Partnerships

A character who owns a shop or other business—or who has contributed money to the owner of such an establishment—has a form of wealth represented by the business. This includes the building where the shop is located, as well as the material goods within. Some examples include the clay, potter's wheel, and finished crockery in a potter's shop, and barrels of ale and foodstuffs for an inn.

The business itself is often an intangible, but nevertheless very real, aspect of a character's wealth. If "Blutar's Place" establishes a reputation in a city as a friendly inn for mercenaries, even if the building burns down and is rebuilt in a new location, chances are good that the mercenaries will find it and keep coming back. (Of course, if they're the ones who burned it down in the first place, the owners might want to try and upgrade their clientele!)

This type of asset is most likely to occur in a Middle Ages or later campaign setting.

## Debts

Debts can be owed in exchange for value or services provided by one character to another. Indeed, for a transient adventurer, being owed money and/or services by others is not a bad way to maintain wealth.

For example, Blutar the fighter drives a pack of bullies out of a comfortable inn. The innkeeper, in gratitude, awards Blutar the best room in the place—and free food and drink—whenever he is in town. Because of this debt, Blutar, even when he's broke, can live pretty high on the hog.

Of course, characters need to take some care about their debtors. Someone who gets a lot of cash as a loan might suddenly decide to relocate, and then the debt is no good. Or, our aforementioned tavern owner might get sick of Blutar's apparently insatiable appetite

and find an even better fighter to drive Blutar out of the inn—so much for the debt.

Still, if a character goes through the campaign world frequently helping others with service and treasure, he stands a much greater chance of finding others willing to help him in times of need.

### Ways to Spend and Save Money

The economies of campaign worlds vary widely. At the most primitive level, money is an unknown concept—"economics" is a matter of finding someone with the proficiency to do a certain task, and then bartering, persuading, or cajoling him to do it.

In a more typical game environment, however, characters will have means of counting their money, and an interest in acquiring as much of it as they can get their hands on.

But what to do when that treasure sack gets too heavy to carry around? Of course, a character can always convert silver to gold, and then gold to gems, as a means of keeping his money portable. For those players who want to take a little more practical approach to the problem, here are some suggestions:

#### Moneylending

As explained under Debts, above, a character's wealth includes those funds owed him by other characters. Whether he wants to charge interest, a character can keep a large sum of money in his own name by allowing someone else to use it for awhile.

There are, of course, risks. Even the most trusting character will want to get something in writing (which may entail finding a scribe or some formal witness). Then there is the matter of the debtor's honesty, not to mention the misfortunes that might befall the fortune. Still, by lending his money and taking an I.O.U in exchange, a character relieves himself of the need to cart all that treasure around.

#### Entrepreneurism

The entrepreneurial spirit exists in virtually every environment where money is a quantifiable entity. In a campaign, the entrepreneur is anybody who spends his money on a risky venture that stands a chance of making him a greater return than his initial investment.

There are several means of doing this—a player needs to decide if he wants his character involved in the daily work of the venture, or if he wishes to give his money to a trusted NPC and see what happens.

A character can offer to sponsor a talented NPC (or PC, for that matter). If an apprentice displays a great deal of pottery skill, the sponsor might buy him a wheel, clay, dyes, and a small shop in which to work. In return, the potter would pay a portion of his earnings to his sponsor—either on an ongoing basis, or until the debt and interest have been paid off.

Other subjects of sponsorship can include entertainers—jugglers, minstrels, acting companies, and the like—merchants (see Trading, below), and any character who would like to open a small shop or tavern of his own.

Business opportunities also can be found in many campaign worlds. Whether a player wants to open his own business, or pay for another character to take his chances, money can be spent to set up shops, inns, ferry and other transport services, and so on. Virtually

any kind of service or goods in the campaign world will require some initial investment before a PC or NPC can get started.

## Charity

Charity is not an investment in any calculated financial sense, but it can pay big dividends to a generous player character. Anyone who makes a practice of sharing his wealth with those less fortunate will earn a deep and lasting sense of gratitude from those he helps. The archetype of this role, of course, is the legendary figure of Robin Hood.

This gratitude can be manifest in many ways. If fortunes reverse, a formerly-wealthy character can find that those he once aided are now willing to aid him in return. Too, those who benefit from a PC's charity will tend to regard their benefactor quite protectively. They will pass along information about the plans and intentions of the PC's enemies, and even seek to thwart those plans by diversion, pretended ignorance, and so forth.

## Scutage

This medieval form of debtorship represents a payment made by a knight or other character who owes fealty to a higher lord. In lieu of joining the ruler's current military campaign, the character can pay a scutage fee. Often the king will welcome a payment of gold or gemstones even more than he would the services of one more blade. Alternately, if the PC is the ranking character, he can find his coffers swelled by the ranks of his followers who have more important things to do than help him slay the pesky dragon, or drive off the marauding orcs.

The exact terms of scutage must be negotiated. Relevant factors will include the dangers of the contemplated campaign, the wealth of the underling, and the need of the ruler to have help. Also, scutage may be demanded after the fact—if the knight didn't show up when he was expected, the king will probably come to see him after the campaign. In this case the scutage fee will be significantly higher than the previously negotiated settlement.

## Trading

One of the most time-honored means of making money involves taking something a character has in plenty, and carrying it where that plentiful item is in great demand. Ideally, the character then gathers some cargo that will draw high prices when he returns home. Trading missions can occur over land or water.

A character may contribute money to a sea captain who's planning to carry a load of local wool, wine, and dye across a small sea. On the far shore, the seaman will barter for spices, silk, and steel. When he returns and sells those goods locally, all the investors will ideally receive their share of the profits.

The trials and tribulations faced by such traveling merchants are too numerous to count. Ships sink, sandstorms scatter desert caravans, and bandits prey on weakly-defended parties.

Trading expeditions can make splendid adventures, if the players are interested in sending their characters on such a trek. Alternately, a wealthy PC can put his funds at the disposal of a reputable sea captain or merchant and see what kind of profits or losses result. The DM will need to adjudicate these attempts, factoring in distance traveled, risks

of weather, terrain and banditry, and the relative worth of the goods in their points of departure and arrival.

For example, a character gathers the funds to purchase 100 mules, 100 pack saddles, and 400 bolts of fine wool. His journey will take him over a mountain range and through a forest known to contain goblins. If the PCs accompany the caravan, the DM could present attacks by griffons in the heights, several harassing attacks by goblins, one major ambush, and a challenging river crossing. Each of these might cost the caravan one or more mules, and several loads might be lost in the river even if the mules make it across. When the caravan reaches its destination, the characters can also role-play the bartering of the wool for other goods or treasure. In the end, the profit or loss of the mission will be a matter of gaming adventure.

Alternately, the character might fund a group of NPCs to perform this mission. The DM will then judge the risks and losses of the mission, as well as the honesty of the NPCs. After a suitable period of game time has passed, those NPCs will (hopefully) show up at the PC's home base to give him his profits.

## Disposition of Wealth—Example

Gronyard, a mighty warrior, returns from an extended adventure during which he rescues the daughter of the king from an evil dragon, slays the dragon, and acquires some 12,000 gold pieces worth of treasure—gems, coins, and a precious artifact, a comb of gold, studded with diamonds.

Upon his return to civilization, Gronyard is made a baron by the king, who is tremendously grateful that his daughter was spared. The title includes a large house that is in need of some repair, but does not include ownership of any significant lands.

Up to this point, Gronyard can cash in some of his treasure for character points—4,000 gp for each point. However, he decides not to do this. Instead, he invests 2,000 to fix up the house, and another 5,000 to buy a large swath of prime farmland. He decides to keep the golden comb (worth about 3,000) as his portable treasure, which leaves him another 2,000 gp as spendable assets.

With that money he invests in a caravan of goods which can travel through the newly opened mountain pass (now that Gronyard has slain the dragon that used to block the way.)

If Gronyard now decides to buy a character point, the cost will still be 4,000 gp because he can't divest himself of liquid assets just before making this trade.

Gronyard also has some intangible wealth, in that the king is still going to be grateful for his daughter's life. If Gronyard needs a hand, chances are that the king will remember this debt. On the other hand, the king will also remember Gronyard as a mighty warrior—if the monarch needs a stalwart battle captain, he may demand Gronyard's services. If our hero is unwilling (or perhaps unable, for example if he accompanied his goods caravan), than he might have to pay a significant scutage fee—perhaps even handing over his treasure golden comb!

As the year passes, Gronyard's wealth will change. His house and lands will require upkeep, and servants will have to be paid. Still, his tenants might provide him with tax income, or his trading caravan might return with goods worth two or three times his initial investment!

## Encumbrance and Movement

*The AD&D Master's Options*: *Skills and Powers* rules retain the encumbrance categories (None, Light, Moderate, Heavy, Severe) familiar to players. As always, the level of detail for encumbrance rules is a matter for DMs and players alike to choose.

The rules of this section are intended to offer streamlining options—ways that players can retain the necessary details of encumbrance without quite so much mathematical precision. And, as always, they're designed to add a few new elements of fun.

Even the fastest sprinter won't move so quickly when he's carrying 140 pounds of armor, weapons, and adventuring gear. A character's encumbrance falls into five categories: None, Light, Moderate, Heavy, and Severe. Encumbrance is described in the *Player's Handbook* in Chapter Six: Money and Equipment.

To determine the character's encumbrance category, find his Strength and read across the table. The numbers on the table are the breakpoints for each category. A character with a Strength of 14 is not encumbered until he has 56 pounds of gear, Lightly encumbered until he has 86 pounds of gear, Moderately encumbered until he carries 116 pounds of gear, and Heavily encumbered up to a load of 146 pounds.

To calculate a monster's strength for this purpose, add 31_2 points per size category (rounded down) to the monster's base Hit Dice (ignoring plusses).

## Simplified Encumbrance

If the standard encumbrance rules aren't worth the trouble, here's an easier way to do it. Most of the weight a character carries is in armor and weapons. To streamline things, only use the character's armor, shield, and largest weapon when figuring the total weight carried. This slightly favors PCs, but it's much faster than tracking every addition of weight.

## Expanded Base Movement

Characters who have a high score in either Dexterity/Balance or Strength/Stamina, or both, can increase their base movement allowance above the 6 or 12 for characters of their race.

For characters with high Strength/Stamina scores, add the character's Attack adjustment (bonus added on rolls to hit) to the character's base movement allowance.

If a character has a high Dexterity/Balance score, add the character's Reaction/Attack adjustment to the base movement allowance.

A character with multiple high scores can add the bonuses from both of these categories.

**Table 54: Strength and Encumbrance**

| Character | Encumbrance Category | | | |
|---|---|---|---|---|
| **Strength** | **Light** | **Moderate** | **Heavy** | **Severe** |
| 3 | 6 | 7 | 8 | 10 |
| 4–5 | 11 | 14 | 17 | 20 |
| 6–7 | 21 | 20 | 39 | 47 |
| 8–9 | 36 | 51 | 66 | 81 |
| 10–11 | 41 | 59 | 77 | 97 |
| 12–13 | 46 | 70 | 94 | 118 |

| | | | | |
|---|---|---|---|---|
| 14–15 | 56 | 86 | 116 | 146 |
| 16 | 71 | 101 | 131 | 161 |
| 17 | 86 | 122 | 158 | 194 |
| 18 | 111 | 150 | 189 | 228 |
| 18/01 | 136 | 175 | 214 | 253 |
| 18/51 | 161 | 200 | 239 | 278 |
| 18/76 | 186 | 225 | 264 | 303 |
| 18/91 | 236 | 275 | 314 | 353 |
| 18/00 | 336 | 375 | 414 | 453 |

A creature's final movement is figured by comparing current encumbrance with natural base movement.

**Table 55: Movement and Encumbrance**

| Base | Encumbrance Category | | | | |
|---|---|---|---|---|---|
| **Move** | **None** | **Light** | **Moderate** | **Heavy** | **Severe** |
| 1 | 1 | 1 | 1 | 1 | 1 |
| 2 | 2 | 2 | 1 | 1 | 1 |
| 3 | 3 | 2 | 2 | 1 | 1 |
| 4 | 4 | 3 | 2 | 1 | 1 |
| 5 | 5 | 4 | 3 | 1 | 1 |
| 6 | 6 | 4 | 3 | 2 | 1 |
| 7 | 7 | 5 | 4 | 2 | 1 |
| 8 | 8 | 6 | 4 | 2 | 1 |
| 9 | 9 | 7 | 5 | 2 | 1 |
| 10 | 10 | 7 | 5 | 3 | 1 |
| 11 | 11 | 8 | 6 | 3 | 1 |
| 12 | 12 | 9 | 6 | 3 | 1 |
| 13 | 13 | 10 | 7 | 3 | 1 |
| 14 | 14 | 11 | 7 | 4 | 1 |
| 15 | 15 | 12 | 8 | 4 | 1 |
| 16 | 16 | 12 | 8 | 4 | 1 |
| 17 | 17 | 13 | 9 | 4 | 1 |
| 18 | 18 | 14 | 9 | 5 | 1 |

In addition to affecting how far a character can move in a combat round, encumbrance also affects how well a character can fight. Moderately encumbered characters suffer a –1 penalty to attack rolls. Heavily encumbered characters suffer a –2 attack penalty, and their Armor Class suffers a +1 penalty. If the character is severely encumbered, he suffers a –4 penalty to all attacks and a +3 penalty to his Armor Class.

## Recording Bulk (Optional Rule)

In addition to weight, the items of equipment are given a bulk rating—an expansion of the earlier categories S, M, and L. The bulk ratings are separate from weight, and represent how much space each object takes up.

Small Size (S) =0, 1, 2 bulk points

Medium Size (M) =3, 4, 5 bulk points

Large Size (L) =6* or more bulk points

*Some large objects, particularly weapons, will actually have lower bulk points than 6. Since the weapon size is primarily a factor of length, these items can be transported with relative ease.

Players who want the added realism can keep track of how many points of bulk they are carrying. The rule is especially useful for planning a trading caravan and calculating how many goods an individual porter or beast of burden can carry. Vessels such as packs and pouches are limited in how much bulk they can carry:

**Backpacks** can vary in size, and they hold an amount of bulk equal to a character's Strength score.

**Belt pouches** can hold up to 3 bulk points. A single character can wear no more than two belt pouches.

**Saddlebags** (horse or mule) can hold up to 4 bulk points, and each animal carries two saddlebags. The capacities of some other animals include (per saddlebag): dog=1; donkey/burro=3; camel=10; elephant=20.

## Effects of Bulk

A human character can carry an amount of bulk equal to his Strength/Stamina score without suffering any ill effects. If he tries to carry more bulk than his score allows, he suffers one penalty in encumbrance class. For example, if Blutar, with a Strength/Stamina of 17, is loaded down with 20 bulk points of light material, his encumbrance might only be Light, but for game purposes it is treated as Moderate.

Smaller characters can carry less than their Strength/Stamina score in bulk before they suffer the encumbrance penalty, as follows:

**Halflings** and **gnomes** can carry 1/2 their Str/Stamina score in bulk.

**Elves** can carry their Strength/Stamina –3 in bulk points.

**Dwarves** can carry their Strength/Stamina –1.

A character's weapon does not count toward his bulk rating, though a shield does. Armor is not counted as bulk, but it has the effect of lowering the total bulk the character could otherwise bear. See the equipment tables to determine the capacity penalties for each type of armor.

No character can carry more than twice his Strength/Stamina score in bulk.

## Recording Encumbrance (Simplified)

Characters can simplify the recording of encumbrance for purposes of the Skills and Powers rules. For most encounters, determine the character's encumbrance by considering only his armor, shield and largest weapon. These are generally the most significant parts of his load, and thus will provide a reasonably accurate rating.

If the character is carrying camping or exploring equipment, or trade goods, extra supplies, etc., the additional encumbrance also can be simplified. If the character is carrying a backpack, figure 10 pounds if he has miscellaneous exploring equipment (rope, lantern, oil, spikes, etc.), 20 pounds for camping equipment (bedroll, cloak or spare clothes, tinderbox and food). Add only five-pound increments for extra items—trade goods, treasure, extra oil flasks, etc.

## Weight

The equipment tables at the end of this chapter contain a weight for every listed item. Players and DMs can use these weights to calculate exact character loads.

# Equipment Tables

### Table 56: Stone Age/Savage Settings

(Italicized entries are only present in metal-using cultures.)

**Weapons:**

Adze; Axe, stone; *Battle axe*; Blowgun—barbed dart, needle; Bola; Boomerang; Bow, short—arrow, stone, *arrow, flight*; club; *Dagger*, Bone dagger, Stone dagger; *Dart; Hand axe; Harpoon;* Bone harpoon; *Javelin*; Stone javelin; *Knife*; Bone knife; Stone knife; Lasso; *Machete*; Quarterstaff; Rock; Sling—Sling stone; *Spear; Throwing Knife*; War club

**Armor:**

Cord armor; Hide armor; Leather; Padded; Studded leather; Wood/Bone

**Transportation/Livestock:**

**Animals:** Cattle; Dog, war; Donkey; Goat; Horse—draft; Sheep

**Wheeled:** *Chariot; Cart*

**Watercraft:** *Canoe; Curragh*; Raft

### Table 57: Bronze Age/Ancient Settings

(Italicized weapons have a limited availability based on the DM's discretion, as they were not as common as the other weapons.)

**Weapons:**

Adze; Battle axe; Bow (long bow, short bow, composite short bow)—Arrow, flight; Cestus; Dagger; Dart; Hand/Throwing axe; Javelin; Lance, light; Mace, footman; Mace, horseman's; *Mace-axe*; Pike; Quarterstaff; Spear; Spear, long; Staff sling—*stinkpot*, stone; Sword (*Broad sword*, Khopesh, Sapara, Short, Sword-axe; Trident; *Two-handed axe*; Warhammer; War club

**Armor:**

Bronze plate; Cord armor; Hide armor; Leather; Light scale; Padded; Ring mail; Scale; Studded leather; Wood/Bone

**Transportation/Livestock:**

**Animals:** Cattle; Dog—war, hunting; Donkey; Goat; Horses—draft, riding, light war; Sheep

**Wheeled:** Chariot; Cart

**Watercraft:** Canoe; Curragh; Dromond; Raft

### Table 58: Cultures of the Roman Age

(Italicized weapons are associated with barbarians or empire-frontier areas.)

**Weapons:**

Battle axe; Bow (long bow, short bow, composite short bow)—Arrow, flight; Cestus; Dagger; Dart; *Hand/Throwing axe*; Javelin; Lance (light, medium); Mace, footman; Mace, horseman's; Net; Pilum; Quarterstaff; Spear; Spear, long; *Staff sling*—stinkpot,

stone; Sword (*Broad sword*, Drusus, Gladius, Spatha) Trident; Warhammer

**Armor:**

Banded Mail; Bronze plate; Leather; Light scale; Padded; Ring mail; Scale; Studded leather

**Transportation/Livestock:**

**Animals:** Cattle; Dog—war, hunting, guard; Donkey; Elephant; Goat; Horses—draft, riding, light war, medium war; Hunting cat; Sheep

**Wheeled:** Chariot; Cart (2 wheeled)

**Watercraft:** Canoe; Coaster; Curragh; Dromond; Galley; Raft

## Table 59: Dark Ages

(Italicized weapons are made in more civilized realms or are late developments of the period, and may not be available at the DM's discretion.)

**Weapons:**

Battle axe; Bow (long bow, short bow, *composite short bow*), Arrow (flight, sheaf); Caltrop; Crossbow (*Light crossbow*, Pellet bow), (*Light quarrel*, Pellet); Dagger; Dart; Hand/Throwing axe; Javelin; Lance (light, medium); Mace, footman's; Mace, horseman's; Quarterstaff; Spear; Spear, long; Staff sling—stinkpot, stone; Sword (Broad sword, *Long sword*, *Sabre*, Short sword); Two-handed axe; Warhammer

**Armor:**

Bronze plate; Chain mail; Leather; Light scale; Metal lamellar; Padded; Ring mail; Scale; Studded leather

**Transportation/Livestock:**

**Animals:** Cattle; Dog—war, hunting, guard; Donkey; Goat; Horses—draft, riding, light war, medium war, heavy war; Sheep

**Wheeled:** Chariot; Cart (2 wheeled)

**Watercraft:** Canoe; Coaster; Curragh; Dromond; Galley; Raft

## Table 60: The Crusades

**Weapons:**

Battle axe; Bow (Long bow, Short bow, Composite long bow, Composite short bow), Arrow (Flight, Sheaf, Pile); Caltrop; Crossbow (Light crossbow, Heavy crossbow, Pellet bow), (Light quarrel, Heavy quarrel, Pellet); Dagger, Stiletto; Flail, footman's; Flail, horseman's; Hand/Throwing axe; Javelin; Lance (Light, Medium, Heavy, Jousting); Mace, footman's; Mace, horseman's; Maul; Morningstar; Pick, footman's; Pick, horseman's; Polearm (Awl pike, Bardiche, Bec de corbin, Bill, Bill Guisarme, Fachaurd, Glaive, Glaive-guisarme, Guisarme, Halberd, Lucern hammer, Military fork); Quarterstaff; Spear; Staff sling—stinkpot, stone; Sword (Bastard sword, Broad sword, Falchion, Long sword, Sabre, Short sword, Two-handed sword); Warhammer

**Armor:**

Chain mail; Improved mail; Leather; Metal lamellar; Padded; Plate mail; Scale; Studded leather

**Transportation/Livestock:**

**Animals:** Cattle; Dog—war, hunting, guard; Donkey; Goat; Horses—draft, riding, light war, medium war, heavy war; Sheep

**Wheeled:** Chariot; Cart (2 wheeled); wagon

**Watercraft:** Canoe; Coaster; Cog; Curragh; Dromond; Galley; Knarr; Longship; Raft/keelboat

### Table 61: Late Middle Ages/Renaissance

**Weapons:**

Battle axe; Brandistock; Bow (Long bow, Short bow, Composite long bow, Composite short bow), Arrow (Flight, Sheaf, Pile); Caltrop; Crossbow (Light crossbow, Heavy crossbow, Pellet bow), (Light quarrel, Heavy quarrel, Pellet); Dagger, Main-gauche, Parrying dagger, Stiletto; Flail, footman's; Flail, horseman's; Hand/Throwing axe; Lance (Light, Medium, Heavy, Jousting); Mace, footman's; Mace, horseman's; Mancatcher; Maul; Morningstar; Pick, footman's; Pick, horseman's; Polearm (Awl pike, Bill, Bill-guisarme, Glaive-guisarme, Halberd, Military fork, Partisan, Ranseur, Spetum, Voulge); Quarterstaff; Spear; Staff sling—stinkpot, stone; Sword (Bastard sword, Broad sword, Claymore, Cutlass, Falchion, Long sword, Rapier, Sabre, Short sword, Two-handed sword); War hammer

**Armor:**

Brigandine; Chain mail; Field plate; Full plate; Leather; Metal lamellar; Padded; Plate mail; Splint mail; Studded leather

**Transportation/Livestock:**

**Animals:** Cattle; Dog—war, hunting, guard; Donkey; Goat; Horses—draft, riding, light war, medium war, heavy war; Sheep

**Wheeled:** Chariot; Cart (2 wheeled); wagon

**Watercraft:** Canoe; Caravel; Coaster; Cog; Curragh; Drakkar; Dromond; Galley; Great galley; Knarr; Longship; Raft/keelboat

### Table 62: Middle Eastern Cultures

**Weapons:**

Ankus; Bagh nakh; Battle axe; Blowgun; Bow (Composite long bow, Composite short bow), Arrow, flight; Chain; Chakram; Crossbow (Hand crossbow, Light crossbow, Pellet bow), (Hand quarrel, Light quarrel, Pellet); Dagger, Jambiya, Katar; Dart; Flail, footman's; Flail, horseman's; Hand/Throwing axe; Javelin; Lance (Light, Medium); Mace, footman's; Mace, horseman's; Mancatcher; Polearm (Awl pike, Glaive, Halberd, Military fork) Quarterstaff; Spear; Spear, long; Sword (Cutlass, Great scimitar, Long sword, Sabre, Scimitar, Short sword, Tulwar); Trident

**Armor:**

Brigandine; Chain mail; Cord; Hide; Improved mail; Leather; Light scale; Metal lamellar; Padded; Scale; Studded leather

**Transportation/Livestock:**

**Animals:** Dog—war, hunting, guard; Camel Donkey; Goat; Horses—draft, riding, light war, medium war; Sheep

**Wheeled:** Chariot; Cart (2 wheeled); wagon

**Watercraft:** Canoe; Coaster; Cog; Dromond; Galley; Great galley; Raft/keelboat

### Table 63: Oriental Cultures

**Weapons:**

Ankus; Battle axe; Blowgun; Bo stick; Bow (Composite long bow, Composite short bow,

Short bow), Arrow (Flight, Sheaf); Chain; Chakram; Chijikiri; Crossbow (Cho-ku-no; Light crossbow, Pellet bow), (Hand quarrel, Light quarrel, Pellet); Dagger; Dart; Gunsen; Hand axe; Javelin; Jitte; Kama; Kau sin ke; Kawanaga; Kusari-gama; Lance (Light, Medium); Mace, footman's; Mace, horseman's; Mancatcher; Nunchaku; Polearm (Awl pike, Lajatang, Nagimaki, Tetsubo); Sai; Sang kauw; Shuriken; Spear; Spear, long; Sword (Cutlass, Katana, Ninja-to, No-dachi, Sabre, Short sword, Tulwar, Wakizashi); Trident

**Armor:**

Brigandine; Chain mail; Cord; Hide; Leather; Light scale; Padded; Ring mail; Splint mail; Studded leather

**Transportation/Livestock:**

**Animals:** Dog—war, hunting, guard; Donkey; Elephant; Goat; Horses—draft, riding, light war, medium war; Sheep

**Wheeled:** Chariot; Cart (2 wheeled); wagon

**Watercraft:** Canoe; Coaster; Cog; Dromond; Galley; Raft/keelboat

# Master Equipment Tables

## Table 64: Weapons

| | | Weight | | | Speed | Damage | |

1 Bone or stone weapons have a 1 in 6 chance of breaking any time maximum damage is

rolled.
2 These weapons weigh little individually; 10 equal 1 pound.
3 These weapons inflict double damage when set to receive a charge.
4 These weapons require two hands to use, regardless of the wielder's size.
5 These weapons do double damage when used in a mounted charge.
6 This weapon dismounts a rider on a successful hit.

## Table 65: Missile Ranges and Rates of Fire

| | | Range(x5 yds) | | |
|---|---|---|---|---|
| **Missile Type** | **ROF** | **Short** | **Med.** | **Long** |
| Blowgun | 2/1 | 2 | 4 | 6 |
| Bolas | 1 | 6 | 12 | 18 |

| Writing ink (vial) | 8 gp | 3 | 0 | Roman |

1 Bulk points in parentheses represent the carrying capacity of the item; the number before the parentheses is the bulk points when the item is empty.
2 A backpack can carry bulk points equal to the character's strength.
3 These items weigh little individually; 10 weigh 1 pound and equal 1 bulk point.

**Table 68: Household Provisions/Trade Goods**

| Pipe, self-lighting | 25 gp | 1 | 1 |
| Utensils (self-lighting) | | | |
| --Carving Knife | 10 gp | † | 0 |
| --Cooking Kettle | 20 gp | 6 | 2 |
| --Ladling Spoon | 8 gp | † | 0 |
| --Pouring Pitcher | 20 gp | 4 | 1 |
| --Rollfroster | 10 gp | 1 | 1 |
| --Teapot | 50 gp | 1 | 1 |

**Table 72: Gnomish Equipment**

| Item | Cost | Wieght | Bulk Points |
|---|---|---|---|
| Coinmaker | 10000 gp | 1000 | 150 |
| Jewel spotter gem (causes light to sparkle in authentic gems within 10' radius) | 1000 gp | † | 0 |
| Jeweler's hammer/chisel | 100 gp | 2 | 1 |
| Polisher rag (shines all metals) | 20 gp | † | 0 |
| Steel etcher | 100 gp | 3 | 1 |

† These wiegh little individually; 10 equal 1 pound

**Table 73: Common Magic Items**

| | Campaign Occurrence | | | | | |
|---|---|---|---|---|---|---|
| **Item** | **Low** | **Medium** | **High** | **Cost** | **Weight** | **Bulk Points** |
| Healing salve (per dose; heals 1—3 hp) | 05% | 25% | 60% | 10+ gp | 1 | 1/4 |
| Lock (open and close on command) | 10% | 30% | 75% | 25+ gp | 2 | 1/4 |
| Peephole gem; allows user to see through up to 6" thickness wood or stone | 02% | 20% | 50% | 50+ gp | † | 0 |
| Permanently—attached horseshoes | 10% | 30% | 75% | 5+ gp | 1 | 1/2 |
| Permanently lighted gold piece | 05% | 20% | 50% | 50 gp | † | 0 |
| Poison antidote (per dose); allows second saving throw vs. poison | 15% | 50% | 90% | 10+ gp | 1 | 1/2 |

*Campaign occurrence indicates the likelihood of a character finding this item in a well—stocked bazaar or marketplace. The categories represent campaign settings of low,

medium, and high incidence of magical items, spells, and equipment. The cost listed is generally the price in a high magic setting; where the items are more rare, the cost will tend to be higher.

# Chapter 8: New Schools of Magic

This chapter introduces four new types of specialist wizards: the alchemist, geometer, shadow mage, and song wizard. The schools of magic that these wizards specialize in are unusual because they are artificial: they contain only spells drawn from other, existing schools. All of the usual rules regarding specialist wizards apply to these four, unless the description states otherwise. Using these as a guide, players and DMs can experiment with creating their own, unique specialist wizards.

**Magic** The *Skills and Powers* rules add flavor and breadth to the spellcasting character classes. Use of these rules is optional, though recommended for characters created with the *Skills and Powers* systems.

## Wizards and Character Points

When a wizard character is created, and each time he advances in level, the player can elect to spend 2 or more character points to acquire an additional spell for his character's spellbook. This is similar to the specialist wizard's ability to automatically add one spell of his specialty to his repertoire each time he gains a level. The player is allowed to pick any spell his character could normally cast (i.e., he can't pick spells from opposing schools), and no roll for learning the spell need be made.

The spell purchased with character points must be of equal or lower spell level than the highest-level spell currently entered into the character's book. The cost is 2 character points for a 1st-level spell, +1 character point for each level of the spell beyond first. For example, a 3rd-level spell would cost 4 character points; a 7th-level spell would cost 8 points.

No more than one additional spell can be acquired with character points when the character is first created, and a character can add no more than one such spell each time he advances a level of experience. However, this ability is cumulative with a specialist wizard's bonus spell—when a specialist wizard gains a level, he learns one spell from his specialty school free, and can spend additional character points to automatically learn a second spell from any school he knows.

## Wizard Specialists: New Schools of Magic

As magic users in the multitude of campaign worlds have progressed in their arts, an

ever-greater diversity of styles and types of wizardry have been developed. Growing from the rigid schools of opposing magical powers outlined in the *Player's Handbook*, more and more disciplines have branched out as young wizards have taken a more liberal interpretation of their masters' teachings. These developments have resulted in new types of spellcasting, each of which focuses on the way in which magic is drawn from the environment and bent to the wizard's will.

When a wizard character is created (or an existing AD&D character is converted to Player's Option rules), the player can elect for his character to specialize in one of the following new schools of magic. These schools are similar to the elemental wizard or wild mage introduced in the *Tome of Magic*, but the new specialist wizards defined here—the alchemist, the shadow mage, and the song wizard—have developed alternate styles of spellcasting and spell organization.

The main purpose for specializing in a magic type is as an aid toward effective role-playing, though the specialties can benefit and hinder characters in various game situations. The use of these new magic types, like any other subsystem in the AD&D game, is subject to the DM's approval. Several of these new schools require a certain amount of campaign or encounter background. The powers of the shadow mage, for example, vary with the prevalent lighting conditions, and the DM must be prepared to answer a player's questions about these conditions any time the player character wishes to cast a spell.

## Choosing a Magic School Specialty

To select a specialty, a wizard character generally has to meet more demanding ability score criteria than a standard mage, and he may have certain backgrounds or origins (in other words, character kits) barred to him. A player is free to choose any specialty the requirements of which his character meets. Naturally, a player may wish to select his character's specialty based on his own interests—song wizards provide good role-playing for players inclined toward music, while scientifically-minded players might enjoy an alchemist who can constantly fuss with odd ingredients and complicated formulae.

**Creating New Schools:** The magic types listed in this chapter are the most common examples of alternate spellcasting techniques. However, other approaches are certainly possible. If a player comes up with a great concept for defining a new school or discipline of magic, he can do so with the DM's approval. In turn, the DM should carefully review the player's design for concept, playability, and game balance before allowing the new specialist in game play.

Generally, a specialist mage should have spells that he can cast with superior skill, balanced by a loss of spells from outside his specialty. All specialists should gain the standard extra spell memorization slot at each level, as well as advantages in learning spells from their specialty and penalties for learning generic spells. Last but not least, a specialist may have non-spellcasting benefits or hindrances, such as the alchemist's ability to create potions, or modifiers to their saving throws.

## Effects of Magic School Specialization

- Choosing a specialty provides a wizard character with a number of benefits. For all the schools introduced in this chapter, the following advantages apply:

- A specialist gains one additional spell per spell level, provided the spell is taken in the specialist's school. Thus, a 1st-level alchemist can memorize two spells instead of only one, as long as at least one of them is from the school of alchemy.
- Specialists receive a bonus of +15% when learning spells from their school, and a penalty of –15% when learning spells from any other school. The bonus or penalty is applied to the percentile roll the player must make when the character is attempting to learn a new spell.
- Whenever a specialist reaches a new spell level, he automatically gains one spell of his school to add to his spell books. This can be selected by the DM or he can allow the player to pick. No learn spells roll need be made.
- When a specialist wizard attempts to create a new spell using the rules given in the *DMG*, the DM should count the new spell as one level lower if the spell falls within the school of the specialist. An alchemist attempting to create a new 2nd-level alchemy spell conducts his research as if it were a 1st-level spell, since the character has a superior understanding of his school.

Note that the saving throw modifiers granted to specialists in the *Player's Handbook* and *Tome of Magic* aren't abilities of the specialist wizards described in this book. They have other abilities that are more specific to their particular methods of spellcasting, described later in this chapter.

Specialist wizards also have several significant disadvantages to balance their bonuses. First and foremost, each of the new schools described here have opposition schools, just like specialists in the *Player's Handbook*. A specialist cannot learn or cast spells from an opposing school, or use magical items that duplicate the effects of spells from that school. Secondly, the character has a reduced chance to learn spells of other non-opposing schools, as noted above.

## The Alchemist

**Minimum Ability Requirements:**
Intelligence/Knowledge 15; Dexterity/Aim 14
**Races Allowed:** Human, half-elf, gnome
**Prohibited Kits:** Amazon, barbarian, peasant hero, savage

The puttering, scientifically-minded wizard who enjoys working with various material components is likely to find the School of Alchemy to be a welcome source of inspiration and magical might. Alchemists are inventors and experimenters, always striving for a way to create new and greater effects through the use of magical powders, reagents, and potions.

The exact nature of the alchemist's materials is not very important for game play, although it is good role-playing for a player to note which substances and minerals are vital to his character's spells. Unlike most wizards, who define the world by the four classic elements of earth, air, fire, and water, the alchemist believes that each subtle combination of these elements is a new element of its own. Gold may be nothing more than a rare type of earth with a small glimmer of fire in it, but the alchemist considers the properties of gold as a unique substance with no other components. In other words, alchemists describe their world in the modern terms of a Periodic Table of Elements,

even though notions such as atoms, electrons, or atomic weight have no meaning in their universe.

As scientific characters, alchemists will always maintain a large and well-equipped laboratory to pursue their experiments. The laboratory must be well-stocked with all kinds of materials, including samples of every metal or alloy imaginable, equipment such as burners, beakers and bottles, and natural curiosities like magnets, incendiaries, and other such things. An alchemist is assumed to begin play with an appropriate laboratory in his home town or base of operations, but building and outfitting a new laboratory costs at least 1,000 gp per character level, and existing laboratories require at least 50 gp of materials a level per month to be functional. An alchemist without access to his laboratory loses the bonus alchemy spell he could normally memorize at each spell level, and can't conduct research, make potions, or add new spells to his spellbook.

Alchemists have no modifiers to their saving throws or their victims' saving throws, but instead they have the special ability to create potions, starting at 6th level. The alchemist must first research the potion's formula, as if conducting normal spell research; consider the potion's level to be equal to its XP value divided by 100, so a *potion of clairaudience* (XP value 250) is considered a 3rd-level spell, and a *potion of longevity* (XP value 500) is a 5th-level spell. The research time is two weeks per effective level, and the cost is 500 gp per effective level. The alchemist must pass a learn spells check to successfully research the formula. Just like spells, the number of potion formulae the alchemist can ever understand is limited by his Intelligence score Maximum Number of Spells per Level, except that all potions are counted together for this purpose. A character with an Intelligence of 12 can never know how to make more than seven types of potions.

Once an alchemist knows the potion's formula, he can produce one dose by investing in 300–1800 gp worth of materials and spending one uninterrupted week in his laboratory. Again, a learn spells roll applies to see if he followed the directions carefully, or if he ruined the batch instead. If the DM finds that a player is abusing this ability, he can insist on specific adventures to acquire rare and unusual materials such as a griffon's heart, a beholder's eye, and other such hard-to-get items.

**The School of Alchemy:** The school of alchemy is opposed by the Schools of Illusion/Phantasm (things that aren't real are of no interest to alchemists) and Necromancy (similarly, life forces and spirits are too intangible for alchemy.) All the spells in the school of alchemy are considered to have no verbal component when employed by an alchemist, which means that an alchemist has little to fear from a silence spell or any other magic that prevents speaking. The School of Alchemy consists of the following spells; italicized spells appear in the *Tome of Magic*.

Affect normal fires (1st)
*Fire burst* (1st)
Grease (1st)
*Metamorphose liquids* (1st)
Protection from evil (1st)
Fool's gold (2nd)
Glitterdust (2nd)
Melf's acid arrow (2nd)
Pyrotechnics (2nd)

*Sense shifting* (2nd)
Stinking cloud (2nd)
*Alamir's fundamental breakdown* (3rd)
Flame arrow (3rd)
Melf's minute meteors (3rd)
Protection from evil, 10' radius (3rd)
Enchanted weapon (4th)
Fire charm (4th)
Fire trap (4th)
Cloudkill (5th)
Fabricate (5th)
Transmute rock to mud (5th)
Death fog (6th)
Glassee (6th)
Stone to flesh (6th)
Transmute water to dust (6th)
Acid storm (7th)
*Hatch the Stone from the Egg* (7th)
Statue (7th)
Glassteel (8th)
Incendiary cloud (8th)
Crystalbrittle (9th)
*Glorious transmutation* (9th)

## The Geometer

**Minimum Ability Requirements:**
Intelligence/Reason 15; Wisdom/Intuition 14
**Races Allowed:** Human, elf, half-elf
**Prohibited Kits:** Barbarian, savage

Potent magical forces can be locked in designs, symbols, and diagrams of mystical significance. Geometers are wizards who study the summoning and control of magic through the creation of intricate geometrical patterns, ranging from runes drawn on paper or carved in stone to free-floating constructs composed of brilliant lines of energy. For a geometer, the somatic component of a spell—the gestures required to unlock the spell's energy—represent the creation of an extra-dimensional doorway through which magic is drawn and shaped into the form the wizard desires.

Geometers, quite naturally, excel in the casting of any spell that involves the use of a mark, rune, or diagram drawn upon the target of the spell. In fact, a number of spells that are not normally cast in this fashion have been adapted to the geometers' philosophy. For example, geometers cast a *hold portal* spell by placing a minor rune of power upon the door to be barred, and *animate dead* by drawing complicated designs upon the face and hands of the creature to be reanimated. Geometers can also create effects with less substantial materials by sketching a design in the air, as if they were drawing imaginary

circles and angles; depending on the power of the spell, this design may be visible as a glowing web of blue or green energy created by the motion of the geometer's hands.

Geometers enjoy the normal benefits and penalties of specialist wizards, but they have no modifier to their saving throws and do not inflict any penalties to their target's saving throws. They do have the special ability to create scrolls, much like alchemists can prepare potions. At 4th level, the geometer can commit a spell that he knows and can cast to a scroll. He may read the scroll at any time after transcribing the spell, just like casting a normal spell from a scroll. However, the character may not have more than one scroll per character level prepared at any given time—the incomplete magical diagrams become too confusing and complex for the geometer to keep track of if he tries to keep too many scrolls ready for casting.

Transcribing a spell to a scroll requires one full day per spell level, so preparing a 5th-level spell for use in this fashion would take the wizard five days of uninterrupted work. The materials (rare inks, fine parchment, etc.) cost 100 gold pieces per spell level, and the wizard requires a suitable laboratory or library to work in. The geometer can transcribe any spell of the School of Geometry that he knows, or he can engage in normal spell research to find a diagram to convey a spell that he knows outside the School of Geometry. (Once he successfully researches a new spell diagram, it is considered to be part of the School of Geometry for that wizard.) In any event, the geometer must succeed in a learn spells check to see if he successfully transcribed the spell.

Geometers may also attempt to create protection scrolls, beginning at 7th level. The geometer must first research the scroll's diagram through normal spell research; scrolls with an XP value of 1,000 are considered to be equal to 4th-level spells; scrolls with an XP value of 1,500 are equal to 5th-level spells; scrolls with an XP value of 2,000 are equal to 6th-level spells; and scrolls with an XP value of 2,500 are equal to 7th-level spells. The research time is two weeks per effective level, and the cost is 1000 gp per effective level. The geometer must pass a learn spells check to successfully research the formula. Once the geometer knows the diagram, he can produce one scroll by investing in 300–1800 gp worth of materials and spending one uninterrupted week in his laboratory. Again, a learn spells roll applies to see if he followed the directions correctly.

**The School of Geometry:** As noted above, the School of Geometry consists of both diagrams that can be drawn on the target, as well as geometrical designs that can be created through gestures. Often, spells of this school require unusual writing implements—the material components for the spell—but generally, no verbal components are necessary. The School of Geometry is opposed by the Schools of Enchantment/Charm and Illusion.

The following spells are part of the School of Geometry; spells from the *Tome of Magic* are in italics, and spells from *The Complete Wizard's Handbook* are in boldface.

Alarm (1st)
**Copy** (1st)
Erase (1st)
Hold portal (1st)
Shield (1st)
Wizard mark (1st)

Knock (2nd)
Wizard lock (2nd)

Sequester (7th)
Vanish (7th)
Binding (8th)
Maze (8th)
Symbol (8th)
Trap the soul (8th)
Gate (9th)
Shape change (9th)

## The Shadow Mage

**Minimum Ability Requirements:**
Intelligence/Reason 15; Wisdom/Will 14
**Races Allowed:** Human
**Prohibited Kits:** Gladiator, pugilist

The places where light and darkness meet have long symbolized opposition and balance, the clash of good and evil, even of chaos and law. The School of Shadow teaches mages to use these contrasts to reach the secret source and union of all shadow and harness its power. Shadow mages tend to be grim sentinels who have exchanged the bright spark of a normal existence for the power of twilight and darkness. Very few shadow mages are of good alignment; a great number are neutral, and some have embraced the darkness completely and turned to ways of evil.

Shadow mages are closely tied to the Demiplane of Shadow. They have discovered that every shadow in the real world has a mystic connection or source in Shadowland. A wizard with skill and a strong heart can use the most mundane shadows as a doorway to this realm of dusk, calling forth its powers for their own purposes. A number of shadow mages eventually become shades, or creatures whose physical forms have been completely replaced by shadow-stuff, although this doesn't happen to player character shadow mages except in extraordinary circumstances.

In addition to the normal advantages and penalties associated with specializing in a school of magic, a shadow mage's effectiveness is tied to the lighting condition at the time he casts a spell from this school. Naturally, shadow mages are weakest in broad daylight and progressively stronger in weak daylight or dusk, partial darkness, and finally complete darkness. It's not the strength of a shadow, but instead the overall absence of light that strengthens the connection to the plane of gloom.

| Condition | Modifier to Opponent's Saves |
|---|---|
| Bright daylight or continual light | +2 |
| Weak daylight, dusk, or light | none |
| Late twilight, strong moonlight, lantern light | –1 |
| Weak moonlight, torch light | –2 |
| Candlelight, starlight | –3 |
| Total darkness | –4 |

Due to their intimate connection with shadow, shadow mages gain an ability to see normally in darkness. As a shadow mage advances in level, he becomes more attuned to darkness and ignores changes in visibility that would partially or completely blind other characters.

| Condition | Attack Penalty | Damage Bonus | Saving Throws | AC Penalty |
|---|---|---|---|---|
| Moonlight | –1 | Normal | –1 | 0 |
| Starlight | –3 | Normal | –3 | –2 |
| Total darkness | –4 | None | –4 | –4 |

At 4th level, the shadow mage sees as well in moonlight (or equivalent light) as a normal human would see in broad daylight, and he can lessen penalties for more complete darkness by 1 point. In other words, he would only suffer a –2 penalty for attacking in starlight, or a –3 penalty for total darkness. At 7th level, he sees by starlight as well as a normal human sees by day, and he lessens combat penalties for total darkness by 2 points. At 10th level he can see perfectly in total darkness, negating all penalties. However, magical blindness or fog can still hinder a shadow mage's sight.

**The School of Shadow:** Many wizard spells derive their energy from extraplanar connections, but spells of the School of Shadow are exclusively tied to the Demiplane of Shadow. The School of Shadow is opposed by the Schools of Invocation/Evocation and Abjuration, both of which rely on more positive energies than the subtle, pervasive power of shadow. The spells of the School of Shadow are listed below; italicized spells can be found in the *Tome of Magic*, and bold spells can be found in *The Complete Wizard's*

*Handbook.*

Chill touch (1st)
Sleep (1st)
Spook (1st)
Blur (2nd)
Continual darkness (2nd)
Darkness 15' radius (2nd)
Ray of enfeeblement (2nd)
Scare (2nd)
Spectral hand (2nd)
*Lorloveim's creeping shadow* (3rd)
Phantom steed (3rd)
Spirit armor (3rd)
Wraithform (3rd)
Dimension door (4th)
Enervation (4th)
Evard's black tentacles (4th)
Fear (4th)
Minor creation (4th)
Shadow monsters (4th)
Demi-shadow monsters (5th)
Major creation (5th)
Mordenkainen's faithful hound (5th)
Passwall (5th)
Shadow door (5th)
Shadow magic (5th)
**Blackmantle** (6th)
*Bloodstone's spectral steed* (6th)
Demi-shadow magic (6th)
*Lorloveim's shadowy transformation* (6th)
Shades (6th)
Duo-dimension (7th)
Phase door (7th)
*Shadowcat* (7th)
Shadow Walk (7th)
Maze (8th)
**Shadowform** (8th)
Astral spell (9th)
Energy drain (9th)

## The Song Wizard

**Minimum Ability Requirements:**

Intelligence/Knowledge 14; Charisma/Appearance 15

**Races Allowed:** Human, elf, half-elf
**Prohibited Kits:** Gladiator, rider

The power of music and words has long been acknowledged as an important source of inspiration and amusement. The School of Song concentrates on spoken spells, using the wizard's skill at weaving melody, lyrics, and rhythm to create enchantments of great power. Elves and great bards have tapped into this source of magic for countless years, but now more wizards are investigating the intriguing possibilities of this school of magic. Musical proficiency or knowledge is not a strict requirement for this school, but most song wizards are also virtuoso vocalists—the subtleties of pitch and expression can have tremendous effect in the casting of the spell.

Song wizards gain the normal benefits and hindrances of a specialist wizard, including the +1 bonus to saves versus spells of their own school, and a –1 penalty for their target's saving throw when casting song spells. Note that magical song or vocal attacks, including a harpy's song, a banshee's wail, or a sphinx's roar are all considered to be magical sound or song attacks for purposes of the mage's saving throw.

**The School of Song:** The School of Song is opposed by the Schools of Necromancy, Greater Divination, and Invocation/Evocation; magical songs are much better suited to tasks of influence, change, or summoning. All spells appearing in this list are considered to have neither somatic nor material components for specialist song mages—song wizards can cast these spells with nothing more than a verbal component. While this renders song wizards particularly vulnerable to silencing, it also means that they can cast spells while bound, restrained, or stripped of all their possessions. The spells of the School of Song are listed below; spells from the *Tome of Magic* are in italics.

Audible glamer (1st)
Charm person (1st)
Find familiar (1st)
Friends (1st)

Otto's irresistible dance (8th)
Power word, blind (8th)
Monster summoning VII (9th)
Power word, kill (9th)
*Wail of the banshee* (9th)

# Chapter 9: Psionics

Psionics With psionics, a character can read the minds of others, move objects without physically touching them, or travel across vast distances in an instant. This chapter explains the game mechanics used to run psionic characters and provides enough powers to get wild talent and psionicist heroes started. Consider the definitions of the following terms:

**Psionics:** The practice of extraordinary psychic powers. A character who has psionic abilities harnesses the power of his or her mind to produce a particular effect. Characters who have psionic powers are either psionicists or wild talents.

**Psionicist:** A character who uses the force of his or her mind to affect the environment and inhabitants around them.

**Wild Talent:** A character from any class who has a natural psionic ability and at least one psionic power.

The psionic system presented in this chapter provides descriptions of the core powers. This chapter presents the same psionics rules that appear in the revised Dark Sun boxed set.

## What's Different?

If players are new to psionics, skip this section because the changes to the original rules from *The Complete Psionics Handbook* discussed below may be confusing. If players are familiar with the previous psionics rules, then a brief discussion of the

changes to look for should be noted.

Many of the terms and powers used in *The Complete Psionics Handbook* have been retained for this new system. However, the definitions and descriptions may have changed, so read this section carefully. The most important changes to watch for are the following:

- ***Attack and defense*** modes are no longer powers, but bonus proficiencies. The new terms are psionic attacks and psionic defenses. Psionicists gain psionic attacks and defenses automatically by level advancement. Existing characters with attack modes must select other telepathic devotions to replace them.
- The ***contact power*** is now the contact bonus proficiency. The proficiency allows characters to participate in psionic combat. In addition, psionic combat has been simplified to work like other AD&D combat forms (that is, using attack and damage rolls). Characters who had the contact power must select another telepathic devotion to replace it.
- ***Tangents*** have been eliminated.
- ***Maintenance costs*** for powers have been eliminated. All powers now have a standard PSP cost per round of use and can be maintained each round by paying that cost.
- ***Power scores*** and the optional effects of rolls of power scores and 20s have been eliminated. All characters now have *mental armor classes* (MAC) and *mental attack numbers* (MTHAC0). MTHAC0 stands for "mental THAC0" or "mental attack roll." The acronym refers to the number (or higher) a particular character needs to roll on 1d20 to hit an opponent with a mental armor class of 0. This mechanic has two distinct uses that work in basically the same manner.
- The ***power check*** has been eliminated. To determine the successful use of a psionic power, a character makes an *MTHAC0 roll*. In psionic combat, a character makes MTHAC0 rolls to break through a target's mental defenses and open the mind. To use a psionic power on an open mind, an MTHAC0 roll is made against the power's MAC instead of the target's MAC. (All psionic powers have base MAC scores.) Some minds are considered open automatically (like the psionicist's own mind for the purposes of using a power on himself). In these cases, no psionic combat is needed, for the mind is already open.
- The ***metapsionics discipline*** has been eliminated; its powers have been redistributed among the remaining five disciplines.

## Using Psionics

Psionic energy can be shaped and used by psionicists and wild talents to produce desired effects, called psionic powers. All psionic powers are grouped into one of five categories, or disciplines, based on how the energy is used. The major powers of a given discipline are called sciences.

Two key concepts need to be presented before the rules for using psionics in the AD&D game are detailed. These are ***psionic strength points (PSPs)*** and ***mental attack rolls (MTHAC0s).*** These are described below.

**Psionic Strength Points (PSPs):** Every psionic character has an internal store of psionic energy, represented as psionic strength points. These are used to activate sciences and devotions, to focus psionic attacks, and to determine how much psionic damage a hero's psionic defenses can stand.

**Mental Attack Rolls:** The success of psionic attacks against closed minds is determined by the number a character needs to roll on 1d20 to hit a specific mental armor class (MAC). The mental attack number (MTHAC0) is the number the character needs to hit a MAC of 0. When used on open minds, the roll is made against a power's MAC. Each power has a base MAC number used to determine the difficulty of activating a psionic power against an open mind.

All ***psionic powers*** belong to one of five ***disciplines***: clairsentience, psychokinesis, psychometabolism, psychoportation, and telepathy. Within each discipline, the powers are divided into two categories: major powers, or *sciences*; and minor powers, or *devotions*. The five disciplines are defined as follows:

*Clairsentient* powers allow characters to perceive things beyond the natural range of human and demihuman senses.

*Psychokinetic powers* move objects across space using only the energy of the mind.

*Psychometabolic powers* affect the user's body by altering it in some manner.

*Psychoportive powers* allow psionic travel, moving characters from one location to another without crossing space.

*Telepathic powers* involve the direct contact of two or more minds.

## Closed and Open Minds

The minds of all characters and creatures exist in one of two states: either *closed* or *open*. A closed mind has either natural or enhanced defenses that protect it from unwanted intrusion. Only those things that enter through the normal senses (such as sight, sound, taste, touch, or smell) can impact on a closed mind. ***The minds of all characters and creatures are naturally closed.*** A character can voluntarily open his or her mind to psionic contact, or a closed mind can be opened by psionic attack.

An open mind is not a natural state. For a mind to be open, psionic defenses must be voluntarily lowered (in the case of a willing subject) or breached by psionic attack (in an unwilling opponent). A psionicist's own mind is considered open when using a psionic power with an area of effect of "personal" (such as the heightened senses devotion).

## Mental Armor Class (MAC)

All characters and creatures have mental armor classes (MACs). While physical Armor Classes protect a body from physical attacks, MACs provide protection from psionic attacks. The MAC rating ranges from minimal defense (MAC 10) to maximum defense (MAC –10); there are no MACs worse than 10 or better than –10.

As with standard Armor Class, the higher the MAC number, the more vulnerable the character is to psionic attack. Likewise, with all attacks, a roll of 20 always hits and a roll of 1 always misses, regardless of the target's MAC number.

For those who have copies of *The Complete Psionics Handbook* and who want to continue using the "optional results" rules (page 28), make the following change. A roll of a power's MAC score gives the good result (what used to be signified by a roll of the power score), while a roll of 1 gives the bad result (what used to happen on a roll of 20).

To determine a base MAC number, find the character's Wisdom score on Table 74 below. Then find the character's Intelligence score and add the indicated MAC modifier. MACs can be improved through proficiencies and other means, as detailed later.

**Table 74: Base MAC and PSP Bonuses**

| Ability Score | Base MAC | MAC Modifier | PSP Bonus |
|---|---|---|---|
| 15 or less | 10 | 0 | 0 |
| 16 | 9 | –1 | +1 |
| 17 | 8 | –1 | +2 |
| 18 | 7 | –2 | +3 |
| 19 | 6 | –2 | +4 |
| 20 | 5 | –3 | +5 |
| 21 | 4 | –3 | +6 |
| 22 | 3 | –3 | +7 |
| 23 | 2 | –4 | +8 |
| 24 | 1 | –4 | +9 |
| 25 | 0 | –4 | +10 |

**Example:** *Tylk of the Westwoods has a Wisdom score of 18, which yields a base MAC of 7. He has an Intelligence score of 16, which gives a modifier of –1. Without other enhancements, Tylk has a MAC of 6 (7–1 = 6).*

## Psionic Strength Points (PSPs)

Every psionicist and wild talent character has psionic strength points, or PSPs. In many ways, PSPs are like mental hit points, though with a different function. Not only do they determine a character's current psionic strength, they also power psionic abilities. This mental strength is used to create psionic attacks, activate psionic powers, and keep psionic defenses in place. As long as any PSPs remain, psionic defenses keep the mind closed to psionic intrusion of any sort. When a psionic character's PSP total falls to zero, his defenses crumble and his mind is left open to psionic contact.

Each time a character uses (or attempts to use) a psionic science, devotion, or attack, he must pay the listed cost from his current PSP total. Damage caused by psionic attacks is also subtracted from PSP totals.

The PSP total for a psionicist depends on four factors: the psionicist's Wisdom, Intelligence, and Constitution scores, and his experience level. Together, these factors determine the psionicist's PSP pool. A 1st-level psionicist automatically gets 15 PSPs. This number is modified by bonuses granted by high ability scores. Lastly, the psionicist rolls 1d6, which is added to generate a PSP total.

The PSP total for a wild talent is determined with slight modifications. A wild talent automatically receives enough PSPs to use his power (or powers) once. In addition, he gets 10 PSPs (instead of 15) and any bonuses granted for high Wisdom, Intelligence, and Constitution scores. He also rolls 1d4, instead of 1d6.

**Example:** *Tylk of the Westwoods has a Wisdom score of 18, an Intelligence score of 16, and a Constitution score of 17. At 1st level, he gets 21 PSPs (15 + 3 + 1 + 2 = 21)*

*plus a 1d6 die roll. Garon, a wild talent with the same ability scores, gets 16 PSPs (10 + 3 + 1 + 2 = 16), a 1d4 die roll, and enough PSPs to use his psionic power once.*

## Gaining PSPs

The PSP total of psionicists and wild talents increases with every level advancement. Psionicists receive 1d6 PSPs with each level increase up to 9th level, plus any bonuses for high Wisdom, Intelligence, and Constitution scores. Starting at 9th level, psionicists gain just 3 PSPs, and they receive bonuses *only* for high Wisdom scores. Regardless of their Intelligence or Constitution scores, they no longer receive bonuses for these abilities. Wild talents, on the other hand, receive only 4 PSPs at each level increase, regardless of their level. Further, no die rolls or additional modifiers are applied.

**Example:** *The psionicist Tylk of the Westwoods has a Wisdom score of 18, an Intelligence score of 16, and a Constitution score of 17. When he advances from 1st to 2nd level, he receives 1d6+6 PSPs: the automatic 1d6 die roll and a +6 bonus for his high ability scores.*

## Recovering PSPs

Characters recover expended PSPs by resting for specific lengths of time (minimum of one full hour). The only states of rest that allow for PSP recovery are sleep or meditation. Any other physical activity or the use of psionic powers (which expend PSPs) negates the recovery process for that hour. A character can never recover more PSPs than his maximum total.

During each hour of rest, characters recover one-eighth of their total PSPs (bearing in mind that they never recover more than their maximum total). To do this, divide a character's PSP total by eight and round up. This is the number of PSPs the character recovers after one full hour of rest. So, if a psionicist is reduced to 0 PSPs, it takes eight full hours of rest to recover the expended PSPs—regardless of whether he has 20 or 100 PSPs.

**Example:** *Neecha Nightmoon has a total of 48 PSPs, and she has lost 24 of them during a recent psionic battle. After an hour of sleep or meditation, Neecha can recover 6 of the expended PSPs (48 ÷ 8 = 6). She is now at 30 PSPs.*

## Psionic Combat

Psionicists automatically receive the contact bonus proficiency when they are created. Contact gives them access to psionic attacks and allows them to participate in psionic combat. The psionic attacks come naturally and don't take up any proficiency slots.

Wild talents, however, must select the contact proficiency and place it in an open nonweapon proficiency slot. (Note that this should occur at the point when a character becomes a wild talent, whether when he is first created or later in his career when his psionic ability becomes known.) Along with the proficiency, wild talents receive only one psionic attack form. However, as a wild talent rises in level and gains nonweapon proficiency slots, he may select additional attack forms. These fill open slots, and the wild talent may choose more forms (for a total of three) as he gains slots. Wild talents may never have more than three of the five psionic attacks.

Psionic combat is used to assault closed minds so that they can be opened to further

psionic contact. This is accomplished like other attacks in the AD&D game system: The attacking psionicist selects an attack form and makes an MTHAC0 roll equal to or exceeding the defender's MAC. Regardless of that MAC, a roll of 1 always fails and a roll of 20 always succeeds.

Psionic attacks can be used against psionic and nonpsionic minds. A nonpsionic mind is defined as any character without a PSP pool. The procedures are the same, but the results are slightly different.

When attacking a psionic mind, psionic combat continues until one opponent is reduced to 0 PSPs or until the battle is broken off. A mind with 0 PSPs is open and can be subjected to other psionic powers. When attacking a nonpsionic mind, however, only one successful attack is required to open the mind.

Psionic powers only can be used on open minds, whether willingly opened or attacked until that state occurs. A psionic power can be used in the same round that a mind is opened by psionic attack.

Psionic defenses, like armor and shields in physical combat, remain in place until the defender's PSP total is reduced to 0 (in the case of a psionic character) or one successful psionic attack breaches the defenses (of a nonpsionic character).

Psionic attacks require concentration. A psionicist who uses one during a combat round can move at only half his walking rate. A character using a psionic attack also can be disrupted the same way as can a wizard casting a spell. In the round when a character using a psionic attack is disrupted, the attack can't be used. A disrupted psionic attack costs 1 PSP for the attempt.

Psionicists can make a number of psionic attacks in a round according to their level: 1–6, 1/1 round; 7–12, 3/2 rounds; 13+, 2/1 round. Wild talents can never make more than one psionic attack in a round.

Psionicists and wild talents receive MTHAC0 bonuses depending on their Intelligence scores, making it easier to accomplish psionic attacks.

## Psionic Combat Sequence

- The DM secretly decides what actions the monsters or NPCs will take—including choosing psionic attacks and defenses (if they have access to any). The DM doesn't announce that decision to the players.
- The players indicate what their characters will do, including choosing psionic attacks and defenses from the ones they have access to.
- Initiative is determined. Note that psionic attacks and powers don't have initiative modifiers.
- Attacks are made in order of initiative.

**Table 75: MTHAC0 Modifiers**

| Intelligence Score | MTHAC0 Modifier |
|---|---|
| 15 or less | 0 |
| 16–17 | –1 |
| 18–19 | –2 |
| 20–22 | –3 |
| 23+ | –4 |

All psionic attacks require line of sight, as do the use of all psionic powers—with a few exceptions, such as those in the clairsentience discipline.

### The Five Psionic Attacks

The five psionic attack forms *are ego whip, id insinuation, mind thrust, psionic blast,* and *psychic crush*. Psionicists have access to all five forms (depending on their levels), whereas wild talents can never have more than three of the five. The psionic attacks are described below.

### Ego Whip (EW)

This attack assaults a target's self-esteem and individuality. It strikes like a glowing whip, its crack slicing open the wells of inferiority and worthlessness buried deep behind the target's defenses. For every 4 PSPs put into the attack (declared after a successful attack roll is made), the attacker rolls 1d6 to determine psionic damage against his foe. If hit, the defender loses that many PSPs or has his mind opened to further psionic contact if no PSPs remain. A failed attack costs 2 PSPs.

Ego whip has three ranges: short (40 yards), medium (80 yards), and long (120 yards). At medium range, the defender receives a +2 bonus to his MAC; at long range, the bonus is +5.

If used against an open mind, ego whip leaves the target dazed for 1d4 rounds, costing the attacker 4 PSPs. Though no psionic defenses remain, the attacker must roll the defender's MAC to successfully hit (this attack receives a +2 bonus). While dazed, all of a character's die rolls (attacks rolls, saving throws, etc.) receive a –5 penalty, and the character can't cast spells above 3rd level.

### Id Insinuation (II)

This attack assaults a target's subconscious, like a mental battering ram tearing through the walls that separate primitive needs from social constraints. For every 6 PSPs put into the attack (declared after a successful attack roll is made), the attacker rolls 1d8 to determine psionic damage against his foe. If hit, the defender loses that many PSPs or has his mind opened to further psionic contact if no PSPs remain. A failed attack costs 3 PSPs.

Id insinuation has three ranges: short (60 yards), medium (120 yards), and long (180 yards). At medium range, the defender receives a +2 bonus to his MAC; at long range, the bonus is +5.

If used against an open mind, id insinuation leaves its victim confused and powerless to act for 1d4 rounds. While no psionic defenses remain, the attacker must roll the defender's MAC to successfully hit (the attack roll receives a +2 bonus). This use of the attack costs 6 PSPs.

### Mind Thrust (MT)

This attack stabs the mind of the defender, piercing thoughts and memories. For every 2 PSPs put into the attack (declared after a successful attack roll is made), the attacker rolls 1d4 to determine psionic damage against his foe. If hit, the defender loses that many PSPs or has his mind opened to further psionic contact if no PSPs remain. A failed attack costs 1 PSP.

Mind thrust has three ranges: short (30 yards), medium (60 yards), and long (90

yards). At medium range, the defender receives a +2 bonus to his MAC; at long range, the bonus is +5.

If used against an open mind, mind thrust causes the target to lose the use of one psionic power (chosen randomly) for 1d6 days. While no psionic defenses remain, the attacker must still roll the defender's MAC to successfully hit (with a +2 bonus to the attack roll). This use of the attack costs 2 PSPs. Beyond opening a closed mind, mind thrust has no effect on nonpsionic minds.

## Psionic Blast (PB)

This attack takes the form of a wave of mental force that jolts a defender's mind. For every 10 PSPs put into the attack (declared after a successful attack roll is made), the attacker rolls 1d12 to determine psionic damage against his foe. If hit, the defender loses that many PSPs or has his mind opened to further psionic contact if no PSPs remain. A failed attack costs 5 PSPs.

Psionic blast has three ranges: short (20 yards), medium (40 yards), and long (60 yards). At medium range, the defender receives a +2 bonus to his MAC; at long range, the bonus is +5.

If used against an open mind, psionic blast causes 1d8 points of physical damage (hit point loss) for every 10 PSPs put into the attack. While no psionic defenses remain, the attacker must still roll the defender's MAC to successfully hit (with a +2 bonus to the attack roll).

## Psychic Crush (PsC)

Like a terrible mental weight, this attack seeks to crush a defender's mind. For every 8 PSPs put into the attack (declared after a successful attack roll is made), the attacker rolls 1d10 to determine psionic damage against his foe. If hit, the defender loses that many PSPs or has his mind opened to further psionic contact if no PSPs remain. A failed attack costs 4 PSPs. Psychic crush has a range of 50 yards.

If used against an open mind, psychic crush causes 1d6 points of physical damage (hit point loss) for every 8 PSPs put into the attack. Although no psionic defenses remain, the attacker must roll the defender's MAC to successfully hit (with a +2 bonus to the attack roll).

## The Five Psionic Defesnses

Both psionicists and wild talents develop psionic defenses naturally when they progress in experience, as detailed on the Psionic Progression chart. Psionic defenses are gained without using up any proficiency slots. As with psionic attacks, wild talents may never have more than three of the five psionic defenses.

A character activates a psionic defense at the beginning of a combat round. This defense protects against all psionic attacks launched at the character in that round. The PSP cost is only paid once per round, no matter how many attacks it defends against in that round.

Some psionic attacks are more effective against certain psionic defenses. The reverse is also true. This is represented by modifiers that apply to the attacker's MTHAC0. See the Psionic Attacks vs. Psionic Defenses, below, for a cross-referenced list of penalties and bonuses.

When a psionic attack clashes with a psionic defense, cross-index the attack with the defense on Table 76. The resulting modifier is applied to the attacker's MTHAC0. Thus, positive modifiers are bonuses and negative modifiers are penalties.

Combat cards that list psionic attacks and defenses are strongly recommended. Use 3¥ 5 cards; one for each attack or defense that a character has. During a round of psionic combat, each player puts an attack and a defense in front of him, face down, to lock in his action. After all declarations have been made, cards are turned over and combat commences.

There are five psionic defenses. They are *intellect fortress, mental barrier, mind blank, thought shield,* and *tower of iron will*. These are described below.

## Intellect Fortress (IF)

This defense encases the mind in a powerful keep of mental energy to protect it from psionic attack. Intellect fortress provides the best protection against ego whip, but it's extremely vulnerable to psionic blast. The cost is 4 PSPs per round to use this defense.

## Mental Barrier (MB)

This defense throws up a wall of thought to protect against psionic attack. A mental barrier is extremely effective against a psionic blast, but vulnerable to a psychic crush attack. It costs 5 PSPs to use this defense in a round.

## Mind Blank (MBk)

This defense hides the mind from psionic attack, forming a vast, featureless area that makes it harder to target the closed mind. Mind blank protects best against id insinuation, while mind thrust easily slices through the defensive fog. It costs 3 PSPs per round to use this defense.

## Thought Shield (TS)

This defense forms a glowing shield to turn away a psionic attack. Thought shield defends most effectively against psychic crush but is vulnerable to ego whip. The cost is 2 PSPs per round to use this defense.

## Tower of Iron Will (TW)

This defense builds an unassailable haven for the mind. Mind thrust has a difficult time penetrating this defense, while id insinuation can breach its protection. The defense costs 6 PSPs per round.

**Table 76: Psionic Attacks vs. Psionic Defenses**

| | **Mind blank** | **Thought shield** | **Mental barrier** | **Intellect fortress** | **Tower of iron will** |
|---|---|---|---|---|---|
| Mind thrust | –5 | –3 | +2 | +3 | +5 |
| Ego whip | –3 | –4 | –2 | +4 | +3 |
| Id insinuation | +5 | +3 | +1 | –2 | –5 |
| Psychic crush | –1 | +4 | –4 | +1 | +2 |
| Psionic blast | +3 | –2 | +5 | –4 | –3 |

## Adding Substance to Psionic Combat

All psionic combat takes place in the minds of the combatants. This mindscape has its own rules and reality. Each combatant reaches into his or her own nexus of power, the place where the energy of mind, body, and spirit come together. The trained psionicist can readily draw upon this nexus of power, as can the wild talent. Nonpsionicists can't access this energy, but it springs forth to protect them in the form of natural Mental Armor Class (MAC).

The attacker and the defender appear as glowing forms, mental pictures of themselves in the mindscape. Psionicists can shape these psionic forms as elaborately as they see fit. Wild talents, however, appear as crude, featureless shapes of humanoid light. Nonpsionicists are simply glowing balls surrounded by mental armor, usually in the shape of a luminescent wall.

While the only thing that determines the success of psionic combat is the MTHAC0 rolls and the choices of psionic attacks and defenses, players and DMs are encouraged to add flavor by describing how their characters' psionic forms look and how the powers they use manifest themselves. Being creative and having fun with the mindscape as a psionic battle progresses enhances the roleplaying experience for all.

**Example:** *Tylk of the Westwoods, a psionicist, decides to use the mind thrust attack against Neecha Nightmoon (also a psionicist). A glowing sword of energy takes shape in his psionic form's hand. The sword slashes out, but Neecha calls forth a thought shield, and a luminescent shield forms suddenly to block Tylk's attack. Then Neecha shapes her own attack, unleashing a psionic blast. Energy swells up from her nexus, forming the image of a glowing tiger. The claws of the great beast slash through the maze of ruins Tylk has formed from his mind blank defense, then scrape across Tylk's psionic defenses, reducing his PSP total as the psionic blast finds its target.*

## Using Psionic Powers

All psionic powers have a MAC score. To determine if a psionic power works against an open mind, a player must make an MTHAC0 roll against the power's MAC score on 1d20. Any roll equal to or greater than the number means the power has been activated and its effects are applied for that round of play.

All powers have a cost per round of use. The cost listed to the left of the slash is the number of PSPs needed to use the power for a single round. The cost listed to the right of the slash is the number of PSPs expended if the MTHAC0 roll fails (in which case the power's effects aren't applied).

Powers that have been successfully activated can be maintained from round to round without making additional MTHAC0 rolls. The psionicist simply expends PSPs to pay for the power's cost. The first round that the character fails to pay the cost (either voluntarily or because his PSPs have been depleted), the power's effects cease to function. If the psionicist wishes to reactivate the power in a later round, even against the same target, he must make a new MTHAC0 roll. If an MTHAC0 roll to activate a psionic power fails, and the character has enough PSPs remaining, he can try to activate the power again in the next round by making another MTHAC0 roll.

A roll of 1 is always a failure and a roll of 20 is always a success, no matter what the power's MAC or the psionicist's MTHAC0 scores are.

## Table 77: THAC0s & MTHAC0s

**Psionicist's Level**

| | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 19 | 20 | 21 | 22 | 23 | 24 | 25 | 26 | 27 | 28 | 29 | 30 |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| THAC0 | 20 | 20 | 19 | 19 | 18 | 18 | 17 | 17 | 16 | 16 | 15 | 15 | 14 | 14 | 13 | 13 | 12 | 12 | 11 | 11 | 10 | 10 | 9 | 9 | 8 | 8 | 7 | 7 | 6 | 6 |

**Psionicist's Level**

| | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 19 | 20 | 21 | 22 | 23 | 24 | 25 | 26 | 27 | 28 | 29 | 30 |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| **MTHAC0** | 20 | 19 | 18 | 17 | 16 | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 | –1 | –2 | –3 | –4 | –5 | –6 | –7 | –8 | –9 |

**Wild Talent's Level**

| | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 19 | 20 | 21 | 22 | 23 | 24 | 25 | 26 | 27 | 28 | 29 | 30 |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| **MTHAC0** | 20 | 20 | 19 | 19 | 18 | 18 | 17 | 17 | 16 | 16 | 15 | 15 | 14 | 14 | 13 | 13 | 12 | 12 | 11 | 11 | 10 | 10 | 9 | 9 | 8 | 8 | 7 | 7 | 6 | 6 |

## Table 78: Psionicist Saving Throws

| Level | Paralyzation, Poison, or Death Magic | Rod, Staff, or Wand | Petrification or Polymorph* | Breath Weapon† | Spell‡ |
|---|---|---|---|---|---|
| 1–4 | 13 | 15 | 12 | 16 | 15 |
| 5–8 | 12 | 13 | 10 | 15 | 14 |
| 9–12 | 11 | 11 | 8 | 13 | 12 |
| 13–16 | 10 | 9 | 7 | 12 | 11 |
| 17–20 | 9 | 7 | 6 | 11 | 9 |
| 21+ | 8 | 5 | 5 | 9 | 7 |

* Excluding polymorph wand attacks.
† Excluding those that cause petrification or polymorph.
‡ Excluding those for which another saving throw type is specified.

## Closing an Open Mind

A nonpsionic mind is one that has never had any PSPs. Its natural state is closed unless willingly opened or opened by psionic means. If such a target's mind has been opened, but the subsequent psionic attack or power used against it wasn't successful, the target can attempt to re-close its mind in the next round. This requires a saving throw vs. paralyzation at no penalty. If a psionic power was used successfully against the newly opened nonpsionic mind, the target can still attempt to close its mind, but its saving throw is at a –4 penalty. The target may attempt to close its mind every round thereafter.

For a newly opened psionic mind (one whose PSPs have been reduced to 0), the target can't attempt to re-close its mind until 1d4+1 rounds have passed. After the required rounds have passed, the target can make a Wisdom check at a –3 penalty every round thereafter to attempt to close its mind.

When either a nonpsionic or psionic character succeeds at re-closing his mind, the following occurs: any psionic power currently in use against the character ceases to function, and contact between the two minds is broken. If the power's effect already took place in the round in which the mind re-closed, the psionicist expends the full PSP cost. If the power's effect didn't take place yet in the round, then the lower PSP cost is subtracted from the psionicist's PSP total (as if the activation attempt failed). If the psionicist wants to reestablish contact, he'll have to once again open the target's mind.

## Psionics in a Round

A psionicist can do several actions during a single round. He can:

- Make as many psionic attacks as his experience level indicates.
- Use one psionic defense.
- Activate one psionic power against an open mind.
- Maintain as many previously successfully activated powers as he wishes, provided he can afford to continue paying the PSP costs. Further, if a psionic attack succeeds and opens a closed mind, a psionic power can be used against the mind that same round.

## Limitations to Psionic Powers

Psionic powers have definite limitations. Some of these already have been discussed, but are repeated here to emphasize them. Other limitations are new.

- **PSPs:** Psionicists and wild talents have a finite amount of psionic strength available to them at any given time. This strength, expressed as PSPs, must be expended to use psionic attacks, defenses, and powers. The total also indicates how much damage a hero's psionic defenses can withstand before his mind opens. As such, the psionic character must always balance the use of powers, attacks, and defenses with how strong he wants his own internal walls to remain.
- **Line of Sight:** All psionic attacks and most powers require line of sight to use. If line of sight is blocked, most psionics won't work.
- **Touch:** Some psionic powers have a range of "touch." These can be used in melee combat, but they require a physical attack roll *and* an MTHAC0 roll to work. Like all psionic powers, they only can be used against open minds.
- **Obstructions:** Anything that hinders a character's normal vision blocks line of sight. Unless the description states otherwise, psionicists require a line of sight to use a power. Obvious exceptions to this rule are the clairsentient powers and many of the telepathic powers. However, certain materials can obstruct these psionic powers if they completely block the target. These are lead and iron (at least 1 inch thick), obsidian (at least 2 inches thick), stone (at least 1 foot thick), and the *antimagic shell* spell.

## Psychic Contests

Sometimes two or more psionicists try to use a psionic power on the same target. For example, two psionicists might try to use telekinesis to move a stone in two different directions, or they might attempt to teleport the same character to different locations, or they might use any psionic powers in such a way as to be in direct conflict with each other. Which power use prevails? The struggle results in a psychic contest.

To resolve a psychic contest, compare the competing characters' MTHAC0 rolls made to activate the powers. The character who has the lowest successful MTHAC0 roll wins the contest. If none of the competing characters roll successfully, none of the power uses succeed. If one character succeeds and the others fail the rolls, then that character wins the contest. If competing characters have the same MTHAC0 score and they roll the same numbers on the dice, then a psychic lock occurs.

In a psychic lock, neither competing character wins the psychic contest that round. Both are applying equal psionic pressure, thus creating a stalemate. To resolve the contest, both characters must pay the power's PSP cost and engage in another round of psychic contest. If either character fails to pay the cost—effectively giving up—that

character suffers a psychic backlash and loses 4d4 PSPs immediately.

## Psionics and Magic

Psionics and magic use completely different forces. Psionics uses internal energy, while magic taps into extraplanar power. Both arts can produce similar effects, but they do so in very different ways. For this reason, psionics and magic don't ordinarily mix. Magical spells, for instance, can't be used to detect or dispel psionic activity, unless otherwise stated. Likewise, psionic powers can't detect magic that simulates psionic abilities. Lastly, if a psionicist uses a psychokinetic, psychometabolic, psychoportive, or telepathic power against a magical illusion, he automatically gets a saving throw vs. spell to disbelieve it. Specific spells, as listed below, intermix with psionics in the following ways.

***Antimagic shell:*** This spell blocks the effects of psionic powers.

***Detect charm:*** This spell detects telepathic control, such as domination.

***Detect invisibility:*** This spell allows the caster to see clearly psionic invisibility, astral travelers, shadowform, and ethereal creatures. It doesn't work against characters in other dimensions.

***Detect magic:*** This spell has no effect on psionics.

***Detect scrying:*** This spell will detect psionic scrying, though psionicists get a save vs. spell to avoid detection.

***ESP:*** If this spell is used against psionicists, they get a save vs. spell with a +2 bonus to negate the effects.

***False vision:*** This spell works against psionics, though psionicists get a save vs. spell to negate effects.

***Forbiddance:*** This spell effectively blocks all teleportation and metabolic powers.

***Free action:*** This spell overcomes all psychokinetic effects against the subject's body, as well as domination.

***Globe of invulnerability/minor globe of invulnerability:*** These spells have no effect on psionics.

***Magic jar:*** Psionicists use their combined Wisdom and Constitution scores when determining the differential modifier.

***Mind blank:*** Psionicists get a save vs. spell to overcome this enchantment.

***Misdirection:*** This spell has no effect on psionics.

***Mislead:*** A psionic attack reveals this spell, but the first attack automatically fails.

***Nondetection:*** This spell works normally against psionics.

***Otiluke's resilient sphere:*** Psionics can't penetrate this spell's protection.

Protection from evil/protection from evil, 10-foot radius: These spells provide +2 bonuses to MACs.

***Spell immunity:*** This spell has no effect on psionics.

***Trap the soul:*** Psionicists trapped by this spell can't use any psionic powers.

## Psionicists and Wild Talents

Psionic powers can be used by any character class, though one class specializes in the

use of psionics: the psionicist. Wild talents are a subclassification within other character classes. These characters possess one or two psionic powers. Their main vocation is that of their class. For instance, a priest could have a psionic ability or two, but he relies primarily on the skills of his class. A psionicist, on the other hand, relies almost entirely on his psionic gifts. The differences between the two types of psionic characters are explained in the section that follows.

### Psionicist

The psionicist character works to mold mind, body, and spirit into a unified, powerful whole. The hero's internal energy, or psionic strength, comes from deep within himself—from a place psionicists call the nexus. This energy is given form and purpose by the individual's strength of will. Through extraordinary discipline, long contemplation, and deepening awareness of self, the psionicist taps the vast potential of his mind.

Psionicists must meet or exceed the following prerequisites.

**Ability requirements:** Constitution 11, Intelligence 12, Wisdom 15
**Prime requisites:** Wisdom, Constitution
**Races allowed:** Any

Because the pursuit of psionics require strict mental and physical discipline, a psionicist has two prime requisites: Wisdom and Constitution. His primary mental ability score is Wisdom. As the measure of his willpower and enlightenment, Wisdom promotes the understanding and mastery of the inner self—the essence of psionic ability. Likewise, the tremendous stress of using psionics requires a healthy body to house a fit mind. This is where Constitution comes into play. Lastly, Intelligence is important to psionicists because of the reasoning and memorization necessary to the class.

All races eligible for use as player characters can become psionicists. Human psionicists have no limit on the levels of experience they can attain in their chosen class. Half-elves, half-orcs, and half-ogres (due to their partial human heritage) can reach 12th level. Halflings and gnomes can attain 10th level. Dwarves and elves can reach only 8th level as psionicists. All creatures not listed here can reach 10th level.

## Dual-Classed and Multiclassed Psionicists

A human character who has scores of 15 or more in the prime requisites of his first class and scores of 17 or more in the prime requisites of the class he switches to can be a dual-classed psionicist. See the *Player's Handbook*, for more details on dual-class benefits and restrictions.

Demihuman characters can be multiclassed psionicists if they meet the requirements in the *Player's Handbook*.

## Alignment

Psionicists can be of any alignment, save chaotic. The discipline integral to psionics can't be maintained by chaotic characters. If a psionicist's alignment shifts to chaotic for any reason, he quickly begins to lose psionic powers. Every day his alignment remains chaotic, the character must make an ability check against one-half his Wisdom score, rounded down. Each time the character fails this check, he loses access to one psionic discipline and all the powers related to it. The discipline is selected randomly by the DM.

Psionicists who change to chaotic alignment can't recover PSPs. If a psionicist's alignment turns from chaotic back to nonchaotic, he begins to recover lost disciplines at a rate of one per day. This is accomplished by making the same halved Wisdom check described above—success indicates the return of a random discipline from those that were lost.

## Weapon and Armor Restrictions

Psionicists disdain using weapons of any sort. Further, they don't have the time to properly train in their use. If a psionicist character wants to use a weapon, he must select it from the following small-sized items: hand crossbow, dagger, dart, dirk, knife, scourge, sickle, and short sword.

Psionicists can only use the following types of armor: padded, leather, studded leather, and hide. They may also carry small shields.

## Psionicist Benefits

Psionicists have their own THAC0s, which are listed on the THAC0s and MTHAC0s, above, along with their respective MTHAC0s. MTHAC0s for wild talents are listed on the same table, though these characters must refer to their class's own THAC0 tables for calculated attack rolls.

Psionicists gain a +2 bonus on all saving throws vs. enchantment/charm spells. This is in addition to any magical defense adjustments for high Wisdom scores. the Psionicist Saving Throw table lists saving throws for this character class.

At 9th level, a psionicist becomes a contemplative master. Such a master can build a sanctuary to use as his headquarters and can attract followers. A 1st-level psionicist arrives monthly to study with the master, regardless of whether he builds a sanctuary. The maximum number of followers is equal to the master's Charisma score if he builds a sanctuary, or half that number rounded down if he doesn't.

A master's followers want to learn. They serve in any capacity the master chooses as long as the master spends at least 10 hours per week instructing them. If the master doesn't live up to this schedule, the followers leave to find someone else.

## Psionicist Advancement

A psionicist earns experience points and advances in level like members of other classes, as outlined on Table 79 below.

## Psionicists and PSPs

A psionicist determines his initial PSP total by adding bonuses awarded for high Wisdom, Constitution, and Intelligence scores to a base of 15, then adding the result of a 1d6 die roll:

**Wis bonus + Con bonus + Int bonus + 15 + 1d6 = 1st-level PSP total.**

With every level increase, up to the 9th level, a psionicist gains additional PSPs by adding the bonuses to a 1d6 die roll:

**Wis bonus + Con bonus + Int bonus + 1d6 = PSPs gained per level (2 through 8).**

Starting at 9th level, a psionicist gains just 3 PSPs per level, plus his Wisdom bonus.

**Wis bonus + 3 = PSPs gained per level (9th level and higher).**

**Table 79: Psionicist Experience Levels**

| Psionicist Level | Experience Points | Hit Dice Roll (d6) |
|---|---|---|
| 1 | 0 | 1 |
| 2 | 2,200 | 2 |
| 3 | 4,400 | 3 |
| 4 | 8,800 | 4 |
| 5 | 16,500 | 5 |
| 6 | 30,000 | 6 |
| 7 | 55,000 | 7 |
| 8 | 100,000 | 8 |
| 9 | 200,000 | 9 |
| 10 | 400,000 | 9+2 |
| 11 | 600,000 | 9+4 |
| 12 | 800,000 | 9+6 |
| 13 | 1,000,000 | 9+8 |
| 14 | 1,200,000 | 9+10 |
| 15 | 1,500,000 | 9+12 |
| 16 | 1,800,000 | 9+14 |
| 17 | 2,100,000 | 9+16 |
| 18 | 2,400,000 | 9+18 |
| 19 | 2,700,000 | 9+20 |
| 20 | 3,000,000 | 9+22 |

## Gaining Disciplines and Powers

Every psionic power belongs to one of the five psionic disciplines: *clairsentience, psychokinesis, psychometabolism, psychoportation,* and *telepathy*. Powers are either major (and are called *sciences*) or minor (called *devotions*). Before a psionicist can learn a psionic power, he must have access to the appropriate discipline.

At 1st level, a psionicist selects one discipline. This is his *primary discipline*. As a psionicist advances in level, he gains access to additional disciplines (as shown on the Psionic Progression table. A psionicist starts out at 1st level with four powers within his primary discipline: one science and three devotions. With each advance in level, the psionicist gains additional disciplines and powers, as outlined. Some additional points to consider include the following:

- A player can select new powers for his character as soon as the character reaches a new experience level. These new powers can be selected from any discipline the character has access to, including a discipline that was just gained.
- Within a single discipline, a character must have twice as many devotions as sciences. For example, a player can't select a third telepathic science until his character has at least six telepathic devotions.
- A character can never learn as many sciences and devotions in another discipline as he knows in his primary discipline. This provides a focus for a hero that he can adhere to throughout his career.

**Table 80: Psionic Progression**

| Exp. Level | Total Disciplines | Total Sciences | Total Devotions | Psionic Att/Def |
|---|---|---|---|---|
| 1 | 1 | 1 | 3 | 1/1 |
| 2 | 2 | 1 | 5 | 1/1 |
| 3 | 2 | 2 | 7 | 2/2 |
| 4 | 2 | 2 | 9 | 2/2 |
| 5 | 2 | 3 | 10 | 3/3 |
| 6 | 3 | 3 | 11 | 3/3 |
| 7 | 3 | 4 | 12 | 4/4 |
| 8 | 3 | 4 | 13 | 4/4 |
| 9 | 3 | 5 | 14 | 5/5 |
| 10 | 4 | 5 | 15 | 5/5 |
| 11 | 4 | 6 | 16 | 5/5 |
| 12 | 4 | 6 | 17 | 5/5 |
| 13 | 4 | 7 | 18 | 5/5 |
| 14 | 5 | 7 | 19 | 5/5 |
| 15 | 5 | 8 | 20 | 5/5 |
| 16 | 5 | 8 | 21 | 5/5 |
| 17 | 5 | 9 | 22 | 5/5 |
| 18 | 5 | 9 | 23 | 5/5 |
| 19 | 5 | 10 | 24 | 5/5 |
| 20 | 5 | 10 | 25 | 5/5 |

## Proficiencies

Like all character classes, psionicists have various proficiencies available to them. The Psionicist Proficiency Slots table below, lists the initial number of weapon and nonweapon proficiencies available to this class, as well as the rates at which these characters earn new slots. Characters start with the initial two weapon and three nonweapon proficiencies available to psionicists. Psionicists can learn a weapon proficiency for any weapon they can use.

**Table 81: Psionicist Proficiency Slots**

| Weapon Proficiencies | | Nonweapon Proficiencies | | |
|---|---|---|---|---|
| Initial | # Levels | Penalty | Initial | # Levels |
| 2 | 5 | –4 | 3 | 3 |

**Initial** Refers to the number of proficiency slots available to 1st-level psionicists.

**# Levels** Indicates how many levels a psionicist must advance before receiving a new slot. He receives one new weapon slot at levels 5, 10, 15, and 20. He receives one new nonweapon slot at levels 3, 6, 9, 12, 15, and 18.

**Penalty** A modifier to a psionicist's attack roll when he uses a weapon he isn't proficient with.

## Bonus Proficiencies

A psionicist receives bonus proficiencies upon creation. They don't take up any of a psionicist's available slots. These bonus proficiencies are contact and mental armor,

which allow the psionicist to participate in psionic combat.

## The Psionicist Group

The table below (along with the "General" group table in the *PHB*) lists the nonweapon proficiencies available to psionicists at the regular slot cost. Add one to the cost for proficiencies taken from other groups.

**Table 82: Nonweapon Proficiencies**

**———General Group———**

| Proficiency | Slots | Ability | Modifier |
|---|---|---|---|
| *Contact* | 1 | Wisdom | 0 |
| *Mental Armor* | 1 | Wisdom | –2 |

**———Psionicist Group———**

| Proficiency | Slots | Ability | Modifier |
|---|---|---|---|
| Gem Cutting | 2 | Dexterity | –2 |
| *Harness Subconscious* | 2 | Wisdom | –1 |
| *Meditative Focus* | 1 | Wisdom | +1 |
| Musical Instrument | 1 | Dexterity | –1 |
| Reading/Writing | 1 | Intelligence | +1 |
| *Rejuvenation* | 1 | Wisdom | –1 |
| Religion | 1 | Wisdom | 0 |

Note: Italicized proficiencies are described in this book. All others are in the *Player's Handbook*.

**Contact**: This proficiency gives characters access to the psionic attack forms necessary to open a closed mind. Contact allows characters to gain psionic attacks as they become available with level advancement.

Psionicists automatically receive this proficiency. It doesn't take up any of their available slots. As a psionicist increases in level, he automatically receives psionic attack forms as outlined on the Psionic Progression table. Psionic attack forms don't fill up a psionicist's proficiency slots.

Wild talents, on the other hand, must select contact and place it in an available nonweapon proficiency slot if they want to gain its benefits. Once contact is slotted, a wild talent selects one psionic attack. He may select an additional attack by placing it in an available nonweapon slot after he has advanced the appropriate number of levels, according to his group's progression rate. Wild talents may never have more than three of the five psionic attack forms.

**Harness Subconscious:** Through the use of this proficiency, a psionicist temporarily boosts his PSP total. To procure these extra PSPs, the psionicist's PSP total must be at its maximum. Two full days (48 consecutive hours) must be spent gathering energy from subconscious reserves. At the end of this time, the psionicist makes a proficiency check. Success increases his PSP total by 20%, rounded up.

The extra PSPs remain available for 72 hours or until they are used up, whichever comes first. At the end of 72 hours, the psionicist loses as many PSPs as he gained from his current total (though the total won't drop below 0).

During the 72 hours of boosted energy, the psionicist can't recover PSPs if his current total equals or exceeds his usual maximum. Once all of the bonus PSPs have been used, PSPs can be recovered normally up to the usual maximum.

**Meditative Focus:** This proficiency allows a psionicist to focus his mental energy into one discipline, causing all powers within that discipline to receive MTHAC0 roll bonuses; powers related to other disciplines receive MTHAC0 roll penalties.

The psionicist must meditate for 12 consecutive hours. He recovers PSPs normally during this meditative state. When the period ends, the character makes a proficiency check. Success means he has focused his energy into the chosen discipline. All MTHAC0 rolls for powers within that discipline receive a +2 bonus for the next 24 hours or until his PSP total is reduced to 0, whichever comes first. All other disciplines get a –1 penalty for the same period.

**Mental Armor:** This proficiency allows a character to improve his mental armor class (MAC). Each time this proficiency is placed in an available nonweapon slot, the character's MAC improves. Nonpsionicists improve by +1 for each slot; psionicists improve by +2. The proficiency may only be slotted once per level advancement.

**Rejuvenation:** This proficiency allows a psionicist to recover PSPs more quickly than is usual by entering a rejuvenating trance. This state of deep concentration requires a successful proficiency check. For every hour a hero maintains this trance (and makes the check), he regains PSPs at twice the usual rate (one-quarter of his total instead of one-eighth). He can't expend PSPs while in this trance, and his state is much like deep sleep.

### Wild Talents

A wild talent is a hero from any character class other than the psionicist class who has natural psionic potential. This potential can be present in any character, regardless of class, alignment, or race. The alignment restrictions of the psionicist class don't apply to wild talents.

Wild talents have one or two psionic powers, up to three psionic defenses, and up to three psionic attacks at their disposal once they've reached full power. The psionic defenses come naturally, one at a time, according to the Psionic Progression table.

Psionic attacks are only gained after the PC places the contact proficiency in an available nonweapon proficiency slot. A wild talent chooses one of the five attack forms at that time. He may select a second and a third attack form when slots become available according to his group proficiency progression (as outlined in the *Player's Handbook*).

## Testing for Wild Talents

Testing for wild talents involves risk. The test must be performed when a character is created, when a character's Wisdom score increases, when psionics are introduced into a campaign, or the first time a character receives psychic surgery.

Every character and monster has a base chance of 1% to be a wild talent. This is modified as follows:

| | |
|---|---|
| Each Wis, Con, or Int score of 18+ | +3% |
| Each Wis, Con, or Int score of 17 | +2% |
| Each Wis, Con, or Int score of 16 | +1% |
| Character is 5th to 8th level | +1% |

| | |
|---|---|
| Character is 9th level or higher | +2% |
| Wizard, priest, or non human* | ½ |

* Round fractions up. Apply this penalty only once, even if checking a non human wizard or the like.

Once a character's chance to be a wild talent is determined, roll percentile dice. Results are as follows:

- *If the result is more than the modified chance and less than 97,* the character is not a wild talent.
- *If the result is less than or equal to the modified chance,* the character is a wild talent. The player rolls percentile dice and consults the WIld Talents table. His character's PSPs are determined as under the Psionic Strength Points section.
- *If the result is **97**,* the character must save vs. death or his Wisdom is permanently reduced by 1d6 points.
- *If the result is **98**,* the character must save vs. death or his Intelligence is permanently reduced by 1d6 points.
- *If the result is **99**,* the character must save vs. death or his Constitution is permanently reduced by 1d6 points.
- *If the result is **100**,* the character must save vs. death at –5 or his Wisdom, Intelligence, and Constitution scores are all permanently reduced to 3 points.

## Table 83: Wild Talents

| Roll 1d100 | Wild Devotion |
|---|---|
| — Clairsentient Devotions — | |
| 01–02 | All-round vision |
| 03 | Combat mind |
| 04–05 | Danger sense |
| 06–07 | Feel light |
| 08 | Feel sound |
| 09 | Hear light |
| 10 | Know direction |
| 11–12 | Know location |
| 13 | Poison sense |
| 14–15 | Radial navigation |
| 16–17 | See sound |
| 18 | Spirit sense |
| — | |
| — Psychokinetic Devotions — | |
| 19–20 | Animate shadow |
| 21–22 | Control light |
| 23–24 | Control sound |
| 25 | Molecular agitation |
| 26–27 | Soften |

| Roll 1d100 | Wild Devotion |
|---|---|
| — Psychometabolic Devotions — | |
| 28–29 | Absorb disease |
| 30–31 | Adrenaline control |
| 32 | Aging |
| 33–34 | Biofeedback |
| 35 | Body control |
| 36 | Body equilibrium |
| 37–38 | Body weaponry |
| 39–40 | Catfall |
| 41 | Cause decay |
| 42–43 | Cell adjustment |
| 44–45 | Chameleon power |
| 46 | Chemical simulation |
| 47 | Displacement |
| 48–49 | Double pain |
| 50 | Ectoplasmic form |
| 51–52 | Enhanced strength |
| 53 | Expansion |
| 54–55 | Flesh armor |
| 56 | Graft weapon |
| 57–58 | Heightened senses |
| 59 | Immovability |
| 60–61 | Lend health |
| 62–63 | Mind over body |
| 64–65 | Reduction |
| 66–67 | Share strength |
| 68–70 | Suspend animation |

| Roll 1d100 | Wild Devotion |
|---|---|
| — Psychoportive Devotions — | |
| 71–72 | Astral projection |
| 73–74 | Dimensional door |
| 75–77 | Dimension walk |
| 78–79 | Dream travel |
| 80–81 | Phase |
| — Telepathic Devotions — | |
| 82–84 | Conceal thoughts |
| 85–87 | Empathy |
| 88–89 | ESP |
| 90–91 | Life detection |
| 92–93 | Psychic messenger |
| 94–96 | Send thoughts |
| 97–98 | Roll two devotions |
| 99 | Roll one science |
| 100 | Roll one devotion and one science |

| Roll 1d100 | Wild Science |
|---|---|
| — Clairsentient Sciences — | |
| 01–06 | Aura sight |
| 07–14 | Clairaudience |
| 15–22 | Clairvoyance |
| 23–27 | Object reading |
| 28–32 | Precognition |
| 33–36 | Sensitivity to psychic impressions |
| — Psychokinetic Science — | |
| 37–44 | Telekinesis |
| — Psychometabolic Sciences — | |
| 45–49 | Animal affinity |
| 50–53 | Complete healing |
| 54–55 | Death field |
| 56–61 | Energy containment |
| 62–63 | Life draining |
| 64–72 | Metamorphosis |
| 72–80 | Shadowform |
| — Psychoportive Sciences — | |
| 81–83 | Probability travel |
| 84–86 | Teleport |
| — Telepathic Sciences — | |
| 87–92 | Mindlink |
| 93–95 | No science gained |
| 96–100 | Roll two sciences |

## Psionic Powers

There are five parameters integral to each psionic power. They are:

**MAC:** The number that the user must roll against with an MTHAC0 roll to activate the power against an open mind. Bonuses to a power's MAC score make it lower, thus harder to hit. While penalties make it higher, and thus easier to roll against. See "Using Psionic Powers" for more details.

**PSP Cost:** The number of PSPs that must be spent per round to use a psionic power. The secondary number is the PSP cost if the MTHAC0 roll fails.

**Range:** The maximum distance from the user at which the power has an effect. "Touch" requires the user to make physical contact with the target—that is, a THAC0 roll.

**Area of Effect:** The physical area or number of beings a power affects. "Personal" only affects the user.

**Prerequisite:** Other sciences or devotions a character must know before being able to use a particular power. Some prerequisites will list a level. This is the lowest level a psionicist using this psionic power can be.

Once a psionicist has mastered the powers of his mind, the results can be as spectacular as the explosive force of the psychokinetic science called detonate or as subtle as the clairsentient devotion called see sound. Originally from *The Complete Book of Psionics, Dragon Kings,* and *The Will and the Way,* the psionic powers described in this chapter have been revised to reflect the new psionics system.

Obviously, not every psionic power could be contained here. For the most part, however, changes have been kept to a minimum and are listed on the Psionic Powers Summary. The summary provides the statistics needed to convert existing powers to the new system. The revised statistics, the MAC score, and the reconfigured PSP cost replace the power score, initial cost, and maintenance cost from the old psionics system.

The powers are divided alphabetically into the five disciplines (clairsentience, psychokinesis, psychometabolism, psychoportation, and telepathy). The major powers (sciences) are presented first in each section, followed by the minor powers (devotions). Each entry includes certain parameters, as described in the accompanying sidebar.

If you're new to psionics, skip the following paragraph. The explanation of the changes from the old psionics system to the new may be confusing. If you've used psionics often in your past campaigns, however, the following paragraph may help you understand the *why* behind some of the system changes.

Power scores have been replaced by MAC scores, as the base mechanic for psionics has been changed from a proficiency system to a combat system. Initial costs and maintenance costs have been combined into a single PSP cost. Preparation time has been eliminated. Optional results also have been eliminated, though they can still be used if DMs and players desire.

## Clairsentient Powers

Clairsentient powers allow characters to perceive things beyond the natural range of human and demihuman senses. Revised sciences and devotions are presented below.

### Aura Sight

**(clairsentient science)**

MAC: 7 (base)
PSP Cost: 9/3

Range: 50 yards
Area of Effect: Personal
Prerequisite: None

With this power, the user can detect auras (the normally invisible envelope of colored light that surrounds all living things). Each use of the power gives the user one piece of information—either the target's alignment (one portion of it) or relative level of power, but not both simultaneously.

This power can be used twice per round (for two PSP costs and with two MTHAC0 rolls) to examine two different auras or the same aura twice. The user can be discreet, but he needs to gaze at the target. Using the power from a distance is less noticeable than using it up close.

The level (or Hit Dice) of the target character affects the MTHAC0 roll. The higher the level of the target, the tougher it is to interpret the aura. The power's MAC should be improved by 1 for every three levels (or HD) the target has, rounded down. For example, an 8th-level target improves the power's MAC by 2, making it MAC 5 (and therefore harder to roll against).

The DM should relate game-related information in a story sense, rather than in mechanical terms. In the case of alignment, the user sees colored light that represents an element: 1) blue (lawful); 2) gray (neutral); 3) red (chaotic); 4) white (good); or 5) black (evil). Relative level of power can be described as follows: 1) dim aura (a low-level target, 1st to 5th level); 2) bright aura (a mid level target, 6th to 13th level); 3) dazzling aura (a high-level target, 14th to 20th level); and 4) blinding aura (a target above 20th level).

## Clairaudience

**(clairsentient science)**

MAC: 8 (base)
PSP Cost: 5/2
Range: Unlimited
Area of Effect: Special
Prerequisite: None

This power allows the user to hear sounds from a distant area. The user picks a location he knows, makes an MTHAC0 roll, then listens to everything he would be able to hear normally if he were standing in that spot. If the user has enhanced hearing, that ability also applies to the use of clairaudience. The power doesn't screen out noise around the user's physical body, which may make it difficult to hear sounds elsewhere. The power doesn't provide any abilities to understand languages or interpret sounds. The distance of the listening spot modifies the power's MAC, as shown below.

| **Range** | **Power's MAC** |
|---|---|
| 100 yards | 8 |
| 1,000 yards | 6 |
| 10 miles | 4 |
| 100 miles | 2 |

| | |
|---|---|
| 1,000 miles | 0 |
| 10,000 miles | –2 |
| Interplanetary* | –4 |

* Clairaudience only works within a given plane or crystal sphere.

For example, a user trying to hear something 10,000 miles away would require a roll against a lower MAC. Instead of 8, for the closest range, the mental armor class would now be –2. If the user's MTHAC0 is 15, he needs to roll a 17 to successfully employ this power.

## Clairvoyance

**(clairsentient science)**

| | |
|---|---|
| MAC: | 7 (base) |
| PSP Cost: | 5/2 |
| Range: | Unlimited |
| Area of Effect: | Special |
| Prerequisite: | None |

This power allows the user to see images from a distant location. The user picks a spot he knows, makes an MTHAC0 roll, then looks at everything he would be able to see if he were standing in that spot. The user's field of vision is the same as normal, and turning his head allows him to scan the area.

Clairvoyance doesn't replace normal vision. The user still sees what's around his physical location, with the distant scene superimposed. Closing one's eyes blocks the double vision and leaves only the distant scene. This power doesn't enhance vision, so hidden or invisible objects remain undetected. The distant scene is visual only; there is no sound.

The distance of the viewing spot modifies the power's MAC, as shown below.

| **Range** | **Power's MAC** |
|---|---|
| 100 yards | 7 |
| 1,000 yards | 5 |
| 10 miles | 3 |
| 100 miles | 1 |
| 1,000 miles | –1 |
| 10,000 miles | –3 |
| Interplanetary* | –5 |

* Clairvoyance only works within a given plane or crystal sphere.

## Object Reading

**(clairsentient science)**

| | |
|---|---|
| MAC: | 7 |
| PSP Cost: | 12/6 |
| Range: | 0 |
| Area of Effect: | Touch |

Prerequisite: None

This power allows the user to detect psionic impressions left on an object by a previous owner. These impressions include the owner's race, sex, age, and alignment. The power can also reveal how the owner came to possess the item and how he lost it. An object can be read successfully only once per experience level. Additional readings at the same level reveal no new information.

The amount of information gained depends on the MTHAC0 roll. Success rolls start with the number the user needs to get MAC 7 and then improve from there, as noted below. The user learns the information listed, plus all results above it.

| **Success Roll** | **Information Gained** |
|---|---|
| 0 to +2 | Last owner's race |
| +3 to +4 | Last owner's sex |
| +5 to +6 | Last owner's age |
| +7 | Last owner's alignment |
| +8 and up | How last owner gained and lost object |

## All-Round Vision

**(clairsentient devotion)**

MAC: 8
PSP Cost: 5/2
Range: 0
Area of Effect: Personal
Prerequisite: None

This power lets the user see in all directions simultaneously. This has obvious benefits, including a +2 surprise roll bonus to the user for encounters where being able to see is an advantage. There is a penalty, however. While this power is in effect, gaze attacks against the user receive a +4 bonus.

## Combat Mind

**(clairsentient devotion)**

MAC: 6
PSP Cost: 4/2
Range: 0
Area of Effect: Personal
Prerequisite: None

This power gives the user an unusually keen understanding of his enemies and their fighting tactics. As a result, the user's side gains a –1 bonus to all initiative rolls during combat for every round the power is in effect. This bonus is in addition to any other modifiers that may apply.

## Danger Sense

**(clairsentient devotion)**

MAC: 8
PSP Cost: 3/1
Range: 50 yards
Area of Effect: Personal
Prerequisite: None

This power produces a slight tingling sensation at the back of the user's neck whenever a hazard or threat is near. When a character wants to activate this power, the DM makes the MTHAC0 roll for the character in secret. The DM informs the user whether the power has been successfully activated, but not how high the roll was. For every round that the user keeps the power in effect, he receives advance warning about the general direction of a threat.

No details about the type of danger are learned, or how or when the danger will strike. How much warning depends on the MTHAC0 roll. If the roll succeeds by +1 to +6, the user receives warning just moments before danger strikes. This gives him the opportunity to act before the danger strikes in the round, but no time to warn others. If the roll succeeds by +7 or better, the user knows whether danger is lurking within the area of effect a full round before it shows itself.

In addition to the above benefits, the power gives the user a +2 bonus to surprise rolls.

## Feel Sound

**(clairsentient devotion)**

MAC: 8
PSP Cost: 4/2
Range: 0
Area of Effect: Personal
Prerequisite: None

This power makes the user's body sensitive to sound. It allows the user to continue to hear even if his ears are disabled. He can't detect sound where there is none, and the power doesn't work within areas of magical silence. The user gains a +2 bonus against all sonic attacks or effects, including a siren's song.

## Know Location

**(clairsentient devotion)**

MAC: 8
PSP Cost: 8/3
Range: 0
Area of Effect: Personal
Prerequisite: None

This power aids characters who travel via teleportation, gates, or other planes of existence. When used successfully, it reveals general information about the user's location. The information is no more detailed than the responses of a simple farmer to the question "Where am I?" Some typical responses are "A few miles southwest of Wingot

Mountain"; "In the house of Fletch the Blind"; and "On a tropical island in the Turomil Sea."

The higher a successful MTHAC0 roll, the more precise the location. A roll of +1 to +4 higher than the MAC specifies a location within 10 miles. A roll of +7 or +8 higher than the MAC targets an area within a mile. A roll of +9 or higher than the MAC gives the location in a planar context ("the Astral Plane").

## Martial Trance

**(clairsentient devotion)**

| | |
|---|---|
| MAC: | 7 |
| PSP Cost: | 7/3 |
| Range: | 50 yards |
| Area of Effect: | Personal |
| Prerequisite: | 3rd level |

This power helps the user in psionic combat. By entering a trance before combat begins, the user focuses his complete attention on the psionic activity, tuning out other distractions. While in the trance, the user gains a +1 bonus to all mental attack rolls, in addition to any other modifiers that may apply.

The trance ends when the user chooses to end it, by any moderate physical contact (a blow, shake, or slap), or when his PSPs are reduced to 0. As his attention is completely focused on the psionic battlefield, any melee attacks against him hit automatically and cause maximum damage.

## Poison Sense

**(clairsentient devotion)**

| | |
|---|---|
| MAC: | 10 |
| PSP Cost: | 1/1 |
| Range: | 1–yard radius |
| Area of Effect: | Personal |
| Prerequisite: | None |

This power enables a user to detect the presence of poison and identify its location within 1 yard of his body (or presence, if he uses clairvoyance or astral projection). The type of poison and how it can be negated aren't revealed, only its presence.

## Psionic Sense

**(clairsentient devotion)**

| | |
|---|---|
| MAC: | 8 |
| PSP Cost: | 2/1 |
| Range: | 200–yard radius |
| Area of Effect: | Personal |
| Prerequisite: | Mindlink |

This power allows the user to detect psionic activity anywhere within 200 yards of his location. Any expenditure of PSPs constitutes psionic activity. The first successful use of

this power reveals whether someone or something is psionically active within range. A second successful use of the power in the following round reveals how powerful the activity is and where the psionic activity is taking place (direction and distance). If psionic activity is occurring in more than one location within the range, the user detects all of it.

Power levels are as follows: 1) low psionic activity (1 to 5 PSPs per round); 2) moderate psionic activity (6 to 12 PSPs per round); and 3) high psionic activity (13+ PSPs per round).

## See Sound

**(clairsentient devotion)**

| | |
|---|---|
| MAC: | 8 |
| PSP Cost: | 4/2 |
| Range: | Special |
| Area of Effect: | Personal |
| Prerequisite: | None |

This power enables a user to perceive sound waves visually by converting those waves into light impulses. Only a character who can see with normal vision can use this power. He can see sound even in darkness, as sound waves don't require light. The user can be "blinded" by silence, however.

## Psychokinetic Powers

Psychokinetic powers move objects across space using only the energy of a character's mind. Revised sciences and devotions are presented below.

## Create Object

**(psychokinetic science)**

| | |
|---|---|
| MAC: | 6 |
| PSP Cost: | 7/3 |
| Range: | 20 yards |
| Area of Effect: | Special |
| Prerequisite: | Telekinesis |

This power allows a user to assemble matter from air and the surrounding area to create a solid object. Only materials within 20 yards of the user can be used in the construction. The object remains in existence for every round that the user continues to pay the PSP cost. During the round that the PSP cost isn't paid, the object breaks apart. An object created with this power can have any shape, color, and texture the user desires, provided it fulfills at least one of these conditions:

- Fits within a sphere no more than 4 feet in diameter.
- Fits within a cylinder no more than 20 feet high and 1 foot in diameter.
- Fits within a cylinder no more than 2 feet high and 6 feet in diameter.
- Weighs no more than 10 pounds.

## Detonate

**(psychokinetic science)**

MAC: 5
PSP Cost: 15/5
Range: 60 yards
Area of Effect: 1 item, 8 cubic feet
Prerequisite: Telekinesis, molecular agitation

With this power, the user harnesses, focuses, and explosively releases the latent psionic energy inside non sentient (0 Intelligence) plants and inanimate objects. The power also works against animated undead (skeletons and zombies), but doesn't affect incorporeal undead. It can't be used against animals, intelligent creatures, or free-willed undead.

The explosion causes destructive damage to the target, based on the MTHAC0 roll. If the roll is equal to the power's MAC, 10% of the target area is destroyed. For every number rolled above the MAC, an additional 10% is destroyed, up to a total of 8 cubic feet of material (by a single power use).

Monsters such as skeletons and golems targeted by the detonate power take damage based on the percentage of their mass that was destroyed, losing an equal percentage of hit points. Magically animated material, like golems, can make a saving throw vs. spell to resist detonation.

Weapons and armor that have been detonated receive penalties of –1 to attack rolls and AC values for each 10% destroyed. Magical items make a saving throw vs. disintegration to resist detonation. Vulnerable objects or living things within 10 feet of the target suffer 1d10 points of damage from the resulting explosion. A save vs. breath weapon reduces damage to half.

## Project Force

**(psychokinetic science)**

MAC: 6
PSP Cost: 10/4
Range: 200 yards
Area of Effect: Personal
Prerequisite: Telekinesis

This power allows the user to focus a psychokinetic "punch" against a target up to 200 yards away. If used offensively, this punch causes damage equal to 1d6 points plus the target's Armor Class (negative armor classes are subtracted from the die roll). Only AC provided by actual armor is added to or subtracted from the roll—not Dexterity or magical bonuses. A successful save vs. breath weapon reduces the damage to half.

Project force can also be used to trigger traps, throw levers, open doors (not locked or latched), break windows, etc. No attack roll is needed, just the MTHAC0 roll to activate it.

## Telekinesis

**(psychokinetic science)**

MAC: 8
PSP Cost: 3+/1

Range: 30 yards
Area of Effect: 1 item
Prerequisite: None

This power allows the user to move objects without touching them. Telekinesis tends to be physically taxing, as it takes a lot of internal energy to move objects. Small objects are easy. But larger, more massive objects are significantly more difficult.

The cost listed above assumes the object being moved weighs three pounds or less. For heavier objects, use the following:

- PSP cost equals the item's weight in pounds.
- The power's MAC improves by a bonus equal to one-third of the item's weight, rounded down. For example, moving a 10–pound rock requires rolling against a MAC of 5.

Telekinesis moves the targeted item up to 60 feet per round. Items moving at such a slow rate of speed don't make effective weapons, but items weighing more than three pounds can be used to disrupt spellcasting or psionic use. The user rolls his base THAC0 score to hit, with a penalty equal to one-third of the item's weight, rounded down. For example, if a hero whose THAC0 is 15 wants to attack a priestess whose AC is 0, he needs an 18 or better to hit her with a 10–pound rock.

Telekinesis can be used to perform very fine work, such as writing or sewing. The user must be capable of performing the work himself, and a second MTHAC0 roll (and second round of power use) is needed to complete fine work. If the hero wants to use the power to pull an item away from an opponent, use the rules for psychic contests, except that the defender uses his Strength score to decide the contest.

## Animate Object

**(psychokinetic devotion)**

MAC: 7 (base)
PSP Cost: 5/2
Range: 50 yards
Area of Effect: 1 item, 100 pounds
Prerequisite: Telekinesis

This power allows the user to control the movement of an otherwise inanimate object, giving it the appearance of life. For example, animate object can make chairs walk or stones dance, though objects being animated must weigh 100 pounds or less. The material the item is made of affects the difficulty of the task, as indicated below.

| **Material** | **Power's MAC** |
|---|---|
| Cloth, paper | 7 |
| Live wood, dead animal | 6 |
| Dead wood, bone | 5 |
| Water | 4 |
| Thin metal | 3 |
| Thick metal | 2 |

Once animated, all materials become flexible to some extent, though fluid motion is uncommon. Animated items move like puppets, with jerky, clumsy motions. If the item was rigid initially, it makes loud creaking, groaning, or grating sounds as it moves. An animated item moves up to 60 feet a round (movement rate 6). It can be used to attack, acting like a club with a THAC0 of 20 and a damage score of 1d6 points.

## Control Light

**(psychokinetic devotion)**

| | |
|---|---|
| MAC: | 8 |
| PSP Cost: | 6/2 |
| Range: | 25 yards |
| Area of Effect: | 400 square feet |
| Prerequisite: | None |

This power allows the user to manipulate ambient light. He can't create light from darkness, but he can create darkness from light. Use of control light can accomplish the following:

- Deepen existing shadows. A thief hidden in such shadows receives a +20% bonus to his hide-in-shadows rolls.
- Brighten existing shadows. This reduces a thief's hiding ability by 20%.
- Brighten a light source until it becomes blinding. Those exposed to the light receive a –2 penalty to attack rolls.
- Dim a light source. This has no effect on attack rolls.
- Extend shadows into areas that are well lit. Only existing shadows can be lengthened, increasing in size by 200%.
- Extend light into areas that are in shadow. Shadows can be reduced by 50%.

## Control Sound

**(psychokinetic devotion)**

| | |
|---|---|
| MAC: | 5 |
| PSP Cost: | 3/1 |
| Range: | 100 yards |
| Area of Effect: | 1 specific sound |
| Prerequisite: | None |

This power allows the user to shape and alter existing sounds. A man's words could emerge as a lion's roar, or the noise of marching soldiers can be made to sound like the wind of a sandstorm. Sounds also can be layered, so that one singer can be made to sound like a choir. Control sound can also dampen a noise. The player must specify what sound his character intends to eliminate. For example, the user might quiet the strike of a hammer or erase the creak of a door. He couldn't eliminate both at once, however.

## Control Wind

**(psychokinetic devotion)**

MAC: 5
PSP Cost: 12/5
Range: 500 yards
Area of Effect: 1,000 yards
Prerequisite: Telekinesis

With this power, a user can gain limited control over wind speed and direction. The speed of any existing wind can be increased or decreased by 10 miles per hour or 25%—whichever is greater. The direction of the wind can be changed by up to 90 degrees. These changes are temporary, lasting only as long as the PSP cost is paid. The changes occur in the round that the power is successfully activated. The wind returns to its original course and speed the round that the PSP cost is not paid.

Wind above 19 miles per hour prevents anything smaller than a human from flying and imposes a –4 modifier on missile fire. On the water, such wind makes sailing difficult. Wind gusting at more than 32 miles per hour causes minor damage to ships and buildings. This wind also kicks up clouds of dust and prevents all but the largest creatures from flying. Wind more than 55 miles per hour prevents all flight, knocks down trees and wooden buildings, and may swamp ships. Wind more than 73 miles per hour is a hurricane gale.

## Inertial Barrier

**(psychokinetic devotion)**

MAC: 6
PSP Cost: 6/2
Range: 0
Area of Effect: 3–yard diameter
Prerequisite: Telekinesis

This power is used as a defense, creating a barrier of psionic energy around the user and anyone within three yards of him. This barrier softens missile blows, shielding the user from damage by slowing and absorbing some or all of the potential damage caused by incoming attacks. However, the barrier also slows outgoing missile attacks—a drawback the user should consider.

The power protects against damage from these forms of attack: any nonmagical missile weapon; any physical missile created by magic; any missile with magical bonuses; flames; some breath weapon attacks (depending on the nature of the breath); acid; gas; all forms of disintegration; and falling (damage is halved). Inertial barrier cannot stop missiles conjured from pure magic or protect against raw heat or cold, pure energy or light, or gaze weapons. An inertial barrier cannot keep enemies out, but it does slow them. Anyone trying to cross a barrier must stop moving when contact is made. In the next round, the barrier can be crossed (either entering or exiting).

Missile weapons, whether passing into or out of the barrier, inflict damage in a modified fashion because the power saps energy from the missile. If a missile strikes its target after passing through the barrier (in either direction), the attacker rolls for damage as normal. However, the defender then rolls the same die to see how much damage the barrier absorbed. (Note: The defender doesn’t include any magical bonuses the weapon

may have.) The defender subtracts his die roll from the attacker's damage total. If anything remains, the defender loses that many hit points. If the defender's roll equals or exceeds the total damage, the weapon falls harmlessly to the ground. If the missile is explosive, the barrier prevents weapon damage but not explosive damage.

## Levitation

**(psychokinetic devotion)**

| | |
|---|---|
| MAC: | 8 (base) |
| PSP Cost: | 5/2 |
| Range: | 0 |
| Area of Effect: | Personal |
| Prerequisite: | Telekinesis |

This power allows the user to float by using telekinesis on himself. The user can lift himself at the rate of 1 foot a second, or 60 feet a round. He can descend as quickly as he wants by simply letting himself fall, then slowing down as he nears the ground. The user can always levitate his own weight. Additional weight, such as equipment or passengers, is a hindrance. Every 25 pounds of added weight improves the power's MAC by 1.

Levitation isn't flying. The power provides no horizontal movement. The user can hover motionlessly and drift with the wind, or he can push off a wall or other fixed object and drift up to 60 feet a round in a straight line. He can't stop, however, until he meets another solid object, lowers himself to the ground, or stops paying the PSP cost. Two powers—control wind and project force—can help the levitating user propel himself forward and change direction. The use of these additional powers requires the extra expenditure of PSPs and MTHAC0 rolls.

## Molecular Agitation

**(psychokinetic devotion)**

| | |
|---|---|
| MAC: | 10 |
| PSP Cost: | 7/3 |
| Range: | 40 yards |
| Area of Effect: | 1 item, 20 pounds |
| Prerequisite: | None |

This power enables the user to excite the molecules of a substance, causing paper to ignite, wood to smolder, or skin to blister, for example. The degree of destruction is as follows, depending on the number of rounds the item is agitated:

- *One round.* Readily flammable materials, such as paper and dry grass, ignite; skin becomes red and tender (1 point of damage); wood becomes dark.
- *Two rounds.* Wood smolders and smokes; metal becomes hot to the touch; skin blisters (1d4 points of damage); hair melts; paint shrivels.
- *Three rounds.* Wood ignites; metal scorches (1d4 points of damage); skin burns away (1d6 points of damage); water boils, lead melts. The damage inflicted doesn't increase beyond this round, but targets continue to suffer the 1d4 or 1d6 points for each subsequent round the power continues.
- *Four rounds.* Steel grows soft.

- *Five rounds.* Steel melts.

Magical items receive saving throws against magical fire, but a +10 penalty is applied to the number needed. The heat produced by this power is highly destructive as it comes from inside the item instead of outside.

## Molecular Manipulation
**(psychokinetic devotion)**

MAC: 7
PSP Cost: 6/2
Range: 15 yards
Area of Effect: 2 square inches
Prerequisite: Telekinesis

This power allows the user to weaken an object's molecular bonds. When stress is applied to the object or a blow is struck, it snaps. The user can create one "weak point" of approximately 2 square inches each round. Deterioration occurs across a plane (in two dimensions, not three). One round's application is enough to fatally weaken most small objects (knives, ropes, saddle straps, bows, etc.). Larger objects require more time and are subject to the DM's discretion.

The DM must decide how vulnerable molecular manipulation makes larger, oddly shaped items (such as doors and shields). An object need not be in two pieces to be useless. A small boat, for example, is unsafe if it has a crack in its hull.

## Psychometabolic Powers

Psychometabolic powers affect the user's body by altering it in some way. Revised sciences and devotions are presented in this section.

## Animal Affinity
**(psychometabolic science)**

MAC: 5
PSP Cost: 7/3
Range: 0
Area of Effect: Personal
Prerequisite: None

With this power, the user develops an affinity for a particular animal type. Roll on the list below to determine the animal type (see the Monstrous Manual for descriptions). The user undergoes a physical change when this power is used, depending on the animal and ability. For example, he may gain wings or claws.

When the user activates this power, he temporarily gains one of the animal's attributes. He can gain the animal's Armor Class; movement rate and mode; physical attacks, damage, and THAC0; hit points; or any other special ability—though only one of these can be gained at a time. The attribute lasts for every round that the cost is paid. Switching to a different attribute requires a new MTHAC0 roll.

| 1d20 | Result |
|---|---|
| 1 | Ape |

| | |
|---|---|
| 2 | Barracuda |
| 3 | Boar |
| 4 | Bull |
| 5 | Crocodile |
| 6 | Eagle, giant |
| 7 | Elephant |
| 8 | Falcon |
| 9 | Griffon |
| 10 | Grizzly bear |
| 11 | Lion |
| 12 | Panther (black leopard) |
| 13 | Draft horse |
| 14 | Peregrine falcon (hawk) |
| 15 | Rattlesnake |
| 16 | Scorpion, giant |
| 17 | Shark |
| 18 | Stag |
| 19 | Tiger |
| 20 | Wolf |

* Constrictor or poison, player's choice.

## Complete Healing

**(psychometabolic science)**

MAC: 7
PSP Cost: 25/5
Range: 0
Area of Effect: Personal
Prerequisite: None

This power allows the user to heal himself completely of all ailments, wounds, and normal diseases. He must place himself in a trance for 24 hours to accomplish the healing. The trance is deep; it can't be broken unless the user loses 5 or more hit points. During the healing trance, the user's body repairs itself at an incredible rate. At the end of the 24 hours, he awakens, restored to complete health in every regard except for the PSPs expended to use the power. If the user fails his MTHAC0 roll, the power can't be activated; the trance breaks after 1 hour, costing 5 PSPs.

## Metamorphosis

**(psychometabolic science)**

MAC: 4
PSP Cost: 6/3
Range: 0
Area of Effect: Personal
Prerequisite: None

This power resembles magical *polymorphing*, but it has a wider application. The user can change himself into anything with approximately the same mass as his body: a wolf, a chair, or even a tree. While in this form, the user retains his own hit points and THAC0, but he gains the AC of the new form. He also gains all physical attacks the form allows, but no magical or special abilities. A new attack ability depends on the form chosen; a tree, for example, can't attack, so it has no THAC0. Nonmagical movement is also gained. If the user metamorphs into another character race, use the *Monstrous Manual* book's descriptions for that race.

Some forms have intrinsic advantages. Changing into a fish or rock renders the user immune to drowning, though he doesn't retain any senses not normally associated with his new form. He may opt to keep some of his own senses when he transforms, but these are likely to give him away.

Like any massive change of shape, metamorphosis causes great physical stress. The user must make a system shock roll. If the roll fails, he expends 6 PSPs, changes form only for 1 round, and immediately passes out for 2d6 turns.

## Shadowform

**(psychometabolic science)**

| | |
|---|---|
| MAC: | 5 |
| PSP Cost: | 5/2 |
| Range: | 0 |
| Area of Effect: | Personal |
| Prerequisite: | None |

This power transforms the user into living shadow. The user, his clothing, armor, and up to 20 pounds of equipment all transform. He can blend perfectly into any other shadow. His movement rate, however, is 6 (regardless of what it was before), and he can only travel through darkness and shadow. Areas of open light are impassable.

While in shadowform, the user only can be noticed by life detection, other types of psionic detection, or by a true seeing spell. He can't harm anyone physically or manipulate any corporeal objects, but he can use psionic powers.

## Adrenaline Control

**(psychometabolic devotion)**

| | |
|---|---|
| MAC: | 6 |
| PSP Cost: | 5/2 |
| Range: | 0 |
| Area of Effect: | Personal |
| Prerequisite: | None |

This power temporarily boosts the amount of adrenaline in the user's system, giving him physical advantages. He gains 1d6 points to divide among his Strength, Dexterity, and Constitution scores as he chooses, thus increasing them while the power is in effect. He receives all of the normal bonuses for high ability scores during this period. (If used to increase Constitution, the user might temporarily gain bonus hit points. Damage suffered is subtracted from the extra hit points first.)

Exceeding racial maximums is dangerous. When an attribute is increased beyond the racial maximum and the user stops paying the PSP cost, he must make a system shock check; he suffers 1d6 points of physical damage if the roll fails.

## Body Control
**(psychometabolic devotion)**

MAC: 5
PSP Cost: 6/2
Range: 0
Area of Effect: Personal
Prerequisite: None

This power allows the user to adapt his body to a hostile environment. The change must be keyed to a specific surrounding: water, acid, extreme heat, extreme cold, an elemental plane, etc. If the power works, the user not only survives, he behaves like a native organism. He can breathe and move normally, suffering no damage from the environment. However, a character who can survive extreme cold is still vulnerable to a cone of cold spell.

## Body Equilibrium
**(psychometabolic devotion)**

MAC: 6
PSP Cost: 2/1
Range: 0
Area of Effect: Personal
Prerequisite: None

This power allows the user to adjust his body weight to correspond to the surface he's standing on. Thus, he can walk on water, quicksand, silt, or even a spider's web without sinking or breaking through. If the user is falling when he activates this power, he falls slowly enough to escape injury. Because of how light weight the user becomes when this power is in effect, he must be wary of wind gusts, which can easily blow him about.

## Body Weaponry
**(psychometabolic devotion)**

MAC: 6
PSP Cost: 6/3
Range: 0
Area of Effect: Personal
Prerequisite: None

This power allows the user to convert one of his arms into a weapon. Virtually any sort of weapon can be imitated, except ranged weapons (such as bows) or any weapon the user isn't proficient with. The arm actually becomes rock, bone, wood, or metal and assumes the weapon's form. It behaves in every respect like a normal weapon of the chosen type, with the bonus that it can't be dropped or stolen.

## Cannibalize

**(psychometabolic devotion)**

MAC: 7
PSP Cost: 0
Range: 0
Area of Effect: Personal
Prerequisite: 5th level

This power allows the user to cannibalize his own body for extra PSPs. When activated successfully, the user can take Constitution points and convert them directly to PSPs at a ratio of 1:8 (1 Constitution point equals 8 PSPs). The user can access these PSPs any time, as if they were part of his total.

The Constitution reduction isn't permanent, but it is debilitating and long-lasting. The user immediately loses bonus hit points that accompany high Constitution scores. His system shock and resurrection survival chances are reduced. All psychometabolic powers receive MAC bonuses (making them harder to use) equal to the number of Constitution points that were cannibalized. The user recovers one cannibalized point of Constitution per week of rest. Rest means staying quietly in a safe place; adventuring is not allowed.

## Cell Adjustment

**(psychometabolic devotion)**

MAC: 6
PSP Cost: 5+
Range: Touch
Area of Effect: Individual
Prerequisite: None

This power allows the user to heal wounds and cure nonmagical diseases—excluding such unnatural diseases as mummy rot and lycanthropy. He can cure a disease in 1 round by spending 5 PSPs and making a successful MTHAC0 roll. If the roll fails, the disease is too widespread in the victim's system. The user must continue spending 5 PSPs each round until he succeeds in activating the power. Note that a cure performed through this power doesn't automatically restore lost hit points. However, the user can heal up to 4 points of damage in each subsequent round by spending 5 PSPs per hit point recovered (4 hit points for 20 PSPs per round maximum). The user can't cure a disease and restore hit points during the same round.

## Chameleon Power

**(psychometabolic devotion)**

MAC: 7 (base)
PSP Cost: 4/1
Range: 0
Area of Effect: Personal
Prerequisite: None

This power changes the coloration of the user's skin, clothing, and equipment to

match the nearest background. The match is automatic; the user doesn't choose the appearance. The change takes several seconds to occur. As the user moves, the coloration shifts to reflect any changes in the surroundings.

This power makes the user extremely difficult to spot. For every round the power is in effect and the user remains still, he can avoid detection simply by successfully rolling against the power's MAC. If the user moves, the MAC score increases (to MAC 5). Chameleon power is most effective in natural surroundings, where the user's coloration can best conceal him. In an urban setting, or in an area without natural cover during broad daylight, the power's MAC score is improved to MAC 3.

## Heightened Senses

**(psychometabolic devotion)**

| | |
|---|---|
| MAC: | 7 |
| PSP Cost: | 3/1 |
| Range: | 0 |
| Area of Effect: | Personal |
| Prerequisite: | None |

This power allows the user to sharpen all his normal senses: sight, hearing, taste, smell, and touch. (DMs might allow other applications as they see fit.) With heightened senses, the user has a good chance to notice thieves hiding in shadows or moving silently. This is represented by a thief's skill chance being cut in half if someone with heightened senses is observing him. Even if the thief is already hidden, he must roll again when the user of this power enters the area.

Someone with heightened senses can also track by sense of smell. He must make an Intelligence check every turn to stay on the trail or to recover it if he loses it. While tracking, the user's movement rate is reduced by 50%. The trail can be no more than 24 hours old. Ranges for the user's hearing and seeing are tripled while this power is in effect. Further, he can ingest small quantities of possibly poisoned or impure foods, identifying the substance without causing himself harm. The user can identify almost anything by touch. He can identify any item he has previously handled and can also tell if an item was handled in the last five minutes.

## Psychoportive Powers

These powers allow psionic travel, moving a character without physical action. Revised sciences and devotions are below.

## Banishment

**(psychoportive science)**

| | |
|---|---|
| MAC: | 8 |
| PSP Cost: | 15/6 |
| Range: | 5 yards |
| Area of Effect: | Individual |
| Prerequisite: | Teleport |

With this power, the user can teleport a creature against its will to a pocket dimension and hold it there for as long as he chooses to continue spending 15 PSPs per round. The

creature being banished must be within 5 yards of the user. The pocket dimension is featureless, with a benign environment—hot or cold, light or dark, but not so much as to cause injury.

The banished creature returns to its original location as soon as the user stops paying the PSP cost. This boomerang feature won't harm the creature. If the creature has access to the Astral or Ethereal Planes, or if it can teleport between planes, it can try to return prior to the expiration of the power by rolling an Intelligence check at –3.

## Summon Planar Creature

**(psychoportive science)**

| | |
|---|---|
| MAC: | 6 |
| PSP Cost: | 40/20 or 80/40 |
| Range: | 200 yards |
| Area of Effect: | 1 creature |
| Prerequisite: | Teleport |

With this power, the user can reach into another plane, grab whatever creature he happens to find there, and teleport it to his own plane. The creature is disoriented for 1 round after arriving, suffering a –2 penalty on all die rolls for initiative, attacks, and saving throws. The user can make the summoned creature appear anywhere within 200 yards of his position. If the user rolls the MAC number exactly, the creature appears within 10 yards. The PSP cost is 40 for a creature from the Astral or Ethereal Planes, 80 for one from the Inner or Outer Planes. Failure costs half the indicated PSPs.

The user chooses the plane from which the creature will come. He doesn't choose the creature, however; that's determined at random. A creature from the Elemental Planes is usually an elemental of the appropriate type. A creature from the Outer Planes could be a native or a visitor. DMs are encouraged to see the Planescape™ line for ideas.

This power offers no control over the summoned creature and doesn't return it to its home plane after a set amount of time—it merely teleports something from there to here. To be rid of the creature, the user must banish it, teleport it again, kill it, or somehow control it.

## Teleport

**(psychoportive science)**

| | |
|---|---|
| MAC: | 9 (base) |
| PSP Cost: | 10+/5+ |
| Range: | Unlimited |
| Area of Effect: | Personal |
| Prerequisite: | None |

This power allows the user to travel to a familiar spot. Teleport is instantaneous and always takes a character to a fixed location. There is a slight audible pop at both ends, signaling use of the power. The destination must be a place the user knows or can picture mentally. Even if the user never has been there, he may still know a location via use of ESP or another power. He can also teleport to a place even if it has changed from the way he pictures it; rearrangement won't hamper the teleport power.

Restraints don't affect this power. The user can bring his clothes, small items, and equipment (up to one-fifth of his body mass). Doubling the amount of PSPs spent to activate the power lets the user carry up to three times his body mass, or to take along up to two others he has a firm grasp on. The cost to use this power varies with the distance traveled, as indicated below.

| Distance | PSP Cost | Power's MAC |
|---|---|---|
| 10 yards | 10/5 | 9 |
| 100 yards | 20/10 | 8 |
| 1,000 yards | 30/15 | 7 |
| 10 miles | 40/20 | 6 |
| 100 miles | 50/25 | 5 |
| 1,000 miles | 60/30 | 4 |
| 10,000 miles | 70/35 | 3 |
| Interplanetary* | 100/50 | 2 |

* Teleport only works within a given plane or crystal sphere.

## Teleport Other

**(psychoportive science)**

MAC: 8 (base)
PSP Cost: 10+/5+
Range: Unlimited
Area of Effect: 1–3 individuals
Prerequisite: Teleport

This power is identical to teleport, except that it is used to teleport characters other than the user. The user stays where he is while someone else is teleported. The character must be willing to be teleported or otherwise have an open mind. If the user pays twice the usual PSP cost, he can teleport up to three characters—provided they are firmly grasping one another.

| Distance | PSP Cost | Power's MAC |
|---|---|---|
| 10 yards | 10/5 | 8 |
| 100 yards | 20/10 | 7 |
| 1,000 yards | 30/15 | 6 |
| 10 miles | 40/20 | 5 |
| 100 miles | 50/25 | 4 |
| 1,000 miles | 60/30 | 3 |
| 10,000 miles | 70/35 | 2 |
| Interplanetary* | 100/50 | 1 |

* Teleport other only works within a given plane or crystal sphere.

## Astral Projection

**(psychoportive devotion)**

MAC: 8

PSP Cost: 3/1
Range: Not applicable
Area of Effect: Personal
Prerequisite: None

This power allows the user to travel without his physical body by creating an astral form that immediately leaps into the Astral Plane. Only creatures or characters who are also on the Astral Plane can see it. A silvery cord connects the astral body to the physical one. This translucent string stretches 10 feet from the astral body before becoming invisible. If the cord is severed, both the astral and physical bodies die—killing the user. The cord is nearly indestructible, however. It only can be severed by a powerful psionic wind or the *silver sword* of a githyanki.

The Astral Plane is used to get to other destinations—a distant point on the Prime Material or a location on another plane, for example. When the user reaches his destination, a temporary physical body is formed there. It resembles the user's real body, and the two remain connected by the silvery cord. However, a temporary physical body isn't formed if the user travels to another location on the same plane as his real body. He can view that distant location in astral form, but he can't affect the area in any physical, magical, or psionic way.

## Blink

**(psychoportive devotion)**

MAC: 9
PSP Cost: 4/2
Range: 0
Area of Effect: Personal
Prerequisite: Teleport

This power allows the user to make a series of random, short-range teleportations that make him very hard to hit in combat. Each round, the user automatically blinks once at a randomly determined time in the initiative order. Roll 1d10 and note the initiative number of the blink. To strike at the user, his opponents must have a better initiative than his blink time. The user may attempt to strike before he blinks, but he must beat the blink initiative with his own roll or hold his action until the end of the round. Each blink carries the user 3d10 feet in a random direction. (Roll 1d8: 1 = straight ahead; 2 = ahead and to the right; 3 = to the right; and so on.) However, the user's blink won't carry him into a solid object or any kind of danger, such as into a fire or over a cliff.

## Dimensional Door

**(psychoportive devotion)**

MAC: 7 (base)
PSP Cost: 3/1
Range: 50+ yards
Area of Effect: Not applicable
Prerequisite: None

With this power, the user opens a human-sized portal that leads to the edge of another dimension. The edge acts as a lightning-quick transit system, carrying travelers to a destination chosen by the user. A gleaming portal appears in front of him. At the same time, an identical portal appears wherever the user wants it (within the power's range). The door can have any orientation desired. Stepping into either portal allows a character to immediately step out of the other. Both doors remain in place as long as the PSP cost is met.

A door has only one side and no thickness; it doesn't exist from the "back" and can't be used to screen missile attacks. Up to five characters each round can use a door. If a group lines up, 10 can step through a round.

Commuting via this power is disorienting. Indeed, a traveler emerges dazed and can't attack or move for a round. Even just poking a head through a door requires a system shock roll. Failure means the hero loses 50% of his current hit points and passes out for 1d6 rounds. Attacks made through a door suffer a –4 penalty. Distances between doors improve the power's MAC, as below.

| **Distance Between Doors** | **MAC Bonus** |
|---|---|
| 50 yards | 7 |
| 75 yards | 5 |
| 100 yards | 2 |
| 150 yards | 0 |
| 200 yards | –3 |

## Dimension Walk

**(psychoportive devotion)**

| | |
|---|---|
| MAC: | 8 |
| PSP Cost: | 5/2 |
| Range: | Not applicable |
| Area of Effect: | Personal |
| Prerequisite: | None |

With this power, the user opens a vaguely shimmering portal, which lets him travel from place to place in his own dimension by piercing other dimensions at right angles. This has two advantages over a dimensional door. The first being that a dimension walk isn't physically traumatizing, and the second being that the range of travel is greater. The user can actually travel through this dimension at the speed of 21 miles per turn. However, this power allows only the user to travel, and the portal closes behind him instantly.

The user finds himself engulfed in a featureless, inky grayness. He can't see where he is or where he's going. He has only his instinct to guide him, and he must make a Wisdom check every turn. If these checks succeed, he'll find himself at his chosen destination when he steps out of the dimensional realm. If any check fails, he strays off course by several miles. The DM can place the character in any location within the maximum distance he traveled from his starting point. It's up to the user to figure out his location, as the power does nothing to help him gain his bearings.

The user can take with him whatever he can carry, though *bags of holding* and other

dimensional devices spill their contents if taken into the gray realm. If anything lives in the gray, it never bothers (or can't interact) with dimension walkers.

## Phase

**(psychoportive devotion)**

| | |
|---|---|
| MAC: | 10 |
| PSP Cost: | 6/2 |
| Range: | 0 |
| Area of Effect: | Personal |
| Prerequisite: | None |

This power allows the user to shift his body into a different frequency of motion, making him transparent to the unphased world around him. While this power is in effect, the user can walk through solid matter. No physical force or energy can harm him, though other phased objects or creatures can do so.

A phased character can move vertically at 10 feet each round; over solid ground at his normal movement rate; over water or silt at half normal; and through solid matter at one-fourth the normal rate. If a character fails to pay the cost while moving through solid matter, he suffers 3d10 points of damage, falls into a coma for 1d6 hours, and phases immediately into the Ethereal Plane. Note that a phased character isn't affected by gravity. If a hero is falling off a cliff and activates this power, he retains any momentum he had and phases into the ground 21_2 feet for every 10 feet he falls. He must then have enough PSPs to reverse his fall and phase out of the ground or suffer the consequences noted above.

A phased character receives a +2 bonus to his MAC during psionic combat and gets a +2 bonus to all saving throws vs. mind-affecting magic or effects. Conversely, his MTHAC0 receives a –2 penalty.

## Teleport Trigger

**(psychoportive devotion)**

| | |
|---|---|
| MAC: | 8 |
| PSP Cost: | 2 per hour/1 |
| Range: | Unlimited |
| Area of Effect: | Personal |
| Prerequisite: | Teleport |

This power allows the user to establish a specific event that will instantly activate his teleport power. It is a reflexive event, occurring as soon as the conditions are met without any conscious effort on the part of the user. After successfully rolling the power's MAC number, the user must specify where he wants to teleport and define very specifically what conditions will trigger that teleport. These conditions can be anything he chooses, but they must happen in his immediate vicinity to activate the trigger.

When the teleport is triggered, the user must have enough PSPs remaining to pay the teleport cost. (If he doesn't, the power fails to activate.) He must also make a teleport MTHAC0 roll. If the roll fails, the power doesn't work. The trigger remains active as long as the user pays the PSP cost.

## Telepathic Powers

Telepathic powers involve the direct contact of two or more minds. Revised sciences and devotions are presented below in this section.

### Domination

**(telepathic science)**

| | |
|---|---|
| MAC: | 8 |
| PSP Cost: | 6+/3+ |
| Range: | 30 yards |
| Area of Effect: | Individual |
| Prerequisite: | Mindlink |

This power only can be used on an open mind. With it, the user projects mental commands into the mind of one other being. The dominated target knows what's happening, but he can't resist the user's will, so he is forced to do nearly anything the user wishes. The target's abilities remain unaffected by this power, and he can be made to use any power he possesses—assuming the user knows about it. Domination doesn't reveal facts or secrets about the target.

When domination is attempted, the target makes a saving throw vs. spell. If successful, the target isn't dominated. If the save fails, the target falls under the user's control for as long as the user pays the PSP cost. The PSP cost is dependent on the target's level, as shown below. Later, if the target is forced to do something against his alignment, he can attempt another saving throw to regain his free will.

| **Target's Level** | **PSP Cost** |
|---|---|
| 1–5 levels or HD | 6/3 |
| 6–10 levels or HD | 12/6 |
| 11–15 levels or HD | 22/11 |
| 16–20 levels or HD | 32/16 |
| 21+ levels or HD | 50/25 |

### Mindlink

**(telepathic science)**

| | |
|---|---|
| MAC: | 8 |
| PSP Cost: | 7+/3+ |
| Range: | Unlimited |
| Area of Effect: | Individual |
| Prerequisite: | None |

This power only can be used on an open mind, allowing the user to communicate wordlessly with any intelligent creature. This is two-way communication. It isn't the same as mind reading, because the user receives only those thoughts the target wants to send. Language isn't a barrier to mindlink. The PSP cost is determined by the target's level, as shown below.

| **Target's Level** | **PSP Cost** |
|---|---|

| | |
|---|---|
| 1–5 levels or HD | 7/3 |
| 6–10 levels or HD | 8/4 |
| 11–15 levels or HD | 9/5 |
| 16–20 levels or HD | 11/6 |
| 21+ levels or HD | 12/6 |

## Probe
**(telepathic science)**

| | |
|---|---|
| MAC: | 8 |
| PSP Cost: | 8+/4+ |
| Range: | 2 yards |
| Area of Effect: | Individual |
| Prerequisite: | ESP |

This power only can be used against an open mind. With it, the user can dig deeply into a target's subconscious. If the target fails a saving throw vs. spell, then all of his memories and knowledge are accessible to the user—from memories deep below the surface to those still fresh in the target's mind. The information is true (or at least the target believes it to be true).

A probe can be tried during melee if the user is close enough and the target's mind is opened. The user knows when a probed spellcaster is casting a spell and what the general effects of that spell are. The user can learn the answer to one question per round, though DMs can alter this rate. Complex questions and answers may take longer than a round to resolve. The PSP cost is per the target's level, as shown below.

| **Target's Level** | **PSP Cost** |
|---|---|
| 1–5 levels or HD | 8/4 |
| 6–10 levels or HD | 9/5 |
| 11–15 levels or HD | 10/5 |
| 16–20 levels or HD | 11/6 |
| 21+ levels or HD | 13/7 |

## Psychic Surgery
**(telepathic science)**

| | |
|---|---|
| MAC: | 8 |
| PSP Cost: | 9+/5+ |
| Range: | Touch |
| Area of Effect: | Individual |
| Prerequisite: | Mindlink, 7th level |

This power allows the user to repair psionic damage. He can operate on himself if need be, but the power's MAC improves to 5. Phobias, aversions, idiocy, comas, seizures—all these mental ailments and more can be treated and cured. However, curses or magical conditions such as charms can't be cured by this power. Nor can the surgery cure possession, though it can identify such a condition and force psionic combat. Most such ailments can be cured in 1 turn. If the MTHAC0 roll fails, the problem is too great

for the user; he can try again when he gains a new experience level.

This power has two special uses. First, it can help characters unleash their wild talents. If the user performs this kind of operation successfully, the patient gains a +2% bonus to his wild talent roll.

Second, the user can make the effect of any telepathic power permanent without any PSP costs. The power isn't bestowed upon the recipient, only the effect. This has the following restrictions: 1) The power must have a range greater than 0; 2) the surgeon must know the power and successfully use it on the patient; 3) the user can't do this type of operation to himself or another psionicist; 4) only one power can be made permanent per turn, and 5) if the MTHAC0 roll equals the MAC number, the procedure takes 2 turns. Likewise, this power can also remove a permanently implanted power. The PSP cost is determined by the target's level, as below.

| **Target's Level** | **PSP Cost** |
|---|---|
| 1–5 levels or HD | 9/5 |
| 6–10 levels or HD | 10/5 |
| 11–15 levels or HD | 11/6 |
| 16–20 levels or HD | 12/6 |
| 21+ levels or HD | 14/7 |

## Awe

**(telepathic devotion)**

MAC: 6
PSP Cost: 4+/2+
Range: 0
Area of Effect: 20 yards
Prerequisite: Mindlink

This power only works on an open mind. With it, the user can cause another character to hold him in awe. Characters affected by this power are mentally cowed—they sense the user's "awesome might." They have no desire to serve or befriend the user, but they won't attack him unless forced to do so. If possible, they'll avoid the user completely and take the first opportunity to escape his presence. The PSP cost for this power is based on the target's level, as shown below.

| **Target's Level** | **PSP Cost** |
|---|---|
| 1–5 levels or HD | 4/2 |
| 6–10 levels or HD | 5/2 |
| 11–15 levels or HD | 6/3 |
| 16–20 levels or HD | 8/4 |
| 21+ levels or HD | 9/5 |

## Conceal Thoughts

**(telepathic devotion)**

MAC: 10
PSP Cost: 4/2

Range: 0
Area of Effect: 3 yards
Prerequisite: None

This defensive power protects the user against psionic or magical ESP, probes, mindlinks, and other powers and spells that read or detect thoughts. It gives the user a +2 MAC bonus and a +2 to saving throws when defending against such effects.

## ESP

**(telepathic devotion)**

MAC: 6
PSP Cost: 6+/3+
Range: Unlimited
Area of Effect: Individual
Prerequisite: None

This power only works on an open mind. Extrasensory perception (ESP) allows the user to read someone else's mind. The user can perceive surface or active thoughts. He can't use ESP to explore a target's memories or to delve into his subconscious. Most intelligent creatures tend to think in words, so language can be a barrier to understanding. Unintelligent creatures think in pictures. Magical thought, such as when a wizard casts a spell, is unintelligible to this power. However, the user can recognize such thoughts as part of the spellcasting process. The PSP cost is shown below.

| **Target's Level** | **PSP Cost** |
|---|---|
| 1–5 levels or HD | 6/3 |
| 6–10 levels or HD | 7/4 |
| 11–15 levels or HD | 8/4 |
| 16–20 levels or HD | 9/5 |
| 21+ levels or HD | 11/6 |

## Inflict Pain

**(telepathic devotion)**

MAC: 5
PSP Cost: 3+/2+
Range: Touch
Area of Effect: Individual
Prerequisite: Mindlink

`This power only can be used on an open mind. It is a particularly nasty form of torture, although no actual harm is inflicted on the target, and the power leaves no physical scars or marks. Only evil characters can learn this power freely; others find their alignments twisting toward evil if they learn and use inflict pain.

If the target is an NPC who is being questioned, he is allowed a saving throw vs. paralyzation to withstand the agony. If he fails, he begs for mercy and answers questions as the DM sees fit. If the user finds a way to employ this power in combat, the target is

still entitled to a saving throw. Success means he grits his teeth and keeps on fighting. Failure means the pain imposes a –4 penalty to his attack rolls that round or disrupts and ruins spellcasting. PSP costs depend on the target's level.

| Target's Level | PSP Cost |
|---|---|
| 1–5 levels or HD | 3/2 |
| 6–10 levels or HD | 4/2 |
| 11–15 levels or HD | 5/3 |
| 16–20 levels or HD | 6/3 |
| 21+ levels or HD | 8/4 |

## Invisibility

**(telepathic devotion)**

MAC: 6
PSP Cost: 3+/2+
Range: 100 yards
Area of Effect: Individual
Prerequisite: Mindlink

This power only can be used on open minds. It differs significantly from the spell invisibility. This is a delusion that affects specific minds, not an illusion that affects everyone; the only real change occurs in those whose minds were opened. Thus, the user must open each mind he wants to deceive, for only to these minds will he appear invisible. He can see himself, and so can anyone whose mind wasn't opened. Only beings within 100 yards can be affected by this power.

The user must make a separate MTHAC0 roll for each delusion and pay a separate PSP cost for each. A delusion is defined as one invisible character as perceived by one other being. The user can make anyone who is human size or smaller invisible with this power, not just himself. Note that this power affects vision only; observers may still be able to hear or smell "invisible" characters. PSP costs are as follows.

| Target's Level | PSP Cost |
|---|---|
| 1–5 levels or HD | 3/2 |
| 6–10 levels or HD | 4/2 |
| 11–15 levels or HD | 5/3 |
| 16–20 levels or HD | 6/3 |
| 21+ levels or HD | 8/4 |

## Life Detection

**(telepathic devotion)**

MAC: 7
PSP Cost: 3/1
Range: 100 yards
Area of Effect: Varies
Prerequisite: None

This power allows the user to scan for the presence of living, thinking creatures within a limited area. If he is scanning at short range, he can cover a large angle. At long range, the angle is significantly reduced. He can scan 180 degrees to a range of 40 yards, 90 degrees to 60 yards, or 30 degrees to 100 yards. One round of scanning detects humans, demihumans, humanoids, mammals, and monsters with 8 or more Hit Dice. A second round detects all creatures with less than 8 Hit Dice. In either case, the user receives an accurate count.

The DM should make the MTHAC0 roll and keep it secret from the player. If the user doesn't detect anything, he won't know whether nothing's there or the power failed.

## Send Thoughts

**(telepathic devotion)**

MAC: 8
PSP Cost: 3+/2+
Range: Unlimited
Area of Effect: Individual
Prerequisite: None

This power only works on an open mind, allowing the user to send his thoughts to another mind via one-way communication. He can send information or simply use the power to distract the target. If the target is a wizard casting a spell, he gets a save vs. spell. If the wizard fails his save, his concentration is broken and the spell fails. If the target is distracted while in melee combat, he receives a –2 penalty to all attack rolls.

| Target's Level | PSP Cost |
|---|---|
| 1–5 levels or HD | 3/2 |
| 6–10 levels or HD | 4/2 |
| 11–15 levels or HD | 5/3 |
| 16–20 levels or HD | 6/3 |
| 21+ levels or HD | 8/4 |

## Sight Link

**(telepathic devotion)**

MAC: 6
PSP Cost: 5+ per turn/3+
Range: Unlimited
Area of Effect: Individual
Prerequisite: Mindlink

Only usable against open minds, this power lets the user tap into another's visual senses, allowing him to see whatever that being sees. The user's own vision is unaffected. If the linked character is subjected to a gaze attack, the user must make an appropriate saving throw or also be affected by the gaze.

| Target's Level | PSP Cost |
|---|---|
| 1–5 levels or HD | 5/3 |

| | |
|---|---|
| 6–10 levels or HD | 6/3 |
| 11–15 levels or HD | 7/4 |
| 16–20 levels or HD | 8/4 |
| 21+ levels or HD | 10/5 |

## Psionic Powers Summary

Below is a listing of all psionic powers currently in the AD&D game. Each has two new statistics, a MAC score and a PSP cost, replacing the old power score, initial cost, and maintenance cost from the original source. The number to the right of the slash is the cost if the MTHAC0 roll fails. All other details of the powers remain the same, unless new descriptions have been provided in this book. Powers are from The Complete Psionics Handbook unless noted otherwise.

**Table 84: Psionic Powers**

***Clairsentient Sciences***

| Power | MAC | PSP Cost |
|---|---|---|
| Appraise | 6 | 14/6 |
| Aura sight[1] | 7 | 9/3 |
| Clairaudience[1] | 8 | 5/2 |
| Clairvoyance[1] | 7 | 5/2 |
| Cosmic awareness[2,3] | 7 | 12/6 |
| Detection[3] | 9 | 8/3 |
| Object reading[1] | 7 | 12/6 |
| Precognition | 8 | 18/10 |
| Psychic clone[2] | 6 | 16/6 |
| Sensitivity to psychic impressions | 8 | 5/3 |
| Spirit lore[2,3] | 7 | 13/5 |
| Subjective reality[2,3] | 8 | 14/7 |
| True sight[2,3] | 8 | 10/4 |

***Clairsentient Devotions***

| Power | MAC | PSP Cost |
|---|---|---|
| All-round vision[1] | 8 | 5/2 |

**Point Allotments for Starting Characters by Race**

| Race | Character Points |
|---|---|
| Dwarves | 45 |
| Elves | 45 |
| Gnomes | 45 |
| Halflings | 35 |
| Half-elves | 25 |

| | |
|---|---|
| Half-orcs | 15 |
| Half-ogres | 15 |
| Humans | 10 |

## Racial Abilities

Racial abilities cost 5 to 15 character points each, or they can be purchased for varying amounts as character packages.

## Point Allotments for Starting Characters by Class

| Class | Character Points |
|---|---|
| Fighter | 15 |
| Paladin | 60 |
| Ranger | 60 |
| Thieves | 80 |
| Bards | 70 |
| Clerics | 125 |
| Druid | 100 |
| Wizard | 40 |
| Specialist Wizard | 30 |

All class abilities cost 5 to 15 character points.

## Nonplayer Character Point Allotment

| Class | Character Points |
|---|---|
| Apprentice | 10 |
| Skilled | 15 |
| Master | 20 |

## Bonus Points

Bonus proficiency points for a high Intelligence can be spent on Intelligence-based nonweapon proficiencies. Fighters can spend the points on weapon proficiencies or on Intelligence-based nonweapon proficiencies.

## Table 1: Background Events

| 1d20 | Event |
|---|---|
| 1 | Accused of a crime |
| 2 | Apprenticeship |
| 3 | Enslaved |
| 4 | Exiled |
| 5 | Failed business venture |
| 6 | Fell in love |
| 7 | Fled a disaster |
| 8 | Found or stole a valuable item |
| 9 | Homeless |
| 10 | Ideological differences |
| 11 | Joined the circus |

| | |
|---|---|
| 12 | Kidnapped |
| 13 | Killed someone |
| 14 | Made a powerful enemy |
| 15 | Orphaned |
| 16 | Ran away from home |
| 17 | Reformed |
| 18 | Touched by magic |
| 19 | Went to sea |
| 20 | Witnessed a crime |

**Table 27: Thieving Skill Base Scores**

| Skill | Base Chance |
|---|---|
| Pick Pockets | 15% |
| Open Locks | 10% |
| Find/Remove Traps | 5% |
| Move Silently | 10% |
| Hide in Shadows | 5% |
| Detect Noise | 15% |
| Climb Walls | 60% |
| Read Languages | 0% |
| Detect magic | 5% |
| Detect illusion | 10% |
| Bribe | 5% |
| Tunneling | 15% |
| Escape bonds | 10% |

**Table 14: Racial Requirements**

| Ability | Dwarf | Elf | Gnome | Half-elf | Half-orc | Half-ogre | Halfling | Human |
|---|---|---|---|---|---|---|---|---|
| Str | 8/18 | 3/18 | 6/18 | 3/18 | 6/18 | 14/18 | 7/18* | 3/18 |
| Dex | 3/17 | 6/18 | 3/18 | 6/18 | 3/17 | 3/12 | 7/18 | 3/18 |
| Con | 11/18 | 7/18 | 8/18 | 6/18 | 8/18 | 14/18 | 10/18 | 3/18 |
| Int | 3/18 | 8/18 | 6/18 | 4/18 | 3/17 | 3/12 | 6/18 | 3/18 |
| Wis | 3/18 | 3/18 | 3/18 | 3/18 | 3/14 | 3/12 | 3/17 | 3/18 |
| Cha | 3/17 | 8/18 | 3/18 | 3/18 | 3/12 | 3/8 | 3/18 | 3/18 |

*Halfling fighters cannot possess exceptional Strength scores.

**Table 15: Racial Adjustments**

| Race | Adjustments |
|---|---|
| Dwarf | +1 Con, –1 Cha |
| Elf | +1 Dex, –1 Con |
| Gnome | +1 Int, –1 Wis |
| Half-elf | None |
| Half-orc | +1 Str, +1 Con, –2 Cha |
| Half-ogre | +1 Str, +1 Con, –1 Int, –1 Cha |
| Halfling | +1 Dex, –1 Str |
| Human | None |

## Table 16: Racial Level Limits

| Class | Dwarf | Elf | Gnome | Half-elf | Half-orc | Half-ogre | Halfling | Human |
|---|---|---|---|---|---|---|---|---|
| Bard | — | — | — | U | — | — | — | U |
| Cleric | 10 | 12 | 9 | 14 | 4 | 4 | 8 | U |
| Druid | — | — | — | 9 | — | — | — | U |
| Fighter | 15 | 12 | 11 | 14 | 10 | 12 | 9 | U |
| Illusionist | — | — | 15 | — | — | — | — | U |
| Wizard | — | 15 | — | 12 | — | — | — | U |
| Paladin | — | — | — | — | — | — | — | U |
| Ranger | — | 15 | — | 16 | — | — | — | U |
| Thief | 12 | 12 | 13 | 12 | 8 | — | 15 | U |

**U** This symbol represents unlimited class advancement for characters of those races this.
— A member of this race cannot choose this class.

## Table 41: Character Kit Table

**Roll percentile dice to determine an adventurer's kit.**

| | | | | | |
|---|---|---|---|---|---|
| 01–03 | Acrobat | 33–35 | Jester | 66–68 | Savage |
| 04–06 | Amazon | 36–39 | Mariner | 69–72 | Scholar |
| 07–09 | Animal Master | 40–42 | Merchant | 73–76 | Scout |
| 10–12 | Assassin | 43–45 | Mystic | 77–79 | Sharpshooter |
| 13–16 | Barbarian | 46–48 | Noble | 80–83 | Soldier |
| 17–19 | Beggar | 49–51 | Outlaw | 84–86 | Smuggler |
| 20–22 | Cavalier | 52–55 | Peasant Hero | 87–89 | Spy |

| Phobia: Enclosed Spaces | 5 | 11 |
| Phobia: Heights | 5 | 10 |
| Phobia: Magic | 8 | 14 |
| Phobia: Monster (specific) | 4 | 9 |
| Phobia: Snakes | 5 | 10 |
| Phobia: Spiders | 5 | 10 |
| Phobia: Undead | 8 | 14 |
| Phobia: Water | 6 | 12 |
| Tongue-tied | 6 | — |
| Unlucky | 8 | — |

## Table 48: Weapon Proficiency CP Costs

| **Class** | **Cost** |
|---|---|
| Warrior | 2 |
| Rogue | 3 |
| Priest | 3 |
| Wizard | 3 |

## Purchasing Weapon Proficiencies Out of Class

| **Character Class** | **Class Weapon is From** | **Character Point Cost** |
|---|---|---|
| Rogue | Warrior | 4 |
| Priest | Warrior | 4 |
| Wizard | Rogue | 5 |
| Wizard | Warrior | 6 |

Warriors can purchase a proficiency in any single weapon at a cost of 2 character points.

### Table 50: Nonproficiency Attack Penalties

| Class | Nonproficiency | Familiarity |
|---|---|---|
| Warrior | –2 | –1 |
| Wizard | –5 | –3 |
| Priest | –3 | –2 |
| Rogue | –3 | –2 |
| Psionicist | –4 | –2 |
| Nonclassed NPC | –4 | –2 |

### Table 51: Shield Proficiency Effects

| Shield Type | AC Bonus | #Attackers |
|---|---|---|
| Buckler | +1 | One |
| Small | +2 | Two |
| Medium | +3 | Three |
| Body | +3/+4 vs. missiles | Four |

### Table 52: Fighting Styles by Character Class

| Fighting Style | Eligible Classes |
|---|---|
| One-handed Weapon | All |
| Weapon and Shield | Warriors, Priests |
| Two-handed Weapon | Warriors, Priests, Mages |
| Two Weapon | Warriors, Rogues |
| Missile | Warriors, Rogues |
| Horse Archer | Warriors, Rogues |
| Thrown Weapon | All |
| Special* | Varies |

* This category includes styles specific to certain weapons and/or cultural backgrounds. Examples include the net and trident style used by some Roman gladiators, or the twin sais of a skilled ninja.

### Two Weapon Style

The proficiency slot spent to specialize in this difficult style requires 1 additional character point when it is first acquired—except for rangers, who can buy it for the same cost as any other fighting style specialization.

### Designating a Weapon of Choice

| Character Class | Character Point Cost |
|---|---|
| Warrior | 2 |
| Rogues | 3 |
| Priests | 3 |
| Wizards | 4 |

### Gaining Proficiencies in Weapon Groups,

### Warriors Only

| Character Point Cost | Group |
|---|---|
| 4 | tight |
| 6 | broad |

### Table 53: Gaining Weapon Specialization

| Character Class | Character Point Cost | Minimum Level |
|---|---|---|
| Fighter | 2 | 1 |
| Multi-class Fighter | 4 | 2 |
| Ranger/Paladin | 4 | 3 |
| Priest | 6 | 5 |
| Rogues | 8 | 6 |
| Wizards | 10 | 7 |

### Gaining Weapon Expertise

| Character Class | Character Point Cost* |
|---|---|
| Warrior | 2 |
| Rogues | 4 |
| Priests | 4 |
| Wizards | 5 |

* The character point cost is reduced by 1 if the character elects to gain an expertise with his weapon of choice.

### Table 54: Gaining Weapon Mastery

| Character Class | Character Point Cost | Minimum Level |
|---|---|---|
| Fighter | 2 | 5 |
| Multi-class Fighter | 8 | 6 |
| Ranger/Paladin | 8 | 7 |

### Buying Character Points

Characters can buy character points with wealth. Exchanging one-third of a character's money nets 1 point. At the DM's discretion, up to 3 point can be gained this way.

### Gaining Character Points

Each time a character gains an experience level, he also gains 3 to 5 character points—at the DM's discretion—that can be used on weapon and nonweapon proficiencies or saved for use during the game.

1d12 for hit points 47

# Player's Option™:
## Spells & Magic
**by Richard Baker**

## Foreword

My introduction to fantasy began when I was assigned J.R.R. Tolkien's *The Hobbit* in my 6th grade reading class. Although I was only eleven at the time, I was already a fan of science fiction—I'd read a lot of Robert Heinlein's juvenile SF, as well as Doc Smith's Lensman books and a smattering of other titles. I hadn't read anything in the fantasy genre, and as I recall, I had little desire to do so. *The Hobbit* changed that for me, and I went back and re-read it as soon as I finished turning the last page. After that, I was off and running. The next thing I read was the *Lord of the Rings*. Then I found Terry Brooks' *The Sword of Shannara*, followed by Ursula K. Leguin's *A Wizard of Earthsea*.

And that's where I was brought to a screeching halt. My hometown library was on the small side, and all of their fantasy and science fiction books occupied one carousel in the kids' section. It may be hard to believe now, but even as recently as 1977 fantasy was a poor cousin to science fiction, which was a poor cousin to mainstream fiction. Bookstores just didn't have the massive sections devoted to fantasy and science fiction that they have today. By hook and by crook, I eventually tracked down more and more fantasy titles. But when I was still desperately searching for fantastic fiction, sometime in 1978 or 1979, I ran across a brand-new game called Dungeons & Dragons®. So, like many people, I came to fantasy role-playing through my love of fantasy fiction.

In writing this book, I've come to the conclusion that the single defining characteristic of the fantasy genre is magic. Every fantasy story features a character who can use magic, owns a magical item, or is confronted with a magical situation or paradox. Movies like *Ivanhoe* or *Robin Hood* are wonderful adventures, but they're not fantasy stories—there's no magic. On the other hand, the popular Star Wars movies are fantasy, not science fiction, because magic (referred to as the Force) is part of the story. Science fiction is the literature of things that could happen; fantasy is the literature of things that can't happen. And magic is the very essence of the impossible.

So, here's a book about magic in the AD&D® game. I've tried to include enough options and choices to give you, the reader, the ability to give magic in your particular campaign almost any kind of flavor or feel that you like. If you want to make magic rarer, more "realistic," or more dangerous, you can find rules in here for doing so. If you want rules to add detail and complexity to the AD&D magic system, they're here. Or if you just want some new wizard and priest character types as well as some complementary spells, you'll find them. When I started this project, I thought that I'd have a hard time filling this whole book . . . now, I can't believe how much more I could have written if space had permitted.

Have fun, and good gaming!

Rich Baker

# Introduction

What's a fantasy game without magic?

Sure, the AD&D® game can be played without spellcasters, enchanted monsters,

or magical items. Everyone can still role-play brave heroes, confront deadly foes, and attempt great quests or deeds of mythical proportions. In fact, it can be fun and challenging to do so in a nonmagical setting. But the point remains that magic, more than any other characteristic, defines the AD&D game. As a *fantasy* role-playing game, AD&D is anchored in the traditions of fantasy literature, and fantasy literature by definition features some element of magic. Even if the heroes of a fantasy story distrust or dislike magic, it's still there in the background as part of the world they live in.

Generally, most writers of fantasy literature create their own unique systems of magic to explain the supernatural powers their heroes and villains employ. With great care and deliberate effort, authors define what magic can and cannot do in their worlds. For example, in *The Lord of the Rings*, J.R.R. Tolkien circumscribes the wizard Gandalf's power by placing restrictions on Gandalf's freedom of action. The great wizard is bound by a code of secrecy and noninterference that prevents him from directly challenging the power of Sauron, and he can only help and advise as the Free Peoples of Middle-earth fight their own battles. Jack Vance's *Dying Earth* stories assume that wizards must study complicated patterns and formulae to memorize very specific spells that may only be used once before vanishing from the wizard's memory. (Sound familiar?)

There are very good reasons for limiting magic's power from a literary point of view. Modern readers need to see real challenges and obstacles for the characters in a story, and magic systems that are too open-ended can wreck a story's credibility and sense of suspense. If Gandalf could have just *wished* the One Ring into the fires of Mount Doom from Frodo's living room, what would have been the point of the trek to Mordor? Since fantasy role-playing games are flexible models of the fantasy genre, the same considerations are true for them. A fantasy RPG has to set very precise rules for how magic works and what it can do, and the presentation and workings of the magic system inevitably become the game's salient characteristics.

In fantasy literature, it's common for a magic system to be defined for only one world-setting at a time by a single author (although shared-world concepts are fairly common, too). The AD&D game's magic system represents a common framework built up by hundreds of designers, Dungeon Masters, and players over more than twenty years. There are *thousands* of spells and magical items defined—a volume of material that is an order of magnitude larger than any other magic system in games or fiction. The basic assumptions of what magic is and how it works in the AD&D game are shared by literally millions of gamers and fantasy fans. Despite the immense importance of magic to the game, it is one of the few areas that has remained nearly unchanged to date in the evolution of the game. Magic never changed in function; it simply grew amoeba-like, adding more and more spells and items while the basic, underlying assumptions remained the same.

*Player's Option™: Spells & Magic* examines the AD&D magic system from every angle. First, the spellcasting classes—wizards, priests, and less dedicated magic wielders such as bards or rangers—will be examined in detail. The various schools and spheres of spells are reorganized and new class abilities are introduced, along with an optional point-based character class design system compatible with the *Player's Option:*

*Skills & Powers* rulebook. New proficiencies and detailed information about wizard and priest equipment adds depth and variety to any campaign. A new magic memorization and casting system is introduced in Chapter 6, providing new ways to customize a character's spell selection. Spells in combat and critical hits with spells are detailed in Chapter 8. And last, but not least, there are more than 30 pages of new spells included in this book.

Like any of the Player's Option books, the material in this supplement is optional. The DM is free to use as much or as little of *Spells & Magic* as he wishes to in his campaign. However, we have tried to present systems that do not contradict each other, so it is possible to use all the rules additions and expansions without any difficulty.

## What You Need to Use This Book

At a minimum, you should have access to a *Player's Handbook* and *Dungeon Master® Guide* to make use of this rules expansion. Note that *Player's Option: Spells & Magic* is compatible with the previous books in the Player's Option line; character class design rules in this book are expansions of the class design rules from *Skills & Powers*, and the chapter on spells in combat is tailored for use with the *Combat & Tactics* skirmish system. In addition, the *Tome of Magic* is referred to a number of times in this book; you don't need *Tome of Magic* to use this book, but it adds many spells and magical items you may find useful in your campaign.

## Integrating *Spells & Magic* into Your Campaign

*Player's Option: Spells & Magic* is designed principally as an expansion, not a replacement. However, there are a few special cases where the information presented here should be taken as an update and replacement of existing rules. Specifically, the wizard spell schools and priest spell spheres have been slightly rearranged to improve game balance and make the wizard and priest specialist classes more competitive with respect to the general versions of these characters, the mage and the cleric.

Most of the rest of this book can be integrated piecemeal into an existing campaign without any trouble. For example, additional proficiencies and new spells can be approved or disapproved by the DM on a case-by-case basis. These were designed to be completely usable with or without the Player's Option rules.

## Making the Switch

Adding spells, magical items, or the critical hit rules to an existing campaign is fairly easy, but a DM may have trouble with some other material in this book. In particular, existing spellcasters may wish to take advantage of new class abilities or optional specializations that weren't available when the character was first created. There are several ways to handle this. First, there's no reason that a DM couldn't allow a player to "re-design" his character, incorporating the abilities he thinks his character should have had all along. If a PC cleric comes from a savage tribe and portrays himself as a barbarian, it's perfectly reasonable to allow him to rebuild his character as a shaman (see Chapter 2) and continue play. If the player is altering his character without any good rationale or explanation for why he's making the change, the DM can require the character to pay a penalty of 10% to 50% of his experience point total, depending on the DM's assessment of the scope of the alterations.

There are a couple of things a player should *not* be able to do by redesigning his character. A character shouldn't change specializations without a very good justification, so a necromancer shouldn't be rebuilt as an enchanter or wild mage, and a specialty priest of Lathander shouldn't become a priest of Helm. A character's basic ability scores, equipment, proficiencies, hit points, and general personality shouldn't change. If a player was playing a barbarian cleric correctly, he was probably choosing skills and weapons appropriate for a shaman—and if he wasn't selecting these skills, the reasoning behind the switch becomes much more suspect. Finally, a character shouldn't actually change classes or become dual-classed or multi-classed.

**The Spell Point System:** The most drastic change to the AD&D game lies in the new spell point system described in Chapter 6. Try running a brief "trial adventure" using the rules before incorporating them into your campaign. The spell point rules provide spellcasters with a lot more flexibility than the standard magic system without increasing their raw combat or spell power, but if PCs are allowed to make use of spell points, NPCs and monsters should be able to as well.

## The Role of Magic in the Campaign

It's safe to say that magic in one form or another is present in virtually all AD&D campaigns; only the most historical or unusual settings do away with magic altogether. But, beyond this simple observation, it's clear that each group of AD&D players has their own interpretation of what magic is, how it works, how various spells interact with each other, and what player characters should and should not be able to do with their arsenal of spells and magical items. By altering some of the basic assumptions that are part of the AD&D game's magic system, a DM can infuse his campaign with its own unique flavor and texture.

While the greater portion of this book deals with altering the rules of the game, this isn't always a necessary part of changing the way that the players (and the NPCs they interact with) view magic and its effect on their world. For example, let's say that the *nature* of magic in a campaign setting can be described by a simple scale that rates the scarcity, mystery, power, and cost of magic on a scale of 1 to 10. Obviously, a campaign with magic that is extremely scarce and weak in power represents a very mundane world when compared to a world where powerful magic is very common.

### Scarcity

How common is magic in the campaign? Are wizards and spell-wielding priests so rare that even low-level characters are figures of legend, or are they so common that any hamlet or crossroads village has its own resident spellcasters? Most AD&D campaigns take a position between these two extremes, but lean towards the high end of the scale, falling in the 6 to 8 range on the 10-point scale—wizards and priests appear as allies, enemies, sources of information, or even window-dressing in literally every adventure a typical group plays. At the highest extremes, campaigns feature numerous spellcasters and magical items. Even a small town has several wizards of skill, plus dozens of minor merchants, craftsmen, or innkeepers with a spell or two up their sleeve. Wizards are so common that even the most remarkable mages lose their aura of mystery.

So, what does this mean? In a normal campaign, it's safe to assume that anywhere the PCs go, the locals know a nearby wizard, and most people encounter a wizard a couple of times a year. Any sizable town has at least one or two resident wizards and

spell-using priests, plus a handful of folks with minor magical powers such as herbalists, hedge wizards, and healers. Large towns or small cities may have up to a dozen or so magic-using characters, and great cities could support several dozen without crowding. Almost any NPC above 1st level owns one or more magical items, even if they're fairly small or expendable, and player characters frequently own about three to five magical items by the time they reach 4th to 7th level.

In campaigns where magic is not as common (say, a 2 to 4 on the scale), the spellcasting characters become truly unique and important. A priest who can actually invoke his deity's power in the form of spells may be perceived by the great clerical hierarchy as a saint or great patriarch in the making, or possibly as a dangerous reminder of the true faith in those hierarchies that have become complacent or corrupt. A high-ranking hierarch without spells will certainly watch a low-level PC cleric very carefully, especially if the PC makes no efforts to hide the "miraculous" effects he creates with simple 1st- and 2nd-level spells. Similarly, if wizard magic is quite scarce, a PC wizard can't help but gather attention, fame, and not a little fear if he publicly displays his skills.

**Priests vs. Wizards:** A wizard's magic and a priest's magic are not the same thing, and both forms of magic do not have to be present in a campaign to the same degree. Imagine a world where wizards are viewed as the worst sort of villain and persecuted without remorse for decades. Wizards and their spells might be exceedingly scarce, while priests are far more common because they are socially acceptable—thus, the presence of wizard magic might only be a 1 or 2 while priest magic is closer to a 6 or 7 on the scale.

**Magical Items:** Similarly, magical items might be more or less common than spellcasters. If no one had ever invented the spell *enchant an item*, it's reasonable to assume that magical items might be a rarity in even the most magical campaign settings. The reverse could be true if there was a lost civilization of highly advanced wizards who left behind great numbers of artifacts and items. The wizards of today might be armed to the teeth with magical items, despite the fact that they are struggling to grasp the basics of spellcasting.

## Mystery

Can anyone in the campaign be a wizard or priest, or do these characters have to belong to a select set in order to even begin their studies? Do the common people know enough about magic to distinguish between priest and wizard spells? Is the study of magic a study of easily-defined natural laws, or are the forms of magic deliberately obscured by generations of needless rite and ceremony? Most importantly, do the PCs know the limits of a spellcaster's powers?

In most AD&D games, characters "in the know" have an excellent grasp of exactly what each spell available can do. After all, most players are quite familiar with the *Player's Handbook* and know the spells they can make use of inside and out. But most common NPCs aren't as knowledgeable; the typical innkeeper doesn't know that a low-level wizard can use *invisibility* to walk out without paying his tab, or *fool's gold* to cheat him. He just knows that wizards can do things that ordinary people can't, and if he's a bright innkeeper, he never falls for the same trick twice.

In a less mysterious world, the same innkeeper knows to look out for *invisibility*,

*charm person*, *fool's gold*, and half-a-dozen other dirty tricks. He may even know enough to request a wizard to relinquish certain spell components to make sure a particularly obnoxious spell (*fireball*, for instance) won't be available to that wizard while he's in the innkeeper's place of business. In this kind of setting, everyone would know that priests can heal injuries, blindness, or disease, or possibly bring back a loved one from the dead, and priest characters will be constantly asked to use their powers on someone's behalf.

In a world where the nature of magic is cloaked in superstition and ignorance—an 8 or 9 on the scale—spellcasters will generally inspire fear in anyone who learns of their powers. Note that even the wizard character himself may not really know why his spells work—imagine a character who begins a *magic missile* spell with a thunderous declaration of the names of forbidden powers, just because he was taught to do it that way. Of course, one of the 'names' is actually the spell's verbal component, and the rest of the nonsense has no effect on the casting of the spell. It's a good idea for a DM with this kind of world to forbid players from looking up spells and effects in the *PHB*, since their characters only have access to a portion of this knowledge. The DM should also feel free to alter standard spell effects and create new spells just to instill a sense of dread and wonder in experienced, jaded players.

## Power

What can magic accomplish in the campaign? Is there anything it can't do, and why? Will 10th-level magic be allowed as an option, or is 9th level the most powerful magic available? Can *wishes* change history or reverse events that have already occurred? To what degree do the gods and their avatars involve themselves in this world setting? In most magic systems, setting boundaries to a character's ability to affect events with magic is vitally important. Typically, an AD&D game assumes that 9th-level spells are the most powerful magic known to mortals, and that the player characters encounter a deity no more than once or twice over the course of an entire campaign.

The impact of magic on a campaign world can be greatly lessened by reducing the maximum level of spells that can work there, although this is getting into rules alterations. For example, by limiting spells to 8th level, mages can no longer make use of *wishes* or *gates*. If the maximum is 7th level, mages lose the spell permanency, which is a key part of the magical item creation process. Without this spell, magical items become temporary or disposable—no persistent enchantments can exist.

Another point lies in the emphasis on the power of characters versus the power of magical items. Should a fighter become a killing machine because he happened to find a *vorpal blade*, or should most of his combat bonuses be derived from skills and training? In earlier incarnations, the AD&D game leaned strongly towards the first option, but with the advent of weapon mastery, style specializations, and other character-based bonuses, it is now possible to create a character who doesn't need a powerful magical item to drastically increase his combat power. The real danger to game balance lies in combining these two benefits—a weapon master equipped with a powerful magical weapon becomes nearly unstoppable. If your campaign features a lot of high-powered magic, you should strongly consider playing without optional specialization or proficiency rules.

## The Cost of Magic

In fantasy literature, there is often a price to be paid for magical power. Wizards

may have to make terrible pacts with dark powers for the knowledge they seek, priests may have to sacrifice something dear to them to invoke their deity's favor, or the spellcaster may pay an immediate price in terms of fatigue, illness, or even a loss of sanity. Generally, the AD&D game is quite forgiving in this regard; when a character casts a spell, he expends a few unusual material components and simply forgets the spell he had known. It's easy to increase the cost of magic by strictly enforcing the requirement to procure material components for spells, especially if the DM is conservative in handing out treasure. For example, *find familiar* requires at least 1,000 gold pieces of special herbs and incenses, which means that a 1st-level wizard may have to do a lot of adventuring before he has enough money to summon his familiar! The spell scare requires a piece of bone from an undead creature; requiring the wizard character to personally locate and remove such materials can force the player to make hard decisions about which spells are worth the trouble.

Now, imagine a game setting in which magic is far more costly. What if a character risked insanity every time he attempted to learn a spell? Or if the casting of a spell required the character to make a saving throw vs. spell or pass out from exhaustion? A character might even have to risk a permanent loss of hit points or ability scores each time he cast a spell in a world where magic is exceptionally dangerous. (See Chapter 6 for some of these options.) Again, these restrictions are rules changes and not just cosmetic matters, but a few changes like these can make a great impact on a normally routine campaign.

## Creating a World-View of Magic

How can the DM put all this together? Let's consider a couple of the AD&D campaign settings as examples. First of all, take a look at Faerun, the setting of the Forgotten Realms® campaign. Magic is quite common in the Realms, and only slightly mysterious; everyone knows of the great wizards and the typical powers a wizard is likely to command, but there are a number of unique spells and magical items to be found. Magic is also fairly powerful in Faerun and comes with little cost or sacrifice to any character who works hard enough. The magic of the Realms is about average for an AD&D campaign.

The Dark Sun® campaign has an entirely different approach to magic. Magic is still fairly common and mysterious, but it can be extremely powerful (the sorcerer-kings of Athas command 10th-level magic) and comes at a great cost—the defiling of any living vegetation nearby when a wizard casts a spell. In fact, the destruction caused by Athas' wizards is the chief cause of the planet's dessication and the rise of bizarre, mutated monsters.

Last but not least, the Birthright™ campaign setting portrays a world in which wizard magic is rare. Mages are mysterious figures with unusual powers. Only a handful of characters have the heritage required to make use of true magic, and fewer still can command the kingdom-shaking powers of realm magic.

Here are a few ideas for alternative magic settings for your own campaign:

**The College of Sorcerers:** In this setting, all wizards belong to a single guild or society cloaked in rite and mystery. (The imagers of Stephen R. Donaldson's *The Mirror of Her Dreams* are a good example of such a society.) Spells may require a rare or unusual ingredient controlled by the College, or the College may treat spells as secrets

that must be kept at any cost.

**Secrets Man Was Not Meant to Know:** Wizard magic is the province of horrible pre-human powers of the Outer Void, and dealing with them is the worst kind of betrayal. Insanity plagues those foolish enough to delve into the secrets of these elder powers; H.P. Lovecraft's stories are an excellent model of this kind of campaign. Chapter 6 describes a spell point system of magic that reflects this type of setting.

**Smoke and Mirrors:** Wizards are far less powerful than they appear to be—most are nothing more than alchemists and scholars who can command a few feeble spells. Any spell that creates something out of nothing or summons energy where no energy existed before cannot be cast; illusions, divinations, and minor alterations and summonings are the only types of magic that work. Many magical effects are accomplished through nonmagical means; for example, a *pyrotechnics* spell is nothing more than a handful of chemical powder thrown on a flame.

**The Magical Renaissance:** In this world, almost everyone has a magical talent or two. Magic is fully integrated into society, not as a replacement for technology, but as a part of the common awareness and an augmentation of a person's skills. Chambermaids use *cantrips* to dust and to make beds, royal investigators have access to *speak with dead* and *ESP* to enforce the law, and many brilliant works of art are at least partly magical in nature. Even nonwizards may have a small selection of spells in this kind of setting.

**The Lost Powers:** Priests of this campaign have almost no spell powers. The various deities of their pantheon have lost the ability to grant spells to their followers or have denied their followers spells for some reason. For a particularly chilling campaign, combine this thesis with the **Secrets Man Was Not Meant to Know** scenario to create a world in which the only spellcasters with any power are the insane servants of inhuman powers.

### Magic and Story Telling

When it comes down to it, an AD&D adventure is nothing more than a story created by the DM and embellished upon by the players. Every campaign generates volumes of epic confrontations, cliffhangers, and sinister villains—it's just the way the game is played. Magic is often the central feature of these campaign stories; most players couldn't tell you a thing about Joe's paladin, but everyone who was at the game remembers the time Joe's paladin found the *holy avenger*! An enormous number of player characters are remembered fondly not for their personalities or the skill with which they were played, but instead the particular magical items they owned and the nifty tricks they had with their spell selections.

While this isn't necessarily bad, it can detract from the role-playing elements of a game if the players and the DM allow it to. After all, when the only tool you have is a hammer, everything starts looking like a nail—and if you've got a *flame tongue* sword, it looks like the answer to any problem is going to involve slashing and burning *something*. Similarly, a wizard whose most memorable achievement is his invention of *Alkair's inescapable decapitation* and subsequent use of the spell in every encounter for the rest of the campaign isn't really a well-developed character at all. A hero with a magical sword is fine, but when the magical sword *defines* the hero, the hero is diminished.

Another difficulty that arises in many campaigns is the substitution of magic for technology. AD&D game players are (quite naturally) creatures of the modern world, and modern conveniences such as automobiles, tanks, telephones, televisions, computers, and

any number of other devices seem so indispensable that there just *have* to be magical equivalents. While some of this is fine in any campaign, it desensitizes both players and DMs to the sheer wonder that magic should inspire in most characters. After all, magic should be *magical*, full of mystery and terror, but when a character routinely uses magic to brush his teeth and stir his stew, magic becomes nothing more than a tool. Blurring the distinction between magic and technology detracts from the strength of both philosophies.

Last, but not least, it's important to remember that magic can do *anything* that a DM needs it to do for purposes of advancing the plot or elaborating on an adventure. If the story calls for a greater tanar'ri to be encased in a glass globe, it's not necessary to worry about exactly how the tanar'ri was imprisoned there, or what spells the old archmage used to defeat the creature; it's okay for a DM to simply tell the players that the archmage did it. However, PCs and NPCs who are interacting with the party should follow the rules—up to the point that the rules interfere with the story.

# Chapter 1: Wizards

The wizard may well be the most important character class in the AD&D game. Whether or not a particular player character wizard is the most powerful member of a party, it seems that *every* AD&D campaign has at least one great archmage or master wizard who holds supreme power. Wizards are responsible for the creation of all kinds of adventures and works of magic that other characters later become entangled in or discover. In many adventures, the party's wizard is the *only* character who can use his magic to provide a means to cross a barrier or solve a riddle. In fact, in some cases, the only way to resolve the entire adventure or quest is through the inventive use of the wizard's spell arsenal.

Given this fact, it only makes sense to begin an examination of magic in the AD&D game with a thorough look at the wizard character class. In this chapter, we'll examine all the varieties of mages and specialist wizards available to a player character. Several new varieties of specialist wizards are also described in this chapter. In addition to a long look at the existing wizard classes, we'll also present a point-based character design system that will allow a player to select his wizard's abilities and limitations in order to customize his own character. This system is an expansion of the character class rules from *Player's Option: Skills & Powers*, although you don't need that book in order to use this material.

The information in *Player's Option: Spells & Magic* replaces or revises the *Player's Handbook*, *The Complete Wizard's Handbook*, *the Tome of Magic*, and the material on magic from *Player's Option: Skills & Powers*. In other words, if you have this book, you should use the rules presented here when creating your wizard character. However, there is one notable exception to this case—if you are using an AD&D campaign setting that includes its own rules on character generation, such as the Dark Sun or Al-Qadim® game settings, you should continue to create wizards for those settings using the appropriate rules.

## Spells from Other Sources

While the material on creating wizard characters is updated for this book, you'll find that spells that appeared in previous books have not been altered. As long as the DM approves, a player character wizard can learn spells from any source the player has available. In fact, the spell lists contained in Appendix 3 of this book include spells from the *Player's Handbook, Tome of Magic*, and *The Complete Wizard's Handbook* as well as dozens of new spells introduced in this book. Additional spells from the *Wizard's Spell Compendium, Pages from the Mages*, or any other source can be approved by the DM on a case-by-case basis.

## Schools of Magic

All wizard spells belong to one or more schools of magic. A school of magic represents related spells with common features or characteristics. For a mage, who is the basic or general wizard, the school of a spell doesn't matter too much; he can learn and cast any spell without regard to the spell's school. The only exception to this rule is wild magic, which is completely unfathomable to any wizard except a wild mage.

While the majority of wizards are mages, a significant number choose to be specialists who concentrate their efforts in one particular school. Generally, this increases the wizard's abilities within the school of his choice at the cost of losing access to any schools with opposing philosophies.

There are three schemes of school organization used in the AD&D game: philosophy, effect, and thaumaturgy.

## Schools of Philosophy

The eight standard schools of spells presented in the *Player's Handbook*—abjuration, alteration, conjuration/summoning, enchantment/charm, greater divination, illusion/phantasm, invocation/evocation, and necromancy—are schools of philosophy. While all spells in this scheme of organization are cast in much the same way, the approach and method by which they achieve their purpose varies from school to school. For example, conjuration spells generally bring something to the caster from another location, while necromancy spells manipulate the forces of life and death.

While spells in a school of philosophy generally involve the application of a common principle, they vary greatly in effect. For example, invocations create anything from solid matter such as *walls of stone* or *iron* to comprehensive enchantments such as *contingency* or *limited wish*. Note that all spells grouped into schools of philosophy share the same execution or method of casting—the use of verbal, somatic, and material components to summon and direct magical energy. The basic philosophies behind each school are briefly described below:

**Abjuration** spells are specialized protective spells designed to banish some magical or nonmagical effect or creature. *Protection from evil* is an example of an abjuration spell, since it creates a barrier that evil or supernatural creatures are reluctant to cross.

**Alteration** spells cause a change in the properties of some previously existing thing, creature, or condition. *Pyrotechnics* is an alteration spell, since it takes an existing

fire and creates special effects from the blaze.

**Conjuration/Summoning** spells bring some intact item or creature to the caster from elsewhere. Any *monster summoning* spell is a good example.

**Enchantment/Charm** spells cause a change in the quality of an item or the attitude of a person or creature. *Charm person* is an enchantment, since it affects the way an individual perceives the wizard.

**Divinations** are spells that provide the wizard with information or the ability to acquire information. *Contact other plane* is a divination, since it allows the wizard to seek answers from extraplanar entities. Note that this school has been somewhat altered in scope for this book; see **The School of Universal Magic**.

**Illusion/Phantasm** spells seek to deceive the minds or senses of others with false or semi-substantial images and effects. *Phantasmal force* is a good example, as well as spells such as *mirror image, invisibility,* or *blur*.

**Invocation/Evocation** spells channel magical energy to create specific effects and materials. For example, *lightning bolt* manifests this energy in the form of a powerful stream of electricity.

**Necromancy** is a school concerned with the manipulation of the forces of life and death. Necromancy spells include those that simulate the effects of undead creatures, such as *vampiric touch*, and more direct assaults on life energy like *death spell* or *finger of death.*

**Universal Magic:** In this book, the school of lesser divination is expanded and renamed to include a number of spells that all wizards should have access to. Consider universal magic to be Sorcery 101; without the basic spells in this school, wizards are incapable of continuing their studies in the other schools of magic. Therefore, all wizards have access to the spells in this school, regardless of specialization. The school of universal magic is described in more detail below.

**Creating a New School of Philosophy:** In most campaigns, the schools of philosophy represent the baseline or standard against which other forms of magic are measured. Almost all spells can be described through this system of magic, with very few exceptions. For a wizard to develop a new school of philosophy, he would have to devise a class of spells that all share a common approach or methodology. Most likely, a group of related spells that already exist in one school or another would have to be used as the starting point for a new school. It's much easier to build a new school of effect or thaumaturgy than to build a new school of philosophy. *The Complete Wizard's Handbook* suggests a school of transmutation that concentrates on spells that change one element or material into one other element or material. Another possibility might be a school of animation, centering on spells that provide motive force to inanimate objects.

## Schools of Effect

A second scheme for organizing wizard magic is by effect. *The Tome of Magic* presented a new type of wizard who could specialize in schools of effect: the elementalist wizard. *Player's Option: Skills & Powers* introduced the shadow mage, another specialist wizard built around a school of effect.

Schools of effect differ from schools of philosophy in that the spells of the school all share one common result or ingredient. For example, the spells of the school of fire all involve fire in some way, without regard for what the spell accomplishes. Divinations,

the direction and control of energy, and the summoning of elementals can all be linked by the common effect of fire. The schools of effect are described below:

**Air:** The elemental school of air naturally includes any air-based spell or effect, including spells that control or affect wind, breathing, falling and flight, air elementals, and other elemental phenomena. *Gust of wind* or *cloudkill* are examples of air spells.

**Earth:** Spells of elemental earth are based around stone-, earth-, or mineral-based effects. *Dig, stone shape* and *stone to flesh* are earth spells.

**Fire:** Any spell involving the manifestation of flame or heat is a spell of elemental fire. Not all fire spells are attack spells; *fire charm* and *affect normal fires* are examples of fire spells that don't cause direct and immediate damage to the wizard's enemies.

**Water:** Last but not least in the elemental schools, spells of the school of elemental water involve water in some form or another, including spells of ice and cold, since these are linked to the element of water. *Water breathing, ice storm*, and *part water* are all included in the school of elemental water.

**Dimensional Magic:** This is a new school introduced in *Player's Option: Spells & Magic*. While all AD&D spells draw power from outside the mage, dimensionalists go one step further—they draw their power from another dimension. Like most schools of effect, the school of dimensional magic overlaps several pre-existing schools, including alteration, conjuration/summoning, and invocation spells.

**Force:** The school of force is a new school of effect presented later in this book. A force mage relies on spells that create or manipulate fields of cohesive energy, such as *wall of force, magic missile,* or any of the various *Bigby's hand* spells. Many spells of this school are borrowed from the school of invocation/evocation.

**Shadow:** All the spells in this school are linked by the common effects of shadow and darkness. The shadow mage can make use of a number of illusion spells dealing with the Demiplane of Shadow and shadowstuff, including *shadow monsters, darkness 15' radius*, and *shadow walk*. He also has access to a number of necromancy spells. Although necromancy and illusion are opposing philosophies, schools of effect ignore these restrictions and concentrate on results.

**Creating a School of Effect:** Again, all spells in a school of effect are cast with the standard execution of somatic, verbal, and material components. Creating a new school of effect is far easier than coming up with a new school of philosophy; there are any number of common spell results or special effects that can be linked in this way. For example, a school of light could be designed around spells that produce bright visible effects, or a school of circles could be designed around any spell effect that is circular or spherical in form.

## Schools of Thaumaturgy

A school of thaumaturgy defines a specific method or procedure of spellcasting that varies from the standard execution of a spell's components. Several schools of thaumaturgy were presented in *Player's Option: Skills & Powers*—the school of song, the school of alchemy, and the school of geometry. In addition, other schools of thaumaturgy have appeared in specific campaign settings. The defiler of the Dark Sun campaign is a mage whose spells are executed through the draining of life energy from

his surroundings. The sha'ir of the Al-Qadim setting casts his spells by sending a servant gen, or minor genie, to fetch the spell and bring it back to him.

Spells belonging to a school of thaumaturgy are not linked by philosophy or effect—instead, they're related by the manner in which they are physically cast. In fact, the "standard" approach to wizard magic defined by the eight philosophical schools represents one common thaumaturgical method. Other thaumaturgical methods include the following schools:

**The School of Alchemy:** In this approach to magic, spell effects are achieved through the combination of unusual material components. Spells such as affect *normal fires, glitterdust,* and *cloudkill* can all be cast through the use of strange powders and reagents, and belong to the school of alchemy.

**The School of Artifice:** This is a new school introduced here for the first time. Artificers are weak in the direct command of magic and instead use various devices and magical items to focus their energies. Spells such as *Melf's minute meteors* and *magic staff* are included in the school of artifice.

**The School of Geometry:** Geometers use diagrams, symbols, and complex patterns to cast their spells. Naturally, any spell involving some kind of writing, marking, or pattern belongs to the school of geometry, including spells such as *explosive runes, sepia snake sigil,* and *symbol*.

**The School of Song:** While alchemists rely on material components and geometers rely on somatic components, a song mage uses the power of his voice to summon and shape spell energy. Any spell that involves speaking, singing, or some other use of the caster's vocal powers belongs to the school of song. *Sleep, charm monster,* and *Otto's irresistible dance* are all examples of spells of this school.

**The School of Wild Magic:** Some wizards have learned to make use of the principles of randomness in their magic, giving rise to the school of wild magic. Wild mages shape the raw, uncontrollable stuff of magic in the hope that something resembling their intended spell will appear. A number of wild magic spells such as *vortex* and *waveform* appeared in the *Tome of Magic*; if you do not have access to that book, you should probably ignore this school.

## The School of Universal Magic

As described in the *Player's Handbook*, the school of divination is actually composed of lesser divinations and greater divinations. A few specialist mages are barred from greater divination as an opposition school, but every specialist wizard is considered to have access to lesser divination. In this book, the school of lesser divination is replaced by the school of universal magic. This includes a few basic divination and nondivination spells that all wizards should have access to, such as *dispel magic* and *enchant an item*. Any wizard may cast spells of this school, regardless of his or her specialty.

The divination spells of both the schools of lesser and greater divination are now considered to be part of one school of divination. Spells such as *ESP, clairaudience,* and *clairvoyance* are part of the school of divination and may not be available to wizards who formerly had access to them as lesser divinations. Refer to Appendix 3 for the revised spell organization.

**Important Note:** Wizards do not automatically know universal spells. They must

study and attempt to learn the spells of this school, just like any other spells. However, when a wizard character is first created, he automatically begins play with any 1st-level universal spells of his choice in his spell book, although these count against the character's limit of beginning spells.

The school of universal magic consists of the following spells:

*cantrip* (1st)
*comprehend languages* (1st)
*detect magic* (1st)
*hold portal* (1st)
*identify* (1st)
*read magic* (1st)
*wizard mark* (1st)
*knock* (2nd)
*protection from cantrips* (2nd)
*wizard lock* (2nd)
*dispel magic* (3rd)
*remove curse* (4th)
*teleport* (5th)
*enchant an item* (6th)
*teleport without error* (7th)
*permanency* (8th)
*astral spell* (9th)

Most of the low-level spells on this list enable the wizard to undertake his basic studies in books of arcane lore and safeguard his laboratory and spell book against intruders. *Teleport, teleport without error*, and *astral spell* are included since the ability to travel vast distances in the blink of an eye is a common power among wizards in fantasy literature. Last but not least, *enchant an item* and *permanency* are universal magic because every wizard should have the ability to create magical items when he or she reaches the appropriate level.

## Wizard Characters

A player creating a wizard character has one basic decision to make when the character is first rolled up— should his character specialize in a school of magic, or should he remain a mage? A mage is equally capable in all schools of magic and may freely learn and cast spells from any school. A specialist wizard gains several important benefits when dealing with his own school, but loses access to certain spells that belong to opposition schools.

As noted in the *Player's Handbook*, wizards may not wear armor and are limited in their selection of weapons to the dagger, dart, knife, sling, and staff. (Some character kits may allow additional weapon choices.) In addition, characters constructed with the *Player's Option: Skills & Powers* rules or the expanded character point rules in this book may pay extra character points in order to gain access to better weapons or protective equipment.

All wizards may create magical potions or scrolls after reaching 9th level by using the magical item creation rules in this book. (The alchemist and geometer gain this ability earlier in their careers.) Wizards may also create other types of magical items upon reaching 11th level. Any wizard may attempt to research new spells, regardless of level.

## The Wizard's Spell Book

A 1st-level wizard begins play with 3d4 1st-level spells in his spell book, two of

which must be *read magic* and *detect magic*. Once these two have been included in the spell book, the player may select any other 1st-level spells of the school of universal magic without making a learn spells roll. In addition, a specialist wizard may automatically choose one spell of his specialty to begin play with. Beyond these selections, the player must attempt a learn spells check for any additional spells he wishes his character to know, with the normal penalties or bonuses for specialization. Optionally, the DM may assign a beginning wizard character *read magic*, *detect magic*, and four other spells of the DM's choice.

**Adding Spells to the Wizard's Repertoire:** As a wizard continues with his adventuring career, he will encounter new spells that he may wish to add to his spell book. In addition, mages may add a spell to their book whenever they reach a new spell level, while specialist wizards are allowed to add one spell of their specialty to their spell books each time they gain an experience level. Last but not least, the DM may allow a PC wizard to purchase spells from an NPC wizard or organization. The price should be a spell of equal level that the NPC doesn't know, a magical item other than a potion or scroll, or at least 1,000 gp per level of the spell in question.

## Mage

Ability Requirements: Intelligence 9
Prime Requisite: Intelligence
Races Allowed: Human, Elf, Half-elf

The mage remains largely unchanged by the material presented in *Player's Option: Skills & Powers*. A mage may learn and cast spells of any school (except wild magic) using the normal wizard spell progression table and learn spells rolls. Naturally, mages may make use of many of the new spells and magical items introduced in this book.

Mages with an Intelligence score of 16 or higher gain a 10% bonus to the experience points they earn. Mages never attract followers, but there's no reason a mage couldn't buy property and hire mercenaries whenever he accumulates sufficient wealth.

## Specialist Wizard

Ability Requirements: Varies
Prime Requisite: Intelligence
Races Allowed: Varies

Wizards who concentrate their efforts in one school of magic are known as specialist wizards. Generally, a specialist wizard must give up some degree of versatility in spell selection—he cannot learn or cast spells belonging to schools that oppose his own chosen school. The specialist also has several other benefits and restrictions; unless otherwise stated, all specialists must abide by the benefits and hindrances described below:

Specialist wizards may memorize one additional spell per spell level, provided the spell selected belongs to the specialist's school. Under this rule, a 1st-level specialist may have two spells memorized instead of only one.

Specialists gain a bonus of +1 when making saving throws against spells of their own school. Specialists also inflict a –1 penalty to their victims' saving throw attempts when casting a spell of their specialty school.

Specialist wizards gain a bonus of +15% when learning spells from their school, but suffer a penalty of –15% when learning spells from any other school. Specialists cannot learn spells belonging to an opposition school.

When a specialist reaches a new level, he automatically gains one spell of his school to add to his spell book. No roll for learning the spell need be made.

When a specialist wizard attempts to create a new spell through research, the spell is treated as if it were one level lower if it falls within the wizard's specialty school.

**Table 1:**
Philosophy Specialist Requirements

| Specialist | Race | Abilities | Opposition School(s) |
|---|---|---|---|
| Abjurer | H | 15 Wis | Alteration, Illusion |
| Conjurer | H, 1/2E | 15 Con | Divination, Invoc./Evoc. |
| Diviner | H, 1/2E, E | 16 Wis | Conj./Summ. |
| Enchanter | H, 1/2E, E | 16 Cha | Invoc./Evoc., Necro. |
| Illusionist | H, G | 16 Dex | Necro., Invoc./Evoc., Abjur. |
| Invoker | H | 16 Con | Ench./Charm, Conj./Summ. |
| Necromancer | H | 16 Wis | Illusion, Ench./Charm |
| Transmuter | H, 1/2E | 15 Dex | Abjur., Necro. |

H: Human; 1/2E: Half-elf; E: Elf; G: Gnome.

## Specialists in Schools of Philosophy

A wizard specializing in a school of philosophy adheres to the general rules above. Depending on his choice of school, the specialist will have anywhere from one to three opposition schools. Each specialty has different race and ability score requirements, reflecting the unique nature of each field of study. See Table 1: Philosophy Specialist Requirements.

*In The Complete Wizard's Handbook*, each specialist received several additional abilities related to his chosen field at high levels. These abilities have been reworked, and specialists now receive them much earlier in their careers. They are optional; if the DM decides that they aren't appropriate, the additional powers are unavailable for PC specialist wizards.

**Abjurer:** The abjurer specializes in the school of abjuration, commanding magical energies that provide various forms of protection to himself and his companions. A wizard must have strength of will to master this school of magic, so a high Wisdom score (Wisdom/Willpower, if *Player's Option: Skills & Powers* is available) is a requirement for an abjurer. The abjurer cannot learn spells from the schools of alteration or illusion.

Abjurers enjoy the normal benefits and hindrances of specialist wizards. In

addition, at 8th level the abjurer gains a +1 bonus to saving throws vs. paralyzation, poison, and death magic. At 11th level an abjurer's base Armor Class improves by 1 point due to his command of protective magic, and at 14th level the abjurer gains immunity to all forms of *hold* spells.

Abjurers have few spells that can directly inflict damage, but their protective enchantments can help them protect their comrades from harm in battle. They are also extremely effective against enemy spellcasters and creatures of extraplanar or unusual origins.

**Conjurer:** Specializing in spells of conjuration and summoning, the conjurer has access to some of the most useful spells in the game. Conjurations are some of the most physically demanding spells, and a wizard must have a Constitution (or Constitution/Health) score of at least 15 in order to be a conjurer. Conjuration/summoning is opposed by divination and invocation/evocation.

All the normal benefits and hindrances of specialist wizards apply to conjurers. In addition, at 11th level a conjurer gains the ability to cast conjuration and summoning spells without any material components. At 14th level, the conjurer gains the power to instantly dispel creatures conjured by an opponent who has used *monster summoning* or an equivalent spell. The conjurer can dispel up to 10 HD worth of creatures with this ability simply by pointing at the target and concentrating one round. Only creatures with 5 HD or less are affected, so a conjurer could dispel three 3 HD creatures, two 5 HD creatures, or any combination that does not exceed 10 HD. The conjurer may use this ability up to three times per day.

The conjurer's spells can be very potent in combat, especially if used to multiply the party's numbers through the summoning of allies.

**Diviner:** It's unusual for a player character to choose this specialty, but NPC diviners are fairly common. Diviners concentrate on spells that reveal or relay information, and information can be a weapon far more dangerous than the sharpest sword. Divination requires patience and insight; a wizard must have a Wisdom (Wisdom/Intuition) of 16 or better to be a diviner. Divination is opposed by conjuration/ summoning.

Diviners have the normal strengths and weaknesses of specialty wizards. In addition, at 11th level the diviner gains the ability to use *find traps* (a 2nd-level priest spell) up to three times per day by pointing in a specific direction and concentrating one round. At 14th level, the diviner becomes immune to all forms of scrying spells such as *ESP, know alignment,* or *clairaudience;* characters trying to use these divinations against the diviner simply get no response at all.

A diviner is very limited in his combat ability and must rely on spells outside his school for anything resembling a damaging attack. However, a diviner in a PC party can be surprisingly effective by providing advice and information. With a diviner around, a party can look for ways to strike at an enemy's weakest points and to maximize its efficiency in battle.

**Enchanter:** The enchanter's specialty lies in controlling or influencing his targets with his spells. The school of enchantment/charm also includes a number of spells that imbue nonliving items with magical powers. Because the greater part of their spell selection involves influencing other people, enchanters must have a Charisma (Charisma/ Appearance, under *Skills & Powers* rules) score of 16 or higher. Enchantment/charm is

opposed by invocation/ evocation and necromancy.

Enchanters have the usual benefits and restrictions of a specialist wizard. In addition, when an enchanter reaches 11th level, he gains the ability to cast a special *free action* spell once per day on himself or any creature he touches. The casting time is only 1, and no material components are required; the spell duplicates the effects of the 4th-level priest spell *free action* and lasts for one hour. At 14th level, the enchanter acquires immunity to all forms of the *charm* spell.

While the enchanter's spells are not spectacular in effect, they are also among the subtlest of spells. In many cases, turning an enemy into an ally is far more effective and desirable than simply incinerating him, and enchanters excel at mind-affecting magic. Careful interrogation of *charmed* enemies can also provide a wealth of useful information for the enchanter.

**Illusionist:** Masters of deceit and trickery, illusionists have access to a variety of powerful spells that can be far more dangerous than simple attack spells. Illusionists must have a minimum Dexterity (Dexterity/Aim) score of 16 to perform the intricate gestures and patterns required by spells of their school. The school of illusion/phantasm is opposed by necromancy, invocation/evocation, and abjuration.

Illusionists gain the normal benefits of specialist wizards. When an illusionist reaches 8th level, he gains an additional +1 bonus to his saving throws against illusion spells cast by nonillusionists. (This is cumulative with his normal +1 bonus, for a total of +2). At 11th level, the illusionist gains the ability to cast a special *dispel phantasmal force* or *dispel improved phantasmal force* up to three times per day. The base chance of success is 50%, ±5% per level difference between the illusionist and the caster of the phantasmal force; for example, if a 16th-level illusionist is attempting to dispel an illusion cast by a 9th-level wizard, his chance of success is 85%. The dispel has a range of 30 yards and a casting time of 1; the illusionist need only point at the illusion and concentrate. If the illusionist attempts to dispel something that turns out to be real, the attempt still counts against his limit of three dispels per day.

An illusionist can be extremely effective in combat despite his lack of high-powered damaging spells, especially if he concentrates on creating distractions and false opponents for his enemies. Every sword swing directed at an illusion is one less that's aimed at the illusionist and his companions. Illusionists should always seek creative and unusual uses for their spells; of all the specialist wizards, they require the most player originality to be run effectively.

**Invoker:** The invoker is the direct antithesis to the illusionist. Where the illusionist deals in subtleties and suggestion, the invoker deals in naked force, summoning and controlling massive energies. The invoker requires a Constitution (Constitution/Fitness) score of 16 or better to withstand the physical stress of this specialty. The school of invocation is opposed by enchantment/charm and conjuration/summoning.

In addition to the normal advantages and disadvantages of specialization, the invoker gains an additional +1 bonus to saving throws vs. invocation/evocation spells when he reaches 8th level, for a total of +2. At 11th level, this increases to +3. (These bonuses also apply to magical items that simulate invocation spells, such as a wand of fire.) At 14th level, the invoker acquires immunity to one invocation or evocation spell of 3rd level or lower of his choice; however, this immunity does *not* extend to similar

magical items or breath weapons.

The invoker is a valuable asset to the party on the battlefield, where his spectacular spells can decimate hordes of low-level monsters or severely injure tougher opponents. Unfortunately, fear of the invoker's firepower leads many opponents to attack the wizard in the hope of disabling him before he can blast them to ashes.

**Necromancer:** Students of this school delve into forbidden lore and dark secrets in their quest to understand and control the forces of life and death. A character must be extraordinarily strong of will in order to succeed at these studies—a wizard must have a Wisdom (Wisdom/Willpower) of 16 or higher in order to choose necromancy as his specialty. Necromancy is opposed by illusion and enchantment/charm.

Necromancers gain the standard benefits for being specialist wizards. At 8th level, his saving throw bonus versus necromancy spells increases to a total of +2. At 11th level, the necromancer gains a special *speak with dead* spell-like ability that requires no verbal or material components; the wizard need only point at the deceased person and concentrate for one round. This spell functions like the 3rd-level priest *spell speak with dead*, except that the necromancer may converse for up to one turn and ask four questions of the spirit. At 14th level, the necromancer gains a partial resistance to the special effects of undead attacks; although he still suffers the normal damage of any such attack, he gains a +2 to saving throws against strength drain, paralyzation, and other effects. He may attempt a saving throw vs. death magic with a –4 penalty to avoid the effects of any attack that normally does not allow a save, such as a wight or wraith's energy drain.

The necromancer commands a variety of powerful spells, but these are not generally as useful on the battlefield as the invoker's powers. The necromancer's best strategy is to concentrate on one important enemy at a time, using the nefarious spells of this school to disable the enemy's leaders and champions. Necromancers can also be very useful in dealing with undead of all sorts.

**Transmuter:** The most versatile of the specialist wizards is the transmuter, specializing in the school of alteration. The school of alteration is the largest of the schools of philosophy, giving the transmuter access to a variety of powers and abilities. In order to master the complicated somatic gestures of this school, a wizard must have a Dexterity (Dexterity/Aim) of 15 or higher to become a transmuter. The school of alteration is opposed by the schools of necromancy and abjuration.

Transmuters have the normal benefits and restrictions of specialist wizards. In addition, they gain an additional +1 bonus to their saving throws versus alteration spells and related magical effects (such as a *wand of polymorph*) when they reach 8th level, for a total of +2. At 11th level, this increases to +3.

Transmuters command a number of useful spells. Their offensive and defensive capabilities are quite formidable, and they also have access to spells such as *haste* or *strength* that can drastically enhance the whole party's fighting power. Despite their skill in battle, transmuters are at their best when overcoming obstacles; there is a great range of generally useful alteration spells such as passwall and fly which may make it possible for transmuters to avoid fights altogether.

**Table 2:**

## Effect Specialist Requirements

| Specialist | Race | Abilities | Opposition School(s) |
|---|---|---|---|
| Elementalist | H | Standard | Special |
| Dimensionalist | H, 1/2E | Int 16 | Ench./Charm, Necro. |
| Force Mage | H, 1/2E | Int 12, Con 15 | Alteration, Divination |
| Mentalist | H | Int 15, Wis 16 | Invoc./Evoc., Necro. |
| Shadow Mage | H | Int 15, Wis 16 | Invoc./Evoc., Abjuration |

H: Human; 1/2E: Half-elf

## Specialists in Schools of Effect

The schools of effect are organized along different lines than the schools of philosophy. This alternate approach to magic and specialization means that elementalists and other effect specialists don't necessarily enjoy the same benefits and penalties of philosophical specialists. These exceptions are explained below in the descriptions of the individual specialist wizards.

Just like the schools of philosophy, specialization in a school of effect generally requires a wizard to meet higher ability score criteria than that required of a basic mage (see Table 2: Effect Specialist Requirements).

**Elementalist:** First introduced in the *Tome of Magic*, elementalists are wizards who specialize in spells dealing with one of the four elements—air, earth, fire, or water. Elementalists ignore the "normal" structure of the philosophical school. Instead, all spells are designated as either *elemental* spells or *nonelemental* spells. Furthermore, elemental spells are divided into spells of each of the four elements. An elementalist is barred from casting spells of the element that opposes his particular specialty; fire mages cannot cast water spells, air mages can't use earth spells, and vice versa. (Refer to Appendix 3 for a list of wizard spells by school.)

**Fire**
|
**Air** — opposes — **Earth**
|
**Water**

Elementalists enjoy most of the standard benefits and restrictions of specialist wizards, but there are some minor differences. They gain the benefit of memorizing an extra spell of each level, as long as it is taken from their preferred element. An elementalist gains a +2 bonus to saving throws against spells of his particular specialty (fire for fire mages, etc.) and inflicts a –2 penalty to his opponents' saves when casting spells of his specialty. Elementalists gain a +25% bonus to learn spells of their specialty, and a +15% bonus for other elemental spells that don't actually oppose their specialty. For example, a fire mage has a +25% bonus to learn fire spells, and a +15% bonus to learn air and earth spells; he can't learn water spells at all. Elementalists suffer a –25% penalty to learn all other nonelemental spells. Last but not least, elementalists research

spells of their specialty as if the spells were one level lower than their actual level.

Note that elementalists do *not* automatically add a spell to their spell book when they gain a level, as other specialists do. However, an elemental specialist has the ability to cast one memorized spell of his specialty per day as if he were 1d4 levels higher. This affects range, duration, area of effect, and damage. When an elementalist reaches 11th level, he does not need to concentrate to control an elemental of his specialty that was summoned through *conjure elemental*. At 14th level, there is no chance for a summoned elemental to turn on the elementalist.

While the elemental schools tend to be small, the elementalists' abilities generally exceed those of normal specialists. Elemental wizards of earth and fire have a potent range of attack spells and can equal the firepower of an invoker. Wizards of air and water tend to have fewer damaging spells, but have access to better travel and support powers.

Elementalists can be used to portray magicians of unusual cultures or origin. After all, the standard philosophical arrangement of schools implies a scholarly, Western approach to magic, but not every culture or nation may have the same beliefs or practices regarding sorcery. Many elementalists are much closer to nature, or more attuned to their surroundings, than philosophical specialists.

**Dimensionalist:** This uncommon specialist is a student of magic that relies on the manipulation of space, time, and dimension. The dimensionalist is familiar with all kinds of extradimensional pockets, planes, and sources of power. While other wizards can make use of these dimensions, the dimensionalist has a much clearer understanding of what he is doing and why when he casts spells of this school. Non-Euclidean geometry and planar relationships are difficult material, even for a wizard; a character must have an Intelligence (Intelligence/Reason in the *Skills & Powers* rules) of 16 or better to grasp the more esoteric concepts required to master this kind of magic.

The school of dimensional magic is listed in Appendix 3 of this book. It includes spells such as *rope trick, dimension door, distance distortion,* and *maze*. Dimensional magic is opposed by the schools of enchantment/charm and necromancy, since these philosophies have nothing to do with extraplanar studies or spells.

The dimensional specialist gains the normal advantages for specialization as described earlier in this chapter; spells belonging to the school of dimensional magic are listed in Appendix 3. At 8th level, the dimensionalist gains the power to *disappear* by stepping into a pocket dimension once per day. While in the pocket dimension, he is detectable only by spells that can discern dimensional openings and is immune to any attack, but he also has no way of knowing what's happening in the place he left until he chooses to step back into the real world. The dimensionalist may remain for up to one hour before he is forced to exit and can take any actions he desires (sleeping, reading, drinking a potion, or so on) while inside. Note that the pocket dimension's point of exit is always the exact same place the dimensionalist entered the dimension. Also, no spells that would allow the dimensionalist to leave the pocket without first reentering the real world can function in the extradimensional place, including *teleport, dimension door, shadow walk,* and similar enchantments. At 11th level, the dimensionalist may bring one other human-sized creature or an object weighing less than 500 pounds with him; at 14th level, he may bring up to five companions or an object weighing 1,500 pounds.

The dimensionalist is a very unusual wizard, with access to some of the strangest spells in the game. A high-level dimensionalist can be a confounding opponent, calling

on rarely seen powers to trap or misdirect his enemies. Dimensionalists have few attack spells, but excel in avoiding trouble or circumventing obstacles.

**Force Mage:** Some of the most powerful spells available to a wizard consist of *force*—cohesive magical energy that can be shaped into fields, walls, or blades. Force is energy that simulates solid matter; it is impervious to normal matter and can be used to exert physical pressure on creatures or objects. A force mage specializes in spells that conjure and manipulate magical force. Force spells are difficult and taxing to a wizard, and a character must have an Intelligence of 12 or better and a minimum Constitution of 15 (Intelligence/Knowledge and Constitution/Health) to choose this specialty.

Naturally, the school of force includes *wall of force* and the *Bigby's hand* spells. However, spells such as *magic missile* and *Mordenkainen's sword* also make use of magical force. The schools of alteration and divination oppose the school of force, since these have nothing to do with the summoning or manipulation of magical energy.

Force mages have the usual advantages and disadvantages of specialist wizards. (Refer to Appendix 3 for the complete list of spells belonging to this school.) At 8th level, force mages gain an additional +1 bonus to their saving throws versus force spells or effects, for a total of +2. When a force mage reaches 11th level, he gains the ability to attempt a saving throw for half-effect against any force spell that causes damage, whether or not it allows a save. For example, an 11th-level force mage struck by a *magic missile* spell may attempt to save for half damage, despite the fact that *magic missile* normally allows no saving throw. At 14th level, the force mage's saving throw bonus increases to +3 against magical force.

Force mages are skilled in battle; most of their spells are designed to hinder, incapacitate, or destroy their enemies. However, they do not enjoy a great variety of spells and must get along without access to two of the most useful schools available—divination and alteration.

**Mentalist:** In worlds where psionics are rare or unknown, some wizards take up the study of mind-affecting spells and enchantments. The mentalist is such a character. Although the mentalist is closely related to the enchanter, the mentalist's spells focus more exclusively on the mind. Of course, this is a complicated area of study, and a great understanding of the human psyche is required for success; the wizard must have an Intelligence of 15 and Wisdom of 16 (Intelligence/Knowledge and Wisdom/Intuition) to become a mentalist.

The school of mentalism includes spells such as *ESP*, *domination*, and *suggestion*. It is opposed by the schools of alteration and necromancy; a list of the spells belonging to the school of mentalism appears in Appendix 3.

Mentalists gain the normal benefits and hindrances of a specialist wizard. When a mentalist reaches 8th level, his saving throw bonus against mentalism spells and effects increases to +2. At 11th level, the mentalist gains the ability to *detect charm* or *mental influence* three times per day by pointing at the individual to be examined and concentrating one round. This power resembles the priest spell *detect charm*, but only one creature can be scanned per use. When the mentalist reaches 14th level, he can *dispel charm* or mental influence once per day with a 50% chance of success. This is modified by ±5% per level/Hit Die difference between the mentalist and the caster of the charm. The mentalist must be within 10 yards of the subject and must concentrate for one round in order to use this power.

The mentalist is a wizard who deals in subtleties and influences. The mentalist is not at his best in open battle against hordes of enemies, but he can be an extraordinarily effective character in investigations or confrontations against single enemies.

**Table 3:**
## Shadow Mage Target Saving Throw Modifiers

| Lighting Conditions | Modifier |
|---|---|
| Bright daylight/continual light | +2 |
| Weak daylight/dusk/light | none |
| Twilight/moonlight/lantern light | –1 |
| Weak moonlight/torch light | –2 |
| Candlelight/starlight | –3 |
| Total darkness | –4 |

**Shadow Mage:** Shadow mages are students of the power of darkness and twilight. While shadow mages are not necessarily evil, most tend to be grim characters who are at home in the darkness. The school of shadow is built around the thesis that all shadows are actually connected in some mystical way in the Demiplane of Shadow; the shadow mage's repertoire of spells reflects this belief. Shadow mages must be keen-minded individuals; a character must have an Intelligence of 15 and a Wisdom of 16 (Intelligence/Reason and Wisdom/Will) in order to select this specialty. The school of shadow is opposed by the schools of invocation/evocation and abjuration.

The shadow mage follows the normal rules for specialist wizards, with one notable exception: the target's saving throw modifiers are tied to the prevalent lighting conditions, and range from +2 to –4. The shadow mage himself receives no saving throw modifiers versus spells of any kind (see Table 3: Shadow Mage Target Saving Throw Modifiers).

Shadow mages also gain the ability to see in darkness due to their connection with the plane of gloom. At 4th level, the shadow mage sees as well in moonlight as a normal human does by broad daylight, and all darkness-based combat penalties are reduced by 1 point. At 7th level, he can see perfectly by starlight and reduces combat penalties for darkness by 2 points. At 10th level, the shadow mage can see perfectly in total darkness, negating all combat penalties. Note that magical blindness or fog can still impair the wizard's vision.

The shadow mage's spells are both powerful and subtle. Of all the specialist wizards, he makes the best spy or infiltrator, especially by night. While the shadow mage isn't very well-suited for open battle, his spells are perfect for solitary confrontations.

**Table 4:**
## Thaumaturgical Specialist Requirements

| Specialist | Race | Abilities | Opposition School(s) |
|---|---|---|---|

| | | | |
|---|---|---|---|
| Alchemist | H | Int 15, Dex 14 | Illusion, Necromancy |
| Artificer | H, G | Int 12, Con 15 | Necro., Ench./Charm |
| Geometer | H, E, 1/2E | Int 15, Wis 14 | Ench./Charm, Illusion |
| Song Mage | H, E, 1/2E | Int 14, Cha 15 | Necro., Div., Invoc./Evoc. |
| Wild Mage | H, E, 1/2E | Int 16 | none |

H: Human; 1/2E: Half-elf; G: Gnome

## Specialists in Schools of Thaumaturgy

While the schools of effect and the schools of philosophy differ in the way in which spells are assigned to the various schools, the schools of thaumaturgy represent an entirely different way of thinking. The thaumaturgical schools discard the normal methods and mechanics of wizard magic to concentrate on new ways of summoning and controlling magical power. In this scheme of magic, spells are organized by method of casting, not effect or method of operation.

Since the schools of thaumaturgy represent a more radical departure from the normal scheme of magic, the benefits and disadvantages of specialization vary from school to school. In addition, the thaumaturgical specialists generally have high ability score requirements, as shown in Table 4: Thaumaturgical Specialist Requirements.

**Alchemist:** This specialist was first presented in *Player's Option: Skills & Powers*. The alchemist's whole work is based on the four classical elements of air, earth, fire, and water. In other words, the alchemist considers gold (for example) to be a combination of earth and fire. Alchemists are the most scientifically-minded wizards, and they experiment constantly in search of knowledge. In order to be an alchemist, a wizard must have an excellent education in the sciences (minimum Intelligence or Intelligence/Knowledge of 15) and a steady hand for experimentation (Dexterity or Dexterity/Aim of 14). The school of alchemy is opposed by the schools of illusion and necromancy; a list of alchemy spells appears in Appendix 3.

The alchemist must maintain a large, well-equipped laboratory. The character is assumed to begin play with a suitable facility in his home town or base of operations, but building and equipping a new laboratory costs at least 1,000 gp per character level, and existing laboratories cost 50 gp per level each month to maintain. An alchemist without a laboratory loses access to the bonus spell provided by specialization and can't conduct research, make potions, or add new spells to his spell book.

Alchemists enjoy the normal benefits of specialization, but have no saving throw modifiers for their own saves or their targets' saves.

At 6th level, the alchemist gains the ability to create potions. This is a special chemical process that doesn't involve magical materials or processes, but it tends to be longer and more tedious than normal potion brewing. First, the character must research the potion's formula, just like conducting spell research; consider the potion's level to be equal to its experience point (XP) value divided by 100. For example, a *potion of clairaudience* (250 XP) is treated as a 3rd-level spell for this purpose, while a *potion of longevity* (500 XP) is equivalent to a 5th-level spell. It takes two weeks per potion level to research the formula, at a cost of 500 gp per potion level. The alchemist must roll learn spells to find out if he learned the spell before he can be considered successful in his

research. The maximum number of potion formulae he can know is limited by the maximum number of spells per level score that is determined by his Intelligence (see Table 4: Intelligence in the *PHB*). A character with an Intelligence of 15, for example, can know up to 11 potion formulae.

Once a character has successfully researched a potion's formula, he can produce one dose by investing 3d6 x 100 gp in materials and spending one uninterrupted week in his laboratory. Again, he must pass the learn spells check to see if he followed the directions correctly, with a +1% bonus per character level. While the alchemist doesn't have to adventure to acquire rare or unusual materials for potions, he may still have to take time to make arrangements for special requirements, such as the delivery of unusual chemicals or glassware.

*Bordun the Chemist wishes to create a* potion of fire resistance, *since his thief friend wants to pilfer a dragon's hoard. The potion has an XP value of 250, so it must be researched as a 3rd-level spell. This requires 6 weeks, and costs a total of 1,500 gp—Bordun's alchemical research is more difficult than normal potion research, but requires no unusual materials. Bordun makes his learn spells check, and his research is productive!*

*Having concluded his research, Bordun sets out to brew a* potion of fire resistance *from his formula. This takes one week, and costs him 3d6 x 100 gp (the DM rolls a 15, for 1,500 gp—ouch!) He must attempt a second learn spells check to execute the formula correctly, with a +7% bonus (he's a 7th-level wizard), and he succeeds again. Bordun now has one potion of fire resistance and can brew more without conducting his research all over again.*

The alchemist has access to a small number of attack and defense spells, but he excels in enchantments that alter or analyze materials. Note that the spells of the school of alchemy are considered to have no verbal component when cast by an alchemist, since they consist of combinations of reagents prepared by the wizard—an alchemist has little to fear from a *silence 15' radius* spell.

**Artificer:** The school of artifice is composed of spells that store or channel magical energy through items carried by the wizard. In effect, the artificer is a wizard who creates temporary magical items for his own use. The advantages of this thaumaturgical method lie in the wizard's ability to increase his spell power by carrying extra spells in various magical items and to unleash powerful enchantments with a single command word. A wizard must have an Intelligence (Intelligence/Knowledge) of 12 and a Constitution of 15 (Constitution/ Health) in order to choose this specialty. The school of artifice is opposed by the school of necromancy and those spells in the school of enchantment/charm which affect living beings.

Like the alchemist, the artificer must maintain a well-equipped laboratory and workshop. A 1st-level artificer begins play with a suitable facility in his base of operations. Building a new laboratory costs at least 1,000 gp per character level, and existing laboratories cost 50 gp per level to maintain each month. An artificer without a laboratory loses access to the bonus spell provided by specialization, and can't conduct research, make magical items, or add new spells to his spell book.

Artificers have the normal benefits and restrictions of specialist wizards, but have

no saving throw modifiers and impose no saving throw penalties on the targets of their spells. At 4th level, the artificer gains the ability to *store spells* in prepared items, saving his memorization slots for other spells. Once placed in an item, a stored spell may be indefinitely retained for ready casting. The spell to be stored must be one which the wizard knows and can cast; at any given time, a wizard may have no more total spell levels stored than his own character level, so a 5th-level artificer could store up to five levels of spells.

Preparing an item to receive one stored spell requires one uninterrupted week of work, and the actual process of casting the spell into the item requires one day and 500 gp per level of the spell. The item must be of the finest workmanship, worth at least 100 gp; after the spell it holds has been discharged, the artificer can re-enchant it. Only the artificer may release the stored spell, with a casting time of 1; in all other respects the spell is treated as if the artificer had cast it normally. Also, an item can only contain one spell at a time. Any attempt to cast another spell into the item will simply replace the current spell. In effect, this ability allows the artificer to create one-shot magical items such as a ring enchanted with *feather fall* or a cloak prepared with *protection from normal missiles*.

At 7th level, the artificer may *create a temporary magical item*. Any magical item in the DMG not specifically restricted to nonwizards is allowed, but the item will function only for the artificer. This is a special ability unrelated to the *enchant an item* spell. First, the artificer must successfully research the item creation process, taking one week per 500 XP value of the item and spending at least 100 gp per week. This time is halved if the artificer has a sample of the item to copy or if he succeeds in a *contact other plane, legend lore*, or other research spell. The artificer must pass a learn spells check to succeed and may never know the processes for more magical items than his maximum number of spells per level. Actually building and enchanting the item requires half the research time and 2d6 x 100 gp, plus the cost of the item itself. Fine materials must be used, but rare and exotic materials and processes aren't necessary for temporary items (see Chapter 7). After completing the work, the artificer must pass another learn spells check to successfully enchant the temporary item.

A temporary item lasts 1d6 days, plus one day per level of the artificer. Once the enchantment fades, the item can be re-enchanted with one uninterrupted week of work, the expenditure of 2d6 x 100 gp, and another learn spells check. If the temporary item normally possesses charges, the artificer automatically places one charge per level into the item when creating it.

*Selthos the wizard desires a* carpet of flying, *since he wishes to investigate an old tower perched high on an inaccessible peak. Looking up the carpet's XP value (7,500 XP), the player realizes that it will take 15 weeks just to research the item! Selthos decides that a carpet of flying is too formidable a challenge and searches for a cheaper alternative. Investigating his alternatives, he decides that a cloak of the bat (1,500 XP) is a much more palatable option.*

*Selthos begins his research, working for three weeks and spending a total of 1,000 gp (an arbitrary amount set by the DM; he would have had to spend at least 300 gp, or 100 per week). Fortunately, he succeeds in the learn spells check, and his research is successful—from now on, Selthos can produce a* cloak of the bat *anytime he desires,*

*without repeating the research.*

*Actually making the cloak requires one week and four days (half the research time) and 2d6 x 100 gp, plus the cost of the cloak. The DM decides that a suitable cloak costs 100 gp (the minimum allowed, but it's only an article of clothing), and rolls 700 gp for the cost of the enchantment. Again, Selthos succeeds in a learn spells check, so he now possesses a* cloak of the bat *that will last for 1d6 days, plus one day per level. With some urgency, he sets off at once to investigate the tower before his enchantment fades!*

*Several months later, Selthos decides that he needs his cloak again. He can re-enchant the cloak with one week of work, another 2d6 x 100 gp, and a learn spells check.*

Artificers may create permanent magical items using the normal magical item creation rules and the *enchant an item* spell when they reach the appropriate levels. (If an artificer creates a true magical item he once made a temporary version of, his research time and expense is reduced to its minimum value—see Chapter 7.) Artificers gain a +10% bonus to their chance to successfully enchant items.

In addition, artificers have a 20% chance at 1st level to identify the general purpose and function of any magical item simply by examining it for one full turn. This is similar to the bard's ability, but is based on the artificer's ability to analyze the construction and enchantments on the item, not the item's historical significance. This chance increases by 5% per level, so a 5th-level artificer can identify items with a 40% chance of success.

While artificers are fairly weak at first, once they reach middle levels they can quickly become some of the most useful and powerful wizards in the game. The DM should always consider the artificer's proposed item research and construction very carefully; any item that the DM feels is too powerful or out-of-character can be disallowed. In particular, items with *absorption* or *negation* powers should be considered very carefully—these can be very unbalancing in a game.

**Geometer:** Like the alchemist, the geometer was introduced in *Player's Option: Skills & Powers*. Geometers seek to control magical forces by creating symbols and diagrams of mystical significance. The tools of the geometer's trade range from runes drawn on paper or carved in stone to free-floating constructs of energy woven by the somatic gestures of a spell. Naturally, geometers excel in the casting of any spell that involves the drawing of a rune, mark, or diagram. In order to choose this specialty, a wizard must have an Intelligence (Intelligence/Reason) of 15 or better and a Wisdom (Wisdom/Intuition) of 14 or higher. The spells used by the school of geometry are described in Appendix 3 of this book.

Geometers gain the usual advantages for specialization, but like the alchemist, they gain no modifiers to their saving throws and inflict no saving throw penalties on their targets. Beginning at 4th level, a geometer may create scrolls by committing a spell he knows to paper. He can cast the spell from the scroll at some later time simply by reading the scroll, which requires one full round; once read, the scroll is consumed and the spell expended. The geometer may not have more than one spell-scroll per character level prepared at any given time, so a 6th-level geometer may have as many as six scrolls ready.

Transcribing a spell to a scroll requires one full day per spell level; a 5th-level spell requires five days of uninterrupted work. The materials cost 100 gp per spell level,

and the wizard needs a suitable laboratory or library to work in. Only spells of the school of geometry can be transcribed to scrolls, but a geometer can engage in spell research to find a diagram for spells outside the school of geometry. In any event, a geometer must succeed in a learn spells check to see if he is successful in scribing the scroll.

Geometers may also attempt to create various forms of *protection* scrolls, beginning at 7th level. The geometer must first research the scroll's diagram through normal spell research. To figure out how much time and money should be spent on researching a particular *protection* scroll, take a look at its experience point value. Basically, a scroll's effective spell level is determined by dividing the experience point value by 500 and then adding 2 (i.e., Level = XP/500 + 2) For example, if a scroll is worth 500 XP, it is considered a 3rd-level spell (500 divided by 500 equals 1; 1 plus 2 equals 3). The research time is two weeks per effective level, at a cost of 1,000 gp per level; the geometer must pass a learn spells check to successfully research the diagram. Once the geometer knows the diagram, he can produce one scroll by investing in 3d6 x 100 gp worth of materials and spending one uninterrupted week working in his laboratory. Again, a learn spells check applies to see if he executed the diagram correctly.

*Bordun's rival Teriaz also wishes to pilfer the dragon's hoard, but he's decided to provide his agent with a scroll of* protection from dragon breath*. This is worth 2,000 XP, so it's the equivalent of a 6th-level spell. It will take Teriaz twelve weeks to research the scroll and costs him 6,000 gold pieces. After passing his initial learn spells check and succeeding in his research, Teriaz can produce the scroll with one week of work and an additional 600 gp (the DM's roll of 3d6 x 100 gp) if he succeeds in the final learn spells check. While the dragon's hoard has suffered at the hands of the alchemist's accomplice, Teriaz's champion succeeds in slaying the beast and claiming the rest of the hoard.*

The geometer's spells tend to be defensive in nature, since many spells in the school involve drawing or scribing boundaries of some kind. Spells of the school of geometry are considered to have no verbal component. The school of geometry is opposed by the schools of enchantment/charm and illusion.

**Song Mage:** The school of song relies on the wizard's skill at weaving melody, lyrics, and rhythm to create enchantments of great power. Elves and bards have tapped into this source of magic for centuries, but now more wizards are investigating the intriguing possibilities of this school. While a song mage does not require proficiency in singing or musical instruments, most song mages are also virtuoso vocalists—the subtleties of pitch and expression are critically important in casting a spell in this fashion. Song mages require an Intelligence (Intelligence/Knowledge) of 14, reflecting their musical studies, and a Charisma (Charisma/Appearance) of 15.

Song mages enjoy the standard benefits and penalties for specializing in a school of magic. (Spells belonging to the school of song are listed in Appendix 3.) The normal saving throw modifiers apply, but note that the song mage may apply his saving throw bonus to magical song or sound attacks such as a sphinx's roar or banshee's wail in addition to song spells. At 8th level, song mages gain the ability to enhance the effectiveness of any musical or sound-based magical item by 50%; a song mage wielding *drums of panic* increases the area of affect from 120-foot radius to a radius of 180 feet. If the magical item proves to be cursed, its effect is lessened by 50% (if possible). At 11th

level, the song mage gains the ability to *counter* magical song or sound attacks once per day, negating the effects of the attack in a 10-foot radius centered on the mage. This allows the song mage to protect those nearby from a harpy's song, a sphinx's roar, or a *shout* spell. The mage must stand still or walk slowly and sing for at least one full round to negate the effect, and may continue singing for up to one full turn per level to defeat pervasive or persistent attacks.

All spells in the school of song are considered to have neither somatic nor material components when cast by a song mage—while song mages are extremely vulnerable to a *silence* spell, they are also capable of casting spells while securely bound or stripped of all their possessions. The school of song is opposed by the schools of necromancy, divination, and invocation/evocation.

The song mage commands a variety of useful spells that are effective both in attack and defense. While he has few spells that can directly damage an enemy, he is very good at influencing or hindering opponents with his magic, especially at higher levels.

**Wild Mage:** The concept of wild magic was introduced in the *Tome of Magic*. Wild magic is a new theory of magic that emphasizes study of the forces of randomness; a wild mage never knows exactly what's going to happen when he casts a spell. While there isn't enough space here to reprint all of the wild magic rules and tables, this briefly sums up the specialist so that readers who don't have access to the *Tome of Magic* can make use of this material.

Since wild magic is a new field of study, and a difficult one at that, a wizard must have an Intelligence (or Intelligence/Reason) score of 16 or better to specialize in this field. Wild magic has no opposition school—wild mages can freely learn any wizard spell they choose, and they're also the only wizards who can learn spells of the school of wild magic. Like other specialists, they gain the bonus memorized spell at each level. They have no saving throw adjustments for their own saves or their targets' saves. Wild mages receive a bonus of +10% when learning new wild magic spells, and a penalty of –5% when learning magic spells from other schools. When a wild mage researches a new wild magic spell, the spell is treated as if it were one level lower.

Wild mages have a special ability to control certain magical items that normally behave randomly for other characters. A wild mage has a 50% chance to control one of the following items, selecting the result of his choice: the *amulet of the planes*, *bag of beans*, *bag of tricks*, *deck of illusions*, *deck of many things*, and the *well of many worlds*. The *wand of wonder* is a special case; if the wild mage successfully controls the wand, he may use charges from the wand to cast any spell he already knows, whether or not he has the spell memorized. The number of charges expended equals the level of the spell chosen; if the mage fails his roll, he simply expends one charge from the wand and rolls for a random result.

Every time a wild mage casts a spell, the effective casting level may vary. While the level variation rules are explained in detail in the *Tome of Magic*, here's a quick and simple method for determining the variation. When the wild mage casts a spell, roll 1d20: on a roll of 6 or less, the caster's effective level drops by 1d3 levels; on a 15 or better, it increases by 1d3 levels; and on a roll of 10, the spell results in a wild surge. Note that the level variation can't exceed the caster's level, so a 2nd-level wizard can't vary by more than two levels either way. Level variation affects all level-based aspects of a spell, including damage, duration, range, opponent's saving throws, and other such factors.

*Kelmaran, a 5th-level wild mage, casts a* fireball *spell at a band of orcs. He rolls 1d20 and comes up with a 1, so his effective level will be reduced by 1d3 levels. Rolling 1d3, he is relieved to see that he only loses 1 level, so his* fireball *does 4 dice of damage instead of 5 and may suffer a small reduction in range. With a lucky roll, Kelmaran's spell could have done as much damage as an 8th-level wizard's* fireball.

Wild surges are strange manifestations of the randomness of wild magic. A complete table for wild surges appears in the *Tome of Magic*, but if a copy of this book isn't available, use the random chart for the *wand of wonder*, in the magical item descriptions of the *DMG*. Note that a number of wild magic spells appear in the *Tome of Magic* and the *Wizard Spell Compendium*—if you're really interested in playing a wild mage character, you should obtain a copy of one or both of those accessories.

## Customized Wizard Characters

While there is a broad selection of specialist wizards to choose from in this book, some players may want to create more unique characters. *Player's Option: Skills & Powers* introduced the concept of point-based character design; this section now expands that material for wizards. Dozens of new powers, abilities, and restrictions are described here, allowing the creation of almost any kind of magic-using character imaginable.

If you want to use the material here in conjunction with Skills & Powers, this section takes the place of the character class design rules. In addition to the initial allotment of 40 character points assigned to a character in this chapter, a player may also choose to spend points left over from the race design chapter and save points in this step for proficiency selections. Note that there is no restriction on how a character spends his points in this system.

As always, the DM has the final word on whether or not a particular character is appropriate for his campaign. If the DM doesn't like the way a character is put together, he can have the player try again.

## Using the Wizard Character Design Rules

In case you aren't familiar with point-based character design, here's how it works: You get to decide which class abilities and which hindrances your character will have during his adventuring career. For example, if you want your wizard character to have the hit points and fighting ability of a priest, you can select the appropriate abilities to do so—but chances are good that your character will have to make serious sacrifices elsewhere in order to get this advantage.

When you custom-design a wizard, your character begins with 40 character points. Each ability you select for your character costs character points, but you can gain extra points by choosing limitations. Unless you spend points on special powers or select special limitations, your wizard character uses a four-sided Hit Die, uses the wizard's THAC0 and saving throw charts, gains the ability to cast wizard spells as noted in the *PHB* on Table 21: Wizard Spell Progression, may use any magical item normally usable by wizards, may not wear armor, and is limited to the following weapons: dagger, dart, knife, sling, or staff. Note that your customized wizard character must spend points to gain schools from which he can cast spells.

Under these rules, you are under no obligation to build your character as a mage or a specialist wizard. Your character's powers and spell schools will be determined entirely by your choices here. However, for your convenience you may want to use these basic wizard classes as starting points. *If you decide to begin the customizing process with a mage or specialist wizard, your character receives no character points to choose new or optional abilities.* Since the mage or any specialist wizard is already a complete character class, the only way to add new powers is to compensate for them by selecting new limitations for a net point cost of zero.

**The School of Universal Magic:** All wizards have full access to this school at a cost of zero character points. This school contains spells basic to any wizard's studies.

## Optional Abilities

A customized wizard is built from a slate of optional abilities, ranging from schools he may cast spells from to game mechanics such as THAC0 improvement rate, Hit Die size, and weapons and armor allowed. The available abilities are listed below.

**Delayed Acquisition of Abilities:** A character can reduce the cost of a special ability by choosing to delay it to a higher level. For example, a character may select the ability of reduced casting time, but then delay the acquisition of the ability to 4th or 5th level. An ability that is not acquired until 3rd level is 1 point cheaper than the listed cost; an ability delayed to 5th level is 2 points cheaper; an ability delayed to 7th level is 3 points cheaper; an ability delayed to 9th level is 4 points cheaper than listed; and an ability delayed to 11th level is 5 points cheaper than normal. No ability can be reduced to zero or less points—everything costs at least one character point, no matter how long the wizard waits for the power.

**Access to schools (5+):** A customized wizard pays 5 character points (CPs) for each school he may learn and cast spells from. A standard mage would pay 40 CPs to gain access to the eight schools of philosophy: abjuration, alteration, conjuration/summoning, divination, enchantment/charm, illusion, invocation/evocation, and necromancy. Customized wizards may choose to have access to thaumaturgical schools or schools of effect if they wish.

**Armor (5/10/15):** With this ability, a wizard may ignore the normal restriction against using armor. As a 5-point ability, the wizard may wear padded armor; for 10 points, the wizard may wear leather, studded leather, hide, or brigandine armor; and for 15 points, the wizard may wear any armor he chooses. Note that a wizard may not use any kind of shield.

**Automatic spell acquisition (2/5):** The wizard may add a new spell of his choice to his spell book every time he gains a level, without having to pass a learn spells check. The wizard need not have a copy of the spell but must have seen the spell used at least once. As a 2-point ability, the wizard can acquire spells from one school only; as a 5-point ability, he can choose from any school he has access to. The wizard must be able to cast the spell he chooses.

**Bonus spells (10/15):** A wizard with this ability increases the number of spells of each level that he can memorize by one. For example, a 1st-level wizard may memorize two 1st-level spells instead of just one. For 10 points, the wizard may select spells of one school as bonus spells; for 15 points, the bonus spell can be any spell the wizard can cast.

**Casting time reduction (2/5):** Spells cast by the wizard are unusually swift and have a casting time of 1 less than normal. For 2 points, the wizard may accelerate spells of only one school. For 5 points, all spells are faster.

**Combat bonus (8/10):** A wizard with this class ability is much better in combat than normal. For eight CPs, the wizard's THAC0 advances as if he were a rogue of equal level. For 10 CPs, the wizard's THAC0 advances as a priest's.

**Constitution adjustment (5):** The wizard may use the Constitution-based hit point bonus of warriors, gaining +3 or +4 hp per Hit Die with a Constitution of 17 or 18 instead of the normal maximum of +2 hp per die.

**Detect magic (10):** A wizard with this power may use detect magic once per day per two levels (twice a day at 3rd level, three times at 5th, and so on). The wizard doesn't need to memorize the spell, but in all other respects the power operates as if it were actually cast by the wizard.

**Dispel (10/15):** This power allows a wizard to dispel one kind of effect or spell once per day, or three times per day for 15 CPs. The range of this power is 30 yards, and it requires nothing more than one round of concentration. The base chance of success is 50%, ±5% for each level difference between the dispeller and the creator of the effect to be dispelled. The type of effect that may be dispelled must be a group of linked spells in the same school; for example, *charm* spells, *polymorph* spells, or *shadow magic* and *monsters* are all good examples.

**Enhanced casting level (10):** A wizard with this ability may cast spells of one school as if he were 1d4 levels higher than his actual level (roll each time used). All level-based effects of the spell are altered, including damage, range, duration, and area of effect. This power may only be invoked once per day.

**Extended spell duration (10/15):** Noninstantaneous spells cast by the wizard last an additional time unit (round, hour, day, etc.) per two levels. The exact time unit depends on the normal duration of the spell—if the duration is noted in hours, a 5th-level wizard's bonus would be an extra three hours. As a 10-point power, extended duration applies to spells of one school. For 15 points, it applies to all spells cast by the wizard.

**Followers (10):** Normally, wizards do not attract loyal followers at high levels like other characters do. A wizard who selects this ability automatically attracts 20 to 200 0-level men-at-arms at 8th level if he establishes a castle, keep, tower, or other place of strength. In addition, 1d6 low-level wizards (1st to 3rd level) will also appear and request permission to study beneath the PC wizard. These loyal apprentices can undertake minor errands or research on the wizard's behalf, as long as they are treated well.

**Immunity (10+):** A wizard with this power gains complete immunity to one particular spell, at a cost of 10 CPs plus 1 CP per spell level. The wizard ignores the effects of the spell and cannot be directly damaged or harmed by the spell, although he could be *indirectly* harmed—a wizard immune to *charm person* could be beaten senseless by a charmed fighter, for example. The character may gain immunity to a group of related spells by spending CPs to become immune to the highest-level spell in that group, so a wizard who wanted immunity to all charms would spend 18 CPs for immunity to *mass charm*—*charm person* and *charm monster* are included with immunity to *mass charm*. The DM may disallow any immunity that he feels is too powerful.

**Improved Hit Die (10/20):** For 10 character points, the wizard uses a d6 for a Hit Die instead of a d4. For 20 points, the wizard uses a d8.

**Learning bonus (5/7+):** The wizard gains a +15% bonus to his chance to learn spells of one school; for seven points, this increases to +25%. The wizard may apply the bonus to learning spells of all schools by doubling the point cost.

**No components (5/8):** With this talent, a wizard may designate one spell of each level as a spell that requires no material components. For 5 points, the wizard may select spells of one school only; for 8 points, the wizard may select spells from any school. The wizard may not choose spells from the schools of alchemy or artifice for this advantage.

**Persistent spell effect (15 +2/spell level):** The wizard may select one spell that he knows (and can cast) to have a persistent, permanent effect. He must give up one spell slot of the appropriate level, so a wizard who wants to have *ESP* as a persistent power must leave one 2nd-level spell slot empty. Only spells with noninstantaneous, nonspecial durations may be selected as persistent powers, and the spell must be one which affects the caster. By concentrating, the wizard may invoke the power and maintain it for as long as he continues to concentrate. Changing the persistent spell requires a full week of uninterrupted work. If the wizard is struck by a *dispel magic*, the persistent effect fails. First-level spells that are appropriate for persistent effects include: *change self, chill touch, detect undead, feather fall, gaze reflection, jump, protection from evil, shield, spider climb,* and *ventriloquism*.

**Priestly wizard (10+):** A wizard with this talent may select one minor sphere of access for 10 points or one major sphere for 15 points. The wizard must still use wizard spell slots to memorize these spells; in effect, they're translations or adaptations of priest spells the wizard knows through special training. Priest spells must be learned normally and count against the wizard's maximum number of spells per level.

**Proficiency group crossovers (5+):** Normally, a wizard may select proficiencies from the wizard and general groups, and must pay a penalty in character points or proficiency slots for choosing proficiencies out of these groups. At a cost of 5 CPs each, the wizard may select another character group for a NWP crossover.

**Range increase (5/7+):** All ranged spells from one school known to the wizard have their range increased by 25% for 5 CPs or 50% for 7 CPs. For example, the 1st-level spell *hold person* has a range of 20 yards per level, but with this power the range could increase to 25 or 30 yards per level. The wizard can gain this bonus to all ranged spells regardless of school by doubling the CP cost.

**Read magic (5):** This power allows the wizard to use *read magic* once per day per two levels. The wizard doesn't need to memorize the spell, but in all other respects the power operates as if it were a read magic actually cast by the wizard.

**Research bonus (5+):** When the wizard is performing spell research, spells of one school are treated as if they are one level lower, just like the standard specialist wizard ability. If the wizard doubles the cost to 10, he may apply this bonus to all schools.

**School knowledge (5/8):** This is a standard benefit for a specialist wizard. Due to the wizard's extensive knowledge of one school of magic, he gains a +1 bonus to saving throws versus spells of that school, and inflicts a –1 penalty to the saving throws of his opponents when casting spells of the school. For 8 CPs, the saving throw modifiers increase to +2 and –2, respectively.

**Thief ability (10+):** A wizard with this talent possesses one thief ability of his choice. For every 5 additional points he spends, he may choose another thief ability.

(Note that backstab is included as a thief ability.) The wizard's percentage scores increase as noted in the *DMG* on Table 19: Thief Average Ability Table. Modifiers for race, armor worn, and exceptional Dexterity score all apply.

**Weapon selection (10/15):** For 10 CPs, the wizard may expand his selection of weapons to either the cleric or thief lists (player's choice). For 15 points, the wizard is completely unrestricted in his choice of weapons and may gain proficiency in any weapon he spends a slot to learn.

**Weapon specialization (15):** With this power, the wizard gains the ability to specialize in a weapon. Choosing this ability doesn't confer specialization—it merely makes it available for the wizard, who is still required to spend the necessary CPs or proficiency slots to actually specialize.

## Optional Limitations

Limitations are selected much like abilities. Each limitation carries a CP bonus that counters CPs spent on abilities. If a wizard selects 55 CPs of abilities in the previous section, he must come up with 15 CPs of limitations, since the wizard is normally allowed only 40 CPs worth of abilities.

A "standard" mage or specialist wizard can use limitations to pay for unusual abilities he wouldn't normally have access to. For example, if a wild mage also wanted to be able to move silently (a 10-point ability from the preceding list), he has to find a 10-point limitation to compensate. The following is a list of available limitations:

**Awkward casting method (5):** The wizard's spells must be cast in an extremely obvious fashion, alerting anyone within earshot that the wizard is using magic. The wizard might be surrounded by brilliant dancing motes of light, he might have to shout his vocal component at the top of his lungs, people nearby might feel waves of chilling cold wash over them—however it works, the wizard's spellcasting activity is immediately noticed. Casting spells from ambush is nearly impossible, and casting spells discretely is right out, so a quiet ESP in a tavern will never be available to the wizard.

**Behavior/taboo (2):** The wizard has a strong set of beliefs that require him to act strangely. For example, he may have to dress in certain colors, avoid physical contact with other people, avoid certain foods, and so on. The behavior chosen is well-known by most NPCs as the behavior of a wizard, so it becomes difficult for the wizard to conceal his profession. The wizard's actions may also make it easier for enemies to find or harass him by exploiting his taboos. Most importantly, a wizard who violates his beliefs loses all spells he currently has memorized; he *believes* that he can't cast spells until he behaves in the required manner again.

**Difficult memorization (5):** A wizard with this limitation can study and memorize spells only in very specific circumstances. For example, the wizard must be in his lab to memorize spells, he must be in a temple of the god of magic, or he must perform a rite lasting one full day and using materials worth at least 250 gp per level in order to prepare himself to memorize spells.

**Environmental condition (5+):** The wizard requires certain conditions for spells to be effective; for example, a wizard may only be able to cast spells by day, while in contact with a favored element, or as long as no priests are nearby. The DM should evaluate the proposed restriction to determine if it applies in everyday circumstances (20

points), common situations (15 points), rare circumstances (10 points), or only under very specific conditions (5 points.) For example, the mage who can only cast spells in daylight hours has an everyday restriction—each night, he's almost helpless. Another mage who can't cast spells during the dark of the moon only has a 5-point restriction, since this occurs for only a couple of days each month.

**Hazardous spells (10):** A wizard with this limitation pays the price for his magic. Each time the wizard casts a spell, he must attempt a saving throw vs. breath weapon or suffer 1 point of damage per level of spell. Alternatively, the wizard has a 1% chance per spell level, cumulative, of going insane. The madness lasts 3d4 days, during which the wizard may be catatonic, psychotic, paranoid, or generally disturbed in whatever fashion the DM deems appropriate, before the character can recover and reset the chance of madness to 0% again.

**Learning penalty (5/8):** This is a common restriction of specialist wizards. The wizard may learn spells of one school without penalty; for all other schools, he suffers a –15% penalty to his learn spells roll, or a –25% penalty for 8 CPs.

**Limited magical item use (5+):** A wizard with this restriction cannot use certain magical items. For each category of magical item that is unusable, the wizard gains a 5 CP restriction. The categories are: potions, oils, and scrolls; rings; rods, staves, and wands; and miscellaneous magical items, weapons, and armor. Another way for this restriction to operate is by barring all magical items that simulate spells of a certain school—for example, all items that have invocation/evocation effects, and so on. This is a 5-point restriction for each barred school. Specialist wizards often take this restriction for their opposition schools.

**Reduced hit points (10):** Wizards with this limitation use a d3 for their Hit Die instead of a d4. In addition, the wizard is limited to a Constitution hit point bonus of +1 per die.

**Reduced spell knowledge (7):** The maximum number of spells of each level that the wizard may know is reduced to one-half normal, or 10 if his Intelligence is high enough to allow him to know all the available spells. For example, a wizard with an Intelligence of 16 may know up to 11 spells of each level, but with this limitation he may only know six spells of each level.

**Reduced spell progression (15):** This is the reverse of the bonus spells enjoyed by specialist wizards. A wizard with this restriction can memorize one less spell than normal at each level, so a 1st-level wizard is reduced from one spell in memory to none at all—a serious disadvantage for lower-level characters.

**Slower casting time (2/5):** Spells cast by the wizard are unusually complicated and require more time than normal to cast. All spell casting times increase by 3. For 5 points, the wizard's spells automatically increase to the next greater time unit. This means that spells with casting times of 1 to 9 increase to one full round. Spells with casting times in rounds require a similar number of turns, turns go to hours, and hours go to days.

**Supernatural constraint (5+):** The process by which the wizard gained access to his magical powers transformed him into a supernatural creature with unusual vulnerabilities. Unlike a belief or taboo, these constraints cannot be violated by the wizard by any means. Some examples: the wizard can't cross running water; the wizard can't enter a home or community without an invitation; the wizard can't set foot on

hallowed ground; the wizard automatically becomes lost at crossroads; the wizard leaves footprints that can always be tracked; normal animals are terrified of the wizard and won't let him near; and any number of other such constraints. These constraints can be used by clever enemies to render the wizard powerless or severely restrict his movements. The DM should evaluate the proposed constraint and assign a limitation of 5 to 15 points depending on how often it comes into play and how much it interferes with the character on a daily basis.

**Talisman (8):** The wizard's magical power is inextricably linked with a single object or talisman. He must have this object on his person in order to cast spells. Typically, a talisman might be a crystal, a staff, an amulet, a ring, or some similar item. If the wizard's talisman is destroyed, he can create a new one with 1d4 weeks of work in his laboratory or home base.

**Weapons restriction (3/5):** As a 3-point restriction, the wizard may never have proficiency in any weapon. As a 5-point restriction, the wizard is not allowed to attempt to wield a weapon at all and may never try to injure another creature with a weapon. Doing so renders all spell use impossible for the character for at least one full month.

## Dealing with Game-Breaking Characters

While the customized wizard rules allow players a great deal of flexibility in creating their characters, they also allow a clever player to put together a "super-wizard" by carefully selecting limitations that he thinks will rarely hinder the character. Don't despair; this is a zero-sum character creation system, and for every strength a character must also incorporate a corresponding weakness. Here are a few guidelines for handling high-powered characters:

**DM's Prerogative:** The DM always has the final say on anything in his campaign. If a player insists on building characters that unbalance the game, the DM is within his rights to simply not approve the character or disallow customized character creation in his game.

**Point Limits:** The DM can limit the number of additional powers purchased by a wizard by setting a limit of 60 or 70 points of optional abilities. After the first 40 points, each additional ability must still be paid for by taking limitations. This prevents a player from building a wizard with every ability on the list and balancing it with every limitation. Optionally, the DM can require that a wizard spend at least 30 points acquiring schools to cast spells from, or set other spending limits in specific areas.

**Limitations with a Vengeance:** A player might think he's getting away with something when he takes a couple of belief or environmental condition limitations, but a good DM can always find a way to bring these role-playing disadvantages into play. By looking for situations where the super-character's built-in weaknesses cripple him, the DM can graphically illustrate how out of balance the character actually is.

**The Bad Guys are Supermen, Too:** Naturally, if one character is a walking arsenal of powers and abilities, it stands to reason that some NPCs might have similar skills. No matter how tough a particular PC is, there's always someone in the game world who's a little tougher than him, and meeting that NPC is a super-character's worst nightmare. While this tactic isn't particularly elegant, it's quite effective in letting the player know just how it feels to be in the place of the poor NPCs his character's been terrorizing.

# Chapter 2:
# Priests

The *Player's Handbook* describes two types of priests: clerics and specialty priests. While clerics are intended to serve as a generic model for a priest character, DMs and players in campaigns that feature specific pantheons or mythoi are encouraged to create specialty priests to reflect the particular aims and powers of the different deities of the world. The druid is presented as an example of a specialty priest, representing any power that stands for nature—or even nature itself.

In this chapter, we'll examine the basic cleric and druid classes in great detail, concentrating on their magical abilities. A number of spells are reorganized into different spheres in order to provide the specialty priests with basic abilities that should be common to all priest characters, while maintaining unique spells that can only be cast by certain specialists. We'll also introduce three new types or subclasses of specialty priest: the crusader, the shaman, and the monk. Last but not least, we'll present a point-based design system for customizing specialty priests.

Hordes of specialty priests have been introduced in various accessories following the *Player's Handbook*. There are specialty priesthoods in *Legends and Lore, The Complete Priest's Handbook, Monster Mythology*, and several of the campaign settings. At this point, there are well over one hundred varieties of priests in print! Unfortunately, some of these specialty priests are far more powerful than similar specialty priests presented in different settings. This raises the question of which sources are "generic" enough to use in any campaign setting, and which should be reserved for specific campaign worlds.

The first rule of thumb is simple: If a campaign setting features its own pantheon and specialty priests for those powers, you should give that material precedence. For example, the deities and priesthoods of the Forgotten Realms, Birthright, or Dark Sun campaign settings are described in detail in their respective boxed sets. When a player creates a priest character for one of these settings, he should refer to the character creation rules specific to those settings. Of course, a DM who has assembled this information for his own campaign can certainly require his players to create their priest characters accordingly!

If a world does not feature a fully-developed pantheon or special priesthood rules for the various powers of the mythoi, then you should consider the material in *Player's Option: Spells & Magic* to take precedence over all earlier material. In other words, the rules here are intended to replace the specialty priesthoods presented in *The Complete Priest's Handbook, Legends and Lore*, and *Monster Mythology*. Note that the powers and faiths presented in these books remain unchanged; *Player's Option: Spells & Magic* just changes the way the specialty priests are put together.

## Spheres of Access

Just as wizard spells are divided into schools of magic, priest

spells are organized into spheres of access. A sphere of access represents a group of related spell powers granted by a particular deity, so a power of war usually grants access to the spheres of combat and war, a power of nature usually grants access to the spheres of animal and plant, and so on. All priestly spheres of access are organized in the same scheme—there are no variant organizations like the schools of effect or thaumaturgy for wizards.

While wizards generally have the ability to learn spells from any school unless specifically stated otherwise, priests are strictly limited to the spheres their deity grants them access to. In other words, the organization of priest spells governs which spells a priest can cast, while wizard schools govern which spells a wizard can't cast. This makes it difficult to create new spheres of priest spells, since a great deal of work must be done to retrofit any new spheres to existing priesthoods that should have had influence in the new sphere.

The standard spheres from the *Player's Handbook* are the spheres of all, animal, astral, charm, combat, creation, divination, elemental (with the lesser spheres of air, earth, fire, and water), guardian, healing, necromantic, plant, protection, summoning, sun, and weather. In addition, the *Tome of Magic* adds the spheres of chaos, law, numbers, thought, time, travelers, war, and wards.

**All:** Spells of this sphere represent the basic class abilities that should be available to all priest characters, regardless of specialization. Spells that deal with direct manifestations of a deity's power, such as *bless, chant*, and *gate* are included, as well as a few spells that are so general that all priests may make use of them, such as *detect magic, remove curse,* and *atonement*. The sphere of all has been greatly expanded in *Player's Option: Spells & Magic* in order to balance the spell powers available to different kinds of specialty priests.

**Animal:** Spells that influence or alter creatures are found in the sphere of animal. Most animal spells do not affect people. Powers of nature or husbandry often grant spells of this sphere.

Astral: The astral sphere deals with communication and movement between the various planes of existence. Priesthoods of philosophy or travel sometimes have access to this sphere.

**Chaos:** Priests with access to this sphere command spell powers that increase randomness and confusion to the world around them. Deities of mischief and ill luck often grant spells of chaos.

**Charm:** Charm spells usually affect the attitudes and actions of people. Powers of love, trickery, or art often grant access to this sphere. The sphere is also useful when dealing with hostile enemies or unbelievers, and many expansive faiths deal with this sphere as well.

**Combat:** Naturally, combat spells are used to attack or injure the enemies of the faith. Since most priests have an interest in self-defense, a great number of faiths have access to the sphere of combat.

**Creation:** Creation spells allow the priest to produce food, water, light, or other things from nothing. *Create water* and *continual light* are good examples. Prime creator powers often grant access to this sphere.

**Divination:** This useful sphere allows the priest to discern the safest course of action, detect hidden things, or discover hidden knowledge. It is the province of deities of

learning and wisdom.

**Elemental:** The four basic elements of creation—air, earth, fire, and water—are dealt with in this sphere. Powers of nature or powers with elemental interests typically grant access to at least part of this sphere. Very few priests have access to all four elements.

**Guardian:** Priesthoods charged with the protection of holy places often have access to this sphere. Spells that help a guardian to perform his task are included as well as spells that create or enforce magical barriers over a person or area.

**Healing:** This sphere deals with all forms of healing spells, except those which restore life or manipulate the subject's life force.

**Law:** The sphere of law is the antithesis of the sphere of chaos. Law spells concentrate on the principle of obedience and the strength of the group over the strength of the individual. Deities of rulership and community are likely to have influence in this sphere.

**Necromantic:** Spells of the necromantic sphere deal with the forces of life and death, including *raise dead* and *resurrect*. These spells are also quite useful in dealing with undead monsters.

**Numbers:** Priests with access to this sphere believe that numbers and mathematical relationships can provide insight into the nature of the universe. Powers of knowledge and arcane lore occasionally grant access to this unusual sphere of spells.

**Plant:** This sphere deals with plants and vegetation of all kinds, from agricultural to wilderness settings. Priests of nature or agriculture are often granted access to this sphere.

**Protection:** While this sphere is related to the guardian sphere, protection spells generally enable the priest to protect people, not places. Many of these spells are very useful in combat, and militant priests often have access to this sphere.

**Summoning:** Summoning spells call creatures to serve the priest. Even extradimensional creatures can be summoned at higher levels. This sphere has been revised to include a modest selection of spells suitable for dismissing summoned creatures.

**Sun:** Solar spells deal with light of different qualities in a variety of ways. Spells such as *starshine* and *Sol's searing orb* are included in the sphere of sun.

**Thought:** The sphere of thought is composed of spells that deal with the interaction of the thinker, the thought, and the subject of the thought. In effect, priests who have access to this sphere believe that thought itself has a certain reality that can affect the physical reality of the world around the mind. Powers concerned with the mind or knowledge are found within this sphere.

**Travelers:** Spells of this sphere provide aid and comfort to travelers and pilgrims. Deities of wayfarers both peaceful and militant may make these spells available to their followers.

**War:** Unlike the sphere of combat, the sphere of war deals specifically with magic useful on the battlefield in clashes between armies. War spells can affect hundreds of soldiers at a time.

**Wards:** The sphere of wards includes spells that provide protection for clearly defined areas, ranging from single objects to whole communities. It is related to the sphere of guardian, but the sphere of wards only creates barriers or obstacles to deter

intrusion; ward spells do not necessarily enhance the priest's ability to defend the area. In addition, many ward spells are cooperative in nature and provide protection for bodies of believers instead of holy sites.

**Weather:** This sphere is concerned with the forces of weather, including wind, fog, lightning, and weather control. Powers of nature and tempests often have influence in this sphere.

## Player's Option and Spheres of Access

While the general definitions of the spheres have remained the same for *Player's Option: Spells & Magic*, a number of spells have been rearranged for purposes of game balance. Many spells have been added to the sphere of all in order to provide all priests with the basic spell powers that should be available to them. Some other spells have been assigned to different schools to better define the roles and strengths of clerics, druids, and other specialty priests. For example, *reflecting pool* was originally designed as a druid spell, but in AD&D 2nd Edition it became a divination spell available to clerics. In this book, *reflecting pool* has been placed in the sphere of elemental water, where druids have access to it but clerics do not. Refer to Appendix 4 for a complete and accurate listing of which spells belong where.

**Cleric Sphere Access:** As part of the reorganization of the spheres of access, clerics lose access to the sphere of sun and the elemental spheres of air and fire. Clerics retain minor access to the elemental spheres of water and earth. The cleric only loses a dozen or so spells he formerly had access to, and most of these were spells that had previously belonged to the druid in the original AD&D.

**Druid Sphere Access:** Similarly, druids lose access to the sphere of divination, but gain major access to the sphere of sun. Again, this takes away spells that blur the line between the druid and cleric's spellcasting powers, while restoring a number of spells that druids formerly had access to in the original AD&D game.

## Priest Characters

All five standard varieties of priest—the cleric, the druid, the crusader, the monk, and the shaman—can be considered generic enough to be used in any campaign setting. In addition, some of the existing specialty priests described in previous books can be "folded in" to these basic five priest archetypes.

**Clerics** are militant priests who serve as temple knights, defenders of the faith, and guardians of a faith's holy places. They have very good fighting skills and a wide array of spells to choose from. The skills, abilities, and spell selection available to the cleric can also describe priests of agriculture, arts, birth/children, community, crafts, culture, darkness/night, dawn, death, disease, everything, evil, fate/destiny, fortune/luck, good, healing, life-death-rebirth cycle, light, love, marriage, messengers, metalwork, mischief/trickery, music/dance, oceans/rivers, prosperity, race, redemption, rulership/kingship, sites, sky/weather, sun, trade, and wind.

**Crusaders** are closely related to clerics, but while clerics can be described as defenders of the faith, crusaders are weapons against the enemies of the temple they serve. They are true soldier-priests, skilled in physical combat and armed with spells appropriate for the battlefield. Crusaders include specialty priests of fire, guardianship, justice/revenge, lightning, metalwork, race, rulership/kingship, strength, thunder, and

war.

**Druids** are priests of nature. They are the protectors of the forests or other wild places and stewards over all living things placed in their charge. Druids are weaker in physical combat than a cleric or crusader, but their spheres of access include a number of powerful offensive and defensive elemental spells. In addition, they enjoy several unique granted powers. Druids can represent the powers of animals, druid, earth, elemental forces, fertility, hunting, moon, nature, seasons, and vegetation.

**Monks** are cloistered priests and adepts who seek enlightenment through the rigorous training of mind, body, and spirit. Monks are extremely skilled in unarmed combat and have access to several unusual spheres of spells. Monks may represent specialty priests of competition, divinity of mankind, literature/poetry, magic, oracles/prophecy, peace, time, and wisdom.

**Shamans** are priests of barbaric or savage cultures. They serve as guides and protectors for their tribes. Shamans have fair combat ability and spell access, but they also command the spirits of animals, ancestors, and nature. The shaman is a good choice for any player character who comes from a barbaric or nomadic culture, and can also represent a specialty priest of ancestors, animals, earth, everything, fertility, hunting, lightning, oceans/rivers, race, sky/weather, thunder, and wind.

## Cleric

Ability Requirements: Wisdom 9
Prime Requisite: Wisdom
Races Allowed: All

Known as the most common type of priest, a cleric makes a suitable representative for a variety of powers. A cleric is both a sturdy soldier with formidable spell powers and a defender of the faith and proselytizer; overall, he is the most versatile and well-rounded priest character. Clerics with a Wisdom score of 16 or better earn a 10% bonus to the experience they gain. A cleric may be of any alignment acceptable to his patron deity.

Clerics retain all the powers and abilities described in the *Player's Handbook*, with the exception of their spheres of access, which are slightly altered. (See **Player's Option™ and Spheres of Access**.) Clerics have major access to the spheres of all, astral, charm, combat, creation, divination, guardian, healing, necromantic, protection, summoning, and minor access to elemental water and elemental earth.

Clerics may wear any armor and use any Type B (bludgeoning) weapon. They may also wield a variety of magical items. Clerics turn undead and attract followers as described in the *PHB*. At 9th level, the cleric may receive permission from his order to establish a religious stronghold and govern it in the name of the faith.

## Crusader

Ability Requirements: Wisdom 9
Strength 12
Charisma 12
Prime Requisites: Wisdom, Strength

Races Allowed: Human, Dwarf, Elf

The crusader is a priest of a deity of war, combat, or conflict who stands at the forefront of the fight for his faith. Crusaders must be either lawful or chaotic in alignment; in other words, crusaders may be of any alignment except neutral evil, neutral good, or true neutral. Since they are often called upon to lead the forces of their faith into battle, crusaders require high Strength and Charisma scores in addition to a minimum Wisdom of 9. High Constitution or Dexterity scores are also very useful for a crusader. A crusader with Wisdom and Strength scores of 16 or better gains a 10% bonus to the experience points he earns. In matters of advancement, crusaders use the same column as clerics do on Table 23: Priest Experience Levels in the *PHB*.

While crusaders are often associated with war gods, they may also represent powers of leadership or strong alignment that are in conflict with opposing forces. Crusaders often organize themselves into a military hierarchy and view their temples as fortifications as well as places of worship. In some cases, the power of the crusader orders can rival the strength of the kingdom that hosts them. This is a situation that sometimes provokes popular resentment or suspicion. However, no one questions their ability and resolve in times of war.

In the adventuring party, the crusader is a natural leader whose place is in the front lines of any battle. When possible, the crusader should take steps to prepare his comrades for battle through the use of *bless*, *prayer*, *aid*, and similar spells. He can also make use of healing spells to assist those who fall in valiant battle.

Crusaders excel in personal combat and are nearly as skilled as a warrior of the same level. They may employ any kind of armor or shield and learn the use of any weapon, although particular orders of crusaders may prefer weapons of a certain type—for example, knightly weapons, bows or battle axes (for elven or dwarven crusaders), and so on. To represent their skill at arms, the THAC0 of a crusader character improves at the warrior's rate of 1 per level. A 2nd-level crusader has a THAC0 of 19 instead of 20, a 3rd-level crusader has a THAC0 of 18, and so on.

Crusaders are considered to have a nonweapon proficiency crossover with the warrior group and may learn warrior proficiencies at no extra cost. They may use any magical item normally usable by priests or by fighters. In addition, if the DM allows, a lawful good crusader may gain the same benefits as a paladin when wielding a *holy avenger* sword.

While crusaders are formidable soldiers, they also retain a good selection of spells that are particularly useful on the battlefield. Crusaders have major access to the spheres of all, combat, guardian, healing, war, and wards. They have minor access to the necromantic and protection spheres. In addition, lawful crusaders have major access to the sphere of law, and chaotic crusaders have major access to the sphere of chaos.

Crusaders cannot turn undead, but at 3rd level they gain the granted power to cast *lighten load* (from the *Tome of Magic*) once per day. This spell effectively halves the weight of equipment and gear for a day, reducing a party's encumbrance. At 7th level, the crusader may cast *easy march* (from *Tome of Magic*) once per week, which basically allows a small party to force march without accumulating fatigue penalties.

Crusaders gain followers much as clerics do. When the crusader reaches 8th level, he automatically attracts 20 to 200 fanatical followers. These followers are normal

0-level soldiers, armed and equipped with weapons appropriate for typical soldiers in the campaign. Unlike the cleric, the crusader does not need to establish a permanent place of worship to attract these followers. Since he is a great battle leader, the soldiers will serve him as a free-roving company if no stronghold is available. At 9th level, a crusader may receive official sanction to establish a religious stronghold or fortified temple.

### Crusaders and *Player's Option: Skills & Powers*

It is assumed that selecting this class for your Player's Option character expends all class-derived character points a character may have available. In other words, a crusader cannot be customized from the model presented here. However, if you're interested in building a specialty priest that resembles the crusader with slightly different powers, you can use the **Customized Priest Characters** information later in this chapter to do so—it's generally more complete and allows more options than the material in *Skills & Powers* does.

In the *Skills & Powers* character point system, crusaders may learn a weapon of their choice, some fighting styles, or expertise in a weapon as if they were multi-classed warriors. A crusader may specialize in a weapon if the DM allows that option from *Skills & Powers*, but it's expensive; he must pay the character point costs as a priest, not a fighter.

## Druid

Ability Requirements: Wisdom 12
Charisma 15
Prime Requisites: Wisdom, Charisma
Races Allowed: Human, Half-elf

Known primarily for their love of nature and guardianship of the wilderness, druids possess remarkable abilities in areas dealing with plants, animals, weather, and the elements. Druids with a Wisdom and Charisma score of 16 or better earn a 10% bonus to the experience they gain. Because of their views, druids must be neutral in alignment.

Except for a slight change in the spheres of access, druids keep all of the abilities and powers listed in the *PHB*. Druids have major access to all, animal, elemental, healing, plant, sun and weather.

Druids can only wear leather armor and use wooden shields. Their weapons are limited to club, sickle, dart, spear, dagger, scimitar, sling, and staff. Aside from written magical items as well as armor and weapons forbidden to druids, this class can use all other magical items. Druids cannot turn undead. See the PHB for details about how druids are organized.

## Monk

Ability Requirements: Wisdom 15
Intelligence 14
Constitution 13
Prime Requisites: Wisdom, Intelligence
Races Allowed: Human

The monk is a priest who belongs to a cloistered or monastic order, where he withdraws from the everyday affairs of the world around him to contemplate his faith. Powers of philosophy, thought, and scholarship are commonly represented by monks, as well as any deity that is not normally worshipped by the common people of an area. Monks must be lawful in alignment, although they can be lawful good, lawful neutral, or lawful evil. While monks are most often associated with oriental campaigns and settings, this specialty priest is not necessarily an oriental class—monastic orders can exist in almost any fantasy setting.

Monks believe that rigorous training of body, mind, and spirit leads to enlightenment. Consequently, a character must have high Intelligence and Constitution scores to qualify for this class. Wisdom and Intelligence are the prime requisites of the monk, and a monk with scores of 16 or better in these two abilities gains a 10% bonus to the experience points he earns. Monks also advance in level as clerics do.

While monks do not attempt to minister to the masses or gather followers for their patron deity, they believe in demonstrating the qualities of their faith by example. A monastery or abbey is a place of learning and strength that is open to any person who requires shelter, advice, or assistance. Other monks choose to leave the abbey and travel widely, setting an example among the people they meet and help. Monasteries devoted to evil powers are sinister places where knowledge and wealth are hoarded for the use of the order, regardless of whom may need it.

The monk brings a variety of skills to the adventuring party. He is somewhat like the bard in that he is a jack of all trades and master of none. A monk is not a front-rank warrior, but he can be a very capable infiltrator and skirmisher. The monk's selection of spells allows access to some of the most unusual and versatile priest spells, even if his spells tend to be short on sheer combat power. Like other priest characters, the monk's principle role is to support and guide the party.

Monks do not wear armor, since the training of the body requires quickness, agility, and discipline; monks see armor and other ironmongery as crutches for a person of weak spirit. To compensate, monks are trained to avoid blows through misdirection and positioning, and their base Armor Class improves by one point at every even level (AC 9 at 2nd level, AC 8 at 4th level, AC 7 at 6th level, and so on) to a maximum base Armor Class of 2 at 16th level. Note that a monk must see the attack coming in order to use this benefit—backstabs, ambushes, or missile attacks from behind the monk will strike him as if he were unarmored.

Monks may employ any Type B weapon, just like the cleric, but they have exceptional skill in unarmed combat. When a monk makes an unarmed attack against an armed opponent, he disregards the Weapons in Defense rule, since he is trained in dealing with armed enemies. (Normally, this rule allows the armed character to attack first with a +4 on attack and damage rolls when another character makes an unarmed attack against him.) In addition, a monk begins play with a free weapon proficiency which may be used to specialize in unarmed combat. Martial arts and other forms of unarmed combat are described in detail in *Player's Option: Combat & Tactics*; if you don't have access to this book, another system appears in *The Complete Fighter's Handbook*.

**Unarmed Combat with *The Complete Fighter's Handbook or The Complete Priest's Handbook:*** In this system of unarmed combat, the monk begins play as a punching specialist, a wrestling specialist, or a martial arts specialist. If the monk chooses

martial arts as his preferred unarmed combat form, he must spend one of his initial weapon proficiencies to do so, since this is more difficult than specializing in punching or wrestling.

Specializing in these combat forms gives the monk a +1 bonus to attack rolls, a +2 bonus to damage rolls, and a +1 chart bonus with his unarmed attacks. A monk specialized in punching or martial arts gains one extra attack per round, while a monk specialized in wrestling gains a +2 bonus to his effective Strength score for purposes of maintaining or breaking holds.

Every fourth level after 1st level (5th, 9th, 13th, 17th) the monk gains an additional free weapon proficiency which can be used to continue specialization in his chosen mode of combat. Each additional specialization grants the character an additional +1 to attack rolls, damage rolls, and a +1 chart bonus, to a maximum addition of +4 at 17th level.

**Unarmed Combat with *Player's Option: Combat & Tactics:*** In this system, the monk begins play as described above. If he chooses martial arts as his combat form, he must spend one of his initial weapon proficiencies to do so. At 1st level, the character is considered a specialist; at 5th level, a master; at 9th level, a high master; and at 13th level, a grand master. The exact benefits are described in more detail in Chapter Five of *Player's Option: Combat & Tactics*.

If you don't have either of these books, the monk must choose to be a punching or wrestling specialist, since martial arts per se aren't described in the *Player's Handbook*. The paragraph about *The Complete Fighter's Handbook* details the effects of specialization and continuing specialization for these forms of unarmed combat.

Monks may not use magical items that simulate armor, such as *bracers of defense*, but they are allowed to wear cloaks or rings. Otherwise, they may use any magical item normally usable by priests. Monks have a nonweapon proficiency crossover with all other classes and may learn any proficiency listed at no additional cost.

Monks enjoy major access to the spheres of all, divination, guardian, numbers, and thought. They have minor access to combat, healing, necromantic, and time. Monks cannot turn undead. Beginning at 5th level, monks are entitled to a saving throw vs. spell to block detection, scrying, or mind-reading through magical or psionic means— see the 3rd-level wizard spell *nondetection*. At 7th level, monks gain the special granted power of *free action*, which duplicates the effects of the 4th-level priest spell.

Monks never gain followers, but at 9th level a monk may receive permission to establish a monastery as an outpost of his order; if he does so, 10 to 40 monks of lower level will come to his monastery and take up their studies there, recognizing the PC monk as the head of their abbey.

**Monks and *Player's Option: Skills & Powers:*** Selecting this class for your Player's Option character expends all class-derived character points, so a monk may not acquire additional class abilities from the cleric list. If you want to create a specialty priest like the monk but with slightly different powers, you can use the **Customized Priest Character** information in this book to do so.

In the *Skills & Powers* character point system, monks are not required to spend CPs to gain their bonus unarmed combat proficiencies and specializations unless they choose martial arts as their unarmed combat form. In this case, the monk must pay the normal cost for proficiency with martial arts (3 CPs) when first created, although he can

use his weapon proficiency CPs to cover this cost.

**Table 5:**
## Shaman Spirits Per Level

| Shaman's Level | Minor Spirit | Major Spirit | Great Spirit |
|---|---|---|---|
| 1 | 1 | — | — |
| 2 | 1 | — | — |
| 3 | 2 | — | — |
| 4 | 2 | — | — |
| 5 | 2 | 1 | — |
| 6 | 3 | 1 | — |
| 7 | 3 | 2 | — |
| 8 | 4 | 2 | — |
| 9 | 4 | 2 | 1 |
| 10 | 4 | 3 | 1 |
| 11 | 4 | 3 | 2 |
| 12 | 5 | 3 | 2 |
| 13 | 5 | 4 | 2 |
| 14 | 5 | 4 | 3 |
| 15 | 6 | 4 | 3 |
| 16 | 6 | 5 | 3 |
| 17 | 6 | 5 | 4 |
| 18 | 7 | 5 | 4 |
| 19 | 7 | 6 | 4 |
| 20 | 7 | 6 | 5 |

## Shaman

Ability Requirements: Wisdom 12
Constitution 12
Prime Requisites: Wisdom
Races Allowed: Human

The shaman is a tribal priest found in savage, barbaric, or nomadic societies. In his homeland, the shaman serves his tribe in much the same way that a cleric would serve the common people of more civilized lands; he acts as a guide, protector, and advisor, using his magical powers to strengthen and defend the tribe. Shamans often serve as the keepers of knowledge and legend for their people, and lead the tribe in the various rites and ceremonies required by the tribe's belief system. A player character shaman may still be associated with his tribe, or he may be a wanderer or exile who has abandoned his duties.

Shamans may be of any alignment. They are always found in tribal or barbaric cultures—if a player wishes to run a shaman in a more civilized campaign setting, his character is considered to be a barbaric foreigner by most common folk he meets. The

shaman's arduous life in uncivilized lands requires a good Constitution, and Wisdom is required for dealing with tribal matters and speaking to the spirits. A shaman with a Wisdom of 16 or better earns a 10% bonus to the experience points he gains. Shamans also follow the same level advancement as clerics do.

The shaman is an unusual character in the adventuring party. Like the druid, he is not a front-line fighter, but he also lacks the high-powered combat spells that the druid commands. However, his mysterious spirit powers allow him to make use of magic that is usually out of the reach of low-level characters. A shaman who demonstrates intelligence and respect in dealing with the spirits can be an extremely effective character in a number of situations. Shamans view themselves as advisors and guides to a party of adventurers and often have an uneducated but insightful view on the more civilized societies they visit.

Shamans may wear any armor normally associated with their tribe. In the absence of more specific information, tribal armor is usually hide, leather, or studded leather with a tough wooden, wicker, or hide-covered shield. Similarly, shamans may use tribal weapons, which usually include the short bow, club, dagger, dart, hand axe, harpoon, javelin, knife, quarterstaff, sling, and spear. Blowguns might be appropriate for shamans of jungle tribes, or light lances and composite bows for shamans of tribal horsemen.

Shamans may use any magical items normally usable by priests. They have a nonweapon proficiency crossover with the warrior group and can learn priest or warrior proficiencies at the normal cost. Shamans have major access to the spheres of all, animal, protection, summoning, travelers, and wards, as well as minor access to healing and plant. Shamans never gain followers or establish strongholds. Good-aligned shamans may turn undead, and neutral or evil shamans may command undead.

In addition to their priest spells, shamans have a special connection to the spirit world and can call on the spirits for guidance, knowledge, or magical aid. While shamans often function as priests of a tribal deity, their primary concern is the spirit world. To a shaman, the physical world is not the entirety of existence; the spirits of animals, nature, and the tribe's dead are always near, and interacting with these spirits is the shaman's greatest duty and responsibility.

**Shaman Spirit Powers:** A shaman begins play with one minor spirit ally or guide of his choice; it's assumed that he has already performed the rites to summon this first guide. As he rises in level, he learns the rites necessary to call additional spirits. Spirits are individuals—speaking to a spirit of the dead means the shaman is in contact with one particular deceased individual. There are dozens of spirits for each species of animal, representing every aspect of the animal's existence, and a near-infinite number of nature spirits. The number of spirits a shaman knows how to contact appears on Table 5: Shaman Spirits Per Level.

Performing the ceremony to call a spirit for the first time requires a week or more of fasting, prayer, and solitude in the appropriate location—if the shaman is trying to call a wolf spirit, he must find a location frequented by wolves, and if he is trying to call a dead spirit, he should perform the ceremony at the individual's burial site. At the conclusion of this week-long ceremony, the spirit appears, and the shaman establishes contact with it. From that time forward, the shaman may attempt to contact the spirit anywhere or anytime to seek information or request a favor of the spirit—see **Calling Spirits**.

**Spirits of the Dead:** These ancestral spirits are individuals who were renowned for their wisdom, skill, or courage in life. Minor spirits may be recent relatives of the shaman, while major spirits are great heroes and wise men of the tribe. A great spirit of the dead is a chieftain or other personage of legendary standing. While spirits of the dead may seem to be frightening allies, they are actually very protective of their living protégé and bear few grudges against the living.

Spirits of the dead know many things. Naturally, they are familiar with any details or events of their own lifetimes. They are able to perceive the shaman's future and can offer advice in times of tough choices. Dead spirits can also provide some measure of protection for the shaman and his allies by using their power on the shaman's behalf. Minor spirits can invoke the powers of *augury, feign death, prayer,* or *speak with dead* on behalf of the shaman; major spirits can invoke *divination, commune,* or *find the path* for the shaman; and great spirits can invoke *raise dead, forbiddance,* or *astral spell* for the shaman. Spells invoked by spirits are cast at the level of the shaman, unless the spell is normally cast at a level higher than the shaman has access to. If the latter is the case, then the spell is cast at the minimum required level of that particular spell. Note that these are spells normally outside the shaman's spheres of access. In addition, there can be other role-playing effects gained in conversation with the spirits, such as information or guidance in making difficult choices.

*The 1st-level shaman Shotheri decides that his first spirit guide will be the spirit of his grandfather, who was the tribe's shaman when Shotheri was a boy. Shotheri can call upon his grandfather's spirit for help and advice. When a shaman character begins play, it's assumed that he has already performed the ceremony to attract his first spirit guide.*

**Animal Spirits:** The shaman lives in a world in which animals are a vital part of human life. Animals provide food, shelter, clothing, and tools for the shaman's people, and the animal spirits are revered for their wisdom and knowledge. Minor and major spirits are embodiments of an archetype, such as the Old Wolf, the Sleeping Bear, or the Hunting Eagle. Great animal spirits are the leaders of these lesser spirits and contain in themselves everything the animal stands for—the Great Bear, the Great Wolf, and so on.

Animal spirits are powerful, but they're also less inclined to offer advice or guidance to the shaman. Their interest lies in ensuring that the shaman is respectful towards their species and helps to guide others in dealing with their kin, not in aiding the shaman in his own affairs. The spirits of game animals such as moose or deer don't mind if the shaman or his people hunt the animal, but they grow angry if the hunting is wanton or disrespectful.

Animal spirits have knowledge of events that have affected their species in the local area and have a number of powers they can use on the shaman's behalf. Minor animal spirits can aid the shaman by using *animal friendship, speak with animals,* or *animal summoning I* on his behalf. In addition, the animal spirit can grant a limited form of *clairaudience* and *clairvoyance* by allowing the shaman to see through the eyes of an animal of that species, with a range of one mile. Animals of the species in question will never attack the shaman or anyone under his protection unless the shaman has angered the spirit or the animals are magically controlled.

Major animal spirits can use *animal summoning II* on the shaman's behalf, grant him the speed or movement powers of the animal (flying, swimming, or running at the animal's base speed), or transform the shaman into the shape of the animal, similar to a druid's shapechange. Great spirits can use animal *summoning III, heal* the shaman or one person under his protection, or become tangible and aid the shaman in a form resembling *Mordenkainen's faithful hound*.

*At 3rd level, Shotheri gains the ability to call a second spirit. Consulting with his grandfather, he decides that the Wise Owl would be a good spirit ally. Because Shotheri is only 3rd level, the Wise Owl is a minor spirit. Shotheri spends several weeks studying owls and their habits, and then performs the ceremony to summon the Wise Owl and speak to it.*

**Spirits of Nature:** The most reclusive and powerful spirits are the elemental spirits of nature. These beings represent the physical world around the shaman. The strength or power of the feature the spirit represents determines whether it is considered a minor, major, or great spirit. A stream, copse, or hilltop may be home to a minor spirit; a river, moderate forest, or canyon may be guarded by a major spirit; and a mountain, large forest, or mighty river may be the home of a great spirit. Spirits of nature frequently take on human-like features or characteristics when dealing with a shaman, so a spirit might be known as Old Mountain, River Woman, or Forest Walker.

Spirits of nature are even more distant than animal spirits, but they do feel some attachment for the people and creatures who live nearby. A river spirit is likely to be protective of the village built on its banks, as long as the people show respect to it. Nature spirits often change with the seasons, so a river spirit in the spring flood may be wild, capricious, and dangerous to deal with, while a forest spirit in winter may be sleeping and hard to rouse.

*At 5th level, Shotheri gains the power to summon a major spirit. Since he has been spending a lot of time in the forests near his home village, he chooses to befriend the Birch Woman, a spirit of a great belt of birch trees in the forest's heart.*

Spirits of nature are generally well-informed about anything that has taken place in their location and can relate this information to the shaman. Spirits of nature are also capable of using potent powers on the shaman's behalf; the principle difference between minor and great spirits is the size of the area in which they can be summoned. Minor spirits are bound to one specific site not more than a few hundred yards across, major spirits are limited to five or ten square miles, and great spirits can act in areas the size of small nations. Note that the areas of effect of spell-like abilities remain unchanged—a great spirit is powerful because the region in which he is available to assist the shaman is much larger than a minor spirit's range.

Spirits of nature can help a shaman by invoking a number of spell-like powers for the shaman. Unlike elementals, spirits of nature include aspects of vegetation and all the elements of their home, so a mountain spirit has influence over earth and air as well as the forests that grow on the mountain's slopes. The abilities available to spirits of nature are described below.

**Land Spirits:** *entangle, pass without trace, dust devil, trip, meld into stone, snare, speak with plants, commune with nature, stonetell, liveoak, wall of thorns, animate rock,* and *changestaff*. Land spirits may be associated with mountains, plains, forests, plateaus, canyons, mesas, or any other distinct land feature.

**Air Spirits:** *obscurement, call lightning, gust of wind, wind wall, commune with nature, air walk, control winds, weather summoning, control weather, uncontrolled weather,* and *windwalk*. Air spirits are associated with high peaks, windswept plains or valleys, or seasonal winds such as a scirocco or the north wind of the winter.

**Water Spirits:** *wall of fog, fog cloud, water breathing, water walk, lower water, solid fog, reflecting pool, commune with nature, part water,* and *transmute dust to water*. Water spirits are associated with lakes, streams, rivers, or seas.

**Calling Spirits:** Once a shaman has performed the initial ceremony that attracts a spirit and establishes a connection to the being, he can summon that spirit anytime to seek the information, favors, and powers described above. The shaman's location doesn't matter; a spirit can come to him anywhere, even though spirits of nature may not be able to help him outside their homes.

To summon a spirit, the shaman must chant, pray, and perform a ceremonial dance for at least 1 turn. The base chance of success is 10% per character level, plus 10% for every additional turn the character chants and dances, to a maximum 90% chance of success. If the shaman has already attempted to summon a spirit that day, his maximum chance of success falls by 10% per summoning attempt—a shaman who has called one spirit, tried to call another and failed, and is trying a third summoning has a maximum success chance of 70%, or possibly less if he's a low-level character in a hurry. In any event, a shaman may attempt no more than one calling per level in the course of a single day. A roll of 96 or higher (91 or higher in the case of spirits of nature) angers the spirit the shaman is trying to call.

If the spirit isn't angry at the shaman for some reason, it appears with a successful roll. Only shamans can see the spirit or speak to it; other characters may be aware of chills, strange odors, shimmering hazes, unusual gusts of wind, and other signs. The shaman can converse with the spirit for one round per character level, asking one question per round. Asking a favor of a spirit, such as the use of a spell-like ability, requires one round for minor abilities, two for major, and three for abilities that can only be granted by great spirits. During this request the shaman explains what he wishes of the spirit and why the spirit should help him; if the DM thinks it appropriate, the player must role-play this conversation. If the spirit agrees to help, the spell-like effect is granted to the shaman, who may "hold" it for up to one full day until he's ready to invoke the spirit's power. A shaman can only hold one favor at a time and can't request another of any spirit until he has used the held ability.

*Shotheri and his companions are getting ready to attack an orc encampment in the woods. Shotheri decides to summon his grandfather and seek aid in the upcoming battle. Since he's now a 5th-level shaman, he has a 50% chance of success to summon him after one turn, a 60% chance after two turns, and so on. Shotheri decides to dance for two turns, and succeeds in calling the spirit. Shotheri requests a prayer spell to be*

*used during the battle. Shotheri's on good terms with his grandfather's spirit, and he gains the spell.*

*Later that day, the orc chieftain escapes Shotheri's party and flees into the forest. Shotheri used his grandfather's favor during the fight, but now he needs to summon the Birch Woman to ask her where the orcs have gone. Fortunately for Shotheri, the orc's camp happened to be located in the Birch Woman's woods. Shotheri has a 50% chance to summon her, and he decides to dance for three additional turns to raise this to an 80% chance—the best he can do, since this is the second spirit he's called today. Shotheri succeeds again. This time, he isn't seeking any favors. He just asks the Birch Woman where the orcs went. The Birch Woman agrees to help, but only if Shotheri ensures that no fiery spells are used against the orcs—she remembers the time that the party's wizard used a fireball while fighting a pair of trolls in her woods.*

*When they finally track down the orc chieftain, Shotheri decides that he will try to summon the Wise Owl to learn what the chieftain is planning. Since this is his third summoning of the day, his success chance can be no better than 70%, and Shotheri dances for three full turns to get to that chance. Unfortunately, Shotheri rolls a 99 on his check, and the Wise Owl is angered by his efforts. The DM decides that Shotheri hasn't done much to help the Owl lately, and that the spirit refuses to come until Shotheri finds a way to reaffirm his loyalty to the spirit.*

**Spirits as NPCs:** Spirits are individuals, and they have long memories. A shaman who takes actions the spirits find offensive, or who asks their help in questionable circumstances, may be denied assistance just because the spirit doesn't feel like being helpful. The DM may find it useful to refer to Table 59: Encounter Reactions in the *DMG*; simply rate the spirit's frame of mind as threatening, hostile, indifferent, or friendly depending on how the shaman's been acting and how outrageous the shaman's request is to the spirit. It's a good idea to create personalities, motivations, and attitudes for the spirits the shaman deals with most often.

Spirits do not have game statistics; normal mortals have no means of injuring them, although other divine creatures may be able to do so. Only greater spirits can take a physical form, and even then they're reluctant to do so. Greater spirits of the dead can briefly resume their living form with the appropriate class and abilities; animal spirits can appear as a double-sized version of the normal variety; and spirits of nature can appear as 12 HD elementals. In physical form, spirits can only be injured by +2 or better weapons, and even if they're "killed," they only retreat from the scene for a short while.

**Angering the Spirits:** A shaman can completely alienate the spirits by taking particularly offensive actions. If the offense is temporary or unintentional, the spirit simply refuses to answer any calls for a suitable period of time—one week to a year may be appropriate. If the offense was deliberate or permanent in nature, the spirit severs its connection to the shaman and cannot be called again until the shaman atones for his offense, repairs whatever damage he did and repeats the week-long summoning ceremony.

**Shamans and *Player's Option: Skills & Powers:*** Selecting this class for your Player's Option character expends all class-derived character points, so a shaman may not acquire additional class abilities from the priest list. If you want to create a variant specialty priest resembling the shaman but with different powers, use the **Customized**

**Priest Characters** section in this book to do so.

### Customized Priest Characters

At least one of the five priest character classes presented in this book are appropriate for almost any faith, but some unique priesthoods may require special treatment. The point-based character design system explained here allows a player to create almost any kind of priest character imaginable. Generally, this system works much like the point-based wizard design rules introduced in Chapter 1; it expands the specialty priest design rules from *Player's Option: Skills & Powers*.

A priest character receives 120 character points to purchase the spheres of access, granted abilities, and class abilities the player desires. Each ability costs a variable number of character points. A character can gain extra CPs with which to buy abilities by choosing limitations, or reduce the cost of an ability by deferring it to a higher level. An ability deferred to 3rd level is 1 point cheaper than normal, 2 points cheaper at 5th, 3 points cheaper at 7th, 4 points cheaper at 9th, and 5 points cheaper if deferred until 11th level. All abilities have a minimum cost of 1 CP.

The basic priest has a d8 Hit Die, uses the priest's THAC0 and saving throw chart, gains the ability to cast priest spells as indicated on Table 24: Priest Spell Progression in the *PHB*, may use only bludgeoning weapons, may wear any kind of armor, and may use any magical item normally usable by priests. The priest does *not* begin play with any spheres of access; he must purchase each sphere of access he wishes to have available. For example, if a player wishes his priest to have major access to the sphere of elemental air, he needs to spend 5 CPs. If, on the other hand, he wants the priest to have *minor* access to all of the elemental spheres, he needs to spend 8 CPs.

For minor alterations to an existing priest class, a customized character can begin the process with all the abilities and restrictions of the cleric, crusader, or any other variety of priest. If this is the starting point for the customized character, the character receives 0 CPs to purchase new abilities; he must take limitations to compensate for all new abilities he selects.

**Table 6:**
### Access Costs

| Sphere | Minor | Major | Sphere | Minor | Major |
|---|---|---|---|---|---|
| All | 3 | 5 | Healing | 5 | 10 |
| Animal | 5 | 10 | Law | 5 | 8 |
| Astral | 3 | 5 | Necromantic | 5 | 10 |
| Chaos | 5 | 8 | Numbers | 5 | 10 |
| Charm | 5 | 10 | Plant | 5 | 10 |
| Combat | 5 | 10 | Protection | 5 | 10 |
| Creation | 5 | 10 | Summoning | 5 | 10 |
| Divination | 5 | 10 | Sun | 3 | 5 |
| Elemental | 8 | 20 | Thought | 5 | 10 |
| Air | 2 | 5 | Time | 5 | 10 |
| Earth | 3 | 8 | Travelers | 3 | 5 |
| Fire | 3 | 8 | War | 3 | 5 |

| | | | | | |
|---|---|---|---|---|---|
| Water | 2 | 5 | Wards | 5 | 10 |
| Guardian | 3 | 5 | Weather | 5 | 10 |

## Optional Abilities

A customized specialty priest is constructed from the list of optional abilities and restrictions below. A priest begins with 120 CPs to purchase abilities and may gain additional CPs by taking limitations.

**Access to spheres (variable):** The priest must purchase each sphere of access with character points. He may cast spells only from spheres he has access to and may only cast spells of 4th level or higher if he has major access to a sphere. Normal cleric access costs 100 points; druid access costs 70 points; crusader access costs 55 points; monk access costs 60 points; and shaman access costs 60 points. See Table 6: Access Costs.

**Animal empathy (10):** This ability is similar to that of the ranger character class. If the priest carefully approaches a natural animal, he can modify the animal's reactions. Domestic or nonhostile animals are befriended automatically, while wild animals or those trained to attack must make a saving throw vs. rod, staff, or wand to resist the priest's overtures. The priest imposes a saving throw penalty of –1 per three experience levels (–1 at 1st to 3rd, –2 at 4th to 6th, and so on.) If the animal fails to save, its reaction is shifted one category as the priest chooses—for example, from hostile to threatening, or neutral to friendly.

**Armor Class improvement (15):** The priest is trained in avoiding blows through timing and deception. His natural Armor Class improves by one point at every even level (AC 9 at 2nd, 8 at 4th, 7 at 6th, and so on) to a maximum of AC 2. However, this ability is useless if the priest wears any form of armor or magical devices which replace armor, like *bracers of defense*.

**Casting time reduction (5):** The casting time of the priest's spells is reduced by 1, to a minimum of 1.

**Cold resistance (5):** The priest enjoys an unusual resistance to natural and magical cold, gaining a +2 bonus to saving throws versus these effects. Ice-based attacks or effects are included in the priest's resistance.

**Combat bonus (20):** The priest's THAC0 advances at the warrior rate of 1 per level instead of the normal priest rate of 2 per 3 levels. The effects of this ability become more pronounced at higher levels.

**Communication (10):** A priest with this ability learns one language per level from a related group of racial tongues. For example, a druid learns the languages of woodland or sylvan races. A priest of a god of the sea might learn the languages of aquatic races instead, while a dwarven priest could learn the languages of mountain races or creatures of stone.

**Detect evil (10):** This power allows the priest to use *detect evil* once per day per two levels (twice a day at 3rd, three times a day at 5th, etc.). The priest must stand still and concentrate for one round; in all other respects the ability operates just like a detect evil spell cast by the priest.

**Detect undead (10):** A priest with this ability may use *detect undead* once per

day per two levels. He need only stand still and concentrate for one round to invoke the power. The duration and area of effect are the same as a *detect undead* spell cast by the priest.

**Expert healer (10):** A priest with this power gains one additional *cure light wounds* per day in addition to any he chooses to memorize.

**Extended spell duration (10/15):** The duration of any noninstantaneous spell cast by the priest is increased by one time unit per two levels. The unit of time varies, depending on how the spell's duration is normally measured; rounds for rounds, turns for turns, and so on. For 10 points, this applies to spells of one sphere and for 15 points to spells of all spheres.

**Fire/electrical resistance (7):** The priest gains a +2 bonus to saving throws vs. fire or electrical effects, including both natural phenomena and magical attacks.

**Followers (5/10):** For 5 points, the priest gains followers as described in the *Player's Handbook* for the standard cleric—at 8th level, 20 to 200 soldiers arrive to serve the character. If the priest spends 10 CPs on this ability, he gains these followers whenever he establishes a suitable stronghold, regardless of level.

**Hit point bonus (10):** A priest with this ability uses a d10 for his Hit Die instead of a d8.

**Identify plants and animals (5/8):** At 3rd level, the character gains the ability to identify natural plants and animals. He may also identify pure water. For an additional 3 CPs, the priest has this ability at 1st level.

**Immunity to charm (5+):** At 7th level, the priest becomes immune to *charm* effects or spells cast by a group of related creatures, such as woodland creatures, undead, plant monsters, extraplanar monsters, or wizards. The priest may gain this power at an earlier level for a cost of +1 CP per level (6 CPs at 6th level, 7 at 5th, and so on.) Each class of monsters or races the priest is immune to costs an additional 5 CPs each.

**Immunity to magic (15):** The priest enjoys partial immunity to one type of magic—alterations, invocations, necromancy, and so on. Both wizard and priest spells of this type are included. The priest gains a +4 bonus to saving throws against spells of the type chosen, or a normal, nonpenalized saving throw against spells that do not normally allow a save.

**Immunity to natural disease (10):** The priest is immune to normal diseases, although magical diseases such as lycanthropy and mummy rot still affect him. This is similar to the paladin's ability to resist disease.

**Inspire/enrage allies (5/10):** Through his prayers and exhortations, the priest can inspire his allies in battle, giving them a +1 bonus to their attack rolls and saving throws. The priest must do nothing but chant for at least three full rounds before his allies gain bonuses, and the effects last for 1d3 rounds after he stops. All allies within 10 feet of the priest are affected. As a 10-point power, his allies become enraged, increasing the bonuses to +2. The priest can do nothing else while using this power.

**Know alignment (15):** Once per day per two levels, the priest may make use of *know alignment*. The spell functions exactly as if it was actually cast by the priest.

**Lay on hands (10):** The priest has the power to lay on hands once per day, curing up to 2 points of damage per experience level. This is identical to the paladin character class ability.

**Pass without trace (5/7):** At 3rd level, the priest gains the ability to pass without

trace, as per the spell, at his normal movement rate. For 7 CPs the character may have this ability at 1st level.

**Proficiency group crossovers (5+):** Normally, priests may learn nonweapon proficiencies from the priest and general lists at no extra cost. Each additional crossover group costs 5 CPs and allows the priest to learn nonweapon proficiencies from another character group's list with no penalty.

**Purify water (5):** Once per day, the priest may make use of a *purify food and drink* spell, applying it to water or brine only. The power operates as a spell cast by the priest in respect to area of effect.

**Resist energy drain (5/15):** Priests with this ability gain a +1 to saving throws versus the *energy drain* spell and the level-draining attacks of the undead. If the attack does not normally allow a saving throw, the power has no effect, but the saving throw modifier does apply to characters under a negative plane protection. For 15 points, this ability allows a priest to attempt a saving throw vs. spell with a –4 penalty to avoid a level-draining attack that normally allows no saving throw.

**Secret language (5):** Priests with this ability share a secret form of communication that only they understand. This permits secure conversations in almost any setting.

**Shapechange (15+):** This is the druid's normal shapechange power. Beginning at 7th level, he may change into a mammal, reptile, or bird three times per day—each form may be used once. Each transformation heals 10%–60% of any damage the character has sustained. The acquisition of this power may be accelerated for 2 CPs per level, so for 17 CPs the priest may shapechange at 6th level.

**Spell-like granted power (special):** Many priests have unusual granted powers that simulate the effects of various spells. Unlike spells, these granted powers require no material components. A spell-like granted power may be invoked once per week and has a base cost of 10 CPs, plus the following modifiers:

1 CP/spell level for priest spells
2 CPs/spell level for wizard spells
5 CPs for a once per day use
1 CP/level for each additional daily use
10 CPs for a continuous or persistent power

For example, a priest who wishes to invoke a fireball once per week would pay 10 CPs, plus 6 CPs (3rd-level wizard spell), for a total of 16 CPs. The ability to use the power once per day would cost an additional 5 CPs, for a total of 21 CPs. Using *cure light wounds* three times per day would cost 10+1+5+2, for a total of 18 CPs.

Regardless of the amount of points paid, a priest may not have a spell-like granted power of 6th or higher level and is limited to no more than one granted power per two levels—one at 1st level, one at 3rd, one at 5th, and so on. The DM should carefully review any proposed granted powers. Note that when the priest invokes a power, factors such as range, damage, duration, and other effects are determined as if he had actually cast the spell.

**Spirit powers (30+):** A priest with this ability commands spirit powers, as described for the shaman earlier in this chapter. For 30 CPs, the shaman may contact one class of spirit: dead, animal, or nature. For each additional 5 CPs, the shaman may contact one more class, so 40 CPs gives the character full spirit powers.

**Thief ability (10+):** For 10 CPs, the priest may select one thief ability. Each additional 5 CPs allows the priest to select an additional ability, up to a maximum of four abilities. (Backstab and thieves' cant may be selected as abilities.) The priest's percentile score increases as noted on Table 19: Thief Average Ability Table of the *DMG*. Modifiers for race, armor worn, and Dexterity still apply to this score.

**Turn undead (15):** A priest with this power may turn undead, using Table 61: Turning Undead in the *PHB*. Priests of evil alignment may command undead.

**Unarmed combat skills (15):** The priest is a specialist in unarmed combat, as described under the monk entry earlier in this chapter. At 1st level, the character is a specialist; at 5th level, a master; at 9th level, a high master; and at 13th level, a grand master.

**Warrior ability bonuses (15/20):** If the priest has a Constitution score of 17 or 18, he gains the additional +3 or +4 hit point adjustment allowed for warriors instead of the normal +2. For an additional 5 points, the priest may roll an exceptional Strength score of up to 18/50 if he has a strength of 18.

**Weapon selection (5/10):** For 5 CPs, the priest is allowed to include one edged weapon in his list of permissible weapons, or instead he may have access to a list of tribal or special weapons approved by the DM—for example, the druid or thief selections. For 10 CPs, the priest may wield any weapon he wishes to.

**Weapon specialization (25):** This ability allows a priest to specialize in a weapon using the normal specialization rules. Note that the priest must still spend the required number of proficiency slots or character points to actually gain proficiency and specialization in a weapon.

**Wizardly priest (25):** A priest with this power may treat one school of wizard spells as another sphere of access. Spells memorized from this school count against the priest's memorization limits, just as if they were additional priest spells.

## Optional Limitations

By choosing limitations, a priest character can gain extra character points to select class abilities, thus balancing out any "overspending" in the previous step. For example, if a priest selected abilities totalling 135 CPs, he would be 15 CPs over the normal limit of 120, so he would have to select 15 CPs of limitations to pay for his additional abilities.

If a priest character begins with a standard package (i.e., the player chooses to begin with a cleric, crusader, druid, monk, or shaman), he can add new abilities by taking limitations on a one-for-one basis. For example, a standard cleric with the wizardly priest advantage must come up with 25 points of limitations to balance the 25-point ability. The available limitations are as follows:

**Armor restriction (5+):** The priest is limited in his choice of armor. As a 5-point limitation, the priest is restricted to chain mail or lighter armor; for 10 points, he is limited to studded leather or lighter armor; and for 15 points, the priest may not wear any armor at all.

**Awkward casting method (5):** Spells cast by the priest are unusually obvious—the priest may be surrounded by a glowing halo of divine light, he may have to invoke his deity's power with peals of thunder and tremors in the ground, or some sensation (fear, cold, elation) may be noticed by anyone nearby. Any intelligent creature in earshot automatically notices the priest's spellcasting, even if they weren't paying attention to him before. Casting spells from ambush or without being observed is nearly impossible with this limitation.

**Behavior/taboo (2):** The priest's religion has an unusual code of behavior or conduct that may hinder him in certain situations. For example, a priest may be required to speak a ten-minute prayer every time he crosses a river, which could be very inconvenient if he was being pursued. Another priest might be required to use cure spells on anyone in need, expending spells on strangers or NPCs instead of his companions. A priest who violates his behavior guideline loses access to his spells and must perform some appropriate penance for his failing.

**Ceremony/observance (5):** The priest's faith demands the observance of a special event or ceremony every day, such as a prayer at sunrise, a small sacrifice or libation performed in a certain way, or a lengthy atonement for the day's thoughts and actions. The priest must drop whatever he is doing to perform the ceremony; there are no excuses for missing it. A priest who skips the ceremony may lose his memorized spells or suffer some other sign of his deity's disfavor until he finds a way to atone.

**Difficult spell acquisition (5):** The priest's deity is particularly demanding about granting spells, and the priest can pray for spells only in very specific circumstances. For example, the priest might only be able to gain spells in a temple of his deity, he might have to wait for certain celestial alignments or phases of the moon, or he might be required to fast and pray for a minimum of three days before gaining spells. In general, this limitation should make it hard for the priest to gain spells while traveling or adventuring.

**Fanaticism (5):** A priest with this limitation comes from an intolerant faith. Followers of other powers must convert or forfeit their lives. The priest absolutely refuses to accept any companion who does not worship the power he represents and suffers a –4 reaction adjustment with any NPCs not of his faith—the priest can't hide his contempt for nonbelievers.

**Hazardous spells (10):** Channeling the power of a deity can be dangerous, and a priest with this limitation can sustain harmful side-effects from casting spells. The priest might suffer 1 point of damage per spell level when he casts a spell, with a saving throw vs. breath weapon for half damage. Another option would be a chance (5% per spell level, –2% per character level, minimum 1%) of losing all spells in memory and being feebleminded for 1d3 days.

**Limited magical item use (5+):** The priest is banned from using certain types of magical items. For each category of magical item he cannot use, he gains a 5-point limitation. The categories are: potions, oils, and scrolls; rings; rods, staves, and wands; miscellaneous magic; and weapons and armor.

**Limited spell selection (5):** The prayers required to petition the priest's deity for spells are extremely complex. In fact, they are as complex as a wizard's spells, and as a result the priest is required to build a "spell book" of priest spells. First, this limits the priest to a maximum number of spells per level, as indicated by his Intelligence score.

Secondly, the priest must make a learn spells roll in order to add a new spell to his selection; if the priest fails to learn a spell, he may not try to learn it again until he gains another level.

**Reduced hit points (10/20):** A priest with this limitation uses a smaller Hit Die than normal. For 10 points, the priest uses a d6 Hit Die; for 20 points, the priest uses a d4 Hit Die.

**Reduced spell progression (15):** A priest with this restriction memorizes one less spell of each level than normal; a 1st-level priest gains 0 1st-level spells instead of 1, and so on. If the priest's spell allocation for any given level is reduced to 0 by this limitation (like the 1st-level priest above), he gains no bonus spells for an exceptional Wisdom score for that character level.

**Slower casting times (5):** The priest's spells are unusually long-winded; all casting times are increased by 3. A casting time of one round or longer is simply doubled.

**Talisman/symbol (8):** The priest's spell powers are focused through one specific talisman or holy symbol. Without this symbol, he is incapable of casting spells. If his talisman is destroyed or stolen with no hope of recovery, he may create a new one with 1d4 weeks of prayer, meditation, and fasting in his home temple.

**Weapon restriction (5/15):** Unless otherwise stated, a priest character has access to the cleric's weapon selection of any Type B weapon. A priest with this limitation is further restricted to the staff, club, war hammer, horseman's mace, and horseman's flail. For 15 points, the priest is not allowed to gain proficiency in any weapon.

## Dealing with Game-Breaking Characters

As noted before in the chapter on wizards, a point-based character design system allows players a chance to create extremely capable characters, especially if role-playing disadvantages are used to finance game mechanic bonuses. The DM should carefully review any character assembled under these rules and make a special note of weaknesses or blind spots. Even a minor role-playing disadvantage can go a long ways towards discouraging an unbalanced design if the DM is a little creative.

# Chapter 3:
# Other Spellcasters

Naturally, wizards and priests aren't the only spellcasters in the AD&D game. Rangers, paladins, and bards are all capable of casting spells. In addition, a variety of monsters cast spells as well, or make use of spell-like powers. While magic is a secondary skill for most of these characters, it is a very potent tool—or weapon—and can provide significant advantages even at low levels. For example, a bard with *spider climb*, *comprehend languages*, and *clairaudience* will never have to worry about missing a crucial climb walls, detect noise, or read languages roll.

In this chapter, we'll take a look at some of these other spellcasters and their magical abilities. A character who combines the basic skills of another class with some degree of magical ability is extremely flexible and effective. And of course, villains with

a similar range of powers are among the most dangerous enemies a PC party can face.

For our purposes, other spellcasters fall into four general categories: bards and custom-designed characters; paladins, rangers, and minor spellcasters; multi-classed characters; and monsters with magical powers. Bards, paladins, and rangers may all make use of the optional spell point rules presented in Chapter 6.

## Bards and Custom Designed Characters

Bards are versatile adventurers whose primary abilities include a fair assortment of spell powers. Unlike rangers and paladins, who don't gain spell abilities until relatively late in their careers, bards may make use of a limited selection of spells at the beginning of their careers and cast spells at their actual experience level, not at a reduced level of effectiveness. In addition, the rapid level progression of the rogue character group means that low-level bards increase in magical power almost as quickly as their wizard counterparts, especially if player characters share spells.

Bards are described in great detail in the *Player's Handbook*. As the jacks-of-all-trades of the AD&D game, bards have the weapon choices of a fighter, the skills of a thief, and some of the magical power of a wizard. Bards have a slower spell progression than true wizards, and they are limited to spells of 6th level or less. In addition, bards never gain spells automatically and must acquire their spells by luck and circumstance, finding them wherever they can. Bards are subject to all the normal restrictions concerning wizard spells, including maintenance of spell books and use of armor while casting spells.

The term 'custom-designed character' refers to any other dilettante who has access to spells throughout their adventuring careers. A character of this type may enjoy the spell progression similar to that of a bard, or he may acquire spells in some other fashion, but he is not a true wizard or priest. Generally, custom-designed characters are created using the character class design rules from the *Dungeon Master® Guide*.

Bards and customized characters may not specialize in a school of magic. Bards do not gain the ability to cast spells until they reach 2nd level, at which point they begin with a spell book of 1d4 randomly determined spells. Note that bards are not guaranteed spells of the school of universal magic, as wizards are—their lack of formal training means that these spells are as unfamiliar to them as spells of the other schools.

## Bards in *Player's Option: Spells & Magic*

While this book is primarily intended for players of priest and wizard characters, much of this information is relevant for bard characters, too. The chapters describing proficiencies, equipment, spells in combat, critical hits, new spells, and new magical items are all applicable to bards. In addition, the new magical system in Chapter 6 includes rules for bards and other such spellcasters. In addition, you'll find that this chapter introduces some new variants for bardic spell ability.

**The Bard's Spell Book:** Bards must keep spell books, just as wizards do, but a bardic spell book is not the same thing as a wizard spell book. When a bard discovers a spell in a wizard's spell book or on a scroll and wishes to copy it into his own spell book, he may not be able to immediately do so. In fact, at 1st level, the bard only has a 40%

chance to comprehend the wizard spell as it is written. This chance increases by 5% per level to a maximum of 85% at 10th level. If the bard is able to make sense of the wizard spell (or uses *read magic* to read it), he may then attempt to learn the spell and add it to his repertoire by translating the spell into bardic spell notes.

Translating a spell from wizard notation to bardic notation requires one week and 100 gp in materials. When the translation is complete, the bard attempts a learn spells check to see if he can add the spell to his spell book. If the check fails, he can always wait until he gains a level before examining his notes again.

Bards add spells to their book only through luck and happenstance. With the exception of spell translations, bards may not engage in spell research or scroll research. Bards may only gain access to new spells by using another bard's spell book, chancing upon a wizard spell they happen to understand, or translating a wizard spell they don't. If the DM is generous, a bardic college or hall might have bardic spell translations available for trade or purchase.

**Bards and Scroll Use:** Normally, bards must wait until 10th level before using wizard scrolls; spells on scrolls are recorded in a wizard's notation, and as described earlier, a bard often can't make sense of a wizard's notes. As an optional rule, the DM may permit the bard character to attempt to read wizard scrolls before 10th level. His chance of success is 25% at 4th level, plus 10% for each level above 4th, to a maximum of 85% at 10th level. If the bard fails to read the spell correctly, the effect may be less (or more!) than expected, or it may affect someone or something besides its intended target. Obviously, this makes low-level spell use a very hazardous thing for a bard, but if the character's willing to take a chance, he can try it.

## Optional Abilities for Bards

Bard characters may modify their spell abilities by selecting optional abilities or restrictions from the following list. Note that these concentrate on the bard's spell powers; the other basic class abilities remain unchanged. For each optional ability selected, the bard character must take a restriction of equal value, so that the total number of character points spent remains 0. Or, these abilities may be added to the bard list in *Player's Option: Skills & Powers*.

**Accelerated spell progression (15):** The bard enters Table 32: Bard Spell Progression in the PHB as if he were one level higher. A 1st-level bard with this advantage has the spell power of a 2nd-level bard, a 4th-level bard is treated as a 5th-level bard, and so on.

**Armor and spell use (5/10):** Normally, a bard cannot wear armor and cast spells. For 5 CPs, he may wear leather or lighter armor and still use spells; for 10 CPs, he may wear any kind of armor normally usable by a bard and still cast spells.

**School specialization (10):** A bard with this power may select a school of magic in which to specialize. He may choose enchantment/charm, illusion, or song magic as his specialty. Bard specialists gain all the normal benefits and restrictions associated with school specialization, including opposition schools and penalties to learning spells outside their chosen school. However, they may not engage in spell research.

**Scroll use (10):** This is the optional ability described above under *Bards and Scroll Use*. Instead of waiting until 10th level, the bard may attempt to use wizard spell

scrolls at 4th level. His success chance is 25%, plus 10% per experience level above 4th (maximum 85%). If the reading fails, the scroll's effects usually rebound on the bard or his companions with deleterious results.

**Wizard magical item use (10):** A bard with this ability may make use of magical items normally reserved for use by wizards, including wands, rings, and miscellaneous magical items, but not rods or staves.

## Optional Limitations for Bards

**Awkward casting method (5):** The bard's spells require either loud singing or the strong playing of an instrument of some kind, making it impossible to cast spells discretely or quietly. He will almost never be able to cast spells without revealing a place of concealment or tipping off an ambush.

**Opposition school (5+):** The bard may not make use of spells from one philosophical school of magic or make use of magical items that duplicate that school's effects. (Schools that are in opposition to any specialty schools of the character can't be selected for this restriction.) For each opposing school of philosophy, the character may take a 5-point restriction.

**Reduced spell power (10):** Since he is not a true wizard, the bard's spells are of less power than a wizard's. For purposes of all level-based characteristics (range, duration, area of effect, damage, and so on), a bard of 2nd–5th level effective casting level is one level lower, a 6th–9th level bard's effective casting level is two levels lower, and a bard of 10th level or higher casts spells as if he were three levels lower.

**Reduced spell progression (15):** The bard can cast one less spell at each level than normal. For example, a 4th-level bard may normally memorize two 1st-level and one 2nd-level spell; with this restriction, he is reduced to memorizing only one 1st-level spell.

**Unreliable casting method (5):** The bard's unorthodox approach to magic results in occasional failures, with spells just fizzling instead of taking effect. The chance for failure is 10% per spell level, less 2% per experience level. For example, a 6th-level bard casting a 2nd-level spell would have an 8% chance (20 minus 12) of failure.

## Paladins, Rangers, and Minor Spellcasters

Minor spellcasters include those characters whose primary abilities lie in other areas—paladins, rangers, and any other characters who gain minor magical abilities at higher levels. For these characters, spells are only a small part of their repertoire of abilities, often acquired late in their adventuring careers.

In many campaigns, the magical powers of minor spellcasters tend to be ignored. Since they have to wait longer than the wizards and priests of a campaign to gain their spell powers, minor spellcasters only have access to spells that their enemies can easily counter. When a 10th-level paladin can cure 20 points of damage by *laying on hands*, his *cure light wounds* seems insignificant, and his *bless* spell only takes his adjusted THAC0 from a 5 or so to a 4. The opponents that an 11th-level ranger is likely to be facing will have an easy time making their saves against an *entangle* spell. The spell powers of minor spellcasters are far more important to a character operating alone or looking for spells that support or enhance his abilities.

## Paladins

Paladins gain the ability to cast priest spells from the spheres of combat, divination, healing, and protection at 9th level. Unlike true priest characters, paladins do not gain extra spells for high Wisdom scores and may not use clerical magical items. At 9th level, the paladin's effective casting level is only 1st level; for each experience level past 9th, the paladin's casting level increases by one, to a maximum of 9th level for a 17th-level paladin. (See Table 17: Paladin Spell Progression in the *PHB*.)

Since paladins only use priest spells, they may use armor with no restrictions while casting spells. However, the character should have at least one hand free to present his holy symbol or any other material components required, so a character might have to drop a shield or second weapon in order to cast a spell.

### Optional Spell Abilities for Paladins

The paladin's spell powers can be customized, just like those of any other class. Some of the options available include the following:

**Alternate Sphere Access (5+):** Refer to Table 6: Access Costs in the previous chapter. Standard paladins have the equivalent of minor access to the spheres of combat, divination, healing, and protection, totalling 20 CPs. A paladin may choose to have minor access to any combination of alternate spheres totalling 20 CPs or less. For example, the paladin of a sea god might choose all, elemental water, healing, weather, and creation. Note that the paladin only pays for minor access, but still gains the ability to cast 4th-level spells. The paladin may exchange spheres for 5 CPs or buy additional spheres at the cost listed in Table 6.

**Increased spell power (7):** A paladin with this power casts spells with an effective casting level only four levels less than his true level and has no maximum casting level. Normally, a 9th-level paladin casts spells as a 1st-level priest, but with this ability the 9th-level paladin casts spells with the power of a 5th-level priest. Spell progression is unaffected; only level-based characteristics of an individual spell are affected by this ability.

**Increased spell progression (10/15):** A paladin with this power gains his spell ability earlier than 9th level. For 10 points, he begins to gain spells at 7th level; for 15 points, he begins to gain spells at 4th level. In all other respects, his spell powers are unchanged, and he simply enters Table 17 in the *PHB* at the level indicated. Each level he gains from that point on advances him one level on the chart, so a 7th-level paladin with this ability uses the 9th-level entry and goes on to the 10th-level entry when he rises to 8th level.

### Optional Spell Limitations for Paladins

Since the scope of this book is simply to discuss magical powers, the paladin class-design options have not been included in their entirety. Players interested in creating customized paladin characters should refer to the *Player's Option: Skills & Powers* book. The abilities above simply add to the slate of available powers for paladin characters.

If you wish to use these special advantages without the *Skills & Powers* rules, you

can simply assign the paladin an experience point penalty of 30% plus 1% per point spent. If a paladin chooses increased spell progression and increased spell power, his total penalty would be 30% + 10% + 7%, or 47%; if the DM awards 3,000 experience points for an adventure, the paladin would gain 1,410 less than normal, only collecting 1,590 experience points. This slower advancement counters the character's unusual advantages.

## Rangers

Rangers gain the ability to cast priest spells at 8th level. They have access to the spheres of plant and animal. Like paladins, rangers don't gain bonus spells for high Wisdom scores and may not use clerical magical items. At 8th level, the ranger casts spells with the effectiveness of a 1st-level priest; for each level past 8th, the ranger's casting level increases by one, to a maximum of 9th level for a 16th-level ranger. (See Table 18: Ranger Abilities in the *PHB*.)

Like paladins, rangers may use armor with no restrictions while casting spells. However, the ranger should have at least one hand free to present his holy symbol or other material components, so a character might have to put down or drop a shield or second weapon in order to cast a spell.

### Optional Spell Abilities for Rangers

The ranger's spell powers can be customized, just like those of any other class. Some of the options available include the following:

**Alternate sphere access (5+):** Normally, rangers have minor access to the spheres of plant and animal, totalling 10 CPs. A ranger may choose to have minor access to any combination of alternate spheres totalling 10 CPs or less. For example, a ranger might choose travelers, elemental air, and healing. If spheres are exchanged on a point-for-point basis, this optional ability has a base cost of only 5 CPs, but a ranger may choose extra spheres of access and add the costs listed in Table 6: Access Costs.

**Increased spell power (7):** A ranger with this power casts spells with an effective casting level only four levels less than his true level and has no maximum casting level. Normally, an 8th-level ranger casts spells as a 1st-level priest, but with this ability the ranger has a casting level of 4 instead of 1. Spell progression is unaffected; only level-based characteristics of a spell are affected by this ability.

**Increased spell progression (7/12):** A ranger with this power gains his spell ability earlier than 8th level. For 7 points, he begins to gain spells at 6th level; for 12 points, he begins to gain spells at 4th level. In all other respects, his spell powers are unchanged, and he simply enters the Table 18 at the level indicated. Each level he gains from that point on advances him one level on the chart.

### Optional Restrictions for Rangers

Ranger class-design options are discussed in detail in the *Player's Option: Skills & Powers* book. The abilities above are simply added to the slate of available powers for ranger characters.

If you wish to use these abilities without the *Skills & Powers* rules, you can assign the ranger an experience point penalty of 30% plus 1% per point spent. If a ranger chooses access to two additional spheres totalling 8 points, his total penalty would be

30% + 13%, or 43%. If the DM awards 2,000 experience points for an adventure, the ranger would gain 860 less than normal, only collecting 1,140 experience points. This experience penalty will counter some of the character's unusual advantages.

## Multi-Classed Spellcasters

Demihuman characters are some of the most popular and flexible characters in the AD&D game. In addition to their various racial advantages, most demihumans also have the ability to advance as multi-classed characters, such as an elf fighter/mage or a dwarf fighter/cleric. Generally, a multi-classed character may freely use abilities of either class but must also abide by class restrictions and penalties. For example, a fighter/mage can't cast spells while wearing armor, nor could a fighter/thief try to move silently while wearing plate mail.

## Multi-Classed Wizards

Armed with the spells of a wizard as well as fighting ability, stealth, or priestly magic, multi-classed wizards are powerful, flexible, and popular characters. The great range of powers offered by a wizard's magic serve as a potent weapon for the character and augment the abilities of his other class. A thief/mage with access to spells such as *spider climb*, *invisibility*, and *wraithform* can do things no ordinary thief could attempt. A fighter/mage with a *strength*, *stoneskin*, or *fire shield* spell in operation is a deadly fighting machine. And the versatility and spell selection of a mage/cleric is truly impressive.

Elves, half-elves, and gnomes may be multi-classed wizards. Elves may be fighter/mages or mage/thieves; half-elves may be fighter/mages, cleric or druid/mages, thief/ mages, fighter/mage/clerics, or fighter/mage/thieves; and gnomes may be fighter/illusionists, cleric/illusionists, or illusionist/thieves. Other PC races from specific world-settings may be able to multi-class as wizards, too.

**Specialist Wizards:** Under most circumstances, a multi-classed wizard must be a mage; the single-minded study and devotion of a single magical specialty would demand the character's full attention. The only exception is multi-classed gnome characters, who may be illusionists but can't be mages.

However, if the DM agrees, a limited number of additional specialties may be available to the multi-classed character. Selecting one of these optional specializations costs a multi-classed character 20 character points under the *Skills & Powers* character design rules, or an experience point penalty of 20% for standard characters. The specializations available for each PC race are shown below:

| **Race** | **New Specialties Allowed** |
|---|---|
| Elf | Enchanter, Song Mage, Wild Mage |
| Half-elf | Transmuter, Force Mage, Song Mage, Wild Mage |
| Gnome* | Artificer |

* Gnomes may be multi-classed illusionists without paying a CP or experience point penalty.

**Restrictions:** Multi-classed wizards gain the full benefits of all their classes, but must abide by any restrictions that aren't specifically negated by a class benefit. For example, a wizard/priest can use more weapons than a single-classed wizard, but is still limited to Type B weapons. The most important restriction is the character's inability to cast spells while wearing armor. While a multi-classed fighter/wizard may wear any armor he chooses, the armor itself interferes with the character's ability to cast spells. In order to cast a spell, the character must remove his armor. The only kinds of armor that do not interfere with spellcasting are elven chain mail and elven plate mail. (Note that single-classed wizards can't use these special armors because they're not trained in the wearing of armor.)

**Optional powers:** With the DM's permission, multi-classed wizards may select some of the optional abilities described in Chapter 2, including armor, automatic spell acquisition, bonus spells, casting time reduction, no components, detect magic, dispel, enhanced casting level, extended duration, immunity, learning bonus, range increase, read magic, research bonus, and any restriction except reduced hit points. These can be paid for by balancing advantages with restrictions of equal value, or the character can accept an experience point penalty of 30% plus 1% for each point he spends on additional abilities. For example, a wizard who chooses the read magic ability (5 points) reduces the number of experience points he earns by 35 percent.

## Multi-Classed Priests

Priests are versatile characters, with good fighting skills, potent spells, and a variety of special powers and talents. Combining the priest's range of spell powers with the talents of another class results in a very capable character. As described in the *Player's Handbook*, dwarves, gnomes, and half-elves may all be multi-classed priests: dwarves may be fighter/clerics; gnomes may be fighter/clerics, cleric/illusionists, or cleric/thieves; and half-elves may be fighter/clerics, fighter/druids, cleric or druid/rangers, cleric or druid/mages, or fighter/mage/clerics or druids.

**Specialty Priests:** Unless otherwise noted, a multi-classed priest character must be a cleric and not any other kind of specialty priest. Some campaign settings may have world-specific guidelines for multi-classed specialty priests; the campaign setting rules take precedence over other material in the *Player's Handbook*, *Player's Option: Skills & Powers*, or *Player's Option: Spells & Magic*.

At the DM's option, some of the varieties of specialty priest presented in Chapter 2 may be added to the list of multi-classed combinations. (See the chart below.) Since the capabilities of the various specialty priests are comparable to each other, there is no penalty for choosing to be a crusader or druid instead of a cleric.

| **Race** | **Specialty Priesthoods Allowed** |
|---|---|
| Dwarf | Cleric, Crusader |
| Half-elf | Cleric, Crusader, Druid |
| Gnome | Cleric |

**Restrictions:** The only limitation that applies to a multi-classed priest is the

restricted selection of weapons available to a cleric or druid. Regardless of the character's other class, he must abide by the weapon selection of his priest class. Of course, crusaders are able to wield any weapon, since they are not normally limited in this regard.

**Optional powers:** With the DM's approval, multi-classed priests may select optional abilities described in Chapter 3, including animal empathy, casting time reduction, cold resistance, communication, detect evil, detect undead, expert healer, extended spell duration, fire/electrical resistance, identify plants and animals, immunity to charm, immunity to magic, immunity to natural disease, inspire/enrage allies, know alignment, lay on hands, pass without trace, purify water, resist energy drain, secret language, spell-like granted power, and turn undead. These can be paid for by balancing advantages with restrictions of equal value; the priest may choose any limitation except armor restriction (for druids) or weapon restriction. Optionally, the priest can accept an experience point penalty of 30% plus 1% for each point he spends on additional abilities. For example, a priest who chooses know alignment (15 points) reduces the number of experience points he earns by 45 percent.

## Monsters

Naturally, human and demihuman characters aren't the only spellcasters in the AD&D game. The most powerful types of undead, the vampire and the lich, can command devastating magical abilities. Many extraplanar creatures have some degree of skill as wizards or priests, and every tribe of humanoids boasts a shaman or witch-doctor of some kind. In fact, many monsters are more skilled with spellcasting than the player characters of a campaign.

In addition to monstrous spellcasters, there are also hordes of creatures with magical powers that resemble spells. The most dangerous extradimensional monsters have a selection of spell-like powers that rivals the spell capability of a high-level wizard. Other creatures, such as dragons, gain both spell-like abilities and the power to actually cast wizard or priest spells.

### Monstrous Spellcasters

Monsters who memorize and expend spells in the same fashion as player characters fall into this category. A monster that has a character level equivalent, such as a 19th-level lich or a 10th-level vampire mage, is a monstrous spellcaster. In general, monstrous spellcasters must abide by the same rules and restrictions of human and demihuman wizards and priests; monstrous wizards may not wear armor (although many monsters have a natural Armor Class to compensate), monstrous priests and mages may be restricted in choice of weapons, monstrous spellcasters must be able to use verbal, somatic, or material components required by the spell, and they can be interrupted by damage or other distractions during spellcasting.

There are several types of monstrous spellcasters, including humanoids, undead, extraplanar creatures, and (for lack of any better word) nonhumanoids. Most monsters have an effective casting level equal to their spell ability, so a cloud giant with the spell ability of a 4th-level priest casts spells as if he were 4th level, while a ki-rin with the spell ability of an 18th-level mage casts spells as an 18th-level wizard. A few rare monsters, such as dragons or kenku, have the ability to use spells of a certain level but aren't wizards or priests with levels. Unless otherwise noted, these monsters have a casting

level equal to their Hit Dice.

**Humanoids:** This category includes living monsters that are generally bipedal or humanoid in form, ranging from bullywugs or lycanthropes to githyanki or giants. In many cases, spellcasters are quite rare among their race; only 1 in 10 cloud giants has the ability to use wizard spells, for instance. The Monstrous Manual™ tome and *The Complete Book of Humanoids* describe dozens of races that have the ability to produce priests or wizards.

**Undead:** Human or demihuman spellcasters who retain their magical abilities after death fall into this category. The principle examples are liches and vampires. In both cases, the character's class and level are retained through the transformation into undeath.

**Extraplanar:** A small number of extradimensional or extraplanar monsters have magical abilities. Some aasimon and yugoloths fall into this category, but creatures that are or formerly were mortal (githyanki, githzerai, tieflings, or einheriar) are considered to be humanoid spellcasters instead. Most extraplanar creatures also command a formidable array of spell-like abilities in addition to their memorized spells.

Creatures of this sort do not need spell books or extended periods of study to learn their spells; after a good rest, or a period of concentration or prayer, extraplanar spellcasters may choose their spells just as a mortal spellcaster would select spells from a book or pray for spells from his patron deity. The actual spell memorization only requires 1 to 3 turns, but the creature's resting time or other preparations consume several hours at the minimum. In any event, spells may be memorized no more than once per day.

Extraplanar creatures with wizard spell ability are still limited in their total number of spells known—in effect, they carry their "spell books" in their own memory, and merely select which ones will be available during the course of a day. Creatures with priest spell ability are assumed have access to the same spheres available to a standard cleric.

**Nonhumanoids:** This broad category includes all other creatures who memorize and expend their spells. Couatl, dragons, lammasu, nagas, and sphinxes are just a few examples of nonhumanoid spellcasters. Generally, nonhumanoid spellcasters follow the same guidelines described under extraplanar spellcasters: they do not need spell books and simply recall their spells once per day. In addition, nonhumanoid spells have verbal components only; no somatic or material components are required, since creatures such as nagas or couatl develop variations on standard spells that do not require hands to cast.

**Monstrous Specialists:** Most monsters with spell ability are assumed to be mages or clerics. However, specialist wizards and specialty priests are not unheard of. First of all, humanoids from races familiar with magic, such as githyanki or githzerai, could quite easily be specialist wizards. Similarly, shamans are common among all kinds of barbarians, and goblin or bugbear shamans are reasonable.

Undead spellcasters could be specialist wizards or specialty priests of any variety, since they gained their magical powers during their lifetimes. On the other hand, extraplanar and nonhumanoid specialists would be fairly unusual, simply because these creatures have a wide array of powers to begin with. Some might be appropriate—a red dragon elemental fire specialist, an arcanaloth dimensionalist, or a planetar with druidic powers are all possible, if rare.

## Monsters with Spell-like Abilities

Many monsters have the innate ability to use certain spells simply by an act of will. Most extraplanar monsters have an array of spell-like powers as formidable as the spell arsenal of a high-level wizard or priest, sylvan creatures such as dryads or brownies can *charm* or *confuse* their opponents, and even dragons have a handful of spell-like abilities based on their color and age. In fact, any monster that can use spell effects without an equivalent wizard or priest character level falls into this category.

Spell-like abilities are invoked by one round of concentration; the monster can do nothing else in that round except use a single power, just like a wizard or priest may only cast one spell per round. All spell-like abilities have an initiative modifier of +3, or *fast* under *Player's Option: Combat & Tactics* rules. Unlike a true spellcaster, a monster with spell-like abilities can't be interrupted by damage or distraction—if the creature survives the injury, the power functions that round regardless. (However, if a monster has both spell-like abilities and normal spells, any spells it actually casts can be interrupted.)

Unless otherwise stated in the monster's description, spell-like abilities are considered to have an effective casting level equal to the monster's Hit Dice, or the minimum character level necessary to use its highest-level ability, whichever is better. For example, a brownie has only half a Hit Die, but its spell-like abilities include *confusion* and *dimension door*, which are 4th-level wizard spells. Since a wizard must be at least 7th level to use 4th-level spells, a brownie's spell-like abilities function as if it were a 7th-level caster. (Refer to Table 21: Wizard Spell Progression or Table 24: Priest Spell Progression in the *Player's Handbook*.) This affects range, damage, duration, and all other level-based characteristics of a spell. A list of monsters from the Monstrous Manual tome with spell-like abilities follows, along with their effective casting level. Only creatures that don't have a casting level noted are mentioned here in Table 7: Monster Casting Levels—you may want to note these in your copy of the book.

A creature with a spell-like ability may choose to use it simply by concentrating for one round. If the power can be maintained, the monster doesn't need to concentrate to maintain it through the spell's normal duration; after that, the monster must spend a round reactivating the power. For example, a brownie's abilities include *protection from evil*, which has a duration of 2 rounds/level, or 14 rounds for a brownie. By invoking the power once, the brownie is affected by the spell for 13 more rounds, and it can then spend a round invoking the power again to be protected for another 14 rounds. This means that the monster may be able to invoke a power and then engage in physical attacks or take other actions while the power is active.

On the other hand, some spell-like abilities require the caster's continuing attention while they're active, such as a *phantasmal force* or *ventriloquism* spell. Invoking the power takes only one round, as described above, but after that the monster must spend each round concentrating on the power and doing nothing else in order to maintain it. A monster with multiple spell-like abilities can have any number of powers active at one time, as long as it spends one round invoking each and continues to concentrate on any powers that need its attention.

**Restrictions:** Generally, monsters with spell-like abilities are free of any restrictions normally associated with those spells; a monster with wizard spells among its spell-like abilities is not a wizard and may use any armor or weapons it cares to. Similarly, a monster with priest spells doesn't have the ability to turn undead or any granted powers specific to a certain priesthood. No components are necessary, but the

DM may rule that a bound and gagged monster may not be able to invoke certain abilities.

Many monsters with spell-like abilities may only make use of them a certain number of times per day; for example, a juvenile black dragon may use *darkness* three times per day, while a marilith tanar'ri may *polymorph self* up to seven times per day.

**Table 7:**
## Monster Casting Levels

| **Monster** | **Level** |
|---|---|
| Arcane | 10th |
| Baatezu, Pit Fiend | 18th |
| Baatezu, Black Abishai | 9th |
| Baatezu, Green Abishai | 9th |
| Baatezu, Red Abishai | 9th |
| Bat, Azmyth | 6th |
| Bat, Sinister | 9th |
| Bird, Talking Owl | 3rd |
| Brownie | 7th |
| Couatl | 9th[1] |
| Deepspawn | 11th |
| Dryad | 7th |
| Elemental, earth kin, Pech | 7th |
| Elf, drow | 2nd[2] |
| Genie, Djinn | 20th |
| Genie, Efreet | 20th |
| Ghost | 10th |
| Giant, Firbolg | 13th |
| Gnome, Svirfneblin | 4th |
| Gnome, Spriggan | 4th |
| Imp, Imp or Quasit | 7th |
| Imp, Fire Mephit | 3rd |
| Imp, Smoke Mephit | 3rd |
| Imp, Steam Mephit | 3rd |
| Kenku | by HD |
| Ki-rin | 18th[1] |
| Leprechaun | 16th |
| Ogre Mage | 9th |
| Satyr | 5th |
| Satyr, Korred | 9th |
| Slaad, Blue | 9th |
| Sphinx, Gynosphinx | 11th |
| Sprite | 3rd |
| Squid, Giant, Kraken | 20th |
| Tanar'ri, Marilith | 12th |

| | |
|---|---|
| Yuan-ti | 9th |

# Chapter 4: Proficiencies

Wizards and priests have developed a number of unique and valuable skills to aid them in their pursuit of both magical and temporal power and knowledge. Literacy in ancient languages, knowledge of the maintenance of libraries and physical care of dilapidated old tomes, and skills in research and the execution of laboratory tasks are absolutely indispensable to a wizard character. Similarly, priests should be familiar with the languages in which their holiest scriptures are written, the correct observances and customs demanded by their deity, and the administration of property and lands belonging to their temples.

In this chapter, we'll take a look at new proficiencies for the spellcasters of the AD&D game. New nonweapon proficiencies describe a number of new skills available to both wizards and priests, ranging from alchemy to zoology. We'll also introduce the concept of *signature spells* or spell *specialization*, which represents unusual skill with a particular spell. Just as fighters can master their weapons with practice and training, wizards can master their spells.

## Proficiencies and Character Points

Since *Player's Option: Spells & Magic* is part of the *Player's Option* series, rules and information for proficiencies are described in two formats: the system of slots and check modifiers described in the *Player's Handbook* and also in terms of character points for readers who are using the *Player's Option: Skills & Powers* rules. Players who wish to create characters using the material in this chapter should first check with their DM to see which system he wants to use in his campaign.

Under either system, characters with high Intelligence scores gain bonus proficiency slots or character points, based on their maximum number of languages. Generally, these slots or points can only be spent on nonweapon proficiencies. If this optional rule is in play, characters *must* use proficiencies to learn new languages, although all characters can speak (but not necessarily read or write!) their native tongue without spending a proficiency slot.

## Proficiency Slots and Check Modifiers

In the *Player's Handbook* proficiency system, a character who selects a proficiency must pay a listed number of proficiency slots in order to acquire that skill. The character's success chance equals the relevant ability score—Dexterity for the skill of tumbling, for example—modified by the proficiency's check modifier. If you are playing with this system, use the slots and check modifiers that appear on Table 37:

Nonweapon Proficiency Groups in the *PHB* or the proficiency tables in this chapter.

If a character selects a proficiency that is not within his character group or the general list, he must pay an additional slot to acquire the skill.

*In the* PHB*, the proficiency spellcraft costs 1 slot for a wizard. The check modifier is Int - 2; for a wizard with an Intelligence of 15, the success number is a 13 or less on 1d20. If the character was a fighter who wanted to be familiar with spells, spellcraft would cost 2 slots.*

## Character Points and Ability Modifiers

*Player's Option: Skills & Powers* revises the proficiency system. Under these rules, the character pays a variable number of character points to acquire a skill. His success chance begins at the proficiency's initial rating, modified by a standard ability modifier based on the relevant score. If you are playing with these rules, use the CP cost and initial rating listed in Table 45: Nonweapon Proficiency Groups in *Skills & Powers*, and then modify the character's rating using Table 44: Ability Modifiers to Proficiency Scores (also in *Skills & Powers*).

*Under the* Player's Option: Skills & Powers *system, spellcraft costs 3 CPs, and has an initial rating of 7. This is modified by +2 for a wizard with an Intelligence of 15, for a total rating or success chance of 9. Note that the* Skills & Powers *proficiency rules tend to compress character's success chances in the 8 to 12 range, but success at completely routine tasks is considered automatic—proficiency checks are only made for difficult tasks or adverse conditions.*

## Wizard Proficiencies

Because of the unusually high Intelligence scores of most wizard characters, wizards tend to accumulate a diverse array of nonweapon proficiencies. Many mages begin play knowing three or four proficiencies more than other 1st-level characters, and they also enjoy a favorable nonweapon proficiency progression in addition to their good starting allocation. *Player's Option: Spells & Magic* expands the scope of wizard proficiencies by adding a number of new nonweapon proficiencies to those described in the *PHB*. Refer to Table 8: New Wizard Nonweapon Proficiencies.

**Table 8:**
## New Wizard Nonweapon Proficiencies

| Proficiency Name | Base Ability | Base Score | CP Cost | # of Slots | Check Modifier |
|---|---|---|---|---|---|
| Alchemy | Int | 6 | 5 | 2 | –3 |
| Anatomy | Int | 5 | 4 | 2 | –2 |
| Arcanology | Int | 5 | 4 | 1 | –3 |
| Bookbinding | Int | 8 | 3 | 1 | 0 |
| Concentration | Wis | 6 | 5 | 2 | –2 |
| Dowsing | Wis | 5 | 3 | 1 | –3 |

| | | | | | |
|---|---|---|---|---|---|
| Glassblowing | Dex | 7 | 2 | 1 | 0 |
| Hypnotism | Cha | 6 | 4 | 1 | –2 |
| Mental Resistance | Wis | 5 | 3 | 1 | –1 |
| Omen Reading | Wis | 5 | 3 | 1 | –2 |
| Papermaking | Int | 8 | 2 | 1 | 0 |
| Prestidigitation | Dex | 7 | 3 | 1 | –1 |
| Research | Int | 6 | 3 | 1 | 0 |
| Sage Knowledge | Int | 5 | 4 | 2 | –2 |
| Scribe | Dex | 7 | 2 | 1 | +1 |
| Tactics of Magic | Int | 6 | 3 | 1 | –1 |
| Thaumaturgy | Int | 5 | 3 | 1 | –2 |

**Alchemy:** A wizard with this skill is not necessarily an alchemist or a specialist in the school of alchemy, but he is well-versed in the physical aspects of magical research and the properties of various chemicals, reagents, and substances. If the character has access to a decent laboratory, he can use his knowledge to identify unknown elements or compounds, create small doses of acids, incendiaries, or pyrotechnical substances, or (if he is 9th level or higher) brew potions.

Refer to Chapter 5 for information on the size, cost, and equipment of an alchemical laboratory. Naturally, a wizard may be able to defray some of the costs by sharing his facilities or striking some kind of deal with a local wizard's guild; the DM can come up with the details.

Identifying substances or samples of unknown material requires 1 to 4 days and a successful proficiency check. Simple materials, such as powdered metals or ores, provide the alchemist with a +1 to +4 bonus on his check, at the DM's discretion. Rare, complex, or damaged or incomplete samples might impose a –1 to –4 penalty.

Creating dangerous substances such as acids or burning powders takes 1d3 days and 20–50 gp or (1d4+1) x 10 per vial, or 2–5 days and 50–100 gp or (1d6+4) x 10 per flask. The alchemist must pass a proficiency check in order to successfully manufacture the substance; failing the check with a natural roll of 20 results in an explosion or other mishap that exposes the character to the effects of his work and damages the laboratory for 10%–60% or 1d6 x 10% of its construction value.

*Acid* inflicts 1d3 points of damage per vial, or 2d4 points of damage per flask, and continues to injure the victim the next round; the vial inflicts 1 point of damage in the second round, and the flask causes 1d3 points of damage. In addition, the flask is large enough to splash creatures near the target; see **Grenadelike Missiles** in the *DMG*. Acid can also burn out a lock or clasp, forcing an item saving throw.

*Incendiaries* ignite when exposed to air. A flask of incendiary liquid inflicts damage as per burning oil (2d6 points in the first round and 1d6 in the second.) Again, refer to the *DMG*. Incendiary powders or liquids can easily start fires if used on buildings, dry brush, or other such surfaces.

*Pyrotechnic* materials resemble incendiaries, but create clouds of billowing smoke. A vial creates a cloud of smoke
5 feet high by 5 feet wide by 5 feet deep, obscuring vision.
A flask creates a cloud of smoke 10 feet high by 10 feet wide by 10 feet deep. The clouds

persist for 1d3 rounds, depending on the wind and other conditions.

Alchemy is an expensive hobby, to say the least, and it can be a dangerous one as well. If a player character is abusing this proficiency (i.e., walking into a dungeon with 10 flasks of acid in his pack), the DM can require item saving throws for all those beakers anytime the character slips, falls, or is struck by an opponent.

Wizards who specialize in the school of alchemy gain a +2 bonus to their proficiency rating in this skill.

**Anatomy:** This proficiency reflects a character's detailed knowledge of the structure and arrangement of the human body, including the location and function of bones, muscles, organs, and other soft tissues. This skill has two distinct uses for a wizard; first of all, knowledge of anatomy provides the character with a +2 bonus on any healing proficiency checks he attempts. Secondly, the wizard can use this skill to repair corpses that have been badly damaged. With a successful proficiency check, the wizard can strengthen and reinforce a body, making it more suitable for animation as a mindless undead. This provides a hit point bonus of +1 per die for skeletal remains, or a bonus of +2 hp per die for a creature to be animated as a zombie.

**Arcanology:** The study of the history and development of magic is termed arcanology. A wizard with expertise in this field is familiar with the works of past wizards. If there was a source of powerful magic in the campaign's past—for example, Netheril or Myth Drannor in the Forgotten Realms campaign setting—the arcanologist has a good idea of who the great mages were and what they were able to accomplish. Special magical items, spells, or forms of magic wielded by these ancient sorcerers are familiar to the arcanologist. With a successful proficiency check, the arcanologist can identify the general purpose and function of an ancient magical item; the DM may apply a penalty of –1 to –4 if the item comes from a region outside the arcanologist's normal studies, or is especially rare or obscure. Note that this ability doesn't help a wizard to identify items manufactured by the "modern" school or tradition of magic, whatever that may be.

**Bookbinding:** A wizard with this skill is familiar with the process of assembling a book. Bookbinding is a demanding task; the pages must be glued or sewn to a common backing of some kind, protected by various kinds of varnishes or treatments, and then fastened to a strong and durable cover. Additional chemicals or compounds to ward off mildew and deter moths and bookworms are a necessary precaution.

Bookbinding is especially helpful for a wizard assembling a spell book. Normally, a wizard must pay a bookbinder 50 gp per page for a standard spell book, or 100 gp per page for a traveling spell book—see Chapter 7 of the *DMG*. A wizard who does this work himself reduces these costs by 50%, although the process takes at least two weeks, plus one day per five pages. If the character passes a proficiency check, his spell book gains a +2 bonus to item saving throws due to the quality and craftsmanship of the work. In addition, the wizard must succeed in a proficiency check if he is dealing with unusual or unsuitable materials, such as metal sheets for pages or dragon scales for a cover.

**Concentration:** A character with this talent has rigorously trained himself to ignore distractions of all kinds, deadening his mind to pain or sensation. This allows a wizard to ignore annoyances or disturbances that might otherwise interfere with the casting of a spell. In order to use this ability, the player must state that his character is concentrating when he begins to cast a spell. If the character is struck by an attack that

causes 2 or less points of damage, he is permitted to attempt a proficiency check to ignore the distraction and continue to cast his spell (unless, of course, the damage is enough to render him unconscious.) The wizard can try to ignore grappling or restraining attacks that cause no damage but suffers a –4 penalty to his check. Spells that incapacitate without damaging, such as *hold person* or *command*, still interrupt the caster if he fails his saving throw.

A character using this ability must focus on the casting of his spell to the exclusion of all other activity, even direct attacks. Any Dexterity adjustment to his Armor Class is lost, and in addition flank or side attacks are treated as rear attacks, with a +2 bonus to hit instead of a +1.

**Dowsing:** This is the skill of finding lost or hidden items by seeking a disturbance in the subtle natural energies that permeate the earth. A dowser is attuned to the invisible, intangible eddies and currents of the world around him; by careful and methodical searching, he can detect particular emanations or anomalies.

Dowsing has two general uses. First, the character can attempt to detect natural deposits or minerals in the ground, such as water, gold, or other ores. Secondly, the character can attempt to find a specific man-made item that has been lost or hidden, such as a friend's dagger, a buried treasure chest, or the entrance to a barrow mound. The search must be very precise—the dowser will have no luck if he sets out to find 'the most valuable thing in this field' or 'the nearest magical weapon,' but 'Aunt Claire's missing brooch' or 'the gold buried by the pirate Raserid' are suitable searches.

Unlike the spell *locate object*, the dowser isn't led or directed to the item he seeks; he has to actually pass within 10 feet of the item, or walk over the place where it is buried, and succeed in a proficiency check to detect the item. (The DM should keep this check hidden from the players so that he doesn't give away the location with a failed check.) Dowsing can take a long time; quartering the dirt floor of a cellar 20 square feet might take 1d3 turns, while checking a field or courtyard might take 1d3 hours. Searching an area larger than 100 square yards is impractical—the dowser gets tired of concentrating.

A dowser can detect items or substances within 100 feet of the surface, although very strong or powerful sources may be detected slightly deeper. The dowser can guess the approximate depth of what he's seeking within ±10% when he stumbles across it.

**Glassblowing:** A character skilled at this trade can manufacture all kinds of glass containers, jars, or bottles. Creating symmetrical or precise pieces requires a proficiency check, but if a character is making items for usefulness instead of decoration, he can produce about 10 small containers, 5 medium containers, or 2 large ones in a day's work. The character must have access to a specialized glazier's workshop and furnace in order to make use of this skill.

**Hypnotism:** With this proficiency, the wizard can hypnotize another character, placing him into a relaxed state in which he is susceptible to suggestions. The subject must be willing and must know he is being hypnotized. Only human, demihuman, and humanoid characters may be hypnotized, and the hypnotist and subject must be able to understand one another's language.

It takes about five minutes to hypnotize someone in a reasonably calm or peaceful environment. Once hypnotized, the subject is willing to do almost anything that isn't very dangerous or against his alignment. However, a hypnotized subject can be fooled into

thinking he's doing one thing when he's actually doing something else. Hypnotism can have the following effects:

A character can be induced to remember things he has forgotten by reliving a frightening or distant event.

A character can be made calm and unafraid in the face of a specific situation that he has been prepared for, gaining a +2 bonus to saving throws versus fear effects or morale checks.

A character can be cured of a bad habit or addiction (but not of curses, physical diseases, or magical afflictions.)

Hypnotism can't increase a character's attributes, give him skills he does not normally possess, let him do things that are beyond his capabilities, or give him information he couldn't possibly know. As a guideline for adjudicating effects, the hypnotism proficiency is substantially weaker than magical commands or directions, such as *charm person, command,* or *hypnotism*. Spells magically compel a person to obey the caster's will; a well-phrased hypnotic command is nothing more than a strong suggestion.

**Mental Resistance:** Through lengthy training and iron discipline, a character with this proficiency prepares himself to resist magical or psionic assaults on his mind. The character receives a +1 bonus to his saving throws against attacks of this nature, if the attack normally allows a saving throw. Generally, this includes any attack form that a character's magical attack adjustment bonus for his Wisdom score might affect, including mind-affecting spells, *charm* or *fear* powers of monsters, and telepathic sciences or devotions that allow the subject a saving throw.

**Omen Reading:** There are hundreds of myths and superstitions about the art of divination, or predicting the future through the reading of signs or indications. A character with this proficiency is skilled in a form of divination and knows the proper ceremonies and observances to use in order to obtain a valid reading. He is also familiar with the various messages or indications that characterize a form of divination. Omen readers use dozens of different methods for their auguries, including astrology, numerology, reading palms, examining animal entrails, casting bones, dice, or runes, and burning incense to observe the smoke, just to name a few. The exact nature of the character's expertise is up to the player.

To use this proficiency, the omen reader phrases a general question about a course of action, such as "Is this a good day to start our journey?," "Should we try to track the orcs to their lair, or wait for their next raid?," or "When will the dragon return?" The DM then makes a proficiency check in secret; if the character fails, the DM can tell him that the signs were inconclusive, or make up a false answer for a spectacular failure (a natural 20 on the check, for instance). If the omen reader succeeds, the DM can give the character a vague answer based on his assessment of the situation. An omen is usually good, bad, or inconclusive, although an answer of "a day or two" or "proceed, but with caution" is acceptable as well. Omens aren't guaranteed; if a party ignores a bad omen, they might succeed in their task anyway. An omen is nothing more than the DM's best guess about a course of action.

Performing the ceremony of reading an omen requires an hour or more. Special tools or supplies, such as runesticks, may be necessary depending on the character's

favored form of omen reading. Some superstitious or primitive cultures may place a great deal of weight on omen reading, and a skilled diviner may be held in high regard by these people.

**Papermaking:** A character with this skill knows how to manufacture paper. This can be an invaluable skill for a wizard, since paper may be fairly rare in many campaign settings. Rag pulp, bark, linen, hemp, and wood were all used to make paper in medieval times. The material is pounded or pressed flat and treated with various chemical compounds to bind and strengthen it. At the DM's option, the character may also be familiar with the manufacture of parchment and vellum. Parchment is finely-scraped animal skin, treated with lime and other chemicals; vellum is unusually supple and smooth parchment taken from very young animals.

A wizard who makes his own paper can reduce the costs of manufacturing a spell book by 50%, although this requires one to two weeks of time and a suitable work area. Normally, a traveling spell book costs 100 gp per page, and a standard spell book costs 50 gp per page. If the wizard also knows the bookbinding nonweapon proficiency and binds the volume himself, the cost of the spell book is reduced by 75% altogether.

**Prestidigitation:** This is the art of street magic or sleight of hand, the trade of the magician. The character is skilled at concealing or manipulating small items and familiar with such tricks as pulling a coin from a child's ear, separating two joined rings, or causing a pigeon or rabbit to vanish. For the most part, nothing more than manual dexterity and showmanship are required, and any kind of character may learn prestidigitation.

While true wizards have little time for these parlor tricks, many apprentices practice with their *cantrips* by duplicating these feats. A wizard with a *cantrip* spell handy can really manipulate a small object by briefly *levitating* it, *teleport* something small from one hand to the other, or use a tiny dimensional pocket to make an object disappear or seem to contain something it shouldn't.

There is no particular game effect for prestidigitation, although it is a form of entertainment and can earn a wizard his dinner with a good performance, or possibly distract or fool an NPC under very limited circumstances. For example, a wizard trying to conceal a wand or precious gem from a robber searching him at knifepoint might be able to hide the item with a successful proficiency check.

**Research:** A wizard with this skill is well-versed in the theory and application of spell research. He is familiar with the use of libraries, laboratories, and other resources, and also has a good grasp of the fundamental processes of experimentation and problem-solving. With a successful proficiency check, the character gains a +5% bonus to his success roll when researching a new spell and only requires one-half the usual amount of time to perform spell research or determine the process necessary to manufacture a particular magical item. However, the amount of money spent on research remains the same because the wizard is still expending the same amount of books and supplies.

**Sage Knowledge:** This proficiency represents a specialized area of knowledge or learning. A character with this skill is a fully qualified sage in the area of study chosen and is capable of answering questions concerning the topic after some time spent researching. Refer to Table 62: Sage Modifiers and Table 63: Research Times in the *DMG*. As noted in the *DMG*, a sage requires an excellent library as a resource—at least

50 to 100 books, costing no less than 10,000 gp altogether. Naturally, a character may be able to strike a deal with a university, monastery, or wizards' guild hall in order to gain access to their library.

In addition to his ability to perform sage research, the character's high level of learning allows him to make field observations or attempt to come up with knowledge off the top of his head. For example, a sage who studies botany may attempt a proficiency check in order to identify a particular plant, while one who studies toxicology may be able to identify a poison by its symptoms in a victim. These on-the-spot observations should be limited to information any expert could reasonably come up with in the field—identifying a common gemstone is one thing for a geologist, but making a guess about the electrical conductivity of quartz crystal or the enchantments of a magical gem is a different matter entirely.

Purchasing this proficiency at its base cost (2 slots or 5 character points) gives the sage a broad overview of the area of study in question, allowing him to answer general or specific questions in the field. For an additional proficiency slot (or 2 CPs), the character may become an expert in one particular aspect of the topic. For example, a botanist may spend another slot to specialize in moss and lichens, ferns, or all plants found in a particular climate or ecosystem. This detailed knowledge allows the character to attempt to answer exacting questions in the field. The fields of study available to a sage include:

**Alchemy:** This is the study of magical chemistry, especially as it applies to elemental transmutations and potions, oils, and magical compounds or solvents. Unlike the proficiency of alchemy, the sage knowledge of alchemy concentrates on theories and principals, not on the practical day-to-day manufacture of specific compounds and substances. An alchemist specialist wizard or a character with the alchemy proficiency gains a +2 bonus to his proficiency rating in this area of sage knowledge.

**Architecture:** This is the study of the development, theories and styles of architecture. (The architecture proficiency, on the other hand, represents the practical execution of workable building plans.) A sage with this field of study can attempt to identify the age, origins, and general purpose of ruined buildings or structures.

**Art:** The sage is familiar with the great works of the past as well as the works of the best contemporary artists. If he specializes in one particular art form (sculpture, paintings, ornamental pottery, etc.) he is able to identify works of the masters, spot fakes, and appraise pieces for sale value.

**Astrology:** This is the history and theoretical background of astrology, not the actual art of prediction. Someone with the astrology proficiency knows that Planet X passing in front of Constellation Y means trouble, but a sage knows why that's a sign of ill fortune. In addition, the sage has the ability to perform historical astrology by working backwards to determine the stars' and planet's alignments for thousands of years in the past. An expert in this field may be familiar with the constellations and beliefs of vanished or dead cultures.

**Astronomy:** For the astrologer, planets and constellations are representations of greater powers. The astronomer, on the other hand, assigns no characteristics or indications to these heavenly bodies, and instead concentrates on studying their movements in the skies. He can predict eclipses, anticipate the return of comets or meteor showers, and answer questions about the locations or predicted locations of various planets or other bodies in the skies.

**Botany:** This is the study of plants, ranging from simple cataloguing and observation to detailed studies of life-cycles and ecologies. Areas of specialization include simple plants, water plants, grasses and brush, flowering plants, domesticated plants, plant diseases, and ecological systems such as rain forest, tundra, prairie, etc.

**Cartography:** Cartography is the art of map-making. A sage who specializes in this field knows where to find maps for any given region or area, knows how to interpret maps using various forms of notation, and can attempt to solve or complete encrypted or partial maps.

**Chemistry:** While alchemy focuses on the study of magical substances, chemistry concentrates on the study of the properties of mundane substances. Note that a character with the alchemy proficiency is assumed to use a fair amount of mundane chemistry to produce acids, solvents, and pyrotechnic substances.

**Cryptography:** This is the study of codes, ciphers, and puzzles. A sage with skill in cryptography can attempt to break codes or solve written puzzles with time and study.

**Engineering:** The character is familiar with the science of building devices, engines, and structures. Sage knowledge of engineering provides a +2 bonus to the character's nonweapon proficiency score in engineering, if he has both proficiencies. The character can specialize in small machines, large machines (water wheels, etc.), siege engineering, fortifications, bridges and roads, or buildings.

**Folklore:** The sage studies legends and folk tales. By spending another proficiency slot, he can specialize in the folklore of a particular culture or region.

**Genealogy:** This is the study of lines of descent. A sage with this skill knows research techniques and sources for tracing family trees and is also familiar with the histories of the important royal and noble families.

**Geography:** A sage with this knowledge has learned about the lands and cultures of his world. He knows general principles of cartography, topography, climatology, and sociology, and can identify individuals or artifacts from other lands.

**Geology:** Geology is the study of landforms, rock, and the physical makeup of the earth. A sage with knowledge in this area can add a +2 bonus to his rating in the mining nonweapon proficiency and can attempt a proficiency check to identify various sorts of gemstones or precious minerals.

**Heraldry:** Coats of arms, banners, flags, and standards are all emblazoned with heraldic designs. A sage with this skill is familiar with the evolution of heraldry and the significance of various symbols and colors. He can identify common coats of arms on sight and knows where to research obscure or unknown devices. This area of knowledge adds a +2 bonus to a character's heraldry nonweapon proficiency score.

**History:** A sage with this skill has an excellent grasp of history and the historical methods. Unlike a character with the ancient or local history proficiencies, a sage with this skill is a generalist, but he can be considered an expert on a particular era or culture by spending an additional slot to specialize. Whether or not the historian knows something off the top of his head doesn't matter—he knows exactly where to look when he needs to find out the details of a person's life or an important event. Skill in this field of knowledge provides a +2 bonus to the character's proficiency score in ancient history or local history.

**Languages:** A character with a modern language proficiency knows how to speak a second language, and a character with an ancient languages proficiency knows how to

read a second language, but a sage who specializes in languages is concerned with the study of the language itself—grammar, syntax and constructs, and vocabulary and word origin. His expertise is limited to one particular tongue, but for each additional slot the linguist may add another language to his field of expertise. This knowledge adds a +2 bonus to the linguist's rating in any modern or ancient language proficiencies he possesses.

**Law:** A sage with this field of study is an expert on matters of law. He is familiar with any national constitutions or charters, the origin and history of the law, and important matters of precedent. He can examine contracts, warrants, orders, or decrees and determine if there is a way to enforce or avoid them.

**Mathematics:** The study of abstract or theoretical mathematics may seem unusual in a fantasy setting, but it dates back thousands of years in our own world; the ancient Greeks laid the groundwork for geometry, while algebra was a pastime of Islamic scholars and nobles before the European Renaissance. A dimensionalist gains a +2 bonus on his proficiency rating in this area of study.

**Medicine:** A sage with this skill studies both the history and development of medicine, as well as current methods and treatments. This provides the character with a +2 bonus to his healing nonweapon proficiency score. In addition, the character may be able to come up with treatments for nonmagical diseases or injuries.

**Meteorology:** This is the study of weather and weather patterns. A sage with this skill knows historical records and prediction methods. In the field, his knowledge of weather provides a +2 bonus to any weather sense proficiency checks he makes.

**Music:** The sage knows the theory and notation systems of music and has studied the works of the great masters. He can attempt to identify unknown pieces or decipher musical puzzles.

**Myconology:** Myconology is the study of fungi. A myconologist can identify samples of fungus, mold, or spores. He is familiar with dangerous or monstrous varieties as well and may be able to spot these in the wild before he or his companions come to harm. His knowledge of mushrooms and molds gives him a +2 bonus to herbalism nonweapon proficiency checks.

**Oceanography:** A sage with this skill studies the ocean, including weather, marine biology, navigation and charting, and undersea topography. An oceanographer may be able to explain unusual phenomena at sea or discover the location of wrecks or other sites of interest.

**Philosophy:** The study of philosophy is the study of logic, ethics, aesthetics, and metaphysics (for game purposes, anyway), and a sage with expertise in this field is conversant with the great thinkers and arguments of his race or culture.

**Physics:** In most AD&D campaigns, the study of physics centers around mechanics and thermodynamics; some of the more advanced fields of study simply haven't been invented yet.

**Planes, Inner:** Most individuals in a campaign have little to no knowledge of worlds beyond the one in which they live, but a sage with expertise in this field is familiar with the characteristics and properties of the Ethereal Plane and the various Elemental Planes beyond that. He understands how the Inner Planes are aligned and how the multiverse is put together. If he spends an additional slot to specialize, he can be an expert on a particular plane, capable of answering exacting questions on the topic.

**Planes, Outer:** The great religions of a campaign tend to disseminate a very limited view of the multiverse, centering on the home of their deity and that of their deity's principal foes. A sage who studies this field has a general understanding with the general arrangement of all the Outer Planes and the characteristics of the Astral Plane. For an additional slot, he can specialize in a particular plane, learning the general properties of its layers, its chief inhabitants and domains, and other important details.

**School of Magic:** A sage with expertise in a school of magic is familiar with the important theories, works, and great mages of that field. By engaging in research and passing a proficiency check, the sage could identify spells or magical items belonging to the school by the item's general effects or appearance. For example, if he was a student of the school of force, he could identify a *wand of force* or *beads of force* as if he were trying to answer a specific question. If the sage is also a wizard, he gains a +5% bonus to his chance to learn spells from the school in question. A specialist wizard gains a +2 to his score in this proficiency if the school of magic is his own specialty.

**Sociology:** This is the study of social structures, customs, mores, and ways of life. The sage is also acquainted with past societies and their customs.

**Theology:** A sage with expertise in this area is conversant with the tenets and beliefs of most major religions, gaining a +2 bonus to his religion nonweapon proficiency check. In addition, he studies the theories and lore surrounding the powers and boundaries of the gods themselves. With research, a theologist can determine what a particular god might or might not be capable of doing.

**Toxicology:** This is the study of poisons, both natural and artificial. A sage with expertise in toxicology can identify poisons both from samples and from examining the symptoms of a poisoned victim. By using toxicology, a sage can also gain a +1 to any healing proficiency check dealing with poisons.

**Zoology:** Zoology is the study of animals. A sage who acquires knowledge in this area has a good overall grasp of the science of zoology, and in addition, he is considered a specialist in one general class of animals or monsters. Each additional slot he spends on this proficiency adds one more type or class to his expertise. Classes of animals available include birds, reptiles, mammals, fish, amphibians, insects, amorphous monsters (slimes, jellies, and molds), aquatic monsters, insectile monsters, reptilian monsters, mammalian monsters, hybrid monsters (griffins, perytons, etc.), and any other reasonable class or grouping the DM allows.

A zoologist can identify common species in the field with a successful proficiency check and may be able to predict behavior or capabilities based on his knowledge of the creature in question.

**Scribe:** Before printing came into common use, professional scribes created books by copying manuscripts. Even after printing presses were in widespread use, scribes were in demand for their calligraphy and the quality of their illuminated (or illustrated) pages. A character with this proficiency is familiar with a scribe's techniques for preparing pages and working both swiftly and accurately. This is an invaluable skill for a wizard; with a successful proficiency check, the character gains a +5% bonus to any rolls he must make in order to copy or transcribe a spell into his spell book or onto a scroll.

**Tactics of Magic:** For many wizards, the principal use of their art is on the battlefield. Knowing which spell to employ at any given time and creating the greatest

effect for one's effort is a skill that can be learned with practice and experience. A wizard with the tactics of magic proficiency can attempt a proficiency check to gauge the range to a target, estimate how many enemies will be caught in a given area of effect, or determine whether or not he may be in danger of a rebounding *lightning bolt* or a *fireball* cast in too small a space.

In addition, a character with this skill may recall subtle effects or interactions that are not immediately apparent. For example, if the wizard is about to cast *magic missile* at an enemy wizard protected by a *shield* spell, the DM may allow the player a proficiency check to see if he suddenly recalls that the *magic missile* will fail—especially if the wizard also knows shield, but the player has just forgotten about the special effects of the spell. However, if there's no way the character could know of a special immunity or property of a monster, spell, or magical item, this proficiency will not be of any help.

**Thaumaturgy:** This is the art of the casting of magic, the study of the interaction of verbal, somatic, and material components in order to produce a desired effect. While all wizards have some degree of familiarity with this field of knowledge, a character who becomes proficient in thaumaturgy has spent time studying the forms and practices of magic. This depth of knowledge gives the wizard a +5% bonus on his learn spell rolls after a successful nonweapon proficiency check has been made.

## Signature Spells

Just as fighters can reach unusual levels of skill by specializing in a particular weapon, a wizard can spend extra proficiency slots (weapon or nonweapon) or character points in order to specialize in a particular spell. This spell is known as a *signature spell*. Unlike fighters, who may only specialize in a single weapon, wizards may have one signature spell per spell level, as long as they have the proficiency slots or character points available.

A wizard with a signature spell may still make use of the rest of his spell repertoire normally; he is not limited to just that one spell.

**Choosing a Signature Spell:** The signature spell must be a spell that the character already knows and is able to cast; a 1st-level wizard couldn't select *fireball* as a signature spell, although he could choose an appropriate 1st-level spell from his spell book. If the character is a specialist wizard, he may only select signature spells from the school of his specialty. Mages, however, may select signature spells from any school. The actual cost in slots or CPs varies with the level of the spell selected.

Since specialist wizards must select their signature spells from their own field of study, they find it easier to narrow their specialization down to a single spell.

**Learning a Signature Spell:** In order for a wizard to gain the skill and practice necessary for a signature spell, he must spend a great deal of time and money, studying every aspect of the enchantment. For all intents and purposes, this is the equivalent of spell research; the character must spend a minimum of two weeks and 1d10 x 100 gp per spell level to master the signature spell and must succeed in a learn spells check to succeed in his studies. If the wizard fails, he still knows how to cast the spell normally, but he can never use it as a signature spell. The character's proficiency slots or character points are not expended if he fails in his attempt to learn the signature spell.

Specialist wizards may apply their spell research bonus to their learn spells roll to develop a signature spell.

**Signature Spells in Play:** Through hard work and extensive practice, the wizard becomes quite skilled at casting his signature spell. First of all, the wizard casts his signature spell as if he were 2 levels higher for purposes of damage, duration, area of effect, range, and all other level-based characteristics. If the spell has no level-based characteristics (*charm person*, for instance), the wizard can choose to inflict a saving throw penalty of –2 on the subject's saving throw when he casts the spell, or he can choose to reduce his casting time by 3.

**Table 9:**

## Signature Spell Costs

| Spell Level | Specialist Slots | Cost CPs | Mage Slots | Cost CPs |
|---|---|---|---|---|
| 1st–3rd | 1 | 4 | 2 | 7 |
| 4th–6th | 2 | 7 | 3 | 10 |
| 7th–9th | 3 | 10 | 4 | 13 |

Secondly, the wizard may memorize one casting of his signature spell at no cost in spells available at that level. In other words, the character gains the specialist wizard benefit of memorizing additional spells. For example, a 1st-level mage may normally memorize one 1st-level spell. If the mage has *magic missile* as a signature spell, he may memorize one 1st-level spell, plus an additional *magic missile*, for a total of two 1st-level spells. If the character is a specialist invoker, he can memorize three 1st-level spells: *magic missile*, a second invocation spell, and the 1st-level spell he normally receives as a 1st-level wizard. Note that the character in this example could choose to spend his discretionary spells to memorize a total of three *magic missiles*, which wouldn't be a bad move considering that he's so good at casting it!

**Role-Playing Signature Spells:** A wizard with a signature spell often becomes notorious for his use of the spell. Everyone recalls stories of the transmuter who *polymorphed* folks into frogs, or the fire mage who threw *fireballs* left and right. The DM should encourage the player to develop his character's motivations for becoming so skilled with one particular enchantment.

## Priest Proficiencies

Like wizards, priests acquire a variety of nonweapon proficiencies over the course of their careers. More than any other character, a priest is likely to find a use for common or everyday skills. In fact, in many cultures, priests are the principal teachers, scholars, or craftsmen of their societies. Priests have a nonweapon proficiency progression that equals that of a wizard, but gain weapon skills much faster.

In this section, we'll take a look at some new priest proficiencies. These should be considered addenda to the Table 37: Nonweapon Proficiency Groups in the *Player's Handbook*. Refer to Table 10: New Priest Nonweapon Proficiencies.

**Table 10:**
New Priest Nonweapon Proficiencies

| Proficiency Name | Base Ability | Base Score | CP Cost | # of Slots | Check Modifier |
|---|---|---|---|---|---|
| Administration | Int | 9 | 3 | 1 | +1 |
| Alms | Cha | 8 | 3 | 1 | 0 |
| Bookbinding | Int | 8 | 3 | 1 | 0 |
| Bureaucracy | Int | 8 | 5 | 2 | 0 |
| Ceremony | Wis | 7 | 2 | 1 | 0 |
| Diplomacy | Cha | 6 | 3 | 1 | –1 |
| Investigation | Int | 6 | 4 | 1 | –2 |
| Law | Int | 7 | 3 | 1 | 0 |
| Observation | Int | 7 | 3 | 1 | 0 |
| Omen Reading | Wis | 5 | 3 | 1 | –2 |
| Oratory | Cha | 7 | 3 | 1 | –1 |
| Papermaking | Int | 8 | 2 | 1 | 0 |
| Persuasion | Cha | 5 | 3 | 1 | –2 |
| Sage Knowledge | Int | 5 | 4 | 2 | –2 |
| Scribe | Dex | 7 | 2 | 1 | +1 |
| Undead Lore | Int | 6 | 3 | 1 | –1 |

**Administration:** Many temples own substantial amounts of land and property, wielding power over vast areas. Priests who can manage these lands and turn a tidy profit in the name of the church are always in demand. A character with this proficiency is skilled in the management and accounting of enterprises ranging from the agriculture of an entire province to the vineyards of a single small monastery. He knows how to account for money, plan work, and supervise the collection of taxes or the sale of goods.

**Alms:** Some orders of priests rely on the charity of others for their support and livelihood. A character with this proficiency is able to find food, shelter, and clothing in return for the benefit of his wisdom and a blessing or two for his hosts. The quality of the charity the priest finds may vary widely, depending on the wealth of his prospective hosts, their piety and their recognition of his deity, and the way the priest presents himself. Generally, if there's shelter to be had, the priest can make use of it, but obtaining food or clothing for his companions may require a nonweapon proficiency check at the DM's discretion.

**Bookbinding:** See the description under **Wizard Proficiencies**.

**Bureaucracy:** This proficiency encompasses a working knowledge of temple or government organization and protocol, and the skills necessary to navigate through bureaucracies. The character knows which officials to approach and when to approach them, where records are kept and how to gain access to them, and how to circumvent unfriendly or sluggish bureaucrats. Unless there are extenuating circumstances, the character can get permits or documents completed in half the normal time.

In addition to these skills, the character can attempt to turn the system against someone else. With a successful proficiency check, the amount of time required to make

a decision doubles—permits are misplaced or filled out incorrectly, or important documents are held up on the wrong desk. For example, a character could keep a shady wizard from gaining permission to build a tower in the town, or he might obstruct a thief's request for bond or parole.

**Ceremony:** A priest with this proficiency is well-versed in the various rites, observances, and ceremonies of his temple. He is qualified to oversee normal worship or devotions, but conducting the rites in difficult or unusual situations may require a proficiency check. This proficiency also includes familiarity with ceremonies such as weddings, namings, and funerals, and the priest can perform these services appropriately.

Diplomacy: This is the grand art of high diplomacy between states or organizations. A character skilled in diplomacy knows the correct procedures and unwritten rules of negotiations between states or large organizations. He is capable of discerning the true intent of the various declarations, statements, and gifts or exchanges that make up a diplomatic encounter, and he is able to take his own wishes and couch them in proper diplomatic terms.

Normally, the character need only make proficiency checks if the negotiations are particularly delicate or difficult. However, if there is a specific goal or compromise the character is working towards, he may attempt a check to see if he can win the other side over to his point. Naturally, the DM can apply a modifier of –8 to +8 depending on what the diplomat's offer means for the parties involved. Requesting the surrender of a vastly superior enemy is next to impossible, unless the character can convince them that they stand to gain something of great value by giving up. In any event, the DM shouldn't use this ability as a substitute for good role-playing by the players.

**Investigation:** This is the art of discovering the truth through careful examination of a problem or situation. A character with this skill is familiar with the process of interviewing or interrogating witnesses, searching scenes for clues or information, and the general execution of a logical and thorough investigation. Priests who are associated with the local government may be called upon to solve common crimes against the state, while other priests may be inquisitors or theological investigators.

The DM may allow the PC to attempt a proficiency check when the player is missing an obvious line of inquiry or step of deductive reasoning, although this should be a rare use of this ability. An investigation proficiency check can also be used to discover clues at the scene of a crime or to extract information from a witness or suspect.

**Law:** A character with this proficiency is thoroughly familiar with the legal system of his homeland and is skilled in representing cases before judges, officers, nobles, and magistrates. This is a working knowledge of the law, as opposed to the theoretical knowledge of the sage area of study. With a successful proficiency check, the character can build a strong defense for a person accused of a crime; if the judge or jury are fair-minded and honest, he stands an excellent chance of winning his client's case. Of course, corrupt or intimidated officials can still deliver unjust verdicts despite the character's best efforts.

**Observation:** Characters with this proficiency have cultivated exceptional powers of observation. The DM may ask for a proficiency check anytime there is something subtly wrong or unusual in the character's environment. For example, the character may note the fact that the tools of a potter's shop are caked with a different kind of clay than that present in the workshop, or he might notice telltale marks of traffic that indicate the

presence of a secret door. The DM shouldn't let this become a substitute for alertness and good thinking on the part of the player; if he's picking up more than one or two clues a game session with this proficiency, it's probably too many.

**Omen Reading:** See the description under **Wizard Proficiencies**.

**Oratory:** This is the power to move other people with words and emotion. By captivating an audience, the priest can convince them of the rightness of his words through force of will and dramatic speaking. Priests with this skill can attempt to proselytize (seek converts) among small audiences by proclaiming the glories of their faith and the dangers of nonbelief, but the character must pass his check by a margin of four or more to win any long-lasting converts to the faith. A convert will listen to the priest's suggestions or ideas, but won't necessarily become a follower or hireling of the character.

The DM can decide how any group of listeners is likely to be affected by the priest's exhortations. If they're inclined to be hostile or are preparing to attack the priest, there's very little he can say to change their minds. However, if the priest passes a proficiency check, he may be able to modify an encounter reaction check by one category—hostile to indifferent, or indifferent to friendly, for example. Optionally, he may be able to encourage the crowd to take a specific action that they're inclined to perform anyway. If an angry crowd wants to see an important prisoner freed because it's rumored he was convicted wrongly, a priest with oratory may be able to push them into storming the jail or convince them to give up and go home. If the player presents an especially moving argument or speech, the proficiency check is made with a +1 to +4 bonus.

**Papermaking:** See the description under **Wizard Proficiencies**.

**Persuasion:** Unlike oratory, which relies on emotion and rhetoric, the art of persuasion is built around intelligent arguments and personal charm. A character with this proficiency is able to present especially cogent arguments and explanations in conversation with an individual or small group. With a successful proficiency check, he can convince them to take moderate actions they may be considering already; for example, he may convince city guards to leave without making arrests if a brawl's already finished by the time they get there, or he may convince a court official that he needs an audience with the king. If the player's thoughts and arguments are particularly eloquent and acute, the proficiency check is made with a +1 to +4 bonus.

**Sage Knowledge:** See the description under **Wizard Proficiencies**.

**Scribe:** See the description under **Wizard Proficiencies**.

**Undead Lore:** A priest with this proficiency is trained in the identification, powers, and vulnerabilities of common undead monsters. With a proficiency check, the character can recall specific tactics or weaknesses of a monster; for example, if confronted by a vampire, he may recall that a mirror, garlic, or holy symbol strongly presented can drive the monster away for a short time. How the character uses this information is up to the player.

# Chapter 5: Equipment

Traditionally, the wizard's laboratory is a wonderland of mysterious devices, bubbling retorts, and strange powders, solvents, and reagents. Shelves crammed full of arcane tomes, yellow scrolls encased in bone tubes, sheets of parchment covered with cryptic notes and designs, candles made from suspicious substances . . . all these things and more can be found in the wizard's workshop. In this chapter, we'll take a look at some of the equipment and supplies required by a working wizard.

In addition to the supplies and devices required for a laboratory and a library, we'll also examine various material spell components. Many powerful spells may require unusual or hard to find items, and the DM can create obstacles and restrictions—or more importantly, adventure opportunities— by requiring players to keep track of spell materials. Lastly, this chapter discusses methods for finding or buying spell components, reagents, and magical items.

**Table 11:**

## Building Construction Time and Cost

| **Building** | **Stone** | | | **Wood** | | |
|---|---|---|---|---|---|---|
| **Size** | **Time** | **Cost** | **Area** | **Time** | **Cost** | **Area** |
| Small | 6 | 2,000 | 400 | 1 | 200 | 400 |
| Medium | 10 | 3,000 | 800 | 3 | 400 | 800 |
| Large | 16 | 4,500 | 1,800 | 6 | 900 | 1,800 |
| Great | 32 | 10,000 | 3,600 | 12 | 2,000 | 3,600 |

### Laboratories

At some point in his or her career, just about every wizard is going to need a well-equipped laboratory. Without a laboratory, a wizard can't perform spell research or create any kind of magical item except a scroll. A laboratory consists of several different components, including a physical site or facility; a personal library; nonexpendable equipment and furniture; and expendable supplies, chemicals, and reagents.

### The Location

When a wizard is contemplating the construction of a laboratory, the first thing he will want to consider is the location of the lab. If the wizard travels extensively, like many adventurers do, the choice of his laboratory's location may prove to be a difficult decision. Since the character will be investing a vast amount of money in the construction and outfitting of his laboratory, he will want to make certain that the facility is located in a secure and reasonably accessible location. There's a lot of valuable and irreplaceable material in a laboratory, and most wizards dread the thought of some hooligan sacking their workshops.

Many wizards locate their laboratories in or near major cities. There are several advantages to this strategy: first of all, the wizard has easy access to skilled craftsmen for unusual pieces of equipment; second, the large cities attract traders dealing in the rare or

unusual, making it easier for the wizard to locate some material components; third, resources such as libraries and fellow wizards or alchemists may be close at hand; and last, cities are relatively secure from monstrous incursions. On the down side, cities also host large and well-organized thieves' guilds, and many wizards find themselves forced to pay protection money to keep their labs intact. Also, a wizard who lives near a large population center is generally easy to find, and the character's enemies won't have any problem in tracking him to his base of operations.

Because of these risks, some wizards prefer to conceal their laboratories in unpopulated or inaccessible regions. The wizard loses the benefits of close contact with civilization, but gains a degree of privacy that an urban wizard finds impossible. This can be costly, especially when the wizard needs some smithing or glassblowing work done, and there's no one nearby who can do it. A wilderness base generally costs 20%–50% or (1d4+1) x 10% more to equip and maintain than a comparable lab in the city. Note that remoteness doesn't guarantee safety; instead of thieves, a wizard in the wilderness has to worry about monsters of all sizes and inclinations nosing around the premises!

## Physical Requirements

Once the wizard has decided where he wants to locate his laboratory, he must buy, build, or rent an appropriate building or room. The space should be well-ventilated and well-lit, although the wizard can do without these comforts if he wishes. The room must be dry and sound; dampness can destroy libraries or cause important reagents to lose their potency. In addition, the laboratory requires at least 400 square feet (a 20-foot by 20-foot room or equivalent floor space) for the furnishings and work spaces.

In urban or civilized regions, the wizard may be able to set up his laboratory inside another building—for example, the castle of his patron noble, a university or library, the local wizards' guildhall, or an inn operated by a fellow adventurer. Generally, the rent on the room should be 30 to 100 gp or (1d8+2) x 10 per month, depending on the exact circumstances of the arrangement. Renting a shabby room in the thieves' quarter is far less expensive than paying the dues of a guildhall or university membership. A player character may be able to avoid paying rent altogether if a friend or patron puts him up.

If the wizard doesn't want to borrow or lease a room from a landlord, he can buy a suitable building. Again, the place should have at least 400 square feet of floor space, or somewhat more than that if the wizard intends to live there as well as maintain a laboratory. (A two-story building of about 20 feet x 20 feet would do nicely.) Or, he can choose to build a new building instead of buying an old one. The table below lists construction times and costs for new buildings; buying an existing structure costs anywhere from 50% to 100% or (1d6+4) x 10% of the listed figure.

**Stone** buildings are sturdier and more durable than wooden buildings, but still feature wooden supports, flooring, and other features. Some interior partitions or walls may be made of wood instead of stone.

**Wooden** buildings are much easier to build than stone buildings. The disadvantage lies in resistance to siege attacks or other forms of damage; wooden buildings can be destroyed easily by many spells or heavy weapons.

Building size is a rough description of the building's dimensions. This fits the building types described in DMGR 2, *The Castle Guide*.

**Time** is the number of weeks required for construction, assuming a working crew

of 10 laborers with good supervision. Obviously, this only applies in the event the wizard wants to have someone build him a new laboratory. If the wizard wants to save money, he can hire fewer workers, doubling the construction time for a savings of 25% off the basic cost. On the other hand, if he's in a hurry he can raise the building in 75% the usual time by hiring more workers, doubling the cost.

**Cost** is the amount of gold pieces required to have the building raised. This includes permits, bribes, pay for workers, expendable supplies, and all other expenses incurred. If the wizard is buying an existing structure, he need only pay (1d6+4) x 10% or 50%–100% of this price, depending on the building's condition, the circumstances of the sale, and other factors.

**Area** is the square footage of the completed structure. A small building suffices for the wizard's laboratory, but if the character wants to live in the same building, it must be at least medium-sized.

## Equipment

Now that the wizard has secured a suitable workroom, it's time to get to the real business of setting up a laboratory. The equipment contained in a lab includes alembics, armillary spheres, beakers, bottles, copper kettles, crucibles, distilling coils, ladles, mortars, retorts, scales, specimens, tongs, vials, and weights of all description. In addition, specialized furniture such as workbenches, stands, braziers, cabinets, and tables with special surfaces must be purchased for the laboratory. Obviously, all these things can be quite expensive; equipping a laboratory is often the single greatest expense a wizard incurs in his career.

A wizard's laboratory is customized to the character's individual tastes and research goals, and is not particularly useful to another character. However, if a wizard inherits a lab from another character or is allowed to borrow one for a time, he can refit the lab for his own purposes for a cost of 1,000 gp.

Wizards' laboratories vary wildly in scope, contents, and completeness. There are three varieties of laboratory, each with its own special purpose: alchemical laboratories, forges, and research laboratories.

**Alchemical laboratories** are intended for the creation of potions and nonmagical acids, solvents, glues, or pyrotechnical substances. As a result, the lab is equipped with glassware, burners, retorts, kettles, and all manner of devices designed for heating, agitating, or otherwise manipulating liquids and powders. An alchemical laboratory costs 2,000 gp; wizards who specialize in the school of alchemy, characters with the alchemy nonweapon proficiency, or mages who want to create potions at 9th level can make use of these facilities.

Specialist alchemists are assumed to begin play with an alchemical laboratory valued at 1,000 gp. Because of their special training and skills, this is sufficient for a 1st-level alchemist. However, the character's requirements for rare and exotic materials increase as he rises in level; keeping the lab outfitted requires an expenditure of an additional 1,000 gp each time he rises in level. If the alchemist's laboratory is up-to-date, he can use his special ability to create potions; if the lab is not up-to-date but still worth at least 2,000 gp, he may use it as if he were a normal wizard using a standard alchemical laboratory.

**Forges** are larger and more complex laboratories that include all the materials and

equipment required for the production of magical items of all types, not just potions or scrolls. A forge includes all the materials found in an alchemical laboratory, as well as furnaces, anvils, and woodworking, leatherworking, or metalworking tools. A forge costs 5,000 gp and requires at least 600 square feet of space; in other words, a "small" building is not big enough to house a magician's forge.

The specialist artificer is assumed to begin play with a forge worth 1,000 gp. In order to keep his specialist wizard benefits, he must invest an additional 1,000 gp in the forge each time he rises in level. If the forge is not maintained properly but is worth at least 5,000 gp, the artificer can still use it for brewing potions or creating magical items using the normal procedures.

**Research laboratories** allow a character to conduct spell research. The research laboratory adds hundreds of rare and unusual specimens, samples, and texts to the wizard's laboratory. Depending on the campaign circumstances, a laboratory suited for spell research can cost anywhere from 1,000 to 10,000 gp, but if a wizard already has an alchemical laboratory or a forge, he can purchase the research laboratory for 50% of its normal cost. Similarly, building an alchemical laboratory or a forge after first building a research laboratory gives the character a 50% break on the costs of the second laboratory.

A research laboratory requires at least 400 square feet, above and beyond any existing facilities. A character with a forge and a research laboratory must have 1,000 square feet of room available to house his equipment, furnishings, work areas, and supplies.

**Table 12:**

## Laboratory Cost and Size Requirements

| **Laboratory** | **Cost** | **Size** |
|---|---|---|
| Alchemical[1] | 2,000 gp | 400 sq. ft. |
| Forge[2] | 5,000 gp | 600 sq. ft. |
| Research[3] | 1,000 gp+ | 400 sq. ft. |

[1] Alchemist specialist wizards must maintain an alchemical laboratory worth at least 1,000 gp per character level.

[2] Includes an alchemical laboratory. Artificer specialists must maintain a forge worth at least 1,000 gp per character level.

[3] Cost set by DM at 1,000 to 10,000 gp.

**Table 13:**

## Libraries

| **Library Expense** | **# Potion Formulae**[1] | **# Item Formulae**[2] | **Max. Spell Research Lvl.**[3] |
|---|---|---|---|
| Initial | 2 | 1 | 1st-level |

| | | | |
|---|---|---|---|
| 2,000 gp | 3 | 2 | 2nd-level |
| 4,000 gp | 4 | 3 | 3rd-level |
| 6,000 gp | 5 | 4 | 4th-level |
| 10,000 gp | 6 | 5 | 5th-level |
| 15,000 gp | 8 | 7 | 6th-level |
| 20,000 gp | 10 | 9 | 7th-level |
| 30,000 gp | 12 | 11 | 8th-level |
| 50,000 gp | any | any | 9th-level |

[1] Libraries for alchemical laboratories and forges
[2] Libraries for forges
[3] Libraries for research laboratories

## The Library

The single most important tool in the wizard's laboratory is his library. *Every* wizard has a library, even if it consists of nothing more than his spell books and a handful of old texts and journals. Depending on the campaign flavor and the prevalence of magic, wizards may find that ancient grimoires and codices are the only source of new spells, potion formulae, or procedures for creating magical items. Unless they go to extraordinary lengths to unearth, purchase, copy, or steal these books, their advancement in the arcane arts can come to a dead halt.

When a character builds and outfits a laboratory of any type, a basic library is assumed to be included in the overall price. This collection allows the wizard to conduct the basic functions of the laboratory—brewing potions and manufacturing special inks for scroll creation, making magical items, or conducting spell research. However, the materials in a lab's initial collection only allow the character to research the formula for one potion or scroll, one magical item, and one 1st-level spell. In effect, the library that the wizard acquires to outfit his laboratory is only sufficient for the first two or three research efforts he undertakes. After these initial studies, the wizard must expand his library in order to undertake new research efforts.

**Alchemists and Artificers:** These two specialist wizards do not need to increase the size of their library in order to discover new formulae or procedures. Their specialist abilities bypass this requirement; the character's expertise allows him to do without many of the texts and canons other wizards find necessary.

**Library Requirements:** Expanding a library and collecting volumes suitable for advanced research takes time and money. The total value of the wizard's library governs the research he can undertake there, as shown in Table 13: Libraries.

**Library Expense** is the total investment the character makes in acquiring books, references, and other research materials. The initial library expense is simply the cost of the character's laboratory, so if a wizard builds a research laboratory and then spends 2,000 gp on expanding his initial library, he can research 2nd-level spells.

**Number of Potion Formulae** represents the maximum number of potions the wizard can research given a library of the listed size. Using the correct enchantments and materials is a critical part of potion-brewing, and wizards must invest some time in researching the correct formula and procedure for any particular potion. (See Chapter 7.)

For example, a wizard who purchases an alchemical laboratory can determine the formula for two types of potion (*flying*, for instance) with the materials at hand, but in order to learn the formulae for additional potions, he must spend money to expand his reference library.

**Number of Item Formulae** represents the maximum number of magical item creation processes the wizard can discover using a library of the listed size. Each magical item has its own unique "formula"—materials and procedures required to successfully produce one item. The initial laboratory included in a forge allows the wizard to research the creation of one type of magical item, such as a *rope of climbing* or *boots of the north.* Discovering the requirements for additional types of magical items requires a larger and more complete library.

**Maximum Spell Research Level** is the highest-level spell the wizard can research, given the library at hand. The basic research laboratory allows the wizard to research 1st-level spells, but if he wants to indulge himself in more advanced studies, he'll have to obtain additional texts, references, and materials.

**Finding Books:** Naturally, a library worth 10,000 gp is not a heap of treasure waiting to be carted off by the nearest adventurer. It is a labor of love and care, created over years by the dedicated efforts of an intelligent and well-organized character. And, unfortunately, building a library can be a tedious and exhausting task. Important volumes may take years to find.

Generally, a library is composed of books ranging in value from 50 to 500 gold pieces, although unusual works may cost much more. Thus, a library valued at 2,000 gp might include 15 to 20 books in the 50–100 gp range, three or four valued at 100–200 gp, and maybe one or two in the 300–500 gp range. While it's not necessary to catalog every single book that is contained in the collection, it's a good idea for the DM to identify a handful of *critical works*, or references that are so central to the wizard's studies that the library just isn't complete without them. Finding or tracking down these rare volumes can be quite a challenge, creating many adventure hooks for a PC wizard!

If the DM is generous, he can assume that the wizard can find everything he needs, given time, and assume that one week of library-building allows the character to spend up to 500 gp on books he needs. In other words, increasing a library's size and value by 2,000 gp would require four weeks of dedicated effort on the wizard's part. Finding a rare or unusual text (or, treasure of treasures, an intact collection!) in an adventure could save a wizard a great amount of time and money.

However, building a library can be far more difficult than just spending money. In medieval societies, books were hand-written, and there might be only six or seven copies of a book the wizard needs to be found *anywhere*, let alone in the local bookseller's shop. Particularly rare or valuable tomes may change hands through sale, deceit, or thievery dozens of times, disappearing from common knowledge.

In addition to the problem of scarcity, it's possible that some significant works required by a wizard might not be written in his native language but instead in the language of a far-off kingdom. An ambitious character might be forced to learn his campaign's equivalent of Latin, Sanskrit, or Mandarin Chinese for no other purpose than to read a single book. Another problem might be suppressed or forbidden books; trading in banned works could get a character into a lot of trouble.

Last but not least, the current owner of the book the character seeks may have no

wish to part with it, especially if it's considered dangerous or unique. The wizard may be able to persuade the book's owner to allow him to make a copy of the text, or he may have to consider more direct action to acquire the necessary materials.

**Library Size:** Large collections of books require space, just like laboratories. The basic references included in the cost of a laboratory don't take up any additional space above and beyond the laboratory's requirements, but expanded libraries require at least 25 square feet for each 2,000 gp value. For example, a library valued at 10,000 gp would require 125 square feet (a 10-foot by 121/2-foot room). This may sound like a generous amount of space, but keep in mind that many of these tomes are extremely large and bulky, and require special shelving, displays, and cabinets. All these furnishings are included in the cost of the library.

**Care and Protection:** A wizard's library is an investment of great value to the character eventually exceeding even the most complete laboratories and forges. Naturally, the owner should be quite interested in making sure nothing happens to it. The library should be in a dry, secure room that is well-ventilated but not open to the weather. Dampness can quickly mold or destroy books, especially those made without modern preservatives. Last but not least, the wizard should consider *fire traps* or similar spells to guard the room against intruders.

## Supplies and Reagents

Laboratories require a large amount of both common and unusual substances. Furnaces and burners must be fueled; water, oil, brine, vinegar, and other liquids are required for cooling, distilling, and quenching; small amounts of chemicals, salts, rare earths, herbs, and various specimens are expended with each day of research; and glassware and pottery may be ruined by one use or broken in accidents. Even if a lab is not in active use, some of the supplies and reagents will go bad or lose their potency with prolonged storage. The upshot of this discussion is simple: Once a wizard finishes building and outfitting his lab, he will still have to spend some money to maintain its supplies and equipment.

This maintenance cost is assumed to be 10% of the lab's total value, not counting the library, for every month of active use. For example, a 5,000 gp forge uses up 500 gp of supplies each month. This cost does not include any special or unique materials, such as a particular item that is to be enchanted, or an unusual material required for a specific potion or scroll ink. For example, if a wizard is enchanting a *long sword +1*, the cost of the sword itself is not included in the lab's monthly operating cost. Similarly, if he is mixing the ink for a scroll of *protection from petrification*, any exotic ingredients such as a basilisk's eye or a cockatrice's feather must be obtained through a deliberate action of the player character.

If the laboratory is not in active use—the owner is off adventuring, or otherwise engaged—the maintenance cost drops to half the normal amount. For the 5,000 gp forge described above, this would be 250 gp per month. This "moth-balled" expense reflects the materials and specimens that are becoming unusable due to the passage of time. Of course, the wizard can choose not to pay this cost, allowing several months of maintenance to pile up before restocking the laboratory. In any event, the cost to resupply a laboratory never exceeds more than half the lab's total value, since a lot of the equipment is fairly permanent. In the case of the 5,000 gp forge, a character would have

to pay 2,500 gp to restock his laboratory after 10 months of neglect, but 15 or 20 months of not paying the maintenance cost wouldn't be any more damaging.

**Alchemists and Artificers:** These specialist wizards must pay 50 gp per character level per month in order to maintain their laboratories. The wizard can defer or ignore these expenses, but this causes the loss of many of his specialist benefits—see Chapter 1. If the wizard misses some payments, he must make up all the money he owes before restoring his lab to operation, up to half the value of the laboratory itself. In other words, an 8th-level artificer must pay 400 gp per month to maintain his forge; if he skips one month of resupply, he loses many of his special abilities, and must pay 800 gp the following month or do without his powers for another month.

## Relocating Laboratories

Laboratories of any type are not very portable. If a character needs to move a lab, he requires one medium-sized wagon for each 100 square feet of equipment and materials. Packing up a lab or setting it up again after transport should require at least two to three days per wagon-load, and the wizard will certainly have to spend a significant amount of money in replacing broken, lost, or ruined materials. Depending on the length of the journey and the care of the wizard's preparations, he will have to replace materials and equipment worth 10% to 40% of the value of the entire laboratory.

*Shiria the Sorceress is a 7th-level invoker who has a great idea for a new spell,* Shiria's Bolt of Efficacious Destruction*. First, she needs to find a site for her laboratory; after due consideration, Shiria elects to locate her lab in the town she and her comrades use as a base of operations. She decides to buy a "medium" stone building in a good part of town to house her laboratory and spends 3,000 gp to have a new building raised (she wants some specialized features to be included). The construction takes 10 weeks.*

*While she's waiting for her building to be completed, Shiria decides to get a head start on collecting the materials and equipment she requires for her lab. Since she plans to do spell research, she decides to acquire a research laboratory, and the DM sets the price at 3,000 gp. It's reasonable to assume that collecting and setting up the equipment would take some time, as well, but the DM generously decides that Shiria can do a lot of this while the building's going up.*

*The initial expense of the lab includes a small library suitable for researching 1st-level spells, but* Shiria's Bolt *is proposed as a 3rd-level spell, and Shiria will have to expand her library immediately to perform the research. She requires a library valued at 4,000 gp above and beyond her laboratory. The DM doesn't feel like identifying any particular books she needs to find; Shiria can build her library at the rate of 500 gp per week, finishing her collection just about the time her building's ready for occupation.*

*Since the research laboratory is valued at 3,000 gp, Shiria will have to pay maintenance and upkeep totalling 300 gp per month while she is engaged in active research, or 150 gp a month to keep the lab moth-balled. By now, Shiria's purse is feeling a little light! She could have saved some money by renting a building instead of buying, or borrowing someone's library instead of outfitting her own. Of course, she can recoup some of her investment by selling access to her facilities to other wizards, or selling* Shiria's Bolt of Efficacious Destruction *once she develops it!*

## Priests' Altar

Wizards aren't the only characters capable of creating magical items. Priests, too, have this capability. Priests can create scrolls at 7th level, potions at 9th level, and other types of magic items at 11th level. Instead of cluttered laboratories filled with all varieties of reagents and bizarre devices, priests need only build a special consecrated altar to their deity in order to create magical items.

### The Location

Altars don't need the continuous maintenance or skilled pool of laborers and craftsmen that a wizard's laboratory requires. Because of this, the altar can be located anywhere the priest wishes to put it, within reason. The general site should be someplace within the deity's sphere of interest, so an altar dedicated to a sea-god should be near the sea, while one dedicated to a druidical power should be located in a pristine wilderness. Considerations such as the distance to the nearest large city or convenience for the character are secondary, at best.

There are two types of location that are ideal: a location that is easily accessible to a large body of the power's worshippers, or a location that has special significance to the power. A priest of Tempus (a god of storms and battle from the Forgotten Realms campaign setting) could meet the first condition by locating his altar in a fortress manned by a number of soldiers who follow Tempus, or a city that included a large congregation of Tempus' worshippers. Or, he might find an ancient battlefield or storm-lashed peak to be appropriate, since they meet the second condition. The DM is the final arbiter of what is or isn't an appropriate location for a particular deity's altar.

Like the wizard's laboratory, the priest's altar represents a significant investment of time, energy, and money. Thieves may attempt to loot the rich trappings of the altar, and enemies of the faith will not hesitate to desecrate an altar left unprotected. As a result, once a place suitable for his patron deity has been found, the priest should make the security and safety of the altar a primary goal.

### Physical Requirements

After finding a suitable location for the altar, the priest must consider what kind of facility he will need to house, shelter, or support the altar. In many cases, he can simply add the altar to an existing temple, monastery, or shrine dedicated to his deity. However, this may require the priest to expand or renovate the existing structure to make it suitable for the altar. Refer to Table 11: Building Construction Time and Cost for building costs; if the altar is to be housed in a free-standing structure, it must be at least a medium-sized building, but an expansion to an old temple might be the equivalent of a small building.

If the altar is located on a sacred site (a forest glade for a druid power, or a mountain peak for a god of the sky), the priest may not have to raise any kind of building to shelter it, especially if a man-made shelter would somehow be inappropriate at that site. However, preparing and clearing a site should still require an amount of work equivalent to raising a small building.

### Materials and Decoration

The altar, its decorations or trappings, and the preparations for the ceremony of consecration cost at least 2,000 gp, above and beyond the cost for any building or

structures to house it. Generally, the altar must be built of whatever materials seem appropriate; for a god of war, an altar made from the swords of brave men, or the shields of fallen warriors, could be appropriate. A deity of storms might require an altar built from a hundred-year-old oak split by lightning. In any event, the altar should be of the finest workmanship possible. Building an altar requires at least 2d4 weeks of the priest's time and attention, and the services of skilled masons, smiths, or woodworkers.

In addition to the construction of the altar, the priest must also assemble and prepare special incenses, ceremonial vestments, and other unusual materials. This could cost anywhere from 1,000 to 10,000 gp more, depending on the deity involved. The priest may be able to borrow some of these materials from a large temple of his own faith, which would reduce the cost by 50%.

## Consecrating the Altar

Once the altar has been completed, the priest must consecrate it to his deity. The prayers, chants, and rituals require at least one full week. During this ceremony, the priest cannot be called away for other duties; if he leaves, he must begin again from the start and replace any materials expended in the abortive ceremony.

At the end of each full week of prayer, the DM makes a special check to see if the priest gains the favor of his deity. The base chance for success is a percentage equal to 5 times the character's level, so a 10th-level priest has a 50% chance of success after one week. For each additional week of prayer, the chance of success increases by 5%. Given time, the priest should eventually succeed, unless he's angered his deity in some way.

When the power responds to the priest's prayers, the priest must offer up something of value or perform a special quest, whichever is demanded by the deity. The DM decides what is appropriate for the character and the deity he follows. Surrendering magical items, treasure of great value, or an item hand-crafted by the priest are all reasonable. A quest that a priest of a god of healing might follow could be to go among the poor and heal one hundred of the sick, while a god of honor might ask the priest to go to the king's court and expose his dishonorable dealings. By completing the quest or making the appropriate sacrifice, the priest demonstrates his devotion, and the deity consecrates the altar.

A consecrated altar radiates a *bless* spell in a 10-foot radius. It remains consecrated until desecrated in some way by the deity's enemies, or until the priest who consecrated it dies or falls from the faith. A consecrated altar can be used to produce potions, scrolls, and other magical items, as described in Chapter 7.

## Material Spell Components

Even without a laboratory or a consecrated altar, priests and wizards often find themselves in need of unusual or hard-to-find items for material components in their spells. While many DMs do not require players to keep track of their characters' stocks of spell components, this can be a great test of a PC's resourcefulness and the source of many adventures. After all, merely *finding* a diamond worth 1,000 gp is quite an event for a low-level character, but then the player has to decide whether to grind it into worthless powder for use in a critical spell!

## Spell Components: Yes or No?

One of the optional rules presented in the *Player's Handbook* is the use of spell

components. You are free to decide to use or ignore components in your own campaign; as long as the NPCs abide by the same rules and restrictions the players do, the game works equally well in either case. The real crux of this issue are material components, and whether or not players should have to keep track of their stocks of spell reagents.

There are some very good reasons why you shouldn't use material components in play; it requires a great attention to detail and some honesty on the part of the players, and may create obstacles or difficulties that take away from the DM's plot. After all, if the party's wizard has to drop out of the epic adventure in mid-stride to track down the ingredients for his next *fireball* spell, all concerned may feel a little frustrated or annoyed.

On the other hand, using spell components and requiring an account of what the wizard has on his person and what he has stockpiled in his laboratory or home base can add another dimension of detail and pseudo-realism to the game. If spell components aren't used, who cares if a wizard is down to his last three coppers? More than any other class, a wizard can operate with no concern for material wealth— unless he has to worry about whether or not he can afford to buy the materials he'll need to be able to cast his spells. In addition, the use of spell components requires players to spend some time and effort thinking about situations their characters would certainly be dealing with and can enhance role-playing if it isn't taken to extremes.

Generally, enforcing the requirements for material components works best for low- to mid-level characters. By the time a wizard is 8th or 9th level, he's usually wealthy enough to easily buy any materials he needs, and his daily selection of spells is so broad that keeping track of each type of component carried becomes a logistical nightmare. By that time, the DM can allow the player a little slack; the wizard's a mighty hero now, and both player and DM may have other arenas of role-playing (building laboratories or establishing strongholds) that the character will be graduating to. However, at low levels, wizards and priests will find that some of their favorite spells have to be saved for when they're truly needed.

For example, low-level wizards often rely on the *armor* spell as their sole means of defense against physical attack. *Armor* requires a piece of leather—no problem there—that has been *blessed* by a priest. Referring to Table 69: NPC Spell Costs in the *DMG*, bless is usually reserved for characters of the same faith as the casting priest, and even then a small sum might be required. So, the wizard who wants the piece of leather *blessed* for his spell might have to convert to the faith of nearest available priest, and tithe him 10 or 20 gp to boot! If you consider how often players simply say, "Oh yeah, I'll cast *armor* the day before we leave, so I'll have my 1st-level spell open and *armor* in effect," you can see just how much hassle (and role-playing opportunities!) are ignored by the player and DM.

## Acquiring Spell Components

The materials used to power spells range from the mundane to the bizarre and the exotic. Dozens of spells require things like pebbles, stones, dirt, twigs, or leaves that can be found literally anywhere—including the middle of a battle, if a spellcaster is desperate. A number of spells require nothing more than a little bit of foresight and access to a simple trading post or small market. Likewise, a few spells require painstaking and expensive preparations that may be impossible to repeat in the field.

**Scavenging:** The cheapest method of acquiring spell components is a *field*

*search*. Many plant and animal specimens can be harvested with nothing more than time and a little luck, and a wizard who knows what he's looking for can find a fair number of minerals as well. The wizard has to find an appropriate location, such as a nearby forest or field for animal and plant specimens. Materials that can be collected with a field search are rated as common, uncommon, or rare; depending on the amount of time the wizard takes, the suitability of his search, and the item's scarcity, he may or may not be successful. See Table 14: Field Searches.

**Table 14:**

## Field Searches

| **Item Scarcity** | **Base Search Time** | **Base Success** | **Time Bonus** |
|---|---|---|---|
| Common | 1d6 turns | 75% | +10%/turn |
| Uncommon | 3d6 turns | 50% | +5%/turn |
| Rare | 1d4+1 hours | 25% | +2%/turn |

**Item scarcity** is taken from Table 16: Spell Components. The DM may modify the category depending on where the wizard is searching; finding sand on a beach is pretty easy, for example.

**Base search** time is the amount of time required to search for the item in question. A character can search for only one component at a time.

**Base success** is the likelihood that the character will find the material in the base search time.

**Time bonus** increases the success chance for each additional turn the caster spends searching for the item. If he fails to find the material in the base search time, he can continue to look, adding this percentage to his success chance as shown on the table.

A field search for common materials doesn't take much time, so a traveling wizard could pause for brief searches during the march or while his companions are setting up or breaking camp. Depending on what it is the wizard is looking for, he can find anywhere from 1 to 20 or more doses or samples of the material. For example, if the wizard was searching a damp forest for foxfire, he might find enough to be used in anywhere from 1 to 20 spells. Of course, storing and preserving multiple uses of a component may be harder than finding it to begin with.

**Purchasing:** If the wizard doesn't have time to search for materials himself, or can't find a certain component, he can always purchase what he needs. Again, the item scarcity reflects the likelihood that someone in the vicinity happens to have the material or compound the wizard requires. If the wizard is out to purchase materials, the most important consideration is the number of vendors or the size and completeness of the market he will be searching. This is generally a function of the community size, but the DM can modify item scarcity to reflect the character of the town. For example, many uncommon or rare chemicals may be common in a city that supports an Alchemist Guild.

Shopping for items in a town takes some amount of time, as well. A character

may have to examine half a dozen smithies to find soot or charcoal of the exact color, weight, and composition he needs. Generally, common items can be located in a few minutes, while rare items may take several hours of the wizard's time. Anywhere from 1 to 20 or more usages can be found.

**Table 15:**

## Purchasing Components

| City | Scarcity | | |
|---|---|---|---|
| **Size** | **Common** | **Uncommon** | **Rare** |
| Village | 80% | 50% | 20% |
| Town | 90% | 60% | 30% |
| City | 100% | 70% | 40% |
| Major City | 100% | 80% | 50% |

**Wizards with Laboratories:** One nice benefit about an up-to-date, well-stocked laboratory is that it includes a number of interesting compounds, minerals, and specimens that may be useful as spell components. If a wizard owns a laboratory, there is a 50% chance that 1 to 20 usages of any given spell component from the mineral, animal specimen, and plant specimen list may be on hand, and a 25% chance that a spell component from the finished item list may be present. The laboratory's normal upkeep and maintenance expenses cover the cost of replacing these items once per month.

**Rule of Common Sense:** The rules presented here for acquiring spell components are intended to be guidelines for the DM. If a player is particularly resourceful or intelligent in looking for components, ignore the dice and let his character find whatever it is that he's looking for. Clever play should always be rewarded. On the other hand, sometimes items just aren't available in a given area, no matter how hard someone looks. Finding iron filings in a village of Stone Age technology is going to be extremely difficult, to say the least. Flowers, plants, and herbs common in one part of the world may not exist elsewhere—no amount of money could create a pineapple in medieval Iceland, for example.

## Storage of Spell Components

Spell components are quite small. Most spells require only the smallest pinches of powder or a few drops of liquid. In fact, the containers that are required to hold the materials and make them easy for a caster to find without looking are far more bulky and clumsy than the materials themselves. Small leather pouches, glass vials or tubes, or tiny clay finger-pots sealed with wax plugs are the most common storage devices. Most wizards choose to store the spell components for each of their memorized spells in separate, pre-measured amounts to facilitate quick and accurate casting. With a system like this, there are ten to twenty spell components to a pound—even the most powerful wizard carries only a couple of pounds of components.

For some wizards, it's a good idea to carry a bulk supply of some common

reagents from which the individual spell preparations can be drawn. For example, a traveling wizard may find it to be a good idea to carry a whole spool of thread or string, since several spells call for this component. A bulk container usually contains twenty to fifty usages of the component in question and weighs about a pound. The character can carry a dozen or more of these in a leather saddlebag or a small trunk, ensuring that he won't run out at a critical moment. Bulk containers cost five times the listed expense of a component, but contain dozens of doses.

Some spell components may be perishable or short-lived. These items are noted on the component list. A perishable item can last for a week or so before it's useless. Obviously, the character shouldn't purchase or store more than a few days' worth at a time.

## The Spell Component List

There are a couple of classes of item deliberately not included on Table 16: items that already have a listed cost in the spell description (the special dust mixture of *Leomund's trap*, or the 100 gp pearl required for *identify*, for instance) and items that are chosen or customized at the time of the spell. For example, the spell *banishment* requires the use of materials "harmful, hateful, or opposed to the nature of the subject of the spell." Since this could consist of a wide variety of substances, *banishment's* material components weren't included on the list.

The spell components are divided into several categories, reflecting their general nature and origins. These include: Miniatures and Models; Finished or Refined Items; Minerals; Common or Household Items; Animal Specimens; Plant Specimens; and Other, a catch-all for anything that doesn't clearly fit in another category.

Each item has a note concerning its method of acquisition. Items are listed as FS (Field Search), TM (Town or market), SO (Special Order), or Auto (items that can automatically be found by anyone willing to look for a few minutes.) A few items are both field search and town or market, meaning that a wizard can try to buy the material if he can't find it for himself.

Scarcity is listed for items that wizards might search for or try to purchase, and a cost for items that the wizard might want to purchase. Also, items that are commonly available in the wizard's own laboratory are noted. Finally, items like the various dusts are priced with one spell use in mind. For example, if a wizard wishes to have enough powdered amber to cast two spells, he needs to come up with 80 gold pieces (40 x 2).

Note that the cost of an item can vary wildly with the circumstances. Buying coffin wood in a kingdom where the interment of the dead is considered the sole and sacred province of a fanatical religious sect could be far more difficult than a stroll down to the undertaker's place of business! Similarly, tolls, finder's fees, and all kinds of surcharges could come into play for strange or exotic items.

In addition to the problems of cost, some special-order items may take quite some time to locate. For example, finding a 100-year-old map to tear to pieces could be quite difficult. Even the most dedicated book-buyer, herbalist, or apothecary may have to wait several weeks for something to turn up. Some special items may not be available for any price, and the wizard may have to locate these items personally if he wishes to cast the spells in question.

**Purchasing Agents:** For the adventuring wizard, it's a very good idea to spend

money on hirelings who can handle the acquisition of components. For instance, the wizard might hire a couple of local children to collect various insects or herbs. Unless the assistants are well-trained, at least 75% of the material they bring back will be unusable due to small imperfections or taints, but for simple materials an assistant can save the wizard a lot of time. Apprentices are often assigned to these duties, both to learn what makes for a good spell component, and to save their masters the time of stalking through a field, looking for a cricket or mouse that will let itself be captured.

### Arcanists and Apothecaries

Most large towns in a typical AD&D campaign support one or two apothecaries, herbalists, alchemists, wise women, occultists, or hedge wizards. These shopkeepers make their living by providing minor enchantments, charms, or herbal mixtures to the townspeople. For the most part, the services and goods offered by these merchants are of little interest to the typical adventurer, but they can be excellent sources of spell components, and from time to time they may purchase magical items from player characters or have an odd item for sale.

In addition to the sellers of mundane herbs, minerals, and charms, a few large cities *may* support an arcanist's shop. An arcanist is a merchant who trades in items of interest to wizards, including spell components, books and parchment suitable for spell books, and magical items. Arcanists are sometimes sponsored by a large wizard's guild and are most frequently found in cities where wizards are well-regarded and fairly common.

### Alchemists

The great majority of alchemists are 0-level characters, as opposed to mages or specialists in the school of alchemy. They are skilled in the nonweapon proficiency of alchemy, but cannot cast spells or manufacture potions or magical items. What common alchemists can do is create nonmagical chemical mixtures that may be useful to an adventuring party, or provide a character with the opportunity to purchase spell components from the mineral list at the listed cost. Of course, the laws of supply and demand apply; the alchemist will charge what he can get for materials that his customers can't get anywhere else.

Some of the alchemists' other wares include the following:

**Acid:** Through careful distillation, alchemists can brew potent acid. (See the proficiency description, on page 51 of Chapter 4.) A flask-full of acid can command anywhere from 50 to 100 or (1d6+4) x 10 gold pieces, while a vial might sell for 10 to 40 gp.

**Incendiaries:** These dangerous concoctions range from flammable oils and pitches to nasty stuff like naphtha or Greek fire. Again, refer to the description of the alchemist nonweapon proficiency in Chapter 4. A flask of an incendiary substance usually costs 10 to 30 gp.

**Pyrotechnics:** Unlike the previous two substances, pyrotechnic mixtures are often powders. They can be used to create clouds of smoke of a variety of colors, or bright flashes of light when added to an existing fire. A vial of pyrotechnic mixture costs 5 to 20 (5d4) gp, while a flask costs anywhere from 10 to 30 gp.

## Apothecaries and Herbalists

At first glance, these may seem to be two completely different occupations, but they share similar roles in the community. Both apothecaries and herbalists provide medicines for people suffering from a variety of ailments, and a great portion of these remedies are derived from various plants, herbs, and roots. Townspeople go to apothecaries or herbalists for pain relievers, poultices, purgatives and laxatives, and all other kinds of medicines.

Adventurers find that apothecaries and herbalists are excellent sources of spell components, especially from the common, herb, and animal specimen lists. In addition, apothecaries sometimes serve as dealers in odds-and-ends in smaller towns, and a magical item such as a potion or ring may occasionally turn up in their possession. This is an unusual occurrence, so player characters might have the opportunity to examine or purchase an item only once or twice in a campaign year from any given apothecary. Refer to the list of the most common magical items, at the end of this chapter.

In addition to their trade in spell components and the rare magical item, apothecaries and herbalists can create medicinal mixtures with the following properties:

**Healing salve:** This ointment contains herbs that help to stop bleeding and close a wound, as well as infection-fighting properties. Applying the salve to a character with open cuts or bleeding wounds (not crushing or bludgeoning injuries) restores 1 hit point per separate wound or injury. For example, if a character was struck three times in the course of a melee, three applications of salve could restore 3 lost hit points. Healing salve costs 5 to 20 gold pieces per application.

**Healing poultice:** This compress helps to reduce swelling and bruising. It has the same effect as healing salve when applied to impact injuries and costs 10 to 30 gold pieces per poultice.

**Poison antidote:** A herbalist or apothecary can prepare an antidote to one specific natural toxin, such as a rattlesnake bite or the sting of a giant wasp. The apothecary must have some idea of what will help the victim, so rare or unusual venoms (such as the giant wasp mentioned above) may be completely unknown. If the character knows an antidote, the herbalist or apothecary can prepare a dose that will remain good for 1 to 4 days at a cost of 20 to 80 gp. The poison antidote allows the victim to reroll his saving throw vs. poison with a +2 bonus, if it is administered within five rounds of the poisoning. Naturally, it is only effective against the specific toxin it was prepared for.

## Wise Women and Hedge Wizards

Every village or hamlet has its own resident "witch" or "wizard," or a person who claims command of magical powers and knowledge of herbs, spells, and charms. In a few cases, these characters are actually low-level magic-users, but more often they're fakes or charlatans. Most of these wise women or hedge wizards are 0-level characters with the herbalism and healing proficiencies. They can sell spell components from the herb, animal specimen, and common lists, although they often have no idea what a particular herb or item might be good for.

Wise women and hedge wizards may be capable of creating healing salves and poultices, as described above. In addition, they can create minor charms or fetishes. These are temporary magical items about as powerful as a typical *cantrip*. Good

examples would include a "love amulet," that raised the wearer's Charisma (Cha/Appearance) by 1 or 2 points, but only in the eyes of one particular subject whose hair was used in the making of the charm; a charm that discouraged mice or insects from entering a kitchen or pantry; or a small totem that brought the user good luck (a +1 bonus) on his next saving throw against a specific threat, such as fire, poison, or resisting mental spells. A charm costs anywhere from 5 to 50 gold pieces, and retains its enchantment for 1 to 4 days.

## Arcanist

Only the largest cities can support an arcanist, or a shopkeeper who deals solely in magical reagents, components, and the occasional enchanted item. An arcanist can provide spell components from any list, and also a number of other generally useful items for a wizard—paper, vellum, parchment, ink, quills, alchemical supplies and equipment, and other such things.

Because arcanists have a clientele of wizards, they are willing to buy magical items and rare or unusual materials that could be useful as spell components. Player characters may sell components for 30% to 80% or (1d6+2) x 10% of their listed value. Magical items can be sold for whatever price the DM deems fair, although a PC selling a magical item should not be able to make more than twice the item's experience point value from the sale. In fact, it's perfectly reasonable for the DM to rule that the seller must sell by consignment—in other words, the arcanist agrees to display the item and handle any inquiries about it for a 10% share of the asking price, but he won't buy it outright. Until another customer comes along to show an interest in the item, the PC seller makes no money. Note that magical items are rare, and from week to week the arcanist has no idea what may or may not show up in his shop.

## Buying, Selling, and Trading Magical Items

In most AD&D campaigns, magical items are rare enough that it is nearly inconceivable that people would buy or sell them like any other commodity. For various reasons, magical items tend to be concentrated in the hands of player characters and their principal enemies. This means that the PCs never really experience the true scarcity of enchanted items and lose the sense of wonder that *most* people in their world would feel at even *seeing* a magical sword, a wand, or a nifty item like a *carpet of flying*.

The effect of this scarcity is simple: Allowing the player characters to purchase or trade magical items is a privilege, and a rare one at that. It's an opportunity that comes along quite infrequently in a campaign, and in many cases it should be an opportunity that the players spent time and adventuring to create. In other words, if a player decides that his character wants to find a *ring of fire resistance* and purchase it, there should be a lot more involved than a stroll down to the corner store. The character might have to hire a sage and spend weeks running down the chain of possession of the last known *ring of fire resistance* to appear in the area, and then he may have to locate its current owner and make an extremely generous offer—including trading magical items of his own, or undertaking some quest or service for the prospective seller—to have a chance of purchasing the ring.

If the character is content to check in with the nearest arcanist once in a while, it could take months or years before the arcanist happened to stumble across the item the

character was looking for—and even then, someone else might be interested in the same item. A bidding war, threats, or outright assassination attempts could result from two wealthy characters both trying to acquire the same item.

Selling items isn't always easy, either. The PCs have to locate a buyer, and then agree on a fair price. Nobody in a small village will have the money required to buy a real magical item, and even a prosperous town may only have two or three individuals who could afford to buy what the PCs are offering for sale. Items such as potions or rings tend to be easier to sell, since anyone can use them, but books, wands, staves, or other items suited for priests or wizards only will be much more difficult to sell. In any event, the PCs are likely to see only 30% to 80% of their asking price for any given item, and they may have to demonstrate that the item works (or pay for an *identify* spell from a neutral party) in order to clinch the sale.

**The Cost of Magical Items:** Enchanted items are rare and valuable. Without exception, they are the rarest and most expensive commodities to be found in a fantasy setting. They are valued accordingly. Even if a character happens to locate a magical item for sale (an extremely rare event), the cost of the item is usually prohibitive, to say the least. As a basic rule of thumb, magical items should be worth anywhere from 5 to 20 times the listed experience point value, and a minimum of 200 gp for one-use items, or 1,000 gp for persistent items. In many cases, the DM should set the cost for an item at a significant percentage of the character's total wealth—if someone has the only magical ring for sale in the entire kingdom, they're going to demand a huge sum for it, even if it's only a *ring of protection +1*.

In addition to the money involved, a character may have to offer a magical item of similar value in trade, or offer to perform a service or undertake a quest to sweeten the deal for the seller. Regardless of the final deal struck, a player character should be careful of switches, swindles, or reneging; more than one adventurer has gone to his death believing that a brass ring with *Nystul's magical aura* is a *ring of wishes* or *spell turning*.

**Table 16:**
## Spell Components

### Models and Miniatures

| Item | Acquisition | Scarcity | Cost |
|---|---|---|---|
| Bag, tiny | SO, TM | Common | 2 cp |
| Balance, golden | SO | Rare | 10 gp |
| Bell, golden | SO | Uncommon | 6 gp |
| Bell, tiny | SO, TM | Common | 5 sp |
| Blade, knife | TM | Common | 3 sp |
| Bust of caster, tiny | SO | Rare | 15 gp |
| Cage, silver wire | SO | Rare | 8 gp |
| Caltrop, golden | SO | Rare | 20 gp |
| Candelabra, silver | SO | Rare | 12 gp |
| Circle, brass | SO | Uncommon | 2 gp |
| Circle, gold | SO | Uncommon | 15 gp |
| Circle, platinum | SO | Rare | 25 gp |

| | | | |
|---|---|---|---|
| Circle, silver | SO | Uncommon | 5 gp |
| Cone, bull or ram horn | SO, TM | Uncommon | 4 gp |
| Cone, crystal | SO, TM | Rare | 7 gp |
| Cylinder, brass | SO, TM | Uncommon | 8 gp |
| Cylinder, copper | SO, TM | Uncommon | 8 gp |
| Cylinder, obsidian | SO | Rare | 14 gp |
| Dagger, tiny | SO | Rare | 4 gp |
| Dart, tiny | SO | Rare | 3 gp |
| Die | SO, TM | Uncommon | 1 sp |
| Die, bronze | SO | Rare | 2 gp |
| Die, silver | SO | Rare | 4 gp |
| Disk, bone, numbered | SO | Rare | 3 sp |
| Doll, replica of self | SO | Rare | 10 gp |
| Drum, small | SO, TM | Uncommon | 8 sp |
| Fan, silk | SO, TM | Rare | 1 gp |
| Fan, tiny | SO, TM | Uncommon | 2 sp |
| Glove, black silk | SO, TM | Uncommon | 8 sp |
| Glove, leather | TM | Common | 4 cp |
| Glove, scorched | TM | Uncommon | 2 cp |
| Glove, snakeskin | SO | Rare | 6 gp |
| Glove, soft | TM | Common | 1 sp |
| Hand, clay | SO | Rare | 3 gp |
| Hand, stone | SO | Rare | 5 gp |
| Handkerchief, silk | TM | Uncommon | 2 sp |

# Chapter 6: Magic

Magic in the AD&D game is mysterious and wonderful. It gives the player characters access to superhuman powers of perception, movement, and destruction. With the right spell or magical item, a character can literally do anything. Impassable obstacles can be circumvented, secrets divined or unearthed, unbeatable monsters defeated; even a low-level wizard or priest can accomplish these amazing feats with ease. And, naturally, magic also empowers the enemies of the player characters, giving villains dangerous and unpredictable abilities with which to oppose the heroes.

While the magic system of the AD&D game generally works well, it only models one style or flavor of magical powers. The basic mechanic of learning spells through long study and forgetting them as they are cast is a very distinctive feature of the game system, and players who are seeking a particular fantasy setting may find it to be too pervasive in the AD&D system. For example, the AD&D spell system doesn't allow players to run characters who become fatigued or exhausted through use of spells but instead retain them in memory, a common element of fantasy literature. In other settings, magic comes

with a moral or spiritual risk, and characters dare not call upon supernatural powers for fear of their lives or sanity.

In this chapter of *Player's Option: Spells & Magic*, we'll present an alternate system of acquiring and expending spells based on *spell points*. At its most basic level, this system simply permits wizards to customize their normal spell progression, but we'll also present optional systems to represent different philosophies or mechanics of magic, including magic systems based on fatigue, sanity, life energy, and spiritual risk or morality.

While the wizard class enjoys the spotlight in this chapter, we'll also take a look at priests and other spellcasters and present versions of the spell point system appropriate for those classes. Last, but not least, we'll discuss incorporating this material into existing campaigns.

## The Spell Point System

Normally, wizards, priests, and other spellcasters are limited to a strict spell progression table which lists how many spells of each level they may retain in memory at one time. For example, every 7th-level mage shares the same spell capacity of four 1st-, three 2nd-, two 3rd-, and one 4th level spell, although specialist wizards (or priests with exceptional Wisdom scores) gain a slight advantage in this area because of their bonus spells. When a spell is cast, it vanishes from the caster's memory, and he cannot make use of it again until he has a chance to rest and study his spell books once again.

Spell points work a little differently. Characters no longer receive a standard spell progression table. Instead, they are assigned a number of spell points based on their character class and level. When the character studies his spell books or prays for spells, he uses these spell points to purchase the spells he wishes to memorize, with some reasonable restrictions. Naturally, higher-level spells are more expensive than lower-level spells, but high-level characters have more spell points available. Under the spell point system, a 7th-level mage may decide to memorize five 1st-level spells instead of the four he is normally allowed, at the cost of giving up his higher-level spells for that day. Or, he could choose to memorize four 4th-level spells, giving up all his lower-level spells, or strike any balance between the two extremes that he likes.

Specialist wizards receive the normal amount of spell points allowed to a mage of the same level, but also gain an amount of *bonus points*. These bonus points must be used to select spells from the specialist wizard's school of specialization, but the specialist can spend them as he sees fit. For instance, a 7th-level invoker normally receives one 1st-, one 2nd-, one 3rd-, and one 4th-level spell as a bonus for his specialization, but with spell points he could choose as many as eight bonus 1st-level spells.

There are three general guidelines the wizard must still obey when memorizing spells by using spell points:

The wizard must be well-rested and have access to his spell books in order to memorize spells. He still may memorize only those spells that he knows and has available at that time. It takes about 10 minutes per spell level to commit a spell to memory.

The wizard is limited in the maximum spell level he may cast, based on his

character level (and possibly his Intelligence score). For example, a 5th-level wizard is still limited to spells of 3rd-level or lower. (See Table 17: Wizard Spell Point Progression.)

The wizard is limited in the maximum number of spells of each level that he can memorize, regardless of how many spell points he has available; for example, a 5th-level mage can't memorize more than four spells of any given spell level. Even 1st-level spells are difficult to memorize, and a wizard can't have more than nine spells of any one level in his memory, no matter how many spell points he has available. See Table 17.

Some of these guidelines are relaxed or ignored for the optional systems of magic described later in this chapter. These systems dispense with the old assumption that spells vanish from memory when cast and use other restrictions to limit a wizard's power.

## Selecting Spells

A wizard uses his spell points to choose his arsenal of spells when he takes the time to rest and study his spell books. Most wizards pre-select their spells; if a wizard can memorize two 2nd-level spells, he picks two specific 2nd-level spells from his spell book (say, *invisibility* and *wizard lock*) and stores them in his mind. This is referred to as a *fixed magick*; once chosen, these spells cannot be changed until the wizard casts them and then studies his spell books again.

Some of the systems of magic described later in this chapter allow a wizard to designate *free magicks.* A free magick is one which the wizard does not place a specific spell into. By keeping the magick open, the wizard can use it to cast any spell of the appropriate level that he has in his spell books. For example, a 3rd-level specialist wizard might spend his spell points to acquire one fixed 2nd-level magick within his specialization (*invisibility,* for instance) and one free 2nd-level magick (see Table 18: Spell Cost by Level (Wizard) for spell costs). With the free magick, the wizard can cast any 2nd-level spell in his book when he needs it. If the wizard found himself in a situation where he needed to probe someone's thoughts, he could use *ESP*; if he needed to aid a friend involved in a fight, he could use *strength*; or, if he needed to distract some pursuers, he could use *improved phantasmal force*. As long as the spell is known to the wizard and recorded in his spell books, it's available through a free magick.

Obviously, this is a huge advantage for a wizard. Instead of guessing about which of his spells may be useful in a particular adventure, the wizard can have *all* of his spells of that level accessible. However, free magicks are less efficient than fixed magicks and cost more spell points to fill. Once the free magick has been used to cast a spell, it is wiped from the wizard's memory, just like a fixed magick.

*Argyth, a 6th-level mage, has a total of 55 spell points with which to purchase his spell selection. He expects heavy combat against tough opponents in the coming adventure. For 10 points apiece, he chooses three fixed 3rd-level spells—fireball,* lightning bolt, *and* haste. *Since he doesn't know which of his 2nd-level spells may be most useful, he spends 12 more points to acquire a single free 2nd-level magick, which can be used to cast any of his 2nd-level spells. He has 13 points left over and decides to memorize two* magic missiles, one protection from evil, *and one free magick* cantrip. *Argyth has spent his 55 points. He has one less 1st-level and 2nd-level spell than he*

*would using Table 21 from the* PHB*, but he has an extra 3rd-level spell and the ability to call upon any 2nd-level spell and cantrip he knows once each.*

*Tierwen is a 3rd-level invoker. She has 15 points available for general selections, plus 10 more points for spells of the school of invocation and evocation. She decides to select web and magic missile for her bonus spells, using up all 10 spell points. For her normal allocation, she chooses* jump, light, *and* stinking cloud*, totalling 14 spell points. She has 1 point left over and has purchased exactly what a 3rd-level invoker would normally receive—three 1st-level spells and two 2nd-level spells.*

**Table 17:**
Wizard Spell Point Progression

| Wizard Level | Max. Spells Max. Spell Level | Memorized at Each Level[1] | Spell Points[2] |
|---|---|---|---|
| 1 | 1st | 2 (3) | 4 (+4) |
| 2 | 1st | 2 (3) | 8 (+4) |
| 3 | 2nd | 3 (4) | 15 (+10) |
| 4 | 2nd | 4 (5) | 25 (+10) |
| 5 | 3rd | 4 (6) | 40 (+20) |
| 6 | 3rd | 4 (6) | 55 (+20) |
| 7 | 4th | 5 (6) | 70 (+35) |
| 8 | 4th | 5 (6) | 95 (+35) |
| 9 | 5th | 5 (6) | 120 (+60) |
| 10 | 5th | 5 (6) | 150 (+60) |
| 11 | 5th | 5 (7) | 200 (+60) |
| 12 | 6th | 5 (7) | 250 (+90) |
| 13 | 6th | 6 (7) | 300 (+90) |
| 14 | 7th | 6 (7) | 350 (+130) |
| 15 | 7th | 6 (8) | 400 (+130) |
| 16 | 8th | 6 (8) | 475 (+180) |
| 17 | 8th | 6 (8) | 550 (+180) |
| 18 | 9th | 6 (8) | 625 (+240) |
| 19 | 9th | 7 (9) | 700 (+240) |
| 20 | 9th | 7 (9) | 800 (+240) |
| 21+ | 9th | 8 (9) | +100 (0) per level |

[1] Number in parentheses applies to specialist wizards.
[2] Number in parentheses represents amount of bonus points specialist wizards can add to the base spell points.

**Table 18:**

## Spell Cost by Level (Wizard)

| Spell Level | Fixed Magick | Free Magick |
|---|---|---|
| cantrip | — | 1 |
| 1st | 4 | 8 |
| 2nd | 6 | 12 |
| 3rd | 10 | 20 |
| 4th | 15 | 30 |
| 5th | 22 | 44 |
| 6th | 30 | 60 |
| 7th | 40 | 80 |
| 8th | 50 | 100 |
| 9th | 60 | 120 |

## Cantrips

The *cantrip* spell from the *Player's Handbook* is intended to describe a host of minor magical effects. In this system, a wizard may choose to memorize a *cantrip* as a 1st-level spell—just as it's described in the *PHB*—or he can memorize individual applications of *cantrip* for a cost of 1 spell point each. These one-shot cantrips have the exact same effect as the 1st-level spell, but each application consumes 1 SP and has a duration of one full turn.

All *cantrips* are free magicks by definition; the wizard can perform any minor magical feat appropriate for the spell, without selecting the precise incantation ahead of time. A wizard is limited in the number of *cantrips* he can memorize at one time; he can't allocate more than twice his number of spells allowed for each level to *cantrips*. For example, a 1st-level mage is limited to no more than two spells of each level, so he can memorize a maximum of four *cantrips*. A 6th-level mage is limited to four spells of any given level, so he can memorize up to eight *cantrips*.

All normal considerations for cantrips as described in the *PHB* still apply—they are minor magic, useful in role-playing or grandstanding but generally useless in combat. Of course, clever and resourceful players can create plenty of mayhem, even with magic as weak as this.

## Exceeding the Spell Level Limit

If the DM agrees, a wizard character may learn and cast spells of a higher level than he would normally be allowed to know. This blurs the line of spell level distinctions, making the character's exact level somewhat less important; there will be spells a character can learn and use easily, as well as spells that will be extremely costly and difficult for the character to use.

Before a character can memorize a spell that's over his head, he has to learn it first. This means that the character must find, purchase, or otherwise stumble across a spell of the level in question and attempt a learn spells check to see if he can master it. However, when a character is dabbling in matters beyond his depth, his learn spells chance of success is *halved* for a spell one level higher than he should be able to use, and

divided by *10* for a spell two levels higher than the maximum normally allowed. If a character does not succeed in learning the spell at this point, then he can try again at the level that he normally gains the spell. Under no circumstances can a character learn a spell three levels higher than his normal maximum—it's just too difficult, and he'll have to study his art for a while longer before he can make heads or tails of it. Also, because the spell is so difficult to learn, the wizard must memorize it as a fixed magick.

If the character succeeds in learning the high-level spell, he can then select it normally by using his spell points to memorize it. However, since the spell is extraordinarily difficult for the character, he must pay *twice* the listed normal fixed magick cost to memorize it. For many low-level characters, this will make the spell prohibitively expensive in any event; a 2nd-level specialist wizard only has a total of 12 spell points available, so he could just barely memorize a single 2nd-level spell of his specialty school. Note that a 2nd-level mage just doesn't have the points available to even try this feat.

Wizards of medium to high level have a better chance to use a spell that would normally be out of reach for them. For example, a 6th-level wizard normally is limited to 3rd-level spells, but with effort he can learn a 4th-level spell and cast it for 30 spell points, which is twice the normal cost of 15 spell points. Since a 6th-level mage has 55 spell points available, he actually has a few points left over to select other spells—although it's a very costly privilege!

Again, this is an optional rule, and the DM can decide to ignore it for his campaign. Note that all level-based characteristics of a spell depend on the caster's true level, so even if a 3rd-level wizard somehow acquired a *fireball*, it would only do 3d6 damage. (And he wouldn't have the points available to memorize it, anyway.)

## Casting Spells For Greater Effect

Another variant rule available with the spell point system is casting spells for greater than normal effect. By "overcharging" a memorized spell (fixed magick only) with magical energy, a wizard can achieve results as if he were a wizard of much higher level. For example, a 2nd-level wizard is normally limited to a single *magic missile* when he casts the spell, but with this optional rule he can fire the spell as a 3rd-level character in order to create two missiles with the spell. Naturally, the wizard must devote additional spell points to the spell when he memorizes it. The price is 50% of the spell's base cost for each additional casting level stored with the spell.

*Rarik is a 4th-level mage who wants to gain the extra damage potential of a third* magic missile *when he casts the spell. Normally, a third missile is gained at 5th level, so Rarik wants to cast the spell as if he were one level higher. A 1st-level spell requires 4 spell points to memorize, but by spending 6 points (50% more than 4), Rarik gains the ability to cast this one spell as if he were actually 5th level. All level-based variables are affected, including range, area of effect, duration, saving throw modifiers, and any other appropriate factors, so Rarik incidentally gains an additional 10 yards of range with his investment.*

*Later on in his career, Rarik decides that he'd like a* fireball *with some extra punch. He's a 5th-level mage now, and the spell costs him 10 spell points. Rarik spends two 50% increments (a grand total of 20 spell points) to cast this fireball as if he were a*

*7th-level caster. The range increases from 60 to 80 yards, and the damage is 7d6 instead of 5d6.*

A character can't invest more than four additional levels into a spell, which would triple its cost, increasing it by 200% above the normal price. Most wizards find that it's more efficient to gain extra spells rather than overcharge a single one, but for spells with important breaks in power level based on the caster's level—like *magic missile*—one or two steps of increased casting level may be a good idea.

## Reducing Spell Cost

Just as wizards can allocate extra energy to hold magicks free, cast spells of higher level than normal, or gain additional levels of casting ability, they may also save spell points by memorizing fixed magicks with limitations or reduced power levels. A spell may be reduced in cost by 25% (round up) per limitation selected, to a maximum reduction of 50% for two limitations. Restrictions include the following:

**Reduced Spell Power:** By investing a spell with less energy than normal, a wizard can save a few spell points. This reduces the caster's level by four, affecting range, duration, damage, and all other level-based variables. In addition, the spell can be more easily *dispelled*, since the effective casting level is used for this purpose.

If the spell has *no* level-based variables (e.g., *charm person*) this limitation cannot be selected. A wizard must be at least 5th level in order to take this limitation.

**Prolonged Casting Time:** The wizard can store less energy than normal in the spell, hoping to draw energy from his immediate environment when the time comes to cast it. This results in a lengthy period of gathering energy before actually releasing the spell. Spells with a casting time of less than one round require a preparation time of a number of rounds equal to the spell's listed casting time, so a spell with a casting time of 3 would require three full rounds of uninterrupted concentration before the wizard could actually cast the spell. Spells with a casting time of one round require one full turn to cast, and spells with a casting time of more than one round can't be reduced in cost through this limitation.

**Special Casting Condition:** By narrowing the focus and application of a spell, a wizard can reduce the amount of energy and effort required to commit it to memory. For example, the wizard can memorize a spell that can only be cast by the light of the moon or only affects certain types of objects (such as a *shatter* on crystal only). If the spell is particularly restrictive, the DM may allow a 50% reduction in cost. For example, a spell that can only be cast while the wizard is standing in one specific place of power in the middle of nowhere might qualify. Naturally, the DM should keep a *very* close eye on spells with this limitation; if it's not really a limitation, the wizard shouldn't catch a break for it.

Instead of requiring certain conditions to be right for casting, the wizard might have to take special steps to ensure that the target can be affected. For example, his *charm person* spell might require the caster to know the target's name or spend a turn conversing with the subject. Or, a *magic missile* might have no effect unless the wizard has touched the subject with his bare hand that day. It's even possible that a wizard may have a spell that automatically fails against a target wearing a certain color or carrying a lucky charm.

A wizard shouldn't have more than one or two casting conditions that he normally observes. It's fine for a shadow mage to have a number of spells that can't be cast in daylight, but if he also has another spell that can't be used while it's raining, and a third that only affects orcs, the character concept is clearly being discarded in favor of game effect.

**Table 19:**
Bonus Spell Points for Intelligence

| Intelligence Score | Bonus Spell Points |
|---|---|
| 9–11 | 2 |

[1] Maximum bonus allowed.

## Bonus Spell Points for High Intelligence

Just as priests of extraordinary Wisdom receive greater than normal spell powers, extremely intelligent wizards can gain a few extra spell points to reflect their superior minds and memorization skills. Under this optional rule, wizard characters gain a number of bonus spell points equal to their maximum number of languages, based on their Intelligence score. These spell points can be spent any way the character desires, as long as he doesn't exceed his maximum number of spells per level (see Table 17). The bonus points are shown on Table 19: Bonus Spell Points for Intelligence.

As noted on the table, a wizard with an Intelligence of 14 or better gains enough bonus points to memorize one additional 1st-level spell, which is comparable with the traditional priest bonus of an additional 1st-level spell for a Wisdom of 13 or better. A wizard with an Intelligence of 17 has enough points to use this bonus to gain an extra 2nd-level spell, or one extra 1st-level spell with a couple of spell points to spare.

DMs, take note: The cumulative effects of specialist wizard bonuses, signature spells, and this optional rule could allow a 1st-level wizard to begin play with as many as four 1st-level spells memorized at once! Obviously, this is a very significant boost in power for a low-level character. Allowing a character to gain bonus spell points for his Intelligence score is a reasonable optional rule, but it also inflates the game by drastically increasing the power of 1st- to 3rd-level wizards. It's a good idea to strictly enforce the limits on the maximum number of spells of each level (see Table 17) permitted to a wizard character.

## Recovering Spell Points

Since spell points in this basic system represent the total memorization ability of a wizard character, they are recovered or regained just like spell capability in the standard AD&D magic system. In other words, if a character spends 10 spell points to memorize a 3rd-level spell, those points are "tied up" by holding the spell ready in the character's memory and can't be used to memorize another spell until expended. Spell points used to memorize free magicks are also tied up in the same fashion.

Once a character has cast a spell, the spell points used to hold that magick in memory are *gone*. The wizard must get a good night's sleep and re-study his spell book in order to regain spell points expended through casting spells.

## Systems of Magic

The spell point rules described in the previous section basically duplicate the normal spell progression, casting, and recovery system of the AD&D game. Spell points provide more flexibility and some interesting options such as free magicks and the ability to cast spells of higher level, but the traditional trappings of magic remain the same—spells are learned through long, tedious study and forgotten once they are cast.

In this section, we'll take a look at several variant magic systems that use the spell point mechanics to create entirely different methods of using arcane powers. For example, many books in fantasy literature assume that channelling magical power through a character's mind and body is a dangerous and exhausting exercise; a character can cast spells as long as his stamina holds out. With these optional systems, a magic system that mirrors this traditional approach can be integrated into an AD&D campaign.

**Table 20:**

### Spell Point Recovery for Channellers

| **Physical Activity** | **Spell Recovered** |
|---|---|
| Hard exertion | none |
| Walking, riding | 2 per hour, or 2% of normal maximum |
| Sitting, resting | 4 per hour, or 5% of normal maximum |
| Sleeping | 8 per hour, or 10% of normal maximum |

## Channellers

Imagine wizards who do *not* forget spells as they are cast, but instead freely use any spell in their repertoire whenever they wish. Wizards in this system of magic are born with some special spark or gift that allows them to reach some hidden source or supply of magical energy and use this to power their enchantments and spells. A young apprentice knows only one or two ways to harness this energy into useful applications and has a very limited capacity for tapping and shaping magical energy, while a great archmage knows dozens upon dozens of spells and has a nearly unlimited capability for wielding magical energy.

While this may seem like a world where the wizards reign unchecked, there's an important catch: Reaching for and directing magical energy is a dangerous and taxing exercise, at least as difficult as heavy labor or prolonged exertion, and each spell a wizard casts leaves him weakened and vulnerable. In fact, wizards can exhaust their very lives by casting a spell that's too much for them to handle or by casting too many smaller spells in succession.

Channelling or summoning magical energy is a very common system of magic in fantasy literature. Here's how it works in the Player's Option rules: Basically, the wizard gains spell points as described in the beginning of this chapter, allocates them to fixed magicks or free magicks just as he wishes, and selects the particular spells he wants to have locked into memory as fixed magicks. (Since the wizard takes the time to impress these spells in his mind, it's easier for him to energize them with channelled magic, and thus the spell point cost is lower than free magicks.) The following optional systems from the previous section are used:

Free magicks may be used to provide the wizard with access to any spell in his repertoire, although they're still more expensive than fixed magicks.

The wizard may exceed his normal spell level limit using the optional rules described previously.

The wizard may decide to cast spells for greater effect by simply spending more spell points when he actually casts the spell.

The wizard can save spell points by choosing to cast spells with a prolonged casting time or at reduced power.

Lastly, the wizard modifies his spell point total based on his Wisdom and Constitution scores; he may not gain bonus spell points for his Intelligence. The character's hit point adjustment for Constitution and his magical attack adjustment for Wisdom are added to or subtracted from his spell point total. If this lowers a 1st-level character to less than 4 spell points, he ignores the adjustments; all wizards have at least 4 spell points.

While the character may have some spell points "allocated" or "tied up" in various fixed and free magicks, this actually makes no difference for a channeller. The initial selection of spells is simply used to create a slate of spell powers that the character can access and to define the cost in spell points for making use of these powers. The character may cast any spell that he has available through either a fixed or free magick, except that the magick does not vanish from his memory once he's cast the spell. Instead, the character deducts the number of spell points required to energize the spell from his spell point total. For example, if a mage with 40 spell points has a magic missile memorized, he can cast that magic missile four times if he wants to!

**Channellers and Studying Spells:** Since spells never vanish from a channeller's memory, the character does not normally re-memorize spells during the course of an adventure. However, channellers have no particular obstacles to learning new spells or replacing the spells held as fixed or free magicks in their memory. The character must be well-rested and have access to his spell books. It takes 10 minutes per spell level for the character to memorize a new spell. In effect, he "overwrites" whichever spells he wishes to in order to change the allocation of spell points into free and fixed magicks.

*Kerian, a 5th-level channelling invoker, wishes to change the spells he has memorized. Because of his Constitution bonus, he has 61 points to assign to various magicks. After resting, he decides to memorize one fixed (*shield*) and one free 1st-level magick (12 SPs), two fixed magicks (*web *and* invisibility *for 12 SPs), and one prolonged casting time 3rd-level magick (*fireball *for 7 SPs), and one 4th-level magick that exceeds his level (*ice storm *at 30 SPs). After memorizing the spells, which takes 1 hour and 10 minutes, Kerian is ready to adventure!*

If a character wishes to change just one spell in his current repertoire, he still has to rest and memorize it. For example, if a mage wished to change his *magic missile* spell to a *shield* spell, then he would have to sleep for eight hours and spend 10 minutes committing it to memory.

Since spell points in this system represent magic potential or stamina (for lack of better words), expended spell points are naturally recovered as the character's fatigue fades and his strength returns. Just as a human who runs a wind sprint eventually recovers from his temporary exhaustion, a wizard who casts a spell will soon return to his full magical strength with a little rest. Spell points are recovered as shown on Table 20: Spell Point Recovery for Channellers.

Characters recover a number of spell points equal to the percentage listed, or the whole number, whichever is better. For example, a 6th-level mage has 55 spell points. If he sleeps, 10% of 55 would be 6 (round up 5.5) spell points per hour, so he recovers 8 per hour instead. In fact, it's more advantageous for any mage of 7th level or lower to take the listed number, and mages of 8th level or higher to work with percentages instead. For specialists, 7th-level is the break point.

In addition to the long-term prospects of exhausting his spell points, a channelling wizard finds that each spell he casts temporarily tires him. See Table 21: Spell Fatigue.

**Table 21:**

## Spell Fatigue

| **Wizard** | | **Fatigue Caused by Spell Level** | | | |
|---|---|---|---|---|---|
| **Lvl.** | **Light** | **Moderate** | **Heavy** | **Severe** | **Mortal** |
| 1–2 | — | cantrip | 1st | 2nd | 3rd or higher |
| 3–4 | cantrip | 1st | 2nd | 3rd | 4th or higher |
| 5–6 | cantrip | 1st, 2nd | 3rd | 4th | 5th or higher |
| 7–8 | 1st | 2nd, 3rd | 4th | 5th | 6th or higher |
| 9–11 | 2nd | 3rd, 4th | 5th | 6th | 7th or higher |
| 12–13 | 3rd | 4th, 5th | 6th | 7th | 8th or higher |
| 14–15 | 4th | 5th, 6th | 7th | 8th | 9th or higher |
| 16–17 | 5th | 6th, 7th | 8th | 9th | — |
| 18–19 | 5th | 6th, 7th | 8th,9th | — | — |
| 20–22 | 5th | 6th–8th | 9th | — | — |
| 23–25 | 6th | 7th–8th | 9th | — | — |

| | | | | | |
|---|---|---|---|---|---|
| 26+ | 6th | 7th–9th | — | — | — |

**Using the Fatigue Chart:** When a wizard casts a spell, find the row that matches the caster's level and then read across until you find the level of the spell. The column it appears in indicates the fatigue caused by the spell. For example, if an 8th-level wizard casts a *fireball*, begin on the row titled "Wizard Lvl. 7–8" and read across until you find the listing for 3rd-level spell. This spell causes *moderate* fatigue for the character. If the wizard casts a 4th-level spell, he would suffer heavy fatigue.

**Loss of Hit Points:** If a character has been reduced to 50% or less of his maximum unwounded hit point total, the fatigue rating of the spell increases by one. If a character has been reduced to 25% or less of his normal hit point total, the fatigue rating increases by two categories. For example, a 5th-level wizard who normally has 16 hit points has been wounded and only has 8 hit points left. When he casts his *fireball* spell, he becomes *severely* fatigued instead of *heavily* fatigued. If he had tried the same spell with only 4 hit points, he would have been *mortally* fatigued, which is not good.

**Loss of Spell Points:** In a similar manner, a character who has depleted his magical energy is more susceptible to fatigue, too. The same rules apply for reduced spell point totals. Always count the character's spell points *before* the spell is cast, so a 1st-level wizard casting his first spell of the day is beginning with 4 spell points (or more) and not zero! Again, a loss of 50% increases fatigue by one category, and a loss of 75% increases it by two. Specialist wizards add their two point totals together for comparing the points spent to the original total.

**Existing Fatigue:** If a fatigued character casts another spell, increase the fatigue category of the new spell by one level if he is moderately fatigued, two levels if he is heavily fatigued, or three levels if he is severely fatigued. The character then acquires the new fatigue level of the spell he just cast, or stays where he was, whichever is worse. For example, if the 8th-level wizard mentioned above was already moderately fatigued and he cast a 2nd- or 3rd-level spell, the new spell would be considered heavily fatiguing because of his existing condition, and the wizard would become heavily fatigued. However, if the wizard had cast a 1st-level spell, he would have remained moderately fatigued.

Note that fatigue can accumulate from other sources than casting spells. In the *Player's Option: Combat & Tactics* book, there is a fatigue system based on rounds of combat. If this is in play, a wizard who fights for three or four rounds and then attempts to cast a spell may be in deep trouble. Characters who are *fatigued* under that system are considered moderately fatigued here, and *exhausted* characters are heavily fatigued.

**Effects of Fatigue:** Naturally, fatigued characters face some significant disadvantages, as shown below:

**Lightly fatigued** characters have no combat penalties, but they risk becoming more exhausted. Their movement rate is reduced to three-quarters normal, so most human and demihuman wizards will be reduced from a 12 to a 9. A lightly fatigued character might suffer from a slight headache or just feel tired.

**Moderately fatigued** characters suffer a –1 penalty to attack rolls and have their

movement rates halved. Characters at this level of fatigue might have a persistent headache, slightly hazy vision, and pervasive muscle aches in random areas.

**Heavily fatigued** characters suffer an attack penalty of –2, and an Armor Class penalty of +1. Their movement is reduced to one-quarter normal. Not only does the character feel exhausted, but he also suffers from a splitting headache, aches all over and could suffer from nose bleeds, etc.

**Severely fatigued** characters suffer a –4 penalty to all attacks and a +3 penalty to their Armor Class. Their movement rate is reduced to 1. It is almost impossible for the character to stand up at this point (make a Dexterity/Balance check if the character moves). Of course, he can still concentrate enough to cast spells, but just barely. Other problems might be the inability to visually focus on anything for more than a second, extreme ringing in the ears, or whatever seems appropriate to the DM.

**Mortally fatigued** characters are incapable of attacking or effectively defending themselves and collapse into a trembling heap immediately. The character must attempt a saving throw vs. paralyzation; if he fails, the strain proves too much and he perishes. If he passes, he remains unconscious for 1d6 hours before awaking severely fatigued. Obviously, a channeller should be extremely careful when he begins to feel tired—he can cause his own death if he overdoes it.

*Now that Kerian is armed with spells, he decides it's time to head on out. As he is traveling through a lightly forested area, he finds himself facing down several large spiders. Thinking quickly, he casts his* invisibility *spell. As a result, he loses 6 spell points and becomes moderately fatigued. In an attempt to get into a better defensive position, Kerian also realizes that he is too weak to even think about trying to run away. He manages to stumble against a jutting boulder. In the meantime, the spiders are having trouble finding the invisible invoker. Kerian takes this opportunity to prepare his prolonged casting time version of* fireball. *After three rounds of gathering energy, Kerian blasts the wicked group of spiders. Not only does he spend 7 spell points, but now he is severely fatigued. Gasping for breath and sweating profusely, he watches the burnt remains of the spiders. Without warning, another large spider bites Kerian. Now he is faced with a quandary. If he casts even a 1st-level spell, he could perish. But then, if he doesn't, he will most certainly die. Kerian manages to cast a final* magic missile *(the free 1st-level magick that had cost 8 SPs) at the remaining spider before lapsing into unconsciousness.*

**Recovering from Fatigue:** Of course, wizards don't stay exhausted forever. Just as their spell points will eventually replenish themselves, their physical capacities will also return. In order for a wizard to "lose" one step of fatigue, he must make a successful saving throw vs. paralyzation.

*Lightly* or *moderately fatigued* characters can attempt a saving throw for each round of resting.

*Heavily fatigued* spellcasters can attempt a saving throw for each turn of resting.

*Severely fatigued* wizards can attempt a saving throw for each full hour of resting.

Each extra round, turn, or hour (as appropriate) spent resting gives the character a cumulative +1 bonus on his saving throw, so a heavily fatigued wizard who rests three turns attempts three saving throws—the first with no modifier, the second with a +1

bonus, the third with a +2 bonus, and so on.

*After four hours, Kerian regains consciousness and sits up. He is severely fatigued but managed to accrue 8 spell points for each hour that he was unconscious, which brings him up to his full amount. Since there doesn't seem to be any immediate danger, he decides to stay where he is for an hour. At the end of the hour, Kerian succeeds at a saving throw vs. paralyzation. Although he is now only heavily fatigued, he still doesn't feel like moving around (his aching body is making him feel slightly nauseous). After two turns and three rounds, Kerian succeeds at two more saving throws. He stands up and resumes his path.*

## Warlocks and Witches

In a great amount of literature and folklore, magical abilities are considered supernatural; they're not normally attainable by most humans, but instead represent gifts or lore granted by dangerous powers. Wizards who subscribe to these beliefs do not learn spells from study and research; instead, they constantly seek to make contact with more knowledgeable (and therefore perilous) entities of extraplanar origin. The best of these creatures can be considered chaotic or neutral, while the worst are creatures of such malice and power that the wizard risks his body, mind, and spirit when merely contacting these entities.

Wizards who rely on these patrons for magical power are known as warlocks or witches. Imps and familiars teach them their first spells as novices, and as they grow in power they seek more and more powerful tutors. Magic comes easily to these characters, a supernatural boon that allows them access to all the normal spell powers of a standard wizard. There is a grave risk involved with contacting these extraplanar powers: the risk of losing one's spirit to the powers that grant the wizard his spells. Magic itself is seen to be wrong for mankind, an abomination of nature, and people believe that wizards who dabble in such things will eventually be consumed by the hungry powers they bargain with for power.

Warlocks use the spell point system as described earlier in this chapter, with the following notes:

Free magicks may be used to provide the wizard with access to any spell in his repertoire, although they're still more expensive than fixed magicks.

The wizard may exceed his normal spell level limit using the optional rules described previously.

The wizard may decide to cast spells for greater effect by simply spending more spell points when he actually casts the spell.

The wizard can save spell points by choosing to cast spells with a prolonged casting time, reduced power, or spells with a special casting condition.

Warlocks and witches gain bonus spell points for high Intelligence scores.

In this system of magic, a wizard uses his normal allocation of spell points to select his arsenal of spells. Like the channeller, the character doesn't actually *spend* his spell points until he actually casts a spell, and his battery of spells remains in his memory without vanishing. In other words, the warlock may make use of any of his memorized

spells freely until he runs out of spell points. However, please note that the warlock may never cast more than nine spells of any one level in the course of a single day.

However, all warlocks and witches have a serious limitation: Each time they spend spell points to cast a spell, they risk attracting the attention of a chaotic or evil power. The character has a percentage chance equal to the number of spell points expended, minus his character level, of being forced to take a step into the pact of service with the malevolent power. For example, a 7th-level wizard casting a 4th-level spell (15 SPs) has an 8% chance of drawing too much of his patron's power and being required either to add to the debt of service that he owes his masters or start on the path of servitude to another dark master. There's always at least a 1% chance of this happening, regardless of the character's level.

The first few steps of service are easy for the character, and not too great a burden. In fact, when the character begins play as a 1st-level initiate, there are no particular game or role-playing effects of his allegiance to these powers, although some societies may shun or persecute anyone who publicly admits to trafficking with supernatural powers. Increasing levels of servitude to the warlock's patron may have the effects shown below; the DM is encouraged to be creative and malevolent. Note that these stages of commitment parallel the Dark Powers checks of the Ravenloft® campaign setting.

**Stage One, Enticement:** The character's patron grants him a gift of some kind, but one that comes with a price. He gains a minor unnatural feature or trait that gives him both an advantage and a disadvantage. These could be red-glowing eyes that permit him to see 30 feet in the dark; small horns, fangs, or talons that can be used to inflict 1d4 points of damage in hand-to-hand combat; the ability to *hide in shadows* as a thief of equal level; acute hearing or sense of smell, giving the character a +1 bonus to surprise checks; or the ability to *speak with dead, speak with animals*, or use some other 1st- or 2nd-level spell as a granted power once per day. In return, the character acquires a visible mark, feature, or characteristic that marks him as one who deals with forbidden powers: his footprints are backwards, his voice is unnaturally raspy and sepulchral, his face shows some concealable mark of his allegiance, or whatever else the DM decides is appropriate. The general effect causes a –1 to –2 reduction to Charisma.

**Stage Two, Invitation:** The warlock's patron powers grant the character enhanced abilities of some kind, but the strengthening of their bond also brings periods of weakness or vulnerability on the character. The enhanced abilities could be a +1 to +2 bonus to any ability score, a bonus of +5 to +10 hit points, or superhuman stamina that allows the character to ignore minor fatigue or the need to sleep for more than four hours. In return, the character must suffer through periods of weakness when his patron is distant or inaccessible. For example, the character may have the spell point costs of his spells doubled during daylight, moonlight, in temples or sacred ground, or on ships or boats. The more powerful the advantage, the more universal the character's disadvantage. In addition to his lapse in magical power, the character may also suffer a halved Constitution, Strength, or Dexterity score for as long as the condition persists.

**Stage Three, Touch of Darkness:** The warlock's hitherto concealable features or subtle traits become so widespread or deformed that there is no chance of concealing what he is without magical aid. For example, he may sprout great bat-shaped wings that permit him to fly with a movement of 15 (C), his body may develop satyr-like hoofed

goat legs that permit a movement of 18, small horns may lengthen into dagger-sized weapons capable of inflicting 1d6 damage each, his skin may become scaly or leathery for a natural AC of 6, he may sprout a spiked tail that permits him to attack for 1d6 damage, or his blazing eyes may *cause fear* in anyone who meets his gaze. Unfortunately, these sinister developments usually prevent the warlock from associating in normal human society for the rest of his life, with a loss of 3 to 6 points of Charisma. In addition, the character acquires some ghastly habit or dependency that marks him as a creature of darkness. For example, the warlock may have to drink blood once per day, eat raw meat or dirt, or sleep only in graveyards. The character's alignment changes one step towards evil or chaos to match that of his patron, incurring the normal penalties for a change of alignment.

**Stage Four, Embrace:** The warlock gains some supernatural immunity or resistance, but also acquires a supernatural vulnerability. For example, he may gain the ability to only be struck by magical weapons, as well as immunity to *sleep* and *charm* spells, resistance to spells of a certain school, immunity to poison, the ability to assume *gaseous form* (much like a vampire) or some other powerful attribute. The price he pays is a vulnerability such as susceptibility to holy water and turning attempts by priests, the inability to stand contact with common materials such as cold iron or garlic, or the inability to set foot on sacred ground. (Take a look at the customized limitations in Chapter 1 for more ideas.) This weakness can be deadly if used against the character by enemies who discover its existence.

The character's alignment changes one additional step towards that of his patron, possibly incurring penalties for the change. In addition, there is a 1% cumulative chance per day that the character's patron *compels* him to undertake some service or observe some rite. The character is controlled by the DM for 1d6 days before he regains full command of his faculties.

**Stage Five, Creature of Darkness:** Eventually, the warlock's pact with darkness overcomes whatever vestiges of humanity remain in his heart, and he becomes a slave to the powers that raised him. At this point, the warlock is no longer viable as a player character and passes permanently into the DM's hands as an NPC. Powerful new abilities manifest, such as magic resistance, additional increases of ability scores, and powers associated with undead monsters or fiends of various sorts.

**Resisting the Descent:** Fortunately for player characters, warlocks can attempt to resist the encroaching evil by fighting off the descent into darkness by sheer force of will. However, this is not easy. When the character's use of spell points creates the possibility for a descent to a new level of servitude, the warlock can acquiesce and accept the new stage, or he can fight to retain his independence. This requires a saving throw vs. breath weapon, with a penalty equal to the level the character is threatened by—a warlock at Stage Three who is in peril of falling to Stage Four makes his saving throw with a –4 penalty. The psychic turmoil of this conflict completely occupies the character's attention for 1d3 days, during which he cannot cast spells and fights with a –3 penalty to his attack rolls.

**Warlocks and Recovering Spell Points:** Witches and warlocks don't automatically recover spell points with the passage of time. For these spellcasters, spell points represent an ever-dwindling store of magical strength that can only be recharged with significant risk. Once the character's spell points have been expended, he must

perform a special ceremony or rite to summon his extraplanar sponsors and negotiate with them for additional spell power. This requires at least eight hours per character level, which means that a high-level wizard may require several days in order to renew his spell powers.

This ceremony restores the wizard to his full allocation of spell points; at no time can the wizard have more spell points than the maximum permitted for his level, specialization, and Intelligence bonus. When the character advances in level, he gains the full allotment of spell points for his new level without resorting to the ceremony.

**Studying Spells:** Like channellers, warlocks can change their allotment of spells and free and fixed magicks by resting and sitting down with their spell books.

**The Warlock Campaign:** If this variant magic system is used in play, wizards are generally detested by the rest of the world. Invariably, they turn towards evil as the beckoning power of darkness lures them into its embrace. Playing a heroic wizard in such a setting will be extremely difficult; by the time most wizards reach 5th or 6th level, they'll be well on their way to becoming menaces to the lives and sanity of all around them. A good-aligned witch or warlock would be extremely scarce, since the basic premise of this entire system of magic is that the end justifies the means—a difficult concept to reconcile with the precepts of good. These rare wizards must carefully ration their spells, using their magical powers only in the direst situations, or they'll soon find that they've set foot to a road from which they cannot turn back.

## Defilers and Preservers

All forms of life contain a spark of magical energy, sharing a mystical life force that a wizard can use to power his spells. In order to cast a spell, the wizard slowly and carefully gathers this power of life until he has accumulated enough energy to create the enchantment he desires. Wizards who cast their spells in this manner are known as either defilers or preservers, depending on whether they destroy the vegetation from which they draw their magical power or work carefully so that the vegetation may live. Most wizards can only draw energy from plant life, but at the very highest levels, defilers and preservers can actually draw away the life force of animals as well.

Wizards who rely on the energy of life in order to cast their spells are a fairly common archetype in fantasy literature, but the model you may be most familiar with is the Dark Sun campaign setting. While defilers and preservers may seem to be inextricably tied to the world of Athas, there's no reason the DM couldn't introduce this system of magic into any campaign. Defilers and preservers use the spell point system as described at the beginning of this chapter with the following options:

The wizard can exceed his normal spell level limit by using the optional rules described previously.

The wizard may decide to cast spells for greater effect by accumulating extra spell points before actually casting the spell.

The wizard can save on spell points by choosing to cast spells with reduced power.

The defiler or preserver uses his allocation of spell points to select his array of spells normally. However, *none of these spells may be cast until the wizard gathers*

*enough energy to do so*. To gather energy, the wizard concentrates on drawing the life force that surrounds him into his body, draining it away from the nearby vegetation. If the wizard chooses to defile his surroundings, the vegetation is destroyed by this process, but a careful wizard can draw only enough energy to cast his spell, leaving the vegetation around him alive and intact.

A preserver can accumulate spell energy at the rate of 4 spell points plus 1 spell point per level each round; for example, a 4th-level preserver can accumulate 8 spell points in one round of absorbing energy. If the preserver can gather the required number of spell points in a single round, he may cast his spell in the same round, but otherwise he may be forced to extend his casting time by one or two full rounds in order to collect the required energy. A preserver can't "hold" the energy; he can only collect life energy as part of casting a spell.

Since accumulating energy takes time, the character may suffer penalties to his initiative depending on how many spell points he draws in a single round, as shown on the Table 22: Initiative Modifiers for Preservers and Defilers. Accumulating energy requires the character's full attention, so he cannot engage in melee or move at more than a fast walk while doing so. However, drawing energy is not actually part of the spellcasting process and is not interrupted by suffering damage, failing saving throws, or other such things as long as the character remains conscious and free of movement.

The initiative modifier is based on the number of spell points accumulated *in the round in which the spell is cast*. In other words, a character may be wise to draw the minimum number of points necessary to avoid a hefty initiative penalty for "overcharging" himself for the spell.

**Table 22:**
Initiative Modifiers for Preservers and Defilers

| **Spell Points Accumulated** | **Initiative Modifier** |
|---|---|
| 3 or less | –1 bonus |
| 4 to 6 | none |
| 7 to 14 | +1 penalty |
| 15 to 29 | +3 penalty |
| 30 to 39 | +5 penalty |
| 40 to 49 | +7 penalty |
| 50 or more | +9 penalty |

*Dynos, a 5th-level preserver, is casting a* haste *spell. He can accumulate as many as 9 SPs per round (4+5), but his spell requires 10 SPs to cast. Dynos spends one entire round gathering energy and must gather at least 1 more spell point in the following round in order to cast his haste spell. If he draws his full allotment of 9 more SPs, he suffers a +1 penalty to his initiative. On the bright side, if he only draws the one point in the second round, his haste spell will gain an initiative bonus to its casting time.*

*Rowan, an 11th-level preserver, normally gathers 4+11, or 15 spell points per round. In order to cast her cone of cold (a 5th-level spell), she must gather 15 spell points in one round, plus an additional 7 in the following round, which causes her to take a +1 penalty to her casting time in the second round. However, Rowan is capable of casting any spell of 4th level or less in a single round.*

Instead of drawing just enough energy to cast the spell desired, a preserver or defiler can choose to continue to accumulate energy in order to increase the effective casting level of the spell, as described in the first part of this chapter. Each additional casting level requires an investment of 50% more spell points, so Dynos could cast his *haste* as a 6th-level wizard by spending 15 SPs instead of 10 SPs to cast it. Similarly, a character may draw less energy and cast a reduced-power version of the spell. In any event, the initiative modifier is always based on the number of points accumulated in the round in which the spell is finally cast. Rowan could decide to cast her *cone of cold* with one extra level of ability, but she now requires 33 SPs to do so and must gather energy for two full rounds before unleashing the spell in the third.

The great advantage of the defiler lies in the speed with which he can gather energy, since he doesn't care whether the life around him survives or not. Defilers accumulate 4 spell points plus 2 spell points per level in one round of gathering energy. For example, a 4th-level defiler can amass 12 spell points per round, instead of the maximum of 8 allowed a preserver of the same level. Unfortunately, the act of defiling destroys an area of 1 foot in radius per spell point acquired in this fashion, so the defiler above would raze a circular area 12 feet in radius in one round of defiling.

Once a preserver or defiler casts a spell, it is wiped from their memory just like a normal wizard's spell. Preservers and defilers can re-study their spells or change their spell selections as if they were standard mages.

**The Pain of Defiling:** On the surface, it may seem that there's no reason to be a preserver when defiling offers such easy access to power. However, there's a price to be paid. The wanton destruction of life for personal power is not a good act; defilers can't be good in alignment. In fact, most defilers tend to have evil tendencies, if not an evil alignment. Secondly, the land destroyed by a defiler remains useless for hundreds of years; the ground may as well have been salted or poisoned by the character. Of course, if the general populace of an area were to find out that a character is a defiler, that character would most likely be hunted down. Destroying the land is considered an evil act by most people—especially the people who have to work with it.

In addition to destroying mundane vegetation, defiling inflicts 1d3 points of damage per spell level (a successful saving throw vs. spell allows half damage) to any plant-based monsters or creatures caught in the radius of destruction. And while animals (including humans and demihumans) don't suffer damage from the energy drain of most defilers, it is a painful and unnerving experience that forces those characters caught in its grip to suffer a +1 penalty to initiative per spell level; a 5th-level defiler casting a *fireball* will cause those standing near him to take a +3 penalty on their next initiative roll.

High-level defilers (21st level or higher) may also gain the ability to drain life energy from animals as well as plants, increasing their power draw to 4 SPs plus 3 SPs per level. All living things caught in the defiler's radius of destruction (except the defiler himself) suffer 1d6 points of damage per spell level. Obviously, this is an act of

irredeemable evil, and it will make the defiler an enemy of all the forces that protect life and nature.

## Alienists or Summoners

Alienists deal with powers and entities from terrifyingly remote reaches of space and time; for them, magical power is nothing more than the triumph of the mind over the rude boundaries of dimension and distance. With knowledge and strength of will, the eons that lie between the stars themselves can be conquered, and unspeakable things from the endless black gulfs of space whisper terrifying secrets to the wizard who dares communicate with them. Each spell, formula, or enchantment represents a hidden truth in the structure of universe, a secret man was not meant to know, and the alienist plunges without fear into abysses of chaos and entropy that would blast a weaker man.

While the warlock deals with supernatural powers, his patrons are creatures with near-human intelligence and motivations. They may embody vice, malice, or corruption of the worst sort, but these are human faults. On the other hand, the alienist's allies are entities of cosmic evil older than time itself and thankfully ignorant (or uncaring) of the very existence of mankind.

A campaign that features this philosophy of magic is a dark and dangerous one indeed. The cosmology of an alienist campaign necessarily reduces human deities and powers to mere phantasms or petty children, who are themselves blissfully ignorant of the outer gulfs that surround humanity. If the DM decides that contact with alien powers is the source of magical ability in his campaign, player character wizards should be extremely scarce.

Alienists fall into three general categories: priests, intellectuals, and scholars. Since the alienist's patrons are powers in their own right, many cults or forgotten religions venerate these entities, and some alienists are priests or students of these vile societies. Intellectuals are characters who simply desire more and more knowledge, the chance to plumb the reaches of space and time with the power of their minds; all too often, these alienists blunder into a dimension or a being that is so inimical to human thought or perception that they return as raving lunatics. The last type of alienist, the scholar, is a character who approaches his work with the greatest caution. Often, the scholar's goal is to learn just enough to interfere with another alienist, and nothing more; he understands that there are things human eyes should never see, and carefully avoids them.

The alienist progresses as noted under the spell point system, with the following options in use:

The wizard may only choose fixed magicks.

The alienist may exceed his normal spell level limit, with the penalties described in the beginning of this chapter applied.

The alienist can choose to reduce the spell point cost of a spell by making use of a prolonged casting time or selecting a special casting condition.

The character gains bonus spell points for his Intelligence score, as described earlier in this chapter.

Alienists memorize spells normally by using their spell point allocation to choose how many spells of which level will be available. When selecting spells, an alienist can reduce the spell's cost by choosing a longer casting time or special casting condition. The alienist's spells are cast normally and vanish from memory after use, and he recovers spell points normally, so on the surface the alienist seems to be fairly close to a standard wizard—the flexibility of the spell point rules simply allows him to customize his arsenal of spells.

Unfortunately for the alienist, *learning* a spell in the first place is the problem. At 1st level, the alienist begins with 1d4+1 1st-level spells. Each spell he attempts to learn after this initial selection places his sanity at risk. (The chance of insanity varies with spell level; see Table 24: Risk of Insanity by Spell Level.) Although the secrets unveiled by the spell may drive the wizard mad, going insane doesn't prevent the wizard from learning the spell. In fact, the comprehension of a particular spell is far more unbalancing than attempting to learn a spell and failing, as reflected by the increased chance for insanity when a character *succeeds* in his roll.

Conducting spell research, investigating the formulae for potions or scrolls, or researching the ingredients or process for creating a magical item all create a chance for insanity. The level of the spell in question (or the nearest equivalent spell in the case of a potion, scroll, or magical item) is used for the insanity check.

If the wizard fails his insanity check, he must attempt a saving throw vs. death magic with a penalty of –2. If successful, the wizard is merely delirious or incoherent for 1d3 days as he tries to reconcile his notion of the cosmos with the awful truth revealed to him. During this time, the character cannot cast spells, and fights with a penalty of –1 to his attack rolls. If the wizard fails both the insanity check and the following saving throw, he must roll on Table 24: Random Insanity Chart.

**Table 23:**
Risk of Insanity by Spell Level

| Spell Level | Chance of Insanity[1] | Modifier to Random Insanity Chart Roll |
|---|---|---|
| 1st | 4% | none |
| 2nd | 6% | none |
| 3rd | 10% | +5% |
| 4th | 15% | +10% |
| 5th | 22% | +15% |
| 6th | 30% | +20% |
| 7th | 40% | +25% |
| 8th | 50% | +30% |
| 9th | 60%[2] | +40% |

[1] Increase the chance of insanity by one level if the wizard succeeds in his learn spells roll; for example, if a character learns a 3rd-level spell, his insanity chance is actually 15%. The modifier to the insanity chart is still based on the spell's actual level.

[2] Maximum chance of insanity

**Table 24:**
## Random Insanity Chart

| d100 Roll[1] | Result |
|---|---|
| 01–15 | Delirium |
| 16–20 | Disorientation |
| 21–24 | Attraction |
| 25–37 | Phobia |
| 38–40 | Paranoia |
| 41–46 | Alienation |
| 47–53 | Amnesia |
| 54–61 | Hallucinatory insanity |
| 62–64 | Melancholia |
| 65–69 | Dementia praecox |
| 70–74 | Monomania |
| 75–79 | Mania |
| 80–81 | Manic-depressive |
| 82–89 | Hebephrenia |
| 90–95 | Catatonia |
| 96–103 | Delusional insanity |
| 104–114 | Schizophrenia |
| 115–119 | Homicidal mania |
| 120–124 | Psychic translocation |
| 125+ | Pursuit |

[1] The spell level modifies this roll; see Table 23.

Many of these conditions are not true forms of madness, but instead represent plagues, curses, or afflictions that may trouble the character. High-level spells are much more dangerous than low-level spells for this purpose, since the most powerful spells grant the wizard insights into the blackest gulfs of cosmic horror. The following list detail effects of the various conditions:

**Delirium:** The character lapses into a state of delirium lasting for 3d4 days during which he wanders aimlessly and mumbles to himself or rants and raves. He does not recognize friends and is incapable of any rational action; he is easily frightened and flees most encounters. The character cannot cast spells, and if he is restrained or threatened by combat, he becomes catatonic for 1 to 6 hours. After the delirium passes, the character returns to normal.

**Disorientation:** The wizard's surroundings make no sense to him, and he is temporarily unable to recognize places, people, or even his own possessions. Unlike amnesia, the character retains command of his normal skills and abilities, although he fights with a –2 penalty to his attack rolls and has a 20% chance of miscasting spells.

However, he has a difficult time initiating or following through on actions; if told to stay put, he may wander off, or if his comrades flee from a monster, he might remain behind, unaware of his danger. The character has a 5% chance per day, cumulative, of recovering from his state.

**Attraction:** The character develops an unhealthy obsession with a particular place, thing, or type of item. This manifests as an uncontrollable desire to be close to the subject of the attraction. Good examples might be a particular star in the sky, a mountain, a special site, the sea, an artifact or item, and so on. This desire drives the character to drop everything he's doing and travel to the site (or in its direction, in the case of a celestial object). If the wizard's friends stop him, he'll become disoriented for 1d6 hours, and then bend all his efforts towards resuming his trek by whatever means are necessary. There is a cumulative 5% chance of recovery per day.

**Phobia:** Exposure to some terrifying stimulus leaves a lasting mark in the character's psyche and makes him mortally afraid of some condition or creature. A character confronted with the subject of his phobia automatically flees the scene with all possible speed for at least 1d3 full turns. If the character cannot escape the condition, he lapses into a catatonic state that lasts for 1d6 days. The DM can assign an appropriate phobia, or roll on Table 25: Phobias.

A character does not normally recover from a phobia, but certain spells or psionic effects may desensitize him to his fear or repair his mind.

**Table 25:**
Phobias

| d10 | Phobia |
|---|---|
| 1 | Acrophobia (heights) |
| 2 | Agoraphobia (open spaces) |
| 3 | Astraphobia (storms) |
| 4 | Claustrophobia (small spaces) |
| 5 | Demophobia (crowds) |
| 6 | Entomophobia (insects) |
| 7 | Monophobia (being alone) |
| 8 | Necrophobia (dead things) |
| 9 | Pyrophobia (fire) |
| 10 | Scotophobia (darkness) |

**Paranoia:** A wizard afflicted with this form of insanity becomes convinced that the agents of the Outer Powers are abroad in his world, his homeland, and even in his home town. They could be anywhere. At first, he is merely suspicious of strangers, but as the condition progresses, his suspicion spreads to those nearest him—his friends and family—and grows in strength, so that he begins taking precautions to guarantee his own safety. These precautions eventually include lethal attacks and plots against his former allies and friends.

The paranoid's condition only grows worse as time passes; without magical

healing or psychic surgery, he will not recover. Generally, a paranoid PC becomes a NPC under the DM's control after 1d6 months have passed, or whenever the DM feels that the player isn't role-playing his character effectively anymore.

**Alienation:** The character experiences an acute sense of dislocation or *wrongness* in his surroundings. He is certain that he belongs somewhere else, although he cannot say where that might be. While the paranoid experiences alienation towards people, an alienated character regards everything in his surroundings—people, places, and things—as unnatural and threatening. As the condition progresses, the character loses his ability to function in society and gradually sinks into dementia praecox or catatonia over the course of 1d6 months.

**Amnesia:** Unable to absorb the secrets revealed to him, the wizard instead purges his mind of anything that reminds him of the horrors he has explored. Only his language skills remain; everything else—his class skills, his proficiencies, knowledge of people and places—vanishes. He retains his hit point total and original saving throw values, but for all other purposes he is now a 1st-level character with no proficiencies. The amnesiac has a noncumulative 10% chance of recovery each month. During his amnesia, the character may actually begin his adventuring career all over again, possibly even changing class and alignment.

**Hallucinatory insanity:** The character's insights into the true nature of things leave him with the ability to perceive sights, sounds, or sensations from the awful, alien dimensions that parallel our own. To other characters, the wizard appears to be hearing things, seeing things, or experiencing things that don't exist. Unfortunately, these hallucinations have a very tangible reality for the character himself, and for any given action he undertakes—casting a spell, making an attack, even trying to walk across a room or study his spells—there is a 33% chance (2 in 6) that one of his hallucinations distracts him, preventing him from completing the action. Each month, there is a 10% chance that the character learns how to ignore these frightful apparitions and regains control of his perceptions.

**Melancholia:** The insignificance of humanity in the face of the Outer Powers is a terrifying concept, and a wizard afflicted with melancholia suffers endless fits of brooding and depression as this knowledge sinks into his mind. Each day, there is a 5% cumulative chance that the character experiences an acute episode that completely disables him for 1d3 days. The melancholic will have no volition to travel, fight, cast spells, or even look after his own survival, although his friends may be able to lead him along on a journey or keep him out of the way on an adventure. Melancholia persists until magically or psionically treated.

**Dementia praecox:** This condition is similar to melancholia, but consists of a hopelessness or loss of volition. The character just can't bring himself to care about what is going on around him, even ignoring direct attacks or immediate threats to his life. Each time the character attempts an action, such as undertaking a journey, participating in a fight, or casting a spell, there is a 50% chance (3 in 6) that his dementia overwhelms him and he instead does nothing. If the character loses his will to fight, he will not even defend himself, losing any Dexterity adjustments to AC and suffering other penalties as the DM deems appropriate. Dementia praecox persists until magically or psionically treated.

**Monomania:** The wizard becomes obsessed with a single goal and works

ceaselessly until his goal is achieved. Depending on the alienist's origin, it might be the summoning of one of the Outer Powers, the secret of the next spell level, or the destruction of a particular cult or occult tome. As long as the wizard can pursue his goal, he can undertake any actions that further his purpose, but if he is somehow blocked or prevented from acting, he is likely to lapse into catatonia or become manic. Note that the wizard's single-minded devotion to his cause is not healthy; he ignores sleep, goes without food, and otherwise neglects both himself and others. Monomania persists through 1d4 linked, long-term goals; when the wizard accomplishes them, he more or less returns to normal.

**Mania:** Terror of unimaginable depth turns the alienist into a stark, raving madman. Every day, there is a 25% cumulative chance that he will suffer a manic episode lasting 1d6 hours, during which he attempts to attack or destroy anything around him. The maniac's Strength is incredible; a character's Strength increases by 6 points (count each percentile category of 18 as one point), to a maximum of 19. While the maniac is raging, he can easily turn on and kill people close to him, but he's just as likely to run off or try to gnaw the bark off a tree. Even if the wizard is temporarily in control of his senses, he cannot cast spells or embark on long or complicated tasks; the struggle to retain control consumes too much of his attention. The alienist has a 5% chance per month of recovering his stability.

**Manic-depressive:** This condition combines the worst features of mania and melancholia. Every 1d4 days, the character's mood swings from the one condition to the other. A manic-depressive's condition lasts until magically or psionically treated.

**Hebephrenia:** Some horrors can forever destroy the mind unfortunate enough to perceive them; a character suffering from hebephrenia withdraws from reality into a childlike state, wandering aimlessly, ignoring most external stimuli and babbling or mumbling to himself constantly. This condition is completely debilitating. The character is effectively *feebleminded*, unable to participate in normal society or survive without constant care. The alienist may never recover from such a profound shock and has only a 5% chance (noncumulative!) per month to regain his sanity.

**Catatonia:** The catatonic completely withdraws from reality, ignoring all forms of external stimulus. He cannot move, speak, or act in any way, and may even ignore food placed in his mouth or painful injuries. There is only a 5% chance per month (noncumulative) that the catatonic will recover from his state, although it is possible to provoke a catatonic into a temporary rage lasting 1d6 rounds by continuously annoying or pestering the poor fellow.

**Delusional insanity:** The alienist believes that he is something other than himself. In many cases, he believes that his mind or persona has been placed into the wrong body, believing that he is actually a creature or entity of some distant dimension trapped in human form. The steps he takes to rectify this could range from attempts at suicide to complex summonings designed to open the "right" dimension to him. The character may refuse to recognize his former friends and companions, or seek new allies more appropriate to his "true" self, but he generally retains all his skills and abilities. There is a 5% chance per month that the delusion may end of its own accord; otherwise, only magical or psionic treatment can help the character.

**Schizophrenia:** An alienist's encounter with schizophrenia is an extraordinarily dangerous event. An entity or power from the outer reaches of the cosmos invades the

alienist's body, forming a second personality that has its own goals and skills distinct from the wizard's normal personality. This second persona may wish to do nothing more than observe the host's world, or it may plot to open a dimensional gateway to the plane of its origin and bring others like itself to the mundane world.

Each day, there is a 25% chance that the second personality takes over, retaining control for 1d4 days while it pursues its own purposes, whatever they may be. During this time, the wizard is an NPC under the DM's control. This condition occasionally corrects itself after a time (if the invasive personality finishes whatever it was doing and leaves voluntarily), but most of the time the wizard will need magical or psionic help in order to exorcise the spirit.

**Homicidal mania:** This resembles schizophrenia, as described above, but it's much worse. The invasive persona is a creature that delights in mayhem and murder, and wants nothing more than to kill until it is sated. When the wizard loses control of his mind, the entity begins stalking and killing its chosen victims (often those closest to the host), often employing bizarre or disgusting methods to further its enjoyment. As described above, there is a slight chance (5% per month) that the entity leaves voluntarily.

**Psychic translocation:** Perhaps the most jarring event that could occur to an alienist, psychic translocation exchanges the wizard's mind and persona with that of some inhuman entity from beyond the stars. The effects are somewhat similar to that of a magic jar spell in that the wizard finds himself trapped in another's body while some alien intelligence animates his own form. The invasive intelligence may simply be curious about the wizard's home, it might have forced the switch in order to escape from a precarious predicament in its own dimension, or it might have waited for eons for a chance to project its mind to the alienist's world, with some dire purpose or summoning in mind. There is a chance that the intelligence will leave of its own accord, or that the wizard may find a means to reverse the situation and reclaim his own body. The DM is encouraged to be creative and malevolent.

**Pursuit:** There are entities in the dimensions beyond our own that are so inimical and insatiable that even speaking their names or catching a glimpse of their existence courts disaster of the worst kind. An alienist who blunders across something of this nature accidentally attracts the notice of a monstrous alien intelligence, which then follows the wizard back to his home. The pursuing entity may be a powerful monster that desires to devour or possess the mortal that roused it, or it could be a forgotten abomination of formless intelligence that desires to devour or possess the alienist's entire world. Again, the DM is encouraged to be creative and somewhat malevolent; mortals who tamper with powers of this magnitude risk catastrophes of cosmic significance.

### Recurring Episodes of Insanity

While a wizard may emerge from a mind-blasting experience with his senses intact after a few weeks, he is never the same afterwards. Each time the wizard is forced to roll on Table 24, regardless of the actual result, his Wisdom score drops by 1d2 points permanently. Wisdom represents stability, strength of will, and mental fortitude; it is a good measure of how many shocks a single person can sustain in the course of his lifetime. Should a wizard's Wisdom score ever be reduced to less than 3, he becomes *permanently* insane, and he will never recover from whatever condition(s) he currently

suffers from.

However, there are ways to bolster a character's strength of mind after he suffers a Wisdom loss. A condition that is treated by means of a *restoration* or *wish* spell, successful psychic surgery, or an *elixir of health* does not cause a Wisdom loss, since the mind is restored to its original state. Of course, when someone attempts to heal the condition by using a spell or psychic surgery, there is a 1% chance that the healer will contract the condition. As a result, it might be a little difficult finding someone willing to help heal a character's insanity.

### Priests and Spell Points

Just as wizards can create or customize their own spell progression by using spell points, priests can as well. Instead of memorizing the "standard" array of spells of each level, a priest can concentrate his magical power into a small number of spells at the highest level of power available to him, or he can instead memorize a greater than normal array of low-level spells. (Table 26: Priest Spell Point Progression shows the number of spell points available to a priest as he progresses in level.) Other considerations include the following:

The priest must be well-rested and have access to a quiet place suitable for prayer. It takes about 10 minutes per spell level to commit a spell to memory.

The priest is limited in the maximum spell level he may cast, based on his character level. For example, a 5th-level priest is still limited to spells of 3rd-level or lower.

The priest is limited in the maximum number of spells of each level that he can memorize, regardless of how many spell points he has available; for example, a 5th-level character can't memorize more than six spells of any given spell level.

**Table 26:**
### Priest Spell Point Progression

| Priest Level | Max. Spell Level | Max. Spells Memorized at Each Level | Spell Points |
|---|---|---|---|
| 1 | 1st | 3 | 4 |
| 2 | 1st | 4 | 8 |
| 3 | 2nd | 5 | 15 |
| 4 | 2nd | 5 | 25 |
| 5 | 3rd | 6 | 40 |
| 6 | 3rd | 6 | 55 |
| 7 | 4th | 6 | 70 |
| 8 | 4th | 7 | 90 |
| 9 | 5th | 7 | 125 |
| 10 | 5th | 7 | 160 |
| 11 | 6th | 8 | 200 |
| 12 | 6th | 8 | 240 |
| 13 | 6th | 8 | 290 |

| | | | |
|---|---|---|---|
| 14 | 7th | 9 | 340 |
| 15 | 7th | 9 | 400 |
| 16 | 7th | 10 | 460 |
| 17 | 7th | 10 | 530 |
| 18 | 7th | 11 | 600 |
| 19 | 7th | 11 | 675 |
| 20 | 7th | 12 | 750 |
| 21+ | 7th | 12 | +75 per level |

**Table 27:**
## Bonus Spell Points for Priest Characters

| | **Character Level/Spell Level** | | | |
|---|---|---|---|---|
| **Wisdom** | **1–2** | **3–4** | **5–6** | **7+** |
| **Score** | **1st** | **2nd** | **3rd** | **4th** |
| 13 | 4 | 4 | 4 | 4 |
| 14 | 8 | 8 | 8 | 8 |
| 15 | 8 | 15 | 15 | 15 |
| 16 | 8 | 20 | 20 | 20 |
| 17 | 8 | 20 | 30 | 30 |
| 18 | 8 | 20 | 30 | 45 |
| 19 | 12 | 25 | 45 | 60 |

**Bonus Spell for High Wisdom:** In addition to the base number of spell points available at each level, priests with high Wisdom scores gain a special bonus to reflect their piety and devotion. (This is a standard rule in this spell point system, unlike the optional bonus spell point rule for wizards with high Intelligence scores.) The number of bonus spell points depends on the character's Wisdom score and the maximum spell level available to him, as shown in Table 27: Bonus Spell Points for Priest Characters.

*A 2nd-level priest with a Wisdom of 18 is still limited to spells of 1st-level or less, so his spell point bonus would be 8 points—enough to purchase the two 1st-level bonus spells he would receive under the* PHB *rules. A 4th-level priest with a Wisdom of 16 is limited to 2nd-level spells, so he would gain 20 bonus spell points, or enough to select the two 1st- and two 2nd-level spells he would normally be entitled to.*

Note that as a character rises in level, and his maximum spell level increases, the number of bonus points available to him may increase as well!

Naturally, all of the normal considerations of choosing a spell apply; the priest does not need a spell book and can choose any spell that falls within his spheres of access. Spells may be chosen as pre-memorized fixed theurgies (the priestly equivalent of magicks), or the priest can leave a theurgy open to use any spell he wishes to by selecting a free theurgy (see the description for wizards.)

## Minor Spheres of Access

Normally, a priest who wishes to select spells from one of his deity's minor spheres of access may only choose spells of 3rd level or lower. However, with the spell point system, the power's secondary interest in a minor sphere can be represented by an increased cost to select these spells. Since the power is only tangentially concerned with these areas, the priest has to work harder and devote more time and concentration to memorizing these spells. Under this optional rule, *spells selected from a minor sphere of access are treated as if they were one level higher for spell point costs.* For example, a priest with minor access to the sphere of healing could select *cure light wounds*, but the spell would cost him 6 SPs instead of 4; see the Table 29: Spell Point Costs for Major and Minor Spheres.

On the surface, this seems inefficient for the priest, and to some degree it is. But there is an advantage to this optional system: the priest is no longer limited to spells of 3rd level or lower in his minor spheres. In the preceding example, the priest with minor access to healing now has the capability to utilize *neutralize poison* or *cure serious wounds*—although it is costly for him to do so.

**Table 28:**
## Spell Cost by Level (Priest)

| **Spell Level** | **Fixed Theurgy** | **Free Theurgy** |
|---|---|---|
| orison | — | 1 |
| 1st | 4 | 8 |
| 2nd | 6 | 12 |
| 3rd | 10 | 20 |
| 4th | 15 | 30 |
| 5th | 22 | 44 |
| 6th | 30 | 60 |
| 7th | 40 | 80 |

**Table 29:**
## Spell Point Costs for Major and Minor Spheres

| **Spell Level** | **Major Fixed** | **Major Free** | **Minor Fixed** | **Universal Free**[1] |
|---|---|---|---|---|
| Orison | — | — | — | 1 |
| 1st | 4 | 8 | 6 | 12 |
| 2nd | 6 | 12 | 10 | 20 |
| 3rd | 10 | 20 | 15 | 30 |
| 4th | 15 | 30 | 22 | 44 |
| 5th | 22 | 44 | 30 | 60 |
| 6th | 30 | 60 | 40 | 80 |
| 7th | 40 | 80 | 50 | 100 |

[1] Universal free allows priests to choose any spell of that level.

**Free Theurgies and Minor Access:** Because spells of the same level may not have the same spell point cost under this optional system, free theurgies don't work in the normal fashion for spells in minor spheres. The priest has two choices: he can pay the spell points for a *major free theurgy*, which allows him to freely choose from any spell of that level to which he has major access, or he can pay for a *universal free theurgy*, which allows him to choose from any spell of that level, regardless of whether he has major or minor access to the spell. See Table 29: Spell Point Costs for Major and Minor Spheres.

*Arkhosia, a 4th-level priest with a Wisdom of 17, has 25 plus 20 or 45 spell points. She chooses to memorize one 2nd-level spell as a major free theurgy (12 points), one 1st-level spell as a universal free theurgy (12 points), one major fixed 2nd-level theurgy (6 points), one minor fixed 1st-level theurgy (6 points) and two major fixed 1st-level theurgies (4 points each). She ends up spending 44 of her 45 spell points to memorize a total of two 2nd- and four 1st-level spells. Under the standard* PHB *rules, she would be entitled to five 1st- and four 2nd-level spells, so Arkhosia is choosing to memorize fewer spells, but giving herself the flexibility of two free slots.*

## Orisons

Appendix 1 of this book introduces the *orison*, or clerical *cantrip*. These minor blessings and invocations require only 1 spell point apiece and are considered to be free theurgies; the priest may make use of any minor magical powers appropriate for the spell without selecting the enchantment ahead of time. The number of *orisons* that may be memorized is equal to twice the priest's maximum number of spells of one level—a 3rd-level priest could memorize as many as 10 orisons, since he is limited to five spells of any one level.

## Recovering Spell Points

Unless one of the optional systems of magic is in play for priestly magic, spell points are regained just like spell capability in the standard AD&D game. In other words, if a character spends 10 spell points to memorize a major fixed 3rd-level spell, those points are "tied up" by holding the spell ready in the character's memory and can't be used to memorize another spell until expended. Spell points used to memorize free slots are also tied up in the same fashion.

Once a character casts a spell, the spell points used to hold that spell (or slot) in memory are *gone*. The priest must rest for at least eight hours in order to regain spell points expended through casting spells and spend about 10 minutes per spell level in devout prayer to use those points to memorize new spells.

## Priests and Systems of Magic

As you may have noticed, there are a few differences in the way priests and wizards acquire and memorize spells. The spell point systems described for each class already reflect these differences to a degree; for example, some of the wizard's optional rules aren't appropriate for priestly spellcasters, and vice-versa, while the amount of spell points available to each class of spellcaster varies in order to portray the "normal" spell progression.

A very good way to highlight the differences between priests and wizards is to

assign schools or systems of magic to each. For example, if you liked the wizard system of defiling and preserving, you may want to rule that priests cast spells by means of the channelling rules. In the campaign, wizards will have to be aware of the life energy around them as they cast their spells, while priests will instead be concerned with their own capacity to deal with the destructive power of divine energy. This provides each class with its own distinct flavor and feel—even though both priests and wizards will be keeping track of spell points.

## Channelling

Every time a priest casts a spell, he touches a small portion of the infinite. The unimaginable power of a deity pours into his body and is directed into a spell effect. But the mortal frame was not meant to contain such energies, and the priest risks exhaustion or even death by calling on his god's power too frequently.

The same rules described for channelling wizards apply to a channelling priest. The priest gains spell points as described above, allocates them to fixed or free theurgies, and selects the spells he wants to have locked into memory as fixed theurgies. Free theurgies may be used to provide the priest with access to any spell in his repertoire, although they're more expensive than fixed slots. The priest may exceed his normal spell level limit or cast spells for greater effect, although his deity may choose not to grant him these enhanced powers. The priest modifies his spell point total based on his Constitution score; the character's hit point adjustment for Constitution is added to or subtracted from his spell point total. If this lowers a 1st-level priest to less than 4 spell points, he ignores the adjustments; all priests have at least 4 spell points.

While the priest may have spell points "allocated" or "tied up" in fixed and free theurgies, this makes no difference for a channeller. His selection of spells simply creates a slate of spell powers which the character can access and defines the cost in spell points for making use of these powers. The character may cast any spell that he has available through either a fixed or free slot normally, except that the spell slot does not vanish from his memory once he's cast the spell. Instead, the character deducts the number of spell points required to energize the spell from his spell point total.

Spell points in this system represent magical stamina. They are recovered as the character's fatigue fades and his strength returns. (Refer to **Channellers**, on page 80.) Spell points are recovered as shown on Table 20.

In addition to the depletion of spell points, channelling also causes immediate fatigue effects. Refer to Table 21 and the fatigue rules that follow. Note that the effective level of a spell may be higher than its true level, especially if the priest makes use of a spell from a minor sphere of access or casts a spell at a greater than normal effectiveness by paying extra spell points to do so. Consider quest spells to be two spell levels higher than the caster can cast for purposes of caster fatigue and exhaustion.

## Ritual Prayer

A priest is an ordinary human, and his spell powers represent nothing more than the favor of his deity. Without his patron power's blessing and attention, the priest is completely incapable of wielding magic. Thus, in order to invoke a spell, a priest must engage in preliminary prayers, invocations, and rites designed to attract his deity's notice.

When the power responds, the priest is infused with the spell points necessary for his spell.

**Table 30:**
Initiative Modifiers for Ritual Prayer

| Spell Points Accumulated | Initiative Modifier |
|---|---|
| 3 or less | –1 bonus |
| 4 to 6 | none |
| 7 to 14 | +1 penalty |
| 15 to 29 | +3 penalty |

**Table 31:**
Modifiers to Ritual Preparatory Times

| Modifier | Condition |
|---|---|
| +1 SP/rd | Casting from place of interest |
| +2 SP/rd | Casting from sanctified/holy place |
| +1 SP/rd | Priest gives a small offering |
| +2 SP/rd | Priest gives a moderate offering |
| +4 SP/rd | Priest gives a major offering |
| +1 SP/rd | Caster is pure or faithful to temple |
| –1 SP/rd | Caster has committed mild infractions or failed to observe normal rites and prayers |
| –3 SP/rd | Priest is casting a previously expended spell |

In this system, the deity or power is concerned more with the priest's show of devotion and observance of the proper form, and considers the priest's actual situation to be irrelevant—after all, martyrs are made every day. The priest purchases his initial selection of spells by allocating spell points to free and fixed theurgies of the various spell levels. These represent very specific prayers that he will use to focus his deity's power, if the power chooses to respond.

The normal options and rules governing priestly spell points are in use. In addition, the priest may make use of the reduced spell cost option, choosing the prolonged casting time in exchange for a 25% reduction in the spell cost. This extends the casting time of a spell to the next highest time increment, so a spell with a casting time of 4 would require four *rounds* to cast, and a spell with a casting time of a full round would take a turn to cast.

Before the priest can cast a spell, he must first invoke his deity's attention by speaking various preparatory prayers and performing other actions favorable to his power. In game terms, he must accumulate enough spell points to power the desired spell. Low-level spells are very easy to cast, requiring nothing more than a moment's

concentration and a brief invocation. However, it can take a long time to build a higher-level spell. A ritual priest gathers 2 spell points per round through his invocations and prayers, but the cost to cast a spell is reduced by the priest's level. For example, a 1st-level priest casting a 1st-level spell must gather 3 spell points (4 for the spell, less 1 for his level), which would require one full round of prayer, plus part of a second round.

If the priest's level reduces the spell's cost to 0, the priest need not spend any time gathering spell points and casts the spell with the normal casting time initiative modifiers. In the example above, a priest of 4th level or higher reduces a 1st-level spell to a cost of 0, which means he can cast the spell without spending time to gather his deity's favor beforehand. In effect, the spell is minor enough that the power trusts the priest not to misuse his or her divine energy.

In many cases, the priest's gathering time will require more than one round. The 1st-level priest described above must gather 3 spell points to cast his spell, which means that he gathers 2 points in the first round of concentration, and the remaining point in the round in which he casts the spell. There is a slight initiative modifier for this, as shown on Table 30: Initiative Modifiers for Ritual Prayer.

The initiative modifier is based on the number of spell points accumulated *in the round in which the spell is cast*. For example, a 5th-level priest casting a 3rd-level spell must draw 5 spell points (10 for the spell, less 5 for his level), which requires two full rounds of concentration and part of a third—but since he only needs to gather 1 spell point in the last round, he gains a –1 bonus to his initiative when he actually casts the spell.

There are ways to accelerate this otherwise tedious process. Invoking the deity's power in a sanctified place, making a sacrifice pleasing to the deity, or staying true to the deity's precepts are all good ways to ensure that the deity in question will be willing to empower the priest with spell energy. See Table 31: Modifiers to Ritual Preparatory Times for examples.

**Place/Site of Interest:** The priest is located in some place favored by the god. This could be a forge for a deity of smithery, a business for a god of commerce, or a battlefield for a power of war.

**Sanctified or Holy Place:** The priest is located in a shrine, temple, or place of special and unique significance to the deity he serves.

**Offerings:** The priest destroys or surrenders items or materials pleasing to his patron power. This could range from treasure, weapons, or gems to such things as exotic spices, candles, or specially-prepared libations. A deity of war or battle might consider a gem-decorated sword to be a minor offering, a sword of special significance or quality to be a moderate offering, and a magical weapon to be a major offering. As a rule of thumb, a small offering must be worth at least 50 gp, a moderate worth 500 gp, and a major offering 2,000 gp or more.

**Purity and Faithfulness:** This is a subjective call on the part of the DM. Has the priest been careful to follow the precepts of both his temple and his alignment? Has the player gone out of his way to role-play his character's dedication, or has he been lazy in portraying the priest? If the character has been played well and is in favor with his superiors and his deity, this bonus applies.

**Previously Expended Spell:** While the ritual priest generally expends spells

normally, it is possible for him to gather spell energy in order to re-use a spell that he already cast. However, this is quite difficult, and unless the priest has some other factor going for him—an offering or a good location from which to cast—he will be unable to attract the divine power necessary to re-use a spell.

**Regaining Spell Points:** As noted above, ritual priests expend their spells normally, striking them from memory as they cast the enchantments. In order to ready himself to use a spell again or change his spell allocation, the priest must rest for at least eight hours and spend approximately 10 minutes per spell level praying for the spells he desires. Despite the fact that ritual priests gain spell energy directly from their deities, the complicated prayers and forms required to cast a spell must still be refreshed occasionally.

## Conditional Magic

In this system of priestly magic, deities grant the ability to cast spells based on the priest's need, not just on form or prayer. A faithful priest following his patron power's tenets will usually receive the spells he requests, but a priest who strays from the path will soon find that his patron no longer supports his actions. While the urgency of the priest's request is a consideration, the deity's primary concern is whether or not the use of that particular spell will benefit the deity's own purposes and causes at that moment. The priest's spell powers will vary with the interest and support of his deity.

The following option is used for conditional magic:

Spells belonging to a minor sphere of access are more costly than spells from a major sphere, as described earlier. Priests may request free or fixed theurgies by meeting the normal spell point costs.

Many of the normal priest restrictions are still in place for priests using conditional magic. First of all, priests must still "memorize" any spell that he wishes to have access to. After all, if the priest is granted the ability to cast the spell, then he should be familiar with exactly how to go about doing so! Secondly, while the priest can cast spells at a higher character level than his own, he cannot use spells from spell lists above his own spell level.

Before a priest actually begins play using this system of magic, the player and the DM should take some time to define *positive* and *negative conditions* for that priest's faith. These are situations or guidelines that define the deity's interests and ensure that the priest only invokes his god's power in pursuit of the deity's aims. Here are some examples of conditions:

**Table 32:**
### Effects of Conditions

| | |
|---|---|
| +4 | Caster may cast the spell as if he were 4 levels higher with no increase to spell point cost (see **Casting Spells for Greater Effect**), or he may choose to reduce the cost to 25% normal. |
| +3 | Caster may cast the spell as if he were 2 levels higher (no increase in SP cost), or |

cast with 1 extra level and a 50% break in the spell point cost.

+2 Caster may cast the spell as if he were 1 level higher (no additional SP cost) or choose to reduce the spell point expenditure by 50%.

+1 No unusual effects.

0 Caster must either select one negative effect of reduced spell cost and pay the normal spell point cost, or he can cast the spell at the usual level by paying 150% of the normal cost.

–1 Caster must select two negative effects of reduced spell cost and pay the normal spell point cost, or spend twice as many spell points as normal in order to cast the spell without reduced effect.

–2 The spell fails completely, expending the normal amount of spell points required.

### Positive Conditions

The priest is engaged in combat against a traditional enemy of the god or the faith, such as giants for a priest of Thor, or orcs for the priest of an elven god.

The priest is located in a place sacred or special to the deity, such as a mountaintop for a god of the air, or a deep forest for a druidical power.

The priest is engaged in a situation favorable to the deity; fighting for a god of war, trading for a merchant power, committing theft or burglary for a god of thieves, or in the open during a storm for a storm god.

The priest's spell will directly benefit another worshipper of the same deity, such as healing a paladin of the same faith or using spells to protect townspeople who follow the priest's religion.

The spell fulfills a traditional role or guideline of the power—starting a fire for a fire god, sowing deceit for a god of mischief, or offering advice or guidance in the case of a god of wisdom or knowledge.

### Negative Conditions

The spell aids or supports a traditional enemy.

The priest is located in a place inimical or opposed to his power (a wind priest adventuring underground, a fire priest venturing out on the ocean, etc.)

The priest is involved in a situation distasteful or opposed to his patron power (a priest of chaos using his spells to restore order, a priest of healing attempting to injure someone with his spells, a priest of battle trying to avoid or escape from a fight).

The spell will directly or indirectly injure or discomfit a fellow worshipper or the temple's interests.

The priest has failed to observe one of his patron's holy days or rites, has violated his alignment, or has generally misrepresented his patron recently.

As an example of how these conditions might work, consider the case of a priest of Tempus from the Forgotten Realms campaign setting. (Tempus is a chaotic deity of battle and storms.) For his positive conditions, he selects casting spells in battle, casting spells during a storm, and casting spells that enhance or augment a warrior's ability to fight, such as *bless*, *emotion*, and other such enchantments. For his negative conditions, he selects casting spells outside of a fight, avoiding or fleeing a battle, and spells that aid

lawful characters. Naturally, the DM can either set up these conditions himself or allow the player to set them
up and then approve the conditions.

Any time the priest casts a spell, the player should compare the number of positive conditions that apply to the number of negative conditions, and consult Table 32: Effects of Conditions.

*Maglas, the priest of Tempus previously described, is locked in battle with an ogre during a thunderstorm. Deciding that things aren't going his way, he decides to cast an* obscurement *spell to cover his escape. Since he is in battle, and the weather is appropriate, he has two positive conditions. On the other hand, he's getting ready to flee, which is a negative condition. There is a net +1 positive condition, which means that Maglas can cast the spell normally.*

In this system, if a priest casts a spell, it's still expended until he can re-memorize it . . . but saving spell points may allow the character to find room for an extra free theurgy. For example, if Maglas manages to save 8 spell points by casting several spells in favorable conditions, he may now add a 1st-level free theurgy to his spell repertoire for the day.

**Recovering Spell Points:** Priests who use conditional magic recover their spell points normally (see **Recovering Spell Points**) and may change their spell selection any time they rest eight hours and spend the time to pray for new spells.

## Druidical Magic

Priests of druidical or agricultural powers may be able to use preserving magic (see **Defilers and Preservers**). Preservers draw their magical energy from the lifeforce that surrounds them but are careful not to draw too much. If the preserving magic system is allowed for wizards, this option should not be available for priests—it's a good idea to keep the flavor and methodology of wizard magic and priest magic distinct and separate.

Preservers strongly resemble ritual priests, since both must gather their energy before casting their spells, but preservers harness the lifeforce around them, while ritual priests rely on the power of their deity.

## Other Spellcasters

Wizards and priests aren't the only spellcasters in the AD&D game; paladins, rangers, and bards also have magical abilities. These are represented by spell point progression tables similar to those of the previous sections, although these characters don't acquire their spell powers until a little bit later in their careers.

## Paladins

While paladins must wait until 9th level to gain access to their spell powers, they rapidly increase in strength until they reach their maximum spell ability at 20th level. Paladins are similar to clerics or crusaders, but they are considered to have access to the spheres of combat, divination, healing, and protection. The paladin's spell point progression is shown on the Table 33: Paladin Spell Point Progression.

**Table 33:**
## Paladin Spell Point Progression

| Paladin Level | Casting Level | Max. Spell Level | Max. Spells Memorized at Each Level | Spell Points |
|---|---|---|---|---|
| 9 | 1 | 1st | 1 | 4 |
| 10 | 2 | 1st | 2 | 8 |
| 11 | 3 | 2nd | 3 | 15 |
| 12 | 4 | 2nd | 3 | 22 |
| 13 | 5 | 3rd | 4 | 30 |
| 14 | 6 | 3rd | 4 | 40 |
| 15 | 7 | 4th | 4 | 50 |
| 16 | 8 | 4th | 5 | 60 |
| 17 | 9 | 4th | 5 | 70 |
| 18 | 9 | 4th | 5 | 80 |
| 19 | 9 | 4th | 5 | 90 |
| 20+ | 9 | 4th | 6 | 105 |

**Table 34:**
## Spell Costs by Sphere (Paladin)

| Spell Level | Major Fixed | Major Free | Minor Fixed | Universal Free |
|---|---|---|---|---|
| orison | — | — | — | 1 |
| 1st | 4 | 8 | 6 | 12 |
| 2nd | 6 | 12 | 10 | 20 |
| 3rd | 10 | 20 | 15 | 30 |
| 4th | 15 | 30 | 22 | 44 |

Regardless of the character's actual level, his casting level is based on how long he has actually been able to use spells. A 9th-level paladin is considered a 1st-level caster for all level-based variables that are part of a spell description. This level of ability increases as the paladin continues to advance, reaching a maximum of 9th level when the paladin reaches 17th level.

Just like wizards and priests, paladins are limited in the maximum spell level available at any given character level. A 9th-level paladin may only use 1st-level priest spells, while a paladin of 15th level or higher can use spells of 4th level or lower. Paladins are also limited in the maximum number of spells of any one level they can memorize at a single time. Unlike wizards or priests, paladins do not gain additional spell points after 20th level.

**Major and Minor Spheres:** Under the optional rules presented in Chapter 3, a paladin may actually select minor access to alternate spheres. Because the paladin is limited to

spells of 4th level or less, the usual distinction between major and minor spheres is waived; the only difference is in the cost to use spells from alternate minor spheres, instead of his primary spheres. See Table 34: Spell Point Costs by Spheres.

Paladins recover spell points just like other priestly spellcasters. If one of the optional systems of magic is in play, paladins should use the mechanics that are used by priests in the campaign.

## Rangers

Rangers gain their spell powers somewhat faster than paladins do, but in the long run they're less formidable as spellcasters; paladins are more powerful. Rangers have more in common with druids or shamans than other varieties of priests and may only learn spells of the plant or animal spheres (unless the character has been customized using the rules presented in Chapter 3). The ranger's spell point progression appears in Table 35: Ranger Spell Point Progression.

Just like paladins, rangers begin with the spellcasting ability of a 1st-level character and reach their maximum casting level of 9 when they reach 16th level. They are limited to spells of 3rd level or less and are also limited in the maximum number of spells of each level they may memorize at one time. Rangers pay the same number of spell points to memorize spells as paladins do.

Rangers normally use the same system of magic that druids or shamans use in the campaign. This could include preserving, channelling, or conditional magic, at the DM's discretion. Rangers reach their maximum spell ability at 16th level and do not gain more spell points at higher levels.

**Table 35:**
## Ranger Spell Point Progression

| Ranger Level | Casting Level | Max. Spell Level | Max. Spells Memorized at Each Level | Spell Points |
|---|---|---|---|---|
| 8 | 1 | 1st | 1 | 4 |
| 9 | 2 | 1st | 2 | 8 |
| 10 | 3 | 2nd | 3 | 15 |
| 11 | 4 | 2nd | 3 | 22 |
| 12 | 5 | 3rd | 4 | 29 |
| 13 | 6 | 3rd | 4 | 36 |
| 14 | 7 | 3rd | 5 | 43 |
| 15 | 8 | 3rd | 5 | 50 |
| 16 | +9 | 3rd | 5 | 60 |

## Bards

With access to any spell and the ability to continuously improve their spell abilities, bards are not very far behind wizards in terms of sheer magical power. While they do not gain spell abilities until they reach 2nd level, they always use their actual character level for calculating level-based effects in a spell; they have no separate

"casting level," like rangers and paladins.

Bards often employ a different system of magic than wizards, since their spells can represent ancient songs or enchantments woven from the interplay of voice, instrument, and dance. Certainly, some systems of magic—alienists or warlocks, for instance—would be inappropriate for the bard's magical skills. The bard's spell point progression is described in Table 36: Bard Spell Point Progression.

Generally, bards follow the rules described for wizards in this chapter for memorizing and casting spells. Like wizards, they may devote extra spell points to memorize free magicks, memorize spells for greater effect, use spells at reduced cost, and any other options the DM deems appropriate. Bards are limited to seven spells of any one level, but continue to gain spell points after they reach 20th level.

**Table 36:**
Bard Spell Point Progression

| Bard Level | Max. Spell Level | Max. Spells Memorized at Each Level | Spell Points |
|---|---|---|---|
| 1 | — | — | — |
| 2 | 1st | 1 | 4 |
| 3 | 1st | 2 | 8 |
| 4 | 2nd | 3 | 15 |
| 5 | 2nd | 4 | 25 |
| 6 | 2nd | 4 | 35 |
| 7 | 3rd | 4 | 45 |
| 8 | 3rd | 5 | 55 |
| 9 | 3rd | 5 | 65 |
| 10 | 4th | 5 | 70 |
| 11 | 4th | 5 | 85 |
| 12 | 4th | 5 | 100 |
| 13 | 5th | 6 | 120 |
| 14 | 5th | 6 | 140 |
| 15 | 5th | 6 | 160 |
| 16 | 6th | 6 | 190 |
| 17 | 6th | 6 | 220 |
| 18 | 6th | 7 | 250 |
| 19 | 6th | 7 | 285 |
| 20 | 6th[2] | 7 | 320 |
| 21+ | 6th | 7 | +35 per level |

[1] If the bard is allowed to specialize (see the class design rules in Chapter 3), he gains the bonus spell points shown in parenthesis in addition to the standard amount.
[2] If the optional rules for exceeding spell level limit are in play, bards of 20th level or higher may attempt to employ 7th level spells.

**Table 37:**
Spell Cost by Level (Bards)

| Spell Level | Fixed Magick | Free Magick |
|---|---|---|
| cantrip | — | 1 |
| 1st | 4 | 8 |
| 2nd | 6 | 12 |
| 3rd | 10 | 20 |
| 4th | 15 | 30 |
| 5th | 22 | 44 |
| 6th | 30 | 60 |

### Optional Rules for Spellcasters

At the DM's option, bards, rangers, and paladins may make use of some of the optional additions to the spell point rules. These include casting spells for greater effect, reducing the spell cost, and using the rules for *cantrips* or *orisons* as appropriate. However, bonus spell points for high Intelligence or Wisdom scores should not be used, since this is a special bonus for dedicated priests and wizards.

# Chapter 7:
# Spell Research and Magical Item Creation

Wizards and priests are constantly devising new and interesting applications for their magical powers. It seems to be a part of the job description; most player characters dive into research and item enchantment as soon as they reach the required level and set aside enough money for an appropriate laboratory or altar.

At first glance, these activities may seem like they're not worth the time and the trouble. After all, researching a new spell or creating a new magical item can be a lengthy and expensive undertaking, uncertain of success. In fact, many DMs will require a PC wizard or priest to embark on several adventures—some quite hazardous—in order to obtain the knowledge or materials necessary. More than one character has allowed his ambition to lead him into expensive or fatal mistakes.

While research and item creation are difficult and tedious endeavors, they can also be extremely rewarding. First of all, player characters confronted with a specific problem may be able to devise a spell or item that can respond to that problem perfectly. Secondly, new items or spells have the advantage of surprise; everyone knows what a *fireball* is and how it works, but *Felgar's incandescent strike* is another matter entirely! New spells or items can provide player characters with defenses or capabilities never

before seen in a campaign.

Spell research and magical item creation are discussed together in this chapter because they represent one of the most rewarding and interesting aspects of the AD&D game the ability of a character to create something that will outlast his or her own career (or even lifetime, in some cases!), becoming a permanent part of the DM's campaign world. After all, spells and items with names attached to them were first created by adventuring wizards and priests no different from any other player character. What wizard doesn't dream of being known as the next Rary, Bigby, or Otiluke?

## Spell Research

At some point, almost any player character spellcaster is going to want to try his hand at spell research. Devising a new spell is a great way for a character to make a lasting mark on a campaign, as noted above, but it's also a fun exercise for the player and the DM; a new spell customizes and alters the campaign and the game itself.

While both wizards and priests can research new spells, it's much more common for wizards to do so. The philosophy of experimentation and investigation seems much more appropriate for wizards, since priests are inclined (quite naturally) to take things on faith and stick to the proven powers and abilities of their patron deity. However, there's no reason why a PC priest couldn't participate in as much research as he or she wishes to; this is only a generalization, not a rule.

There are two parts of spell research: designing the spell, and actually executing the spell research in game play. The player and DM will have to take time to work out the details of the spell before the character can embark on his research.

### Proposing a Spell

Player characters can research four types of spells: existing spells that they just haven't had the opportunity to learn, "look-alike" spells that approximate an existing spell that they failed to learn; spells that would exceed the normal maximum number of spells allowed by a character's Intelligence score; and completely new spells never before seen in the campaign. Note that priests never have to worry about conducting the first three types of research, since they can use any spell belonging to a sphere to which they have access. Priests only conduct spell research to create entirely new spells.

**Existing Spells:** From time to time, wizards will find that there is a particularly useful or valuable spell that eludes their grasp. There's no reason that a wizard can't decide to research a *fireball* or *magic jar* if he gets tired of waiting for an old spell book or scroll to fall into his lap. This is fairly straightforward, since the spell description already exists; the PC can go on to **Conducting Research**.

**Extra Spells:** By the time most wizards reach moderate levels, the maximum number of spells they may know at any given level may become quite restrictive. For example, a wizard with an Intelligence of 14 may only know nine spells of one level. In order to continue to add to his spell book, the wizard must research any spells above and beyond this limit, instead of simply scribing newfound spells into his spell book. Obviously, this makes adding spells a tedious and time-consuming chore after a certain point, but if the PC is willing to spend the money and time, he may exercise this option. Again, since the spell description already exists, the PC can go on to **Conducting Research**.

**New Spells:** The most interesting aspect of spell research, the creation of new

spells requires a careful write-up and analysis in order to spot potential problems or abuses. Since the player must generate all the game-effect information for the spell, he must first write up a full description and then submit it to the DM for approval and modification. Note that modifying a new spell (i.e., deleting components, improving casting time or range, or changing the way it works) constitutes a new spell. Creating a "look-alike" spell to mimic a spell the PC is unable to learn is also considered to be new spell research. Go on to **Describing a Spell** and follow the process of approval and research step-by-step.

## Describing a Spell

The first step in creating a new spell is describing its intent and effects. The interested player should take some time to write up a spell description similar to the spells in the *Player's Handbook*. Generally, a new spell should be just that—new. Spells that do the same thing as existing spells or a combination of existing spells aren't really new, and need a better "hook" for purposes of spell research. Here are some guidelines, by category:

**Level:** Naturally, the character should be able to cast the spell he's trying to develop, so the spell in question must be at or under his normal maximum spell level. For example, a 6th-level wizard can use spells of 3rd-level or less, so he can research 1st-, 2nd-, or 3rd-level spells.

Compare the proposed spell to a similar spell to get an idea of what a fair level assignment should be. Generally, spells should inflict about one die of damage per level, give or take a die; compare the spell's potential to *magic missile*, *fireball*, or *flame arrow*. Spells that do not allow saving throws, or spells that can affect an opponent regardless of his level or Hit Dice, are often of higher level than similar spells. Spells that are improvements of existing spells should be one to three levels higher than the spell they're modelled on, depending on the extent of the improvement.

**School/Sphere:** Refer to Chapter 1 and Chapter 2; brief descriptions of each school of wizard magic and each sphere of priest magic appear in those chapters. Both wizards and priests may only conduct research in schools or spheres they have access to, so a cleric may not research new animal or plant spells, and an invoker may not research illusion spells.

**Range:** Damage-inflicting attack spells should have a good justification for ranges greater than 150 yards (or more than 10 yards per caster level), while nondamaging attack spells (*sleep*, *hold*, *polymorph*, and other such effects) rarely exceed more than 100 yards (or more than five yards per caster level) in range. Other spells can vary wildly in range, depending on their function; communication or transportation spells may allow a range of hundreds of miles.

**Duration:** While damage from attack spells or the effects of many noncombat spells are permanent, most spells that create a condition or change of status for their subjects have a well-defined duration. Durations can be defined by time (the preferred method) or until a certain predefined event occurs. For example, *invisibility* lasts until the caster makes an attack, while a *charm* can last for a few days or for several months, depending on the victim. Very few low-level spells should bring about a permanent change or weakness in a living target.

**Area of Effect:** A spell that can affect several people at once, or several dozen

people at once, is inherently more powerful than a spell that affects a single individual. Spells designed to affect several enemies can affect a random number of subjects in a cube of about 20 to 30 feet (for example, *hold person* affects 1 to 4 targets in a 20-foot cube). Spells designed to affect more than 10 or 12 individuals shouldn't be larger than a *fireball*, which affects a sphere of 20 feet in radius. Exceeding these limits requires a more powerful (and therefore higher-level) spell than one that stays well within them.

**Components:** Most spells should have all three components—verbal, material, and somatic—unless there's a good reason for omitting one. Spells with only one component are fairly rare. Note that spells without verbal components can be cast even if the character is *silenced*, and are therefore more dangerous than they may appear to be at first look.

Material components that are hard to come by or very expensive can be used to control a spell's use in a campaign. Even though a 1st-level wizard can use *identify*, each time he does so, he must ruin a 100 gp pearl. If the DM enforces material component rules, the wizard might think twice before casting the spell any time he feels like it.

**Casting Time:** The rule of thumb for wizard spells is a casting time of 1 per level, so a 4th-level spell (for instance) should have a casting time of 4. Priest spells default to a casting time of 3 plus 1 per level, so a 4th-level priest spell should be around a 7. If a spell is significantly under this mark, it should either be weaker than spells of a similar level, or higher in level than normal. Conversely, a prolonged casting time may help to compensate for other advantages.

**Saving Throw:** While the nature of the saving throw varies with the purpose of the spell, enchantments that incapacitate the victim without the benefit of a saving throw should be rare or limited to a type of victim affected. The *sleep* spell is a good example; it allows no saving throw, but can only affect low-Hit Dice creatures. Damage-causing spells that affect more than a single target without a saving throw are uncommon and tend to be high in level.

**Description and Effects:** When creating the actual description of the spell, remember to note who it affects, how it works, what it does, and how it can be stopped or undone. If the duration, range, or saving throw is described as 'special,' make sure you note how it is special and what its limits actually are.

Most spells should perform one specific action, although spells may present several applications from which one can be selected when the spell is cast (see *Otiluke's freezing sphere* for an example of this). Spells that actually do two or three things at once, such as *shadow door* or *guards and wards*, are quite rare and are almost always high-level enchantments.

Last but not least, creating a new spell is an opportunity to be creative—feel free to add any color or special effects that are appropriate. A spell that makes a character impervious to cold is useful, but not very colorful; however, a spell that transforms a character's blood to magical ice water, thereby enabling him to resist cold damage, is a little more interesting. Also consider side effects or dangerous combinations of powers when writing up the spell description.

## Approval and Modification

After the player writes up the spell and refines it, the DM should review and analyze the spell. Is it the right level, or is it more powerful than it should be? If the PC

was the target of his own spell, would it completely obliterate him? This might be a sign that the spell is too strong. Are the effects reasonable and appropriate for its power level? Does it permit the subject a chance to avoid its effects? Does the spell intrude on a role best left to another character—in other words, would it make the wizard a better thief than the party's thief, a better fighter than the party's fighter, and so on? A spell can take a few steps in this direction, but it should be examined carefully. And, most importantly: do you, the DM, think that this spell will make your game better or make it worse?

If the spell is well-balanced and well-considered, then the PC can go on to **Conducting Research**. However, if it needs some work still, you can either return it to the player and inform him of any objections, or pencil in the modifications you think are appropriate to make the spell work in your campaign. Remember, the player always has the option of deciding to not go through with the research if he doesn't like the way the spell turned out after the DM looked at it!

## Conducting Research

Now that the spell has been described and approved by the player and the DM, the character can begin his research effort. Spell research is time-consuming and expensive. First of all, a wizard must have access to a well-equipped research *laboratory* and *library*, as described in Chapter 5. In fact, if his library isn't good enough for the research, he may need to spend time and money improving his scholarly resources before beginning the research at all!

Priests can get by without purchasing these expensive facilities, but they must have access to the holy writings and texts available at a specific temple of their deity selected by the DM. In many cases, a priest will have to embark on a pilgrimage to a remote monastery or a theological university to find the research materials he will need.

Secondly, the character must refrain from adventuring and concentrate solely on his research, to the exclusion of all other activities. Spell research consumes at least two weeks per spell level, so researching a 3rd-level spell would require at least six weeks of game time. The character may take breaks from his research to attend to other matters, but if the break is longer than a day, he suffers a setback of some kind and loses one week's worth of research. For example, if a wizard finishes four weeks of research and then finds that he must travel out of town for three days, he must repeat one week of his studies. If the break turns out to be longer than the time he's already invested, all the research is lost and he must start over.

Basic Time of Research = 2 weeks per spell level

Money is also an issue in spell research. Expending the supplies, reagents, tomes, and books required by the research consume 100 to 1,000 gp per spell level, above and beyond the normal maintenance cost of any laboratory used by the character. Priests must invest in special incenses, candles, and other religious items of similar cost. The DM can set the price to a level he deems appropriate, but it should always represent a bit of a stretch for the character.

Basic Cost of Research = 100–1,000 gp per spell level

**Success or Failure:** If the character meets all the expenses and puts in his time

with the books, he may attempt a success roll after the minimum research time (two weeks per spell level) has passed. The chance of success is 10% and is modified by the researcher's Intelligence score (for wizards) or Wisdom score (for priests) and experience level, less twice the level of the spell being researched. (See below.)

Basic Success Chance = 10% + 1% per point of relevant ability score + 1% per experience level – (2 x spell level).

For example, a 7th-level wizard with an Intelligence of 17 researching a 3rd-level spell has a success chance of 10% (base) + 17% (Intelligence) + 7% (experience level), minus 6% (3rd-level spell), for a total of 28%.

If the character does not succeed in his first attempt (unless he's very high level, he probably won't), he may continue his research. At the end of each additional week, he may attempt a check with a +10% cumulative bonus. However, if the character ever rolls a result of 99 or 100 on his success check, the DM may rule that the spell proves unworkable and must be abandoned.

Note that the success check replaces the normal learn spells mechanic—if the character can successfully research the spell, he can add it to his book automatically.

## New Spells in the Campaign

A unique spell is a valuable commodity, one with significant trading value among other wizards or priests. An enterprising PC can choose to sell his hard-earned knowledge for whatever price he can get for it, or he can hoard his spell for his own use. In some cases, a wizard may want to be careful about flashing his newfound powers about in public; unscrupulous spellcasters have been known to steal the inventor's spell book in order to wrest the secrets of the new enchantment from its creator! Priests are less vulnerable to this kind of activity, but it's always possible that their patron power may take a liking to the spell and make it available to other priests of the same mythos.

## Magical Item Creation

In many AD&D campaigns, characters are defined by their magical items. Rings, potions, boots, cloaks—all kinds of devices exist that are designed to let a character break the rules of the game in one way or another. Controlling the player character's acquisition of powerful magical items may be one of the most important jobs of the DM, since too little can lead to boredom or stagnation, while too much can create an ever-spiralling elevation of power gaming and wreck a good game even faster.

Just because a character has the ability to make a magical item, the DM shouldn't wave his hand and let the item appear in the campaign. It's important to strictly enforce the details of magical item creation, since this is a character power that can unbalance a game very quickly. The point is for the *player* to appreciate all the trouble and effort his character goes through in order to create even simple items. Forging a powerful item may take a character out of the campaign for months.

Creating magical items has been described in great detail in the *Book of Artifacts*, and again in *DM™ Option: High Level Campaigns*. The rules presented here mirror those systems and sum up the process for ease of reference. In addition, some more ideas for strange materials and components for magical items are included in order to widen the

range of bizarre quests and riddles a DM can throw at a character while he's working on his next potion or devising a new ring or wand.

**Standard vs. Nonstandard Items:** A character isn't limited to duplicating magical items that appear in the *DMG*. He can choose to devise completely new magical items, tailored to his own needs and tastes. However, the character can attempt to create new items as he sees fit. Some may be simple variants of existing items—for example, there's no reason a *ring of displacement* wouldn't work as well as a *cloak of displacement*. Other items can incorporate powers never before seen in a magical item. Generally, variant items suffer a –5% penalty to the final success check, and nonstandard items suffer a –10% penalty.

**Specialist Wizards:** Some magical items very clearly duplicate the effects of certain spells or specialist schools. For example, a *wand of polymorphing* is obviously an item with strong ties to the school of alteration, while a *wand of force* belongs in the school of force. If the DM agrees that the item in question does indeed fall into the character's specialty, the wizard gains a +5% bonus on his success check when creating the item.

## Special Ingredients

Creating an enchanted item is difficult. Even the simplest devices require extraordinary materials and processes. In many cases, characters find that an item just isn't worth the trouble of gathering the components, treating or refining them, and then weaving the spells that empower the final product. The DM's best means for controlling player character item creation is through the special ingredients required by a particular item.

There are two types of special ingredients: materials and processes. Materials are just what one would think—components that are actually incorporated into the structure of the item. Processes are steps that somehow refine, imbue, or alter the basic item. In either case, the ingredient can range from common to exotic, embracing almost anything imaginable.

**Materials:** As a general rule of thumb, more powerful items require more unusual materials. Materials may actually represent physical components of the item in question—the metal used to forge a ring or a rod, the wool from which a cloak is woven—or materials might be additives or refinements, such as a handful of pixie dust for a *potion of flying*, or the scales of a giant snake that are incorporated in a *phylactery of proof against poison*.

Materials can be completely nonmaterial, metaphorical ingredients as well as tangible substances. The courage of a knight, the spirit of a mountain, or the breath of a butterfly are all examples of this type of ingredient. A player character may have to exercise quite a bit of ingenuity and inventiveness to capture these rare qualities or essences!

Materials are divided into three general categories: common, rare, and exotic.

**Common** materials can be acquired almost anywhere. Steel, leather, bone, cloth, oak staves, and other such things are all common materials. Note that items suitable for enchantment must be made of the finest materials available, so a wizard might have to commission an ore-smelter to create the very purest steel available. Even the most common magical items require materials worth 100 gp, at a bare minimum! Intangible

common materials could include the tears of a maiden, the strength of a smith, or the essence of a rose.

**Rare** materials are more difficult to find or more expensive. A particular type or grade of silk, diamonds, roc feathers, ebony, a wizard's bones, or iron smelted by a master dwarven smith would be rare. Intangible materials could include the tears of a heartbroken maiden, the strength of a king, or the essence of rose harvested on the first night of a new moon. Common materials produced or gathered under unusual circumstances—such as the rose essence just described—also count as rare.

**Exotic** materials can only be acquired through an adventure on the part of the character. Silk woven from a phase spider, a faceted diamond never exposed to light, an archmage's bones, a lock of a goddess's hair, or steel smelted from a fallen star are all exotic materials; intangible materials might include the tears of a heartbroken princess, the strength of the greatest king in the world, or the essence of a rose harvested by the light of a comet that returns once every twenty years.

**Processes:** Almost anything that alters, changes, decorates, or aids in the production of an item without becoming part of the final piece is a process. Naturally, the exact nature of the process varies with the physical form of the item; potions might be mixed or brewed in a special retort, boiled over a fire fueled by an unusual substance, stirred in a special fashion, distilled, evaporated, infused, fermented, separated, or purified. Other processes appropriate for various types of item include the following:

Ink for scrolls can be brewed much like a potion;

The alloy for metallic rings must be mined, smelted, and then cast in some kind of mold, extruded as wire, or cold-worked. Setting stones, polishing, tempering, inscribing, or etching could finish the ring. Rings can also be made from nonmetallic substances; carefully carved stone, wood, or bone would work.

Wands and rods can be made of wood, iron, bone, crystal, stone, or almost anything imaginable. These items might require lathing, steeping, tooling, sanding, carving, polishing, enamelling, etching, or inlaying.

Staves are almost always made of wood, but a staff's heels—metal bands that cap the ends—could be made from any number of substances. Staves can be lathed, carved, steeped, tooled, sanded, inlaid, or set with crystals or stones.

Functional weapons and armor can be made from iron, bronze, steel, or any of a variety of fantastic alloys. Arms of +3 value are usually made from special meteoric steel, +4 weapons or armor are made from mithral-alloyed steel, and +5 arms are of adamantite-alloyed steel. Processes used to make these items include mining, smelting, refining, forging, casting, tempering, cooling, etching, inlaying, sharpening, and enamelling or painting.

Other items could be beaten, boiled, embroidered, engraved, carved, painted, smoked, cured, glazed, decorated, upholstered, tempered, lacquered, cooled, or heated in some way. Take a look at the appropriate proficiency descriptions for an idea of some of the processes involved.

*Common* processes could include chasing, engraving, marking, or finishing in any of the manners described above. *Rare* processes would add a hard-to-find material—embroidering with gold thread, boiling in the skull of a wizard, or painting with pigment

made from the blood of a cockatrice. *Exotic* processes could include such things as steeping the item or its components in the energies of the Positive Material Plane, smoking it over a fire fueled by branches of Yggdrasil, the World Oak, or forging the item with a hammer touched by the hand of a god.

## Potions

Among the easiest of items to make, potions range from simple healing brews to potent mixtures capable of taming dragons or restoring a character to complete health and sanity. Some potions are clerical potions and can only be manufactured by priests. These include: the *elixir of health, potion of extra-healing, potion of fire resistance, potion of healing, potion of sweet water*, and *potion of vitality.*

**Level Requirements:** Both priests and wizards must be at least 9th level to create potions. Specialists in the school of alchemy may brew potions at 6th level, but must use special procedures to do so. They may use the standard procedure after reaching 9th level or continue to use their special process.

**Facilities:** Wizards require an alchemical laboratory or a forge to brew potions; priests must have a consecrated altar. (See Chapter 5.) A wizard may need to expand his library in order to obtain the texts and tomes needed for researching the potion's formula.

**Research:** Before a character can brew a potion, he must discover what processes, materials, and special ingredients are required, and how these must be combined for success. This research requires 1d3+1 weeks at a cost of 100 gp per week, but if the character uses a *commune* or *contact other plane* spell to speed his research, he automatically succeeds in the minimum time.

If the character has a full dose of the potion in question to use as a sample, the research takes only one week and costs nothing. However, he still must have access to a laboratory or an altar in order to conduct the research.

Alchemists may use the research rules above once they reach 9th level, but before that they must follow a lengthier and more expensive process if they take advantage of their ability to create potions before other wizards can. An alchemist of less than 9th level must spend two weeks and 500 gp per potion level to research the formula and then pass a learn spells check. (A potion's equivalent spell level is its experience point value divided by 100, rounded up.)

Once a character has researched a potion's formula, he need not research it again; he can create samples of the potion as often as he wishes, as long as he follows the cost and time requirements.

**Processes and Materials:** Potions that contain only a single-use require one rare material and one common process; potions that provide several doses with one brewing require an exotic material and a rare process. (See **Special Ingredients** at the end of this chapter.) Potions that normally produce more than one dose include *potion of diminution, elixir of health, potion of extra-healing, potion of fire breath, potion of fire resistance, potion of growth, potion of invisibility, oil of impact,* and *potion of rainbow hues*.

One of the advantages of the alchemist is that he need not obtain special ingredients before creating a potion; his knowledge of chemicals and reagents enables him to simulate these rare materials, whether he is using the alchemical process or the magical process.

**Cost and Time:** Assuming that the character is able to obtain any special or

unusual materials required for the potion, it will cost him a number of gold pieces equal to the potion's experience point value to brew the potion. This process takes one day per 100 gp required.

The alchemical process usually requires one full week and 300 to 1,800 gp (3d6x100) to brew a potion. If the potion's experience point value is greater than 700, then the alchemist must spend an extra day per 100 experience points brewing the potion. However, at 9th level, the alchemist may choose to use the normal potion-brewing rules instead.

**Success or Failure:** The base chance for a successful brewing is 70%, +2% per character level, –1% for every 100 gp the potion costs. For example, a 13th-level wizard brewing a *potion of fire breath* would have a success chance of 96% (70% + 26% for character level), less 4% (400 gp), for a total of 92%. The DM should make this check in secret, since on a natural roll of 96 or higher the process fails, and the potion is cursed in some way (typically, it becomes a potion of poison or delusion instead of what it should be).

Alchemists may instead use a learn spells check, with a +1% bonus per character level, to see if they are successful in brewing the potion. Or, if the alchemist is 9th level or higher, he may produce the potion by magical means, using the normal success check of 70% + 2% per level. If this is the case, the alchemist gains a +5% to his success chance due to his specialist knowledge of potions.

*Talghaz the Enchanter, a 9th-level wizard, decides that he needs to produce a* philter of love *in order to help a princess fall in love with one of his comrades. Talghaz already possesses a minimal library and arranges to borrow the laboratory of his alchemist friend. As a result, he can begin his research without any additional expense. He uses no special techniques, so the research takes 1d3+1 weeks and costs him 100 gp per week.*

*After three weeks, Talghaz finishes his research. He discovers that the potion requires the tears of a dryad as a rare material and, with some grumbling, sets out to find a dryad and convince her to shed a few tears for him. One week (and an interesting adventure) later, Talghaz returns to the laboratory with a vial full of dryad tears and sets about brewing his potion. A* philter of love *is worth 200 XP, so it takes Talghaz two days and 200 gp to brew the potion.*

*When Talghaz finishes, the DM checks in secret to see if he was successful. The base chance is 70%, plus 18% for Talghaz's level, less 2% for the potion's experience point value. The DM also decides that a philter of love is right up an enchanter's alley and gives Talghaz the +5% bonus for specialization. His total chance of success is 91%; if the DM rolls a 96 or higher, the failure creates a cursed potion. (Wouldn't that be a surprise for Talghaz's friend?)*

## Scrolls

Like potions, scrolls are fairly easy to manufacture and are also accessible to characters of moderate level. Scrolls come in two varieties: spell scrolls and protection scrolls. Spell scrolls are exactly what the name implies—scrolls that store spells that can be cast simply by being read. Protection scrolls are special single-use magical items that provide defense against a number of threats.

While any character may read a protection scroll without the benefit of a read magic spell, wizard spells cannot be cast from a scroll or transcribed into a spell book until a *read magic* spell or effect has been employed by the reader. This can be done at the time of the scroll's use, or the reader can prepare ahead of time by using *read magic* in advance; once magically read, a scroll remains intelligible for the character who reads it. Note that only wizards, thieves, and bards may read wizard spells from spell scrolls; thieves and bards can bypass the normal requirement to *read magic* by using their special class abilities.

Priest spells do not require a *read magic* spell in order to be used from a scroll. Priests, thieves, and bards may read priest spells from spell scrolls.

Low-level wizards and priests may be able to read spells from scrolls that are normally beyond their abilities; even a 1st-level wizard has a chance to pronounce the incantation for a *fireball* or *lightning bolt* correctly. Refer to **Scrolls**, in Appendix 3 of the *Dungeon Master® Guide*.

**Level Requirements:** Wizards may create scrolls when they reach 9th level. Priests may scribe scrolls when they reach 7th level. Any spell the character knows (or has access to, in the case of a priest) can be placed on a scroll, or the character may attempt to create a protection scroll.

Geometers (specialists in the wizard school of geometry) have a special ability to create spell scrolls beginning at 4th level and protection scrolls at 7th level. When a geometer reaches 9th level, he may instead use the normal scroll creation process if he so desires.

**Facilities:** Wizards require access to any kind of laboratory (alchemical, forge, or research) in order to blend the ink for the scroll, although this is a fairly simple task given the right ingredients. Priests can blend the ink in any reasonable work area, but then must have access to a consecrated altar in order to actually scribe the scroll.

**Research:** There is no research required for spell scrolls or for protection scrolls that mirror spells available to the character. For example, if a wizard knows how to cast *antimagic shell*, he can write a scroll of *protection from magic* without performing any kind of research. If the scroll has no spell equivalent known to the character, he must research the scroll using the normal spell research rules. To figure out a scrolls's effective spell level, divide the experience point value by 500 and then add 2 (Level = XP/500+2). For example, scrolls worth 1,000 experience points are considered 4th-level spells;

Protection scrolls that have spell equivalents include the following scrolls:

| **Scroll** | **Equivalent** |
|---|---|
| Protection from elementals | dismissal |
| Protection from magic | antimagic shell |
| Protection from petrification | stone to flesh |
| Protection from plants | antiplant shell |
| Protection from poison | neutralize poison |
| Protection from possession | dispel evil |
| Protection from undead | control undead |
| Protection from water | airy water |

**Processes and Materials:** Scrolls require three components: some form of paper,

a specially-blended ink, and a unique quill. Common paper, parchment, or papyrus may be used to create the scroll; paper provides a +5% bonus to the success roll, while papyrus inflicts a –5% penalty. All scrolls require a rare quill of some kind.

Ink for spells of 1st to 3rd level requires a rare ingredient; ink for spells of 4th to 6th level requires an exotic ingredient; and ink for spells of 7th to 9th level requires a rare and an exotic ingredient. (Use the spell level equivalents noted above for protection scrolls.)

Geometers have the special advantage of requiring nothing except common paper or parchment and a rare quill (which can only be used once); the ink is not important for the geometer's scrolls.

**Cost and Time:** Inscribing a spell onto a scroll takes one day per spell level, while creating a protection scroll takes one full week of uninterrupted work. The only cost incurred is that of obtaining the required materials.

Geometers have the same time requirements, but must pay 100 gp per spell level for their materials for spell scrolls, or 300 to 1,800 gp (3d6x100) for protection scrolls.

**Success or Failure:** The base chance to successfully create a scroll is 80%, +1% per character level, –1% per spell level (or equivalent spell level, in the case of protection scrolls). If the character fails the success check, the spell he is currently inscribing fails, and he may not add any more spells to that scroll, but any spells previously placed on the scroll remain intact and may still be used.

The DM should make the check in secret, since a natural 96 or higher on the success check creates a *cursed* scroll. The creator of the scroll has no idea that his work is flawed until he tries to use that particular spell.

Geometers use a learn spells check instead of the normal success check if they produce the scroll without any magical ingredients or processes. If a geometer creates a scroll using the usual methods described above, he gains a +5% bonus to his success check due to his familiarity with scrolls.

*Milana, an 8th-level priestess, decides to create a* scroll of protection from poison*, since she and her fellow adventurers intend to go wyvern-hunting. Because Milana is capable of casting the spell* neutralize poison*, she does not need to do any research. Because the spell equivalent is 4th level, the scroll requires an exotic material for the ink. The DM decides that the ink must include nightshade harvested during the dark of the moon, so Milana spends a week or more locating the deadly mushrooms and waiting for the proper time to collect them. The quill must be a feather steeped in the venom of an adder, and Milana attends to that as well. Fortunately, her temple is near a good-sized town, and she can easily procure paper.*

*After gathering the necessary materials, Milana blends the ink (no cost or time) and begins scribing* scroll of protection from poison*. This requires one full week, at no particular cost—although the patriarch of her temple suggests that an offering for the use of the altar would be appreciated. Milana's chance of success is 80%, +8% for her level, –4% for the equivalent level of the scroll. The use of paper gives her a +5% bonus, for a total of 89%. Milana passes the check easily, and finishes her scroll.*

## Other Items

This broad category includes all other types of magical items, including rings,

wands, staves, rods, miscellaneous magical items, and weapons and armor. Player characters can manufacture almost any kind of magical item appearing in the *DMG*, except for magical books, tomes, manuals, librams, grimoires, or artifacts of any kind.

In addition, a player character may be restricted from creating a particular item by his class. Wizards can create *any* magical item that is not specifically reserved for the use of priest characters (i.e., an item such as a *staff of curing*) or limited to certain races (such as *boots of elvenkind*). Racial items are created by priests of that particular race. If the item can be used by other characters as well as priests (for example, *helm of teleportation*), the wizard can manufacture the item. On the other hand, priests and specialist wizards can only create items that they can use. When creating an item, a specialist wizard gains a +5% bonus to his chance of succeeding.

The most important aspect of an item's enchantment has very little to do with its purpose or form. Magical items are divided into several loose classes that are based on the nature of the enchantment: single-use, limited-use, single-function, and multiple-function.

**Single-use** items are depleted after a single usage. Most potions and scrolls fall into this category, but these have been discussed already. Other single-use magical items include such things as *beads of force*, *incense of meditation*, or any of *Quaal's feather tokens*.

**Limited-use** items have a set or variable number of charges that may be used before it is expended. Some limited-use items can be recharged, but only if they are recharged before their last charge has been expended. Other limited-use items may have multiple-functions (see below). Most wands and staves are limited-use items. Other limited-use items include such devices as a *ring of wishes, bag of beans, scarab of protection,* or the special properties of *armor of fear*.

**Single-function** items have only one power, which functions continuously or on demand. Some single-function items have time limitations, after which they cannot be used until they replenish their magical energy. Some single-function items may feature a limited-use feature, in addition to the persistent powers. Items such as a *ring of shocking grasp, amulet of life protection, boots of speed*, and *wings of flying* are good examples of single-function items.

**Multiple-function** items have more than one power and may also feature additional limited-use powers. Good examples include the *rod of alertness, ring of elemental command, cloak of arachnida,* or the *helm of brilliance*.

**Level Requirements:** Both wizards and priests must be at least 11th level to create any kind of magical item other than a potion or a scroll. Wizards are also limited by the spells required to actually create the item—*enchant an item*, *permanency*, and any other appropriate spells. Priests, on the other hand, do not cast spells to create items, but instead use a consecrated altar (see Chapter 5).

**Facilities:** Wizards require a well-equipped forge and may need to expand their personal libraries in order to conduct the necessary research. (Again, refer to Chapter 5.) Priests must have access to a specially consecrated altar. In addition, both wizards and priests may find it very useful to have some skilled assistants nearby.

**Research:** Before a character can begin work on a magical item, he must first discover the steps necessary to create it! This requires research time and effort.

Generally, a character must spend 1d6+1 weeks and 200 gp per week in order to find out how to build the item, although the DM may rule that exceptionally powerful items (5,000 XP value or greater, or any item such as a *girdle of giant strength* that imparts drastic and persistent bonuses to a character) requires consultation with a sage or some special effort on the part of the character to research.

*Contact other plane* and *commune* spells are particularly useful in this step of item creation, since the successful use of one of these divinations reduces the research time to the minimum required.

**Processes and Materials:** The exact nature of the processes and materials required varies from item to item depending on its category and type. However, all items require an *enchant an item* spell (or the equivalent priestly ceremony), and many require a *permanency* spell to boot.

**Rings** require one common process, usually some type of carving, engraving, pouring, shaping, or forging. In addition to this process, magical rings have other requirements based on their type:

Single-function rings require one exotic material;
Multiple-function rings require one exotic material and one exotic process per function;
Limited-use rings require one exotic material and one exotic process per use.

Rings created by wizards must be prepared with an *enchant an item* spell and finished with a *permanency* spell, although charged rings such as the *ring of the ram* do not require the *permanency* spell, since it can be recharged. Naturally, the character must also cast any spells required for spell-like functions.

**Rods, staves, and wands** are not completed with a *permanency* spell and lose their magic if their charges are ever completely exhausted. Again, the type of item determines what processes and materials are required:

Single-function wands and staves require one rare material and one rare process;
Single-use or single-function rods require one exotic material and one rare process;
Multiple-function rods, staves, or wands require one exotic material, and one exotic process per function;
Limited-use rods, staves, or wands require one exotic material, and one exotic process per use.

Materials for these devices could include the actual shaft or handle, a special headpiece or crystal, or special heels or caps for the ends. Processes might include carving, engraving, painting, or tempering.

**Miscellaneous magical items** require an enchant an item spell (or the appropriate priestly ceremony), but single-use and limited-use items do not require *permanency* spells.

Single-use and single-function items require one exotic material and one exotic process;

Limited-use items require one exotic material per function and two exotic processes per use;

Multiple-function items require one exotic material per function, one exotic process, and one rare process per function.

Naturally, the materials and processes used will vary widely with the nature of the item in question. Considering that miscellaneous magic includes everything from articles of clothing to boats and decks of cards, the actual construction or creation of the item could include anything imaginable! See **Special Ingredients** for ideas.

**Magical weapons and armor** require an *enchant an item* and a *permanency* spell or the priestly equivalents (see pages 121–122 in the *DMG*). In addition, devices with expendable charges (*armor of fear*, for example) must be imbued with the appropriate spells. Weapons and armor that have no special properties except for conferring combat bonuses are considered single-function items; items with *blending, command, disruption, throwing, hurling, accuracy, speed, distance, venom, homing, lightning, piercing, sharpness, wounding,* or *vorpal* properties are considered multiple-function items. Armors that have special but expendable properties (*fear* and *etherealness*) are limited-use items; and expendable items such as magical arrows or javelins are single-use items.

Single-use weapons require one rare material and one common process;

Single-function weapons and armors require one exotic material, one common process, and one rare process;

Multiple-function weapons and armors require one exotic material and process, one rare process, and one common process per function;

Limited-use armors and weapons require one exotic material and process, one rare process, and one common process per use.

**Table 38:**
Magical Item Cost and Time Requirements

| Item | Cost | Time |
|---|---|---|
| Ring, single-function | XP value | 1 wk per 100 gp |
| Ring, all others | 2 x XP | 1 wk per 100 gp |
| Rod, single-use | 1/5 XP | 1 wk per 1,000 gp |
| Rod, single-function | 1/5 XP | 1 wk per 100 gp |
| Rod, multiple-function | 1/5 XP | 2 wks per 100 gp |
| Rod, limited-use | 1/5 XP | 4 wks per 100 gp |
| Staff/wand, single-function | 1/5 XP | 1 wk per 100 gp |
| Staff/wand, multiple-function | 1/5 XP | 2 wks per 100 gp |
| Staff/wand, limited-use | 1/5 XP | 4 wks per 100 gp |
| Misc. magic, single-use | 2 x XP | 1 wk per 100 gp |
| Misc. magic, single-function | 3 x XP | 1 wk per 100 gp |
| Misc. magic, multiple-function | 4 x XP | 1 wk per 100 gp |
| Misc. magic, limited-use | 2 x XP | 3 wks per 100 gp |

| | | |
|---|---|---|
| Weapon, single-use | XP value | 1 wk per 100 gp |
| Weapon/armor, single-function | 2 x XP | 3 wks per 1,000 gp |
| Weapon/armor, multiple-function | 2 x XP | 4 wks per 1,000 gp |
| Weapon/armor, limited-use | 2 x XP | 2 wks per 1,000 gp |

**Cost and Time:** Again, the cost and time required to manufacture magical items varies depending on the category and the type of item. For example, if a mage wishes to create a single-function ring worth 1,000 XP, then he must not only spend 1,000 gp (see the "Cost in XP" column of Table 38: Magical Item Cost and Time Requirements), but he must also spend 10 weeks (one week for every 100 gp spent) constructing the item.

The cost of any special processes or materials is not included in the base cost to create the item, so if a wizard discovers that he must crush one hundred pearls to create his *dust of disappearance*, it's up to him to find the pearls. The time requirements do not include any special quests or processes the character must undertake in order to create the item.

**Success or Failure:** All magical items that fall into this broad category share the same success roll. Assuming the character follows all the necessary steps, there is a base 60% chance of success, +1% per caster level, –1% per spell or special process required to create the item. (The caster's initial *enchant an item* or finishing *permanency* spells do not count against his success chance.) While specialist wizards receive a 5% bonus to their success chance when creating an item using abilities from their school of specialization, artificers gain a special 10% bonus to their success chance due to their superior item-crafting skills.

At the DM's option, characters who display exceptional ingenuity or go to extreme lengths to create an item from the very best, most appropriate materials and processes available may receive an additional bonus of +5% to +15% on their success chance.

If the character rolls a 96 or higher on his success check, the item is cursed in some way. For example, a character attempting to produce a *cloak of displacement* might create a *cloak of poisonousness* instead. If for some reason the character was trying to create a cursed item, a roll of 96 or higher is a simple failure—he doesn't create a beneficial device instead!

*Thedaric is a 14th-level fire mage who decides to create a* wand of fire *for those times when he's low on memorized spells. He easily meets the level requirement and spends a little money refurbishing a laboratory (in this case, a forge) that he found in the ruins of an archmage's tower. The forge comes with a library sufficient for researching the* wand of fire *(it's the first item Thedaric has tried to make). Thedaric uses a contact other plane spell to minimize his research effort, so he only requires two weeks and 400 gp to learn how to create the wand.*

*As described in the* DMG, *the* wand of fire *is a multiple-function item (it has four separate uses), and a limited-use item, since it uses charges. The DM decides that the wand requires one exotic material, and four exotic processes, in addition to the necessary spells, cost, and time. Thedaric discovers that the wand must be forged by a master smith of the azer (a race of fire-dwarves from the Elemental Plane of Fire), from brass smelted*

*in the efreeti City of Brass, tempered by the fiery breath of an adult red dragon, graven while still soft with runes of power, using a fire sapphire (a mythical gemstone the DM just made up on the spot), and finally polished with a mixture containing the ash of a thousand year-old tree destroyed by fire. With a heavy sigh, Thedaric sets out on months of quests, challenges, and adventures, arranging all of the materials and processes.*

*Several months later, everything's ready. Thedaric journeys to the elemental plane of fire, obtains the efreeti brass, gets the azer smith to work it into a wand, engraves it with the fire sapphire, tricks a dragon into tempering it, and finally polishes and finishes the item in his own workshop with his special mixture of ash. The construction of the item required an amount of gold equal to one-fifth the wand's XP value (900 gp in this case) and 4 weeks per 100 gp, for a total of 36 weeks of forging, tempering, and polishing!*

*Thedaric is well-satisfied with his work so far, but now he has to make the wand magical. First, he'll need to use enchant an item in order to prepare the wand to receive spells. After four days, the enchant an item is finished, and Thedaric attempts a saving throw vs. spell to see if it succeeded. His elementalist bonuses to saving throws vs. fire apply, and Thedaric passes with a surprisingly close shave. He then casts* burning hands, pyrotechnics, fireball, *and* wall of fire *into the wand. Each spell requires 2d4 hours per spell level, so this ends up taking several days in and of itself. Since he must check the success of each enchantment and doesn't know if any one spell will take, Thedaric casts another battery of the same spells into the wand, just to make sure that he gets all the functions desired—at worst, the wand will have a few extra charges on it, so this is a reasonable precaution against the possibility of failing in one of these steps. Since the* wand of fire *is a limited-use item, it does not require a* permanency *spell to complete it; after his second round of spells, Thedaric declares that he is finished. (He's not worried about stocking up on charges right now; he just wants to complete the initial enchantment, and recharge the wand to its maximum potential later.)*

*The DM rolled saving throws vs. spells for each spell Thedaric placed into the wand, and as it turns out, the extra four spells were an unnecessary precaution; Thedaric succeeded the first time around. Now the DM checks to see if the overall process was a success or failure. The base chance of success for a wand is 60%, plus 14% for Thedaric's level, –12% for spells and special processes. The DM decides that Thedaric was particularly resourceful, and gives him a +10% bonus, and since Thedaric is a fire specialist, he gains an additional +5% bonus, for a total success chance of 77%. Thedaric succeeds and now has a* wand of fire*; the DM decides that the spells he placed into the wand became its first 8 charges (each spell was cast into the wand twice.)*

*Now, Thedaric will probably seek to recharge the wand. Recharging items requires another enchant an item spell, but this one is automatically successful. He can then begin to place spells into the wand to increase the number of charges, up to its maximum of 50. So, after close to a year of adventuring and construction, Thedaric finishes his* wand of fire*! Considering the immense time and effort this took a 14th-level character, you can see why magical items should be rare and unusual things!*

## Qualities

When a wizard or priest creates a magical item, he spends a lot of time and effort seeking a way to impart to his creation the particular qualities and properties he desires.

While an exhaustive listing of each standard item's usual components would be beyond the scope of this book (and fairly boring, as well!), we'll take a quick look at some good ideas for components, spells, and processes designed to imbue an item with the powers the character desires.

Qualities are divided into twelve loose categories: control or domination, charm or influence, perception, bodily alteration, bodily augmentation, movement, resistance and defense, attack or offense, summoning, object alteration, healing and restoration, and magical manipulation. Most items fall into at least one, and sometimes two, of these categories.

**Control or Charm:** Magical devices of this sort exert a compulsion of some kind, forcing compliance from the subject. Unlike items that rely on influence or the power of emotion, control devices allow the caster to dictate commands to the subject, which will then be followed to the letter. Good examples of items that fall into this category include *potions of giant, dragon,* or *undead control,* or a *ring of mammal control* or *elemental control*.

Materials for these items often include specimens or samples from the creature in question—blood, hair, sweat, or more intangible qualities. Rare or exotic requirements might force the PC to seek out a unique individual among the subject race, such as a frost giant jarl, or a vampire mage.

Rings, rods, and staves of this class might require decorating or engraving with a rune signifying the true, secret name of the subjects to be affected. A substance that is linked to the subject in some way could be included; for example, a *potion of plant control* might require the sap of a treant since treants have the ability to animate other plants, or the potion might have to be prepared in a vessel carved from a treant's heartwood. Similarly, a powdered gem taken from a king's crown might be required for a *potion of human control*.

In many cases, some form of *charm, geas,* or *quest* spell will be required to enchant the item.

**Influence or Emotion:** Magical devices with these properties enable the wielder to exert unusual influence over the subject or impart an emotional state of some kind without gaining the ability to direct and control his movements. It is a subtler type of enchantment than outright control or domination, with more persistent effects that often highlight a player's role-playing ability. The wielder of the item is not able to actually order the subjects about but instead presents the subject with strong preferences or impulses that the subject is free to pursue as he sees fit. The least subtle of these items simply delivers an overwhelming emotion, such as fear or panic, to send the victims into instant flight. A *ring of human influence, wand of fear,* or *philter of love* all fall into this category.

Unlike the control and charm devices, many devices in this category enhance the caster's Charisma or eloquence, without regard to the subject's race. Materials associated with the emotion required are often incorporated into magical items of this type; for example, a *wand of fear* might require a bone from a lich or the terror of a coward. Items that confer persuasiveness to a character might require something from a creature with natural *charm* or *beguiling* powers, such as a snake's tongue or wood from the tree of a dryad.

Processes could include such things as etching the item with the tears of a liar,

engraving it with the secret name of a terrifying fiend, or tempering it on the altar of a deity of love or trickery. Rods, rings, and wands of this type are often chased with metals related to the emotions in question— silver or gold for noble emotions, lead or iron for base ones.

Spells that may prove useful in enchanting these items include such things as *animal friendship, emotion, enthrall, fear, suggestion,* or *mass suggestion*.

**Perception:** Magical items of this type extend the wearer or user's perceptions in some way, enabling him to detect things he could not detect before, or extending the range of his senses beyond his immediate surroundings. Devices that expand the senses include such things as a *ring of x-ray vision, a medallion of ESP*, or a *gem of seeing*; items that extend the senses include *potions of clairaudience* or *clairvoyance, crystal balls*, and similar items.

Materials often include samples or specimens from creatures who naturally possess the sense in question, such as the wit of a thief, the cunning of a fox, or the pick of a dwarf master miner. In addition, gems, glass, or stones of special clarity or color are often incorporated into devices of this nature.

The processes required may involve more specimens of appropriate origin, such as polishing a magical lens with a paste made from the eye of a giant eagle or steeping a robe of eyes in the ichor of an argus. Other processes could include such things as grinding lenses or orbs, sanding items with special mixtures or compounds, magnetizing metal wands, or painting or inscribing an item in a certain design.

All kinds of divination spells—*clairaudience, clairvoyance, ESP, detect lie*, or *true seeing*, for example—may be part of the item creation process.

**Movement:** A great number of magical items impart some supernatural means of travel. Some merely augment the wearer's natural abilities, while others open up entire new avenues of movement for the character. There are a number of movement-enhancing items, including *potions of flying and levitation, boots of speed, boots of striding and springing, carpet of flying, cloak of the bat, wings of flying*, and many others.

Once again, specimens from creatures possessing the desired abilities are often important materials. Feathers from rare or unusual birds are frequently used for flying magic, while creatures such as grells or beholders provide levitation properties. Other materials could be more fantastic, such as the essence of the north wind.

Depending on the nature of the item, the process usually serves to seal the magical power into the item. Boots might be stained with a special mixture or soled by a particular craftsman or a special tool. Cloaks might be cured or waterproofed in some unusual way.

Useful spells for items conferring movement powers include enchantments such as *jump, haste, fly, levitate, teleport, polymorph self, wind walk,* or *plane shift*.

**Bodily Alteration:** This common category for magical items imparts some ability or power not normally possessed by the wearer. These abilities are not necessarily offensive or defensive, but they can provide the character with unusual resistances or camouflage in certain situations. Magical items that fall into this category include *potions of diminution, growth,* and *gaseous form*; items that confer *invisibility, blending,* or *disguise* abilities; and items that provide the wearer with *water breathing, adaptation,* or the ability to change his own shape. Naturally, this category often overlaps with several others since the alteration of one's form can augment the wearer's powers of movement,

attack, or defense.

In addition to materials harvested from creatures with the desired abilities, inert objects with the desired properties can be used as materials for these items. For example, a diamond or crystal of perfect clarity might be useful for invisibility, while the smallest grain of sand on a beach (now there's a challenge!) might be required for diminution. Steam from a certain volcano, or wood from a vampire's coffin, could impart gaseous form.

Since many of the items in this category are potions, any process that is reasonable for creating a potion could be used. Other items might be steeped in special solutions designed to imbue them with the desired powers, or polished or painted with the materials required.

Obviously, most of these items have spells that are immediately applicable to the enchantment. *Enlarge* or its reverse are good for diminution and growth; *invisibility, water breathing, polymorph self*, and *change self* may all be useful for items of this type.

**Bodily Augmentation:** Items of this type increase abilities or skills that the wielder already possesses by making him stronger and more dexterous, increasing his effective level, or augmenting his skills in a specific way. Examples include a *potion of giant strength* or *heroism*, a *girdle of giant strength, bracers of archery*, or *gauntlets of dexterity*. The chief difference between this category and the previous one is that augmentation changes existing abilities, while alteration provides abilities the character would not otherwise have.

There are three major classes of item that can augment the user's natural abilities: potions, girdles and gauntlets, and books. Potions often feature the hair, blood, or sweat of a creature possessing the desired qualities—a giant of the appropriate type for a *potion of giant strength* or a great hero for a *potion of heroism*. Materials for persistent items might include such things as an arrow carved by a master elf fletcher, leather from the belt of a giant chieftain, or steel worked by the strongest ogre in the land.

The processes required for potions have been described at length already. Belts, gauntlets, and other such things require curing, cutting and shaping, etching or inscribing, piercing, applying metal studs or fasteners, and finishing with various rubs or mixtures.

Spells that the character may find useful include enchantments such as *strength, bless, prayer*, or *spider climb*.

**Resistance or Defense:** This large category includes all kinds of devices that provide the user with a resistance, defense, or immunity to some attack form. These can be divided into two subcategories: physical defenses, which protect the user from direct attack, and magical defenses, which negate specific forms of damage. A few items in this class provide some benefits against both physical and magical attack. Examples of items with resistance or defensive powers include all kinds of magical armor, *potions of fire resistance* or *invulnerability*, the various sorts of protection scrolls, *rings of mind shielding, sustenance*, or *protection, cloaks of protection* or *displacement*, and many others.

Naturally, favored materials include those that are resistant to the type of damage defended against by the item. These can be minerals or substances that possess the qualities desired—diamonds for hardness, special clay or crystal for acid resistance, various metals and alloys for strength and resilience—or samples from a creature known for a certain defense, such as the hide of a displacer beast or blink dog, the scale of a

dragon, or the shell of a giant tortoise. Finally, substances inimical to the creature could be used to make a ward; garlic, holy symbols, or holy water could be incorporated into an *amulet versus undead*.

Intangible materials such as a knight's courage, a moonbeam, or the morning mists on a sylvan lake may be required instead of physical substances. A *scarab versus golems* might require the animating spark of a flesh golem, or the pity of an iron golem.

Items of this class take many shapes and forms, but potions, armor, clothing, and jewelry are the most common varieties. The processes involved depend on the exact form of the item. However, processes designed to lend strength— tempering, shellacking or enamelling, or bonding—are frequently used to finish these items. Any number of spells provide defenses or resistances of some kind; these may be useful in the creation process.

**Healing and Restoration:** Resistances generally prevent injury from taking place, but magic of this category concentrates on the swift repair of damage or adverse conditions. Some types of item instead offer enhanced health or longevity; in general, if an item affects the metabolism of the wearer for the purpose of preserving his health, it falls into this category instead of bodily augmentation. Items in this category include *potions of healing* and *longevity, elixirs of health and vitality, ring of regeneration, staff of curing,* and *periapts of health* or *wound closure*.

Many of these devices or brews require herbs, which are special medicines and preparations famed for their healing potency. These herbs may require special harvesting or treatment before they can be incorporated into an item. In addition, animal samples from creatures who enjoy the properties in question can be useful; for example, a *ring of regeneration* may require the heart of a troll, while very long-lived creatures (elves, treants, or dragons) may be useful for magic that prolongs life.

Adventurers are most familiar with potions of this type, and these require the same steps or processes that other potions do—distilling, brewing, aging, purification, and so on. Spells of healing and restoration are often required for creating items of this class, which means that most of these devices are created by priest characters.

**Attack or Offense:** As the largest single category of magical items, these devices with offensive powers range from simple enchanted weapons to mighty staves with a dazzling array of dreadful powers. Most rods, staves, and wands fall into this category along with almost all weapons and a fair number of rings, potions, and miscellaneous magical items. Just like defensive items, attack devices provide the wielder with either combat bonuses or magical effects, and a few (such as a *staff of power*) provide both.

Weapons and other items designed to strike blows at an enemy usually rely on materials designed to grant extraordinary strength, sharpness, flexibility, or lightness and ease of use. Special minerals for the weapon's alloy are quite common. In addition, weapons with special qualities (*quickness, wounding, hurling*, and so on) may include samples from creatures that naturally possess these powers; a *sword of life stealing* might require the essence of a wraith, while a *mace of disruption* could incorporate the holy symbol of a patriarch dead 1,000 years.

Devices that project magical attacks at the wielder's enemy often require materials that reflect their nature. A *wand of frost* could be made from an icicle, the bones of a frost giant shaman, or the fang of a white dragon. A *staff of thunder and lightning* might require wood taken from a lightning-struck treant; a *ring of shocking grasp* that is etched with a solution made from the blood of electric eels is also appropriate. Obviously,

there is a wonderful variety of ideas to choose from!

The process involved reflects the item in some way. Again, items meant to be employed as weapons will often feature some kind of tempering or strengthening, while other items could be finished in any number of ways. Items of this type that require charges may need certain spells to be cast into them over and over again during the creation process.

**Magical Manipulation:** Magical items that affect other magical items, provide magical powers to their owners, or somehow augment or enhance the spell capability of their owners belong to this group. These items are among the most potent in the AD&D game system. This category includes *rings of spell storing, spell turning,* and *wizardry*; *rods of absorption and cancellation; wand of negation; pearl of power; incense of meditation; book of infinite spells*; and the *beaker of plentiful potions*.

Generally, items of this sort require either highly magical or highly antimagical materials since they are designed to manipulate the very stuff of magic itself. Magical materials include special alloys of meteoric or extraplanar minerals, as well as things such as a unicorn's horn, a kirin's hooves, the bones of an archmage, or the holy symbol of a saint. Antimagical materials could consist of specimens from creatures with high magic resistance, iron taken from a nonmagical prime material world, or wood from a tree rooted in a magic-dead area in worlds where such places exist.

Processes suitable for items of this type may involve polishing or etching with a solution of magical or antimagical substances, tempering or engraving it in a place of great magical potential (the extraplanar domain of a god of magic, for example), or bathing it in the raw stuff of magic, such as a wild mage's *wildfire* spell.

Spells suitable for empowering magic-manipulating items include dweomers such as *antimagic shell, dispel magic, Mordenkainen's disjunction,* or *spell turning*. Priests may rely on *imbue with spell ability* or *holy word*.

**Matter Manipulation:** Items of this sort are designed to have their greatest effects on inanimate objects or substances by transforming, destroying, or otherwise altering something without making a direct attack. Matter-manipulating devices include *potion of sweetwater, oil of timelessness, wand of flame extinguishing, decanter of endless water, maul of the titans,* or the *horn of collapsing*. While many of these devices have obvious applications as weapons in certain situations, in most cases this is an incidental benefit or hazard of their normal function.

Materials for these items often consist of substances that have the effect desired or animal samples from creatures that can perform the intended action. For example, a *wand of flame extinguishing* could incorporate ice or water from the heart of the Elemental Plane of Water, while a *spade of colossal excavation* might require the ground-up claws of a giant badger to be mixed into the alloy for the shovel's blade. In a couple of cases, the item contains some kind of link to one of the elemental planes and produces an endless supply of one substance or another.

The process varies with the type of item; tools may require balancing, sharpening, or tempering of some kind. Spells that may be useful include *dig, move earth, temporal stasis, purify food and drink,* and other spells designed to affect objects.

**Summoning:** Items that summon monsters, servants, or champions to aid the wielder fall into the class of summoning devices. In addition to the devices which obviously bring creatures from distant locales, *figurines of wondrous power* and other

objects that transform into living servitors can be considered summoning devices since the overall effect (i.e., the user gains a useful ally of some kind) is much the same. Other summoning items include a *ring of djinni summoning, staff of swarming insects, brazier commanding fire elementals, pipes of the sewers*, and the *horn of Valhalla*.

Summoning devices almost always include materials that are pleasing to the creatures to be commanded, or at least signify them in some way. For example, a *horn of Valhalla* might require the courage of a berserker, iron from the riven shield of a mighty hero, or gold won from a dragon's hoard. Devices built to summon extraplanar monsters often feature material collected on the subject creature's home plane.

The finishing processes of a summoning device usually reinforce the bond with the particular creature by bathing or steeping the item in the creature's blood or by somehow imbuing it with a substance desired by the monster. Several spells may prove useful in creating these items, including *gate, exaction, entrapment, conjure elemental*, or *binding*.

## Items That No Player Character Should Create

The rules for creating magical items allow the DM a great amount of latitude in determining just how difficult the creation of any particular item is going to be. After all, the search for a few exotic materials and processes can keep an ambitious PC busy for years! And the rules have been scaled to make the most powerful and deadly items prohibitively expensive and time-consuming. But, despite these safeguards, there are still a few items that are just too powerful for a player character to create.

The first item is actually an entire category—magical books. Books, tomes, librams, manuals, and other such items provide the character with the ability to build himself an instant level gain or quickly enhance his ability scores. In most campaigns, it's safe to assume that magical books are demi-artifacts endowed with a special purpose and a near-sentient talent for skipping out on their present owners. For whatever reasons, powers beyond mortal ken had a hand in the creation of these devices, and the only characters who can duplicate the feat are those who stand on the verge of divine ascension.

The next two items are simply so inexplicably weird that the reasons why a PC would wish to create one or the other is almost impossible to fathom. These are the *deck of many things* and the *sphere of annihilation*. Both have potentially disastrous consequences for a campaign and should be extremely rare in any event. In particular, players seem to have a vindictive streak with regard to *spheres of annihilation*, using them to do things like drain seas and devour planets. The DM is well advised to prevent PCs from making a few dozen of these to liven up his world. The *deck of many things*, on the other hand, offers instant level gains and other such game-busting benefits. If a group of PCs finds one after an arduous adventure and chooses to experiment with it, they've earned the privilege. But preparing a new *deck* on demand is a privilege too dangerous for most players.

The last category is the least spectacular: special racial magic, such as *cloaks* or *boots of elvenkind*. Unless the character is a member of the race in question, he shouldn't be able to create these items. However, if the character is an elf (for example), and he's a priest that has risen high enough in level to contemplate the manufacture of these devices,

there's no reason the DM couldn't allow him to do so as long as he follows the normal rules for item creation.

## Recharging Magical Items

Items that possess charges, such as most wands or rods, can be recharged. Some item descriptions name the particular class and level of character that can recharge the item; for example, a *rod of security* can only be recharged by the combined efforts of a wizard and priest of 18th level or higher. If the item description does not specify the level required to recharge it, then it can be recharged by any character who can create an item (i.e., an 11th-level priest, or a wizard with the ability to cast *enchant an item*), as long as the character can also cast the highest-level spell simulated or cast by the item. For example, the highest-level spell incorporated in a *wand of fire* is *wall of fire*, a 4th-level wizard spell, which can be cast by a wizard of 7th level or higher; therefore, if the wizard knows *wall of fire*, it's the requirement to *enchant an item* that is the pressing issue in this case.

If the character can use the appropriate spells, an item can be recharged by simply casting *enchant an item* and then making a saving throw vs. spell to see if the spell takes. (Priests spend a week praying at their consecrated altar to recharge their items.) If the *enchant an item* succeeds, the character may then cast the appropriate spells into the item, taking 1d4 hours per spell. If the preparatory spell fails, then the caster must make another saving throw vs. spell with a –1 penalty this time; failing this save results in the item's ruin. It will never be usable again.

Assuming the character doesn't spoil the item by attempting to recharge it, he may then begin to place spells of the appropriate type into the item. As long as he begins the next spell within 24 hours of finishing the last one, he can pour charges into the item without stopping to use *enchant an item* again. Success is automatic, and the character can place as many (or as few) additional charges into the item as he likes. However, he may never overcharge the item by placing more charges into it than it could have at its maximum. For example, a *ring of the ram* can hold as many as 10 charges at one time, so it can't be recharged past that limit.

# Chapter 8:
# Spells in Combat

While many spells provide a character with information, influence, or unusual powers of movement, most wizards and priests seem to be interested in spells that bring doom and destruction upon their enemies. Naturally, there are a great number of these enchantments, ranging from spells that annoy or hinder the subjects to awesome strikes that can slay dozens of monsters at once.

In this chapter, we'll examine the use of spells on the battlefield. First of all, we'll take a look at characteristics or properties of combative spells—for example, how far away can a fireball be seen? Next, spells with special or unusual effects associated with

them will be dealt with—just what does a *fireball* do to the air quality of a small room? For those of our readers who are familiar with the *Player's Option: Combat & Tactics* book, we'll examine the issue of spells that cause knockdowns and the possibility of critical strikes or specific injuries caused by spell damage.

Spell Characteristics If you've played the AD&D game for any amount of time, you are already quite familiar with a number of spell characteristics such as range, duration, area of effect, and other such attributes. Some characteristics are fixed values, while others may vary with the caster's level. *Player's Option: Spells & Magic* introduces the new characteristics of **casting subtlety** and **sensory signature**, which describe the obviousness of a spell's casting or effects.

In addition to perception characteristics, we'll also take a look at spells that may create knockdowns (a concept from the *Player's Option: Combat & Tactics* book), as well as spells that require attack rolls on the part of the caster.

## Casting Subtlety

In many situations, a wizard or priest couldn't care less who sees him casting a spell. When an archmage is getting ready to electrocute a band of ogres with his *chain lightning* spell, he usually doesn't take any steps to conceal what he is doing and casts the spell in the most expedient fashion possible. On the other hand, some situations require great delicacy on the part of the character. When a wizard wants to *charm* a guard-captain in front of the captain's detachment of soldiers, he'll have to be very careful not to tip his hand.

Naturally, some spells are more subtle than others. There are a number of factors to take into consideration—the number of components required, the size of the material components, the length of the casting time, and whether or not the spell requires some unusual behavior or speech on the part of the caster.

**Noticing Spells:** Who notices when spells are being cast? Generally, anyone who is directly observing the caster notices the strange gestures or air of concentration that characterize a spell. Depending on the lighting conditions and the amount of distractions nearby, an observer might be able to notice the spellcaster's actions from as far as 30 to 50 feet away. Casual observers—people who are on the scene, but don't have any particular reason to be watching the spellcaster—rarely notice the spell unless it's unusually obvious. If it's important to know whether or not a particular NPC or monster notices the spellcaster's actions, the DM can make an Intelligence check for that character (Intelligence acts as a measure of a character's perceptiveness).

**Subtlety Rating:** A spell's subtlety rating is the overall measure of how easily the caster's actions are detected by an observer. In some cases, the spell is automatically detected; any character within 10 feet who *specifically* watches the spellcaster (for example, someone engaged in melee with the caster, or a vigilant guard) will automatically notice that the character is attempting a spell. However, if an Intelligence check is used to determine whether or not a character notices a spell, the subtlety rating is used as a modifier to the character's roll.

The spell's subtlety rating is figured as shown in Table 39: Spell Subtlety Modifiers.

**Table 39:**
Spell Subtlety Modifiers

| Modifier | Condition |
|---|---|
| +1 | Casting time of 4 or higher |
| +2 | Casting time of 7 or higher |
| +3 | Casting time of one round or more |
| +5 | Casting time of one day or more |
| +1 | Includes verbal component |
| +1 | Includes somatic component |
| +1 | Per three material components included |
| +1 | Spell includes unusual action (singing, clapping, etc.) |
| +2 | Spell requires dramatic action (shattering gem or breaking item, capering and dancing, shouting, etc.) |
| +4 | Spell requires very obvious action (a full religious ritual, drawing a circle on the ground with powder, etc.) |
| +6 | Character going out of his way to be noticed |
| –2 | Poor lighting |
| –1 | Background noise can mask sounds |
| –2 | Distracting activity nearby |

Casting time is an important factor in the subtlety of a spell, since the longer the character is involved in the spell, the more likely it is that someone will notice him. The number of components involved measures how complicated the spell is and how difficult it is to cast. Last but not least, some spells clearly require some unusual actions or behaviors that may be hard to disguise. However, if the caster can mask his actions by performing them in a place or manner that wouldn't be suspicious (for example, dancing or clapping in a street carnival, or shouting on a crowded battlefield) this last modifier can be negated.

The spell's subtlety rating is the total of its modifiers. It is applied to an observer's Intelligence when rolling an Intelligence check to see if he or she notices the physical act of spellcasting. Remember, in many cases an Intelligence check is completely unnecessary—a wizard who casts a spell in a pitch-black room won't be seen by anyone, while a priest who uses magic in a crowded town market is probably going to be noticed by someone nearby.

*Vorgaad, a necromancer, is enjoying a stout ale in his favorite taproom when a pushy paladin challenges him over some trifling issue of raising decently buried townsfolk and using them for his own evil ends. Vorgaad sighs and orders his minion Azoth to accept the paladin's challenge. Accompanied by a large number of tavern-goers, all concerned step outside into the torchlit yard of the inn. Vorgaad decides that the paladin will cut Azoth to pieces if he doesn't do something and decides to use* stoneskin *on Azoth to even the odds.* Stoneskin *has a casting time of 1 and requires verbal, somatic, and material components. As a result, its total subtlety rating is 4. In addition, the DM rules that the act of sprinkling granite and diamond dust over Azoth is strange enough for*

*an additional +1 bonus, giving anyone nearby a +5 bonus to their chance to detect Vorgaad's spell. However, the light in the courtyard, the din of the crowd, and the spectacle of Azoth taunting the paladin all help Vorgaad remain unnoticed; taken together, these reduce the bonus to 0. Any bystander who succeeds in an Intelligence check sees Vorgaad cast his spell.*

Note that characters can sometimes deceive intelligent enemies by *pretending* to cast spells. The would-be trickster should have some idea of what he's doing; otherwise he's just flailing his arms around and shouting nonsense (which might be a distraction in and of itself!) It also helps a lot if the target of the charade has seen that particular character use magic before since the whole act is much more credible when it follows a *real* spell. Consider how fast a band of trolls might scatter if they'd just been *fireballed* and then observe the same wizard getting ready to cast another spell!

## Sensory Signature

Another characteristic of spells is their sensory signature, or just how noticeable the effects of the spell are. A *lightning bolt* includes a blinding flash of light and a deafening clap of thunder; clearly, it is much more noticeable than a *shocking grasp* or an *unseen servant*. Many spell effects are completely undetectable; for example, a *charm person, polymorph self*, or *feeblemind* spell may wreak all kinds of havoc with the subject, but outside observers can't see, smell, or hear anything when the spell is cast that lets them know that magic was just employed. Sensory effects fall into (naturally) five major categories: sight, hearing, smell, touch, and taste.

**Sight:** Spells that create matter, project energy, or create visible changes in the subject have a visual sensory signature. Any creature close enough to see the effect will be aware of the fact that a spell has been cast.

**Hearing:** Most spells with visible signatures also have an audible signature as well, even if it's a weird hum, buzz, or *ZOTTT!* as the magic affects its target. A few spells have particularly noticeable audible signatures, such as *lightning bolt, shout*, and other such deadly enchantments. Very few spells have an audible signature without some form of visual signature as well.

**Smell:** Enchantments such as *stinking cloud* and *cloudkill* are the obvious offenders in this category, but other spells may leave olfactory signatures behind, particularly spells that start fires. The pungent fumes of a *pyrotechnics* or *incendiary cloud* spell may easily be the first thing an observer notices, even before he sees the smoke.

**Touch and Taste:** Usually, if a character's close enough to notice a spell's effect by these methods, he's already quite aware of the fact that magic has been used against him. However, in some cases, this might be a character's only way to detect a spell. For example, a character who has been magically *blinded* and *deafened* would still feel the warmth of a distant *fireball* on his face or feel the tremors caused by a priest's *earthquake.*

## Strength of Sensory Signatures

All sorts of conditions may influence the obviousness of a spell; a *lightning bolt* may be reduced to a dim, distant flash in a deep fog, but the crack of the thunderbolt will

still be quite audible! The number of creatures affected by a spell can be used as a rough measure of the strength of a sensory signature, as shown in Table 40: Sensory Signatures.

For example, a *fireball* normally affects a 20-foot radius, so it would be considered a huge signature detectable at a range of 500 feet under good visibility conditions. On the other hand, *polymorph other* affects only one target, so it would be a medium signature spotted at a range of 50 feet. Obviously, the DM has a great deal of latitude here; spells break the rules of the game, and many defy classification.

If the visibility is poor, the ranges listed above could be reduced by as much as 50 to 75 percent. However, simple darkness may not conceal spells with brilliant or fiery effects; if anything, a *fireball* or *lightning bolt* is even more visible at nighttime than it is in daylight!

Spells can usually be heard or smelled at half the range they can be seen and felt at one-tenth the visibility range. The roar of a *fireball* normally carries for 250 feet or so, even if the blast itself is out of sight around a corner or behind a hill. A deafened character who isn't looking at the blast can still feel the heat of the *fireball* from as far as 50 feet away. However, sound and smells may not propagate in a perfect circle from the spell's targeting point—if there's a strong wind blowing, the faint stench of a *stinking cloud* may be noticeable a mile or more downwind, while stone walls and large areas of still water may reflect or bounce sounds to several times their normal carrying distance.

**Table 40:**
## Sensory Signatures

| # of Targets Affected | Area Affected | Visible at Range (Size Category) |
|---|---|---|
| Self | Caster | 20' (S) |
| 1 Target | 5' sq. or 2' rad. | 50' (M) |
| 2–9 Targets | 30' sq. or 15' rad. | 200' (L) |
| 10+ Targets | 40' sq. or 20' rad. | 500' (H) |
| 40+ Targets | 100' sq. or 40' rad. | 1,000' (G) |

## Sensory Signatures by School

While each school of magic includes a variety of different spells, it's possible to make some general observations about each school. Both priest and wizard spells of the listed type share some common sensory signatures.

**Abjurations:** Spells of this type fall into three loose categories—those that create barriers, those that enhance the recipient's resistance to attack, and those that directly attack the offending creature or object. Barriers include spells such as *protection from evil, minor globe of invulnerability*, *antimagic shell*, or *prismatic sphere*; generally, these spells have a normal visible signature for their size, but don't produce odd smells or sounds. Spells that enhance resistance include *sanctuary*, *nondetection*, or *protection from normal missiles*. These enchantments have small signatures or no discernible signatures at all. Abjurations that attack the offending creature include *fire trap*, *repulsion*, or *banishment;* they may include sight and sound signatures as normal for their

area of effect. The following are some specific examples:

*Protection from evil:* moderate visual;
*Minor globe of invulnerability:* small visual;
*Banishment:* small visual, small audio.

**Alterations:** This broad school includes spells designed to accomplish a multitude of effects. As a gross generalization, all alterations have the signatures derived from their areas of effect with a couple of notable exceptions. Alteration spells that affect other spells (the so-called "metamagic" spells, like *far reaching* or *Rary's mnemonic enhancer*) and spells that imbue the caster with a quality that doesn't change his appearance (*comprehend languages*, *fly*, or *water breathing*, for example) usually have no signature at all. Specific examples appear below:

*Burning hands:* moderate visual and audio;
*Haste:* no signature at all;
*Animal growth:* moderate visual and audio.

**Conjurations:** Most conjurations involve visual sensory signatures since people on the scene notice whatever it is that just appeared, but audio signatures are unusual. Instead, olfactory signatures—strange smells and odors— often accompany spells of this school. Also, tactile sensations such as chills, goosebumps, or nausea may come into play when doors to other dimensions are opened in the vicinity. The following are specific examples:

*Unseen servant:* small audio and tactile;
*Monster summoning:* moderate visual;
*Power word:* small audio and tactile.

**Divinations:** A great number of divinations have no sensory signature at all since they impart information directly to the caster's awareness. However, some divination spells (such as *detect magic*) cause the items or objects in question to glow, so that anyone nearby can see them.

**Enchantments:** Spells of this type that directly manipulate the subject's mental or emotional state have no signature to speak of, but a few spells of this type that relay compulsions or orders, or affect objects instead of people (*command*, *bind*, *ray of enfeeblement*, *snake charm*, *trip*, or *snare*, to name a few examples) have normal sensory signatures as appropriate for their areas of effect.

*Charm person:* no sensory signature;
*Hold person:* moderate visual/tactile signature;
*Ray of enfeeblement:* small visual/audio signature.

**Illusions:** In one sense, illusions are nothing more than sensory signatures with no reality attached to them. The central spells of this school—*phantasmal force* and its various improvements and refinements—are designed to create the largest "signature" possible and may easily be observed from quite a distance away. A few illusion spells work directly on the mind of the subject and have a much smaller sensory effect; these include *misdirection*, *phantasmal killer*, or *eyebite*. Illusions that mask or conceal

something else have no true sensory signature in and of themselves; if an *invisible* wizard was surrounded by a glow or gained a pungent odor, the spell would be worthless!

*Phantasmal force:* visual signature by area affected;
*Wraithform:* small visual/tactile signature;
*Eyebite:* no sensory signature.

**Invocations:** Without question, the school of invocation/ evocation includes the most spectacular spells available to a wizard or priest. Like it or not, a wizard who throws *fireballs* and *lightning bolts* is creating a fireworks show that people can see and hear for quite a distance away. Blinding flashes of light and deafening peals of thunder leave no doubt in the observer's mind that magic is at work here. Here are some classic examples:

*Magic missile:* moderate visual signature;
*Fireball:* huge visual, moderate audio/tactile;
*Cloudkill:* large visual, large olfactory.

**Necromancies:** While spells of this school can be extremely potent, the flash and bang of a powerful invocation isn't found in most necromancy spells. Most necromancy spells affect only a single subject at a time. Tactile sensations such as chills, nausea, or disorientation are somewhat more common in necromancy than thunderous detonations or weird haloes of light. The following are some good examples of necromancy spells:

*Enervation:* small visual/audio/tactile;
*Animate dead:* moderate visual/tactile;
*Cure serious wounds:* small visual/tactile.

## Spells with Attack Rolls

A small number of spells require the caster to make an attack roll in order to deliver damage or other effects to the victim. Some of these can be very potent, but their power is limited by the requirement to actually touch the subject with a successful attack roll. Generally, the caster can execute a touch attack (or roll an attack roll) as soon as he finishes casting the spell, or he can delay until the end of the current round and then make his attack. However, if the caster doesn't attempt to discharge the spell in the round in which it is cast, it is wasted unless the spell has a duration of more than one round. For example, *cause light wounds* must be used in the same round in which it is cast, but since *chill touch* lasts a minimum of four rounds, the caster doesn't have to "use it or lose it" in the round he casts the spell.

A number of spells don't require the caster to actually injure the target or breach the victim's armor; even a glancing touch will be sufficient to discharge the spell's effects on the target. Spells of this type *ignore the portion of the victim's Armor Class that is derived from wearing armor*. In other words, only Dexterity-based and magical adjustments help a character's Armor Class against some magical attacks.

*Oromonos the wizard takes a dislike to an obnoxious guard and decides to teach him a lesson with a* shocking grasp. *Since the spell only requires the wizard to make contact with the target, the DM rules that the guard's plate mail +1 won't help him. Only the 1-point Armor Class bonus for the armor's enchantment counts for the guard's AC, which makes him AC 9 to Oromonos's attack instead of his usual AC 2.*

Which spells qualify as spells that bypass armor? Basically, this is a judgment call for the DM. In order to gain this advantage, the spell description should clearly imply that the spell would take effect even if it struck the victim on the breastplate instead of requiring the caster's hand to actually touch exposed skin. Another way of looking at it is this: Does the spell emulate the action of a normal weapon, such as a sword, arrow, or dagger? If it does, the spell definitely requires a normal attack roll on the part of the caster, but if the spell affects the victim's life force or achieves its effect from simple contact, the subject's armor is ignored.

Spells that directly affect the subject's life force include most of the necromantic touch spells (*chill touch, vampiric touch, energy drain,* etc.), the various *cause wound* spells and other reversals of healing spells such as *poison, slay living*, and *destruction*. The victim's armor does not help to protect him from these attacks. Spells that somehow change or alter the victim's status, such as *imprisonment, plane shift*, or *dispel evil* also ignore armor.

A second category of spells that can affect the victim through his armor includes spells that produce energy or forces against which armor is useless. For example, *shocking grasp, chromatic orb, watery double, produce flame, fire seeds,* or *crystalbrittle* can affect an armored or unarmored person equally well.

Some spells that use attack rolls but ignore the victim's armor appear in Table 41: Armor-Breaching Spells.

Spells that create physical attacks or emulate the effects of weapons include such enchantments as *ice knife, hovering skull, Mordenkainen's sword,* and *spiritual hammer*. Since these spells manifest as tangible weapons and are wielded in the same way, the subject is allowed the full benefit of his or her armor. See Table 42: Armor-Observing Spells.

**Table 41:**
## Armor-Breaching Spells

| **Wizard Spells** | **Priest Spells** |
|---|---|
| chill touch (1st) | cause light wounds (1st) |
| chromatic orb (1st)[1] | produce flame (2nd) |
| shocking grasp (1st) | cause blindness or deafness (3rd) |
| ghoul touch (2nd)[1] | cause disease (3rd) |
| pain touch (3rd)[1] | curse (3rd) |
| vampiric touch (3rd) | cause serious wounds (4th) |
| watery double (3rd)[2] | chaotic sleep (4th)[2] |
| fire aura (4th)[1] | poison (4th) |
| mummy rot (5th)[1] | cause critical wounds (5th) |
| Malec-Keth's flame fist (7th)[2] | dispel evil (5th) |
| Otto's irresistible dance (8th) | plane shift (5th) |
| crystalbrittle (9th) | slay living (5th) |
| energy drain (9th) | fire seeds (6th) |
| imprisonment (9th) | harm (6th) |

seclusion (6th)[2]
Sol's searing orb (6th)[2]
destruction (7th)

## Armor-Observing Spells
**Wizard Spells**

fist of stone (1st)[2]
ice knife (2nd)[1]
Melf's acid arrow (2nd)
bone club (3rd)[1]
hovering skull (3rd)[1]
Melf's minute meteors (3rd)
snapping teeth (3rd)[1]
turn pebble to boulder (4th)[2]
claws of the umber hulk (6th)[2]
tentacles (6th)[1]
Mordenkainen's sword (7th)
shadow form (8th)[1]

**Priest Spells**

magical stone (1st)
shillelagh (1st)
flame blade (2nd)
spiritual hammer (2nd)

[1] From The Complete Wizard's Handbook
[2] From Tome of Magic

***Player's Option: Combat & Tactics:*** In the revised initiative system introduced in the *Combat & Tactics* book, spells that require attack rolls are cast as normal (i.e., on the fast, average, or slow phase, as appropriate for the casting time). After the spell is invoked, the caster may then make his attack for the round in any subsequent phase. For example, a wizard who casts *chill touch*, a fast spell, may then make a touch attack in the average, slow, or very slow phases. Note that the character still receives only one attack per round.

Even though the wizard will often be 'unarmed' when he uses a touch attack spell, he does *not* provoke an attack of opportunity since he's not attempting to initiate unarmed combat. All he needs to do is touch the subject, not land a full-force punch or wrestle with the fellow. However, a victim who is guarding will still be able to make his own attack before the wizard can deliver his touch-based attack.

## Knockdowns

The concept of knockdowns was introduced in the *Player's Option: Combat & Tactics* rulebook. Knockdowns are hits that send the victim flying or put him on the ground, knocking him prone. The ability to cause a knockdown varies from weapon to weapon, and the larger the target, the more resistant he is to knockdown results. Very few

attacks have the power to put a frost giant flat on his back!

While a club-wielding giant or a powerful barbarian obviously has the potential to take an opponent off his feet, many spells also have the ability to drive a victim to the ground with tremendous force, shock, or concussion. In some cases, spell energy may cause knockdowns through spasms, intense pain, or physiological shock as well as sheer impact energy.

**Knockdown Die:** The likelihood of a weapon (or a spell) to cause a knockdown is governed by the size of the knockdown die. Any time a character suffers damage from a spell, the caster may roll a knockdown die to see if there is a chance for a knockdown. If the number rolled on the knockdown die is higher than the victim's knockdown number, he must roll a saving throw vs. death magic or fall down.

Usually, being knocked down forces the character to spend his next action or attack standing again. Standing is treated as moving half the character's normal movement rating, so a knocked-down fighter could choose to stand in the following round and still receive his normal allotment of melee attacks, while a knocked-down archer who stood up would have to fire at 1/2 his normal rate of fire. (See **What You Can Do in One Round**, page 122 of the *PHB*.)

While a character is on the ground, he is especially vulnerable to attack. Anyone attacking the knocked-down character gains a +4 bonus to hit, and the prone character may not apply his Dexterity adjustment (if any) to his Armor Class. Obviously, it's worth the time to stand up again!

**Knockdown Number:** A character's resistance to knockdowns is measured by his knockdown number. Size is the most important characteristic here, although a character with a good saving throw will avoid many knockdowns regardless of his size. See Table 43: Knockdown Numbers by Size.

*Oromonos isn't done with that guard yet. Since the* shocking grasp *didn't deter the fellow, Oromonos throws a* lightning bolt *at him at point-blank range. The* lightning bolt *has a knockdown die of d12 (we'll discuss knockdown die sizes for particular spells in a moment), and Oromonos rolls an 8 with the d12 while he's rolling his damage for the spell. Since the guard is a human (size M) and therefore knocked down on a 7 or better, he must now make a saving throw vs. death magic or hit the turf. Although the fellow does save against the lightning bolt itself, he blows his knockdown save and winds up on the ground, wondering what hit him*.

## Spells and Knockdown Dice

Clearly, not every spell has the potential for a knockdown. Enchantments such as *charm person* or *slow* may create serious difficulties for the victim, but they're not going to throw him to the ground in the process. Other spells cause 'knockdowns' just by their nature; *sleep, grease*, and *ice storm* can put creatures on the ground by virtue of their normal effects. Table 44: Spells with Knockdown Effects list spells that actually use the knockdown rules.

For spells from other sources, use your best judgment in assigning a knockdown die. First of all, the spell must deliver energy to the target or cause a physiological reaction that might cause the subject to lose control of his limbs—for example, the agony associated with *Abi-Dalzim's horrid wilting* or *throbbing bones* has a chance to distract

even the stoutest warrior, despite the fact that neither spell actually strikes the victim with a tangible blow. You may observe that *lightning bolts* are particularly good for knockdowns, because they strike the target with an immense amount of energy and electrocute the victim at the same time!

Spells that stun, daze, sleep, confuse, charm, hold, trip, fumble, or tangle the opponent don't need a knockdown die; if the spell succeeds, the victim is hindered by the action of the spell itself, and a knockdown would be redundant. Last but not least, spells that simulate weapons (*Mordenkainen's sword*, for example) can use a knockdown die based on the weapon itself; see *Player's Option: Combat & Tactics* for a complete listing of weapons and knockdown ratings.

**Table 43:**
## Knockdown Numbers by Size

| Size Category | Knockdown Number |
|---|---|
| T | 3+ |
| S | 5+ |
| M | 7+ |
| L | 9+ |
| H | 11+ |
| G | 13+ |

**Table 44:**
## Spells with Knockdown Effects

| Spell | Knockdown Die | Spell | Knockdown Die |
|---|---|---|---|
| Abi-Dalzim's horrid wilting[2] | d12 | gust of wind | d6 |
| Bigby's forceful hand | d12 | harm | d12 |
| Bigby's crushing hand | d12 | holy word | d12 |
| Bigby's grasping hand | d12 | ice knife[1] | d6 |
| Bigby's clenched fist | d20 | ice storm (hailstorms) | d10 |
| blade barrier | d10 | lightning bolt | d12 |
| bone club | d8 | magic missile | d6 |
| call lightning | d12 | magical stone | d6 |
| cause serious wounds | d10 | Melf's acid arrow | d6 |
| cause light wounds | d8 | meteor swarm | d20 |
| cause critical wounds | d12 | Mordenkainen's faithful hound | d10 |
| chain lightning | d12 | Mordenkainen's sword | d8 |
| chromatic orb[1] | d6 | Otiluke's freezing sphere (globe) | d10 |
| claws of the umber hulk[2] | d10 | prismatic spray | d12 |
| cone of cold | d8 | | |
| delayed blast fireball | d8 | | |

| | | | |
|---|---|---|---|
| dust devil | d6 | repulsion | d10 |
| explosive runes | d10 | shocking grasp | d8 |
| fire seeds (missile) | d8 | shout | d8 |
| fire trap | d8 | spiritual hammer | d10 |
| fire storm | d8 | tentacles[1] | d8 |
| fireball | d8 | throbbing bones[1] | d8 |
| fist of stone[2] | d8 | thunder staff[2] | d10 |
| flame arrow | d10 | turn pebble to boulder[2] | d12 |
| flame strike | d8 | vortex[2] | d10 |

## Collateral Spell Effects

Everyone knows that a *fireball* does 1d6 damage per level of the caster, but have you ever stopped to consider what else a ball of flame 40 feet across might do? First of all, a *fireball* will start a lot of fires, especially in medieval settings with thatch-roofed houses, garments redolent with animal oils and tanning chemicals, and lots of wooden construction. Secondly, the residual fires left by a *fireball* will produce smoke—probably a lot of it, as many fires smoke very heavily just when they're getting started. Next, a *fireball* may foul the air of a confined space by consuming a great amount of the available oxygen. But, for most players and DMs, the same fireball did 17 points of damage, and that was it!

In this section, we'll take a quick look at unusual effects that may accompany the use of many powerful spells. In military terms, these incidental effects are referred to as collateral damage—a PC wizard probably isn't trying to start a three-alarm fire when he torches a city guard with his *burning hands* spell, but it might happen anyway. Depending on the DM's mischievousness, all kinds of mayhem may break loose when wizards start throwing heavy-damage spells around.

The most important characteristic of a spell for purposes of collateral effects is its general type and purpose. There isn't a whole lot of fallout from a *charm person* or *magic missile* spell, but many other spells create environmental effects that may be long-lasting or even permanent.

### Fire

A great number of spells employ fire as a weapon. Fires create smoke, foul contained atmospheres, and may spread to nearby flammables.

**Visibility:** Flames don't produce smoke—burning objects or creatures do. A *fireball* thrown in an unfurnished room of bare stone against a creature that won't burn well (say, an ice elemental) will leave very little in the way of heavy smoke. On the other hand, a *fireball* thrown in a sod house or a wooden building cluttered with greasy old furs and shoddy furniture will create a number of smoky residual fires and quickly cloud up the surroundings. Generally, a fire spell creates a cloud of smoke in its area of effect that persists for 2d4 rounds. This obscures vision, forcing all characters and monsters to suffer a –2 penalty on missile attacks through the smoke. The stink of burning objects may also hinder creatures that rely on scent to detect their enemies.

**Environmental Effects:** Fire spells naturally cause fires. See **Item Saving Throws** on page 58 of the *DMG*. In addition to the affected characters, the DM can roll an item saving throw for the surrounding area; for example, if a stone room is furnished with tapestries and wooden benches, the DM can use the row for cloth and thin wood.

If an item (or a victim's clothing, for example!) fails its saving throw, it may be *on fire*. People who catch fire suffer 1d4 points of damage in the following round and an additional die of damage in each subsequent round—for example 2d4 in the second round, 3d4 in the third round, and so on—until they extinguish the flames. The victim must pass a saving throw vs. death magic in order to extinguish the flames and may gain a +2 to +8 bonus (DM's discretion) if he uses a sensible method for doing so.

Large fires in confined areas (for example, dungeon rooms) can be especially dangerous since they deplete the oxygen in the air, making it unfit for breathing. If a fire fills more than 50% of an enclosed room or space, it fouls the air. Air-breathing creatures inside the room are affected as if the entire chamber had been targeted with a *stinking cloud* spell. After 1d6 rounds of ventilation (or 1d6 hours in an unventilated area), the atmosphere returns to normal.

One more thing about big fires: they make things hot. Imagine a character's surprise when he goes to open the castle gates just after the wizard's *fireball* goes off! In fact, the DM may rule that metal and stone objects retain enough heat to be affected as if they were struck with a *heat metal* spell, although under most circumstances they will only be heated to the minimal damage level of the spell.

## Cold

Cold-based attacks are rarer than fire-based attacks but are still fairly common among wizard spells. The most obvious examples are *ice storm*, *cone of cold*, and *Otiluke's freezing sphere*.

**Visibility:** The supernatural temperatures of a cold-based spell can cause some surprisingly thick fog by condensing water vapor in the air. The more humid the setting, the more likely it is for cold-based attacks to leave a residue of fog. Generally, cold spells create a cloud of fog equal in size to the spell's area of effect. The fog persists for 1d6 rounds, and any attacks in or through the mist suffer a –2 attack penalty.

**Environmental Effects:** Cold spells don't start fires, but they can leave a dangerous coating of ice on the ground; in fact, the *ice storm* spell specializes in this effect. Creatures moving in the area of effect have a 25% chance of risking a slip or fall, which a saving throw vs. death magic (or a Dexterity check, DM's choice) can avert. Note that this is not as dangerous as the sleet application of *ice storm* since that version of the spell is designed to coat the ground with slippery ice.

Objects subjected to intense cold may be weakened or become unusually brittle for a short time afterwards. Even if an item passes the saving throw, for the next 1d6 rounds it is especially vulnerable to normal blows or crushing blows, suffering a –4 penalty on any further item saving throws.

As noted under fires, metal or stone objects subjected to supernaturally cold temperatures may be affected as if struck by a *chill metal* spell.

## Electricity and Lightning

The distinction between lightning and electricity is principally one of hitting

power. A lightning bolt's immense voltage allows it to overcome the resistance of many things that normally don't conduct electricity at all. In addition, the power of a lightning bolt is so great that the target can blow itself to pieces as its fluids or water content is flashed to steam and then expands. This is why trees hit by lightning bolts split open; the water in the wood bursts the tree from inside as it turns to steam.

In the AD&D magic system, *lightning bolt*, *call lightning*, *chain lightning* and blue dragon breath are lightning attacks. *Shocking grasp*, *glyphs of warding*, and the touch of a volt, shocker, or electric eel are electricity attacks.

**Visibility:** The bright arc of electricity or the flash of lightning as it strikes can temporarily dazzle people looking right at the bolt or spark, especially when the viewers' eyes are adjusted to darkness or dim light. In this case, the DM may require onlookers to make a saving throw vs. death magic or suffer a –1 attack penalty for 1d3 rounds as their vision clears.

In addition, lightning and electricity may start fires if applied to flammable targets (wood or trees usually, but not people). The smoke from a lightning-struck fire can be just as disorienting as the smoke from a *fireball*.

**Environmental Effects:** Lightning and electricity leave few lingering effects behind; a stink of ozone (ionized air) may persist for 1d6 rounds, possibly confusing creatures that rely on smell to detect their prey, and objects may be *magnetized* by their exposure to powerful electrical currents. This is not fantasy magnetism capable of picking up an armored warrior and hurling him through the air; this is low-level magnetism capable of skewing compass needles and lodestones.

Flammable items that fail their saving throw vs. lightning or electricity must make a second saving throw vs. normal fire or begin to burn. This may in turn cause smoke and other such effects.

*Lightning bolts* cast underwater electrocute everything within a 20-foot radius of the bolt's origin. Since the wizard can start the bolt up to 40 feet away from his position, he would be wise to do so when using this spell in an aquatic setting. If a caster out of the water throws a *lightning bolt* into the water, the bolt has its normal effect on any creature in its path until it strikes the surface of the water; at that point, it expands in a 20-foot-radius globe in the water, and goes no further.

## Acid

Another unusual attack form is acid. Very few spells make use of acid as a weapon, although a fair number of monsters have acid-based attacks, including the ankheg, the black dragon, and some slimes, puddings, and oozes.

**Visibility:** Acid at work tends to give off noxious fumes, usually in an area about 5 to 15 feet in diameter; the more acid, the larger the area affected. The fumes may obscure missile and melee attacks at the DM's option, creating a –1 penalty for any creature trying to attack through the smoke and haze.

**Environmental Effects:** Acid fumes are unpleasant to be around and may cause severe irritation of a victim's eyes, nose, and throat. If the DM desires, creatures within the cloud of fumes must roll saving throws vs. death magic or suffer a –2 penalty to attack rolls and Armor Class as long as they remain nearby. This means that a character struck by *Melf's acid arrow* may suffer combat penalties as well as damage from the spell.

## Wind

Spells or effects that generate powerful gusts of wind can create a number of collateral effects. Enchantments such as *dust devil, gust of wind, wind wall,* and *control wind* are the most common in this group, and monsters such as djinni or aerial servants can create whirlwinds.

**Visibility:** While a blast of wind doesn't necessarily obscure visibility, a gust on a very dusty or sandy surface is a different story altogether. On a dry, gritty surface, a wind-based spell or attack will create a rolling dust cloud that creates a –2 penalty for people trying to fight or fire missiles into or through the area of effect.

A blast of wind can also make it very difficult to hear anything above the roaring of the air and may carry a character's scent downwind and away from a creature that relies on smell or hearing to locate its enemies.

**Environmental Effects:** Strong winds can create all kinds of havoc in a dungeon by extinguishing torches and candles and plunging the party into darkness. Above the ground, it can carry the sparks from a campfire farther than normal or blow over a lamp, possibly starting an unexpected fire.

## Other Collateral Effects

Magic is astonishing and almost always has effects or uses that are not immediately apparent. Feel free to improvise when a player in your campaign tries something that seems especially clever—or stupid. What happens when a purple worm is *polymorphed* into a puppy dog just after swallowing a still-living character? Or how do the various rays of the *prismatic spray* affect the area around them if they miss their target? What kind of wreckage does an *acid storm* spell leave behind when cast in a forest clearing? Be creative and take your best guess; the AD&D game is made of exceptions and special cases.

## Critical Strikes

Sometimes, a spell or a special attack strikes with such devastating effect that even the toughest opponent can be crippled or killed by a single blow. Critical strikes reflect this capability; even a lowly *magic missile* might strike the cyclops in his eye, while a *lightning bolt* that strikes a warrior dead-on can kill him in an instant.

Critical strikes add flavor and pseudo-realism to the AD&D game by increasing the likelihood that the use of a spell will decide a fight one way or the other. An AD&D combat can be reduced to a simple process of attrition, but the use of magic should create the potential for a battle-ending injury. Even if the evil giant has 90 hit points, and the wizard's *fireball* won't do more than 42 points of damage at its very best, a critical strike may allow that spell to severely wound or incapacitate the giant. After all, it's not very heroic to throw six volleys of *magic missiles* into the same evil high priest; it denigrates the value of magic.

Critical strikes can also represent special attack forms common among monsters. Creatures that spit acid, breathe fire, or exhale poison gas are just as likely to kill a hero as a creature that rends him limb from limb with fang and claw. A hell hound may only inflict 4 to 7 points of damage with its fiery breath, but that doesn't mean that a 60-hit point fighter should not be threatened by the monster's attack! Critical strikes help to

keep characters honest since *any* attack could result in severe injury or death.

## When Do Critical Strikes Occur?

The critical strike system presented here is meant to be an expansion of the critical hit system from *Player's Option: Combat & Tactics*. However, some of the mechanics that work for attack rolls and Armor Class can't be applied directly to saving throws. For a spell or an attack to have the potential for a critical strike, it must do physical damage. While it's easy to imagine a character who is double-*charmed* or double-*held*, it's somewhat hard to extend the effects of such spells past the obvious results. After all, by failing the saving throw, the character already suffered whatever he was going to suffer for being subjected to the spell.

Critical strikes occur when the target rolls a natural 3 or less on his saving throw *and* misses his saving throw by a margin of 5 points or more. If the spell in question does not allow a saving throw, the target still checks for a critical strike by rolling a saving throw versus the attack; this special saving throw has no other purpose than determining whether or not the character suffers a critical strike.

High-level casters or monsters are more likely to cause critical strikes, as shown on Table 45: Critical Strike Chance by Caster Level.

Note that spells written on scrolls are assumed to be scribed at the 6th level of ability or one level higher than the minimum level required to cast them, whichever is higher; for example, a 5th-level wizard spell requires a 9th-level caster, so it is scribed at the 10th level of ability, but a 1st-level spell (requiring only a 1st-level caster) is written at the 6th level of ability.

Monsters with special attacks that may entail critical strikes use the table above, substituting their Hit Dice for caster level. As one might suspect, ancient red dragons of the 20 Hit Dice or higher variety can inflict devastating criticals with their fiery breath!

*Beshira the Sorceress, a 4th-level mage, hurls a* magic missile *at an unfortunate orog. Normally, a* magic missile *allows no saving throw, but the orog will still roll a d20 for a saving throw vs. spell just to see if he fails critically or not. The orog is a 3 Hit Die monster, which means that his saving throw vs. spell is a 16. The orog rolls an 8, which can't be a critical strike, since it's not a natural 3 or less— even though he missed his save by 8 points!*

*A few levels later, Beshira encounters an angry cloud giant and decides that* lightning bolt *is the best way to deal with him. The cloud giant is a 16 Hit Die monster and only needs a 7 to make its saving throw. However, the giant rolls a 4, missing its save! Since Beshira is now an 8th-level sorceress, this natural 4 may be a critical strike— except the giant still didn't miss by 5 points. (He would have had to roll a 1 or 2 to miss his saving throw by a margin of 5 points.)*

*Later in the same fight, Beshira exhausts her spells and hauls out a* wand of fire *to use against the giant. Against rods, staves, and wands, the giant's saving throw is a 6, so he will only suffer a critical strike on a roll of 1.*

## Critical Strikes the Easy Way

If the math of the preceding system seems to be a little too much for your campaign, try this method: the attacker rolls 1d20 when he throws the spell or uses his

special ability. If the die comes up an 18 or higher, the victim suffers a critical strike if he fails his saving throw. If the spell or effect doesn't allow a saving throw, the victim may still attempt a saving throw vs. death magic to avoid the critical strike itself, although he still suffers the effects of the spell even if he avoids the critical hit. This system doesn't account for the skill or power of the spellcaster or monster, but it may be a little faster than figuring out how much someone missed their save by.

## Types of Critical Strikes

Obviously, the exact nature of the injuries a character suffers from a critical strike will vary with the form of energy or magic that hits him. Different spells or effects can burn, char, dissolve, electrocute, freeze, impale, maul, scorch, or wound the victim in different ways. Therefore, there are ten different critical strike charts, each representing a different attack form.

Readers familiar with the critical hit system from *Player's Option: Combat & Tactics* may observe that the target type (humanoid, monster, or animal) is not a consideration in the critical strike charts. Instead, only one body form or target type is included for each attack. Optional hit location tables for monsters and animals are provided in case you wish to incorporate them in your campaign, but you can use the critical strike tables for any kind of opponent as they are written.

The critical strike tables include acid, cold, constriction, crushing, electricity, fire, impact, slashing, vibration, and wounding.

**Acid** attacks include *Melf's acid arrow, acid storm*, the breath of a black dragon, the secretions of a black pudding, or the effects of holy water on certain undead.

**Cold** attacks include *chill touch, cone of cold, Otiluke's freezing sphere*, white dragon or silver dragon breath, and the deathly touch of a lich.

**Constriction** attacks are the forte of giant snakes, monsters with tentacles, and spells such as *Evard's black tentacles* or *Bigby's crushing hand*. Anything that surrounds and squeezes the victim could fall into this category.

**Crushing** attacks are mammoth assaults that can smash a person like a bug. *Turn pebble to boulder, Bigby's clenched fist*, or the blow from a *ring of the ram* are crushing attacks. Crushing can also represent the effects of a dangerous fall or the force of an explosion that hurls a character through the air. If the character's whole body is affected by a physical force, it's a crushing injury.

**Electricity** includes various forms of magical *lightning, shocking grasp*, and the breath of a behir or blue or bronze dragon. There is no distinction between electricity and lightning for critical strikes.

**Fire** is fairly obvious, but note that explosions (a gas spore explosion or the retributive strike of a broken staff) are more accurately described by crushing injuries.

**Impact** injuries result from concentrated applications of force or small projectiles. *Magic missile, spiritual hammer,* or bullets cause impact injuries. In some cases, impact injuries actually penetrate the victim's body.

**Slashing** attacks include spells such as *ice knife, Mordenkainen's sword*, and *blade barrier*. This category also includes the mauling action of some mechanical traps.

**Vibration** attacks are rare, but dangerous, literally shaking the victim to pieces. A few monsters have special vibration or sonic attacks.

**Wounding** attacks result from *cause light, serious* or *critical wounds*, and can

also simulate withering, desiccation, or disease attacks. Wounds appear as gaping sores or destroyed tissue.

## Strike Location

In the movies, the hero always manages to get shot in the shoulder, the leg, or just grazed in the side. Regrettably, adventurers aren't always that lucky, and even a fairly minor critical strike—say, a *magic missile*—could be extremely dangerous if it strikes the character in the eye or the throat. The location of a critical strike is determined by rolling a d10 and comparing it to Table 46: Critical Strike Location.

For your convenience, the hit locations are numbered on each subtable in the critical strike charts.

**Called Shots:** If a spell or special attack uses a normal attack roll, the attacker may choose to use a called shot. A called shot forces the attacker to take a –4 penalty on his attack roll, but if it hits and inflicts a critical strike, the strike automatically affects the location the attacker was aiming for. Spells that do not use attack rolls do not permit the caster to attempt a called shot.

**Whole-Body Injuries:** Unlike most weapons, spells and special attacks create the possibility for whole-body injuries which damage a creature in several places at the same time. This is a function of the spell's size or area of effect.

**Table 45:**
## Critical Strike Chance by Caster Level

| Caster Level | Critical Strike Occurs on . . . |
|---|---|
| 1–5 | Natural 3 or less, save missed by 5 or more |
| 6–10[1] | Natural 4 or less, save missed by 5 or more |
| 11–15[2] | Natural 5 or less, save missed by 5 or more |
| 16–20 | Natural 5 or less, save missed by 3 or more |
| 21+ | Natural 5 or less |

[1] Potions, wands and staves fall into this level range for determining critical strikes.

[2] Rings, rods, and miscellaneous magical items fall into this range for critical strikes.

**Table 46:**
## Critical Strike Location

| d10[1] | Humanoid | d10[1] | Monster/Animal |
|---|---|---|---|
| 1–2 | Right leg | 1 | Right foreleg/wing |
| 3–4 | Left leg | 2 | Left foreleg/wing |
| 5 | Abdomen | 3 | Right hind leg |
| 6–7 | Torso | 4 | Left hind leg |

| | | | |
|---|---|---|---|
| 8 | Right arm | 5 | Tail[2] |
| 9 | Left arm | 6–7 | Abdomen |
| 10 | Head | 8–9 | Torso/chest |
| | | 10 | Head |

[1] If the defender is two sizes taller or has a height advantage, roll 1d6 for location; if the attacker is two sizes taller or has a height advantage, roll 1d6+4 for location.
[2] Rolls of 1–5 are tail hits for creatures with snake-like or fish-like bodies.

Huge creatures treat critical strikes as if they were one size smaller, so a frost giant struck by a *fireball* would suffer 1d3 separate critical strikes, not 1d4. Gargantuan creatures reduce the strike by two size categories. Regardless of the size of the strike, the victim always suffers a critical strike in at least one hit location.

*Terthan, a human warrior, is struck by a* lightning bolt *and blows his save badly enough to qualify for a critical strike. The DM rules that the bolt is a large attack (two to nine targets reasonably approximates a lightning bolt's area of effect) so Terthan will suffer 1d3 strikes. He rolls a 2, or two separate hits, and refers to Table 46. Naturally, Terthan is a humanoid; two 1d10 rolls result in a 5 (abdomen) and an 8 (right arm). Now Terthan will go on to determine the strike's severity and see what kind of injuries he suffers.*

Whole-body injuries can be ignored if the DM wishes; one roll on the hit location table should be enough for anybody. Whole-body injuries are a little more "realistic," and they make critical strikes much more deadly, but the game works fine without them.

**Table 47:**
## Whole-Body Injuries

| **# of Targets Affected** | **Area Affected** | **# of Locations Affected by Strike** |
|---|---|---|
| 1 Target | 5' sq. or 2' rad. | 1 (M) |
| 2–9 Targets | 30' sq. or 15' rad. | 1d3 (L) |
| 10+ Targets | 40' sq. or 20' rad. | 1d4 (H) |
| 40+ Targets | 100' sq. or 40' rad. | 1d6+1 (G) |

**Table 48:**
## Critical Severity

| **Damage Potential vs. Target Hit Point Total** | **Severity Roll** |
|---|---|
| Max. damage is less than 1/2 target hp | 1d6 |
| Max. damage is less than target hp | 2d4 |

| | |
|---|---|
| Max. damage is less than twice target hp | 2d6 |
| Max. damage is twice or more target hp | 2d8 |

## Severity

Naturally, critical strikes cover a great range of severity. There's a world of difference between a *burning hands* spell cast by a 2nd-level wizard and the awesome blast unleashed by an ancient, fire-breathing dragon. If the whole-body injury rules cover the size of the attack, severity measures its intensity.

The best approximation for the severity of a critical strike is how much damage the attack can inflict on its target. Figure the maximum damage potential of the spell or effect, compare it to the maximum, unwounded hit point total of the victim, and refer to Table 48: Critical Severity.

*Terthan, the warrior from the previous example, has a normal hit point maximum of 35 when unwounded. The* lightning bolt *was thrown by a 6th-level wizard with a potential of 6d6 points of damage (a maximum of 36 points). Since this is more than Terthan's hit points, without being twice Terthran's total, the severity roll will be 2d6.*

Refer to the appropriate critical strike chart and roll the severity dice indicated for the hit location. The result is the specific injury or effect suffered by the victim for the critical strike. Unlike the critical hits of the *Player's Option: Combat & Tactics* book, critical strikes do *not* inflict doubled damage, and they do not allow the victim a special saving throw to avoid the specific effects. After all, the target already blew one saving throw, or he wouldn't be rolling on the critical strike table.

*Lord Nonnach Redoff the Bold, a 20th-level warrior, rides forth to do battle with an adult red dragon. The dragon naturally opens the fray with its best fiery blast. Nonnach must make a saving throw vs. breath weapon, needing only a 4 to succeed. Unfortunately, Nonnach rolls a 1 and misses. Since the dragon has 17 Hit Dice, its victims suffer critical strikes if they miss their save by at least 3 points and roll less than a 5—which Nonnach just did.*

*Chortling with glee, the DM rules that the dragon's breath is a huge attack, inflicting critical strikes in 1d4 locations; Nonnach rolls a 3, so he'll get three separate rolls on Table 46 and winds up with critical strikes to the abdomen, right leg, and left arm. Now, on to severity: the dragon's damage potential is 126 points, and Nonnach at his best only has 109 hit points, so each strike will be rolled with a severity of 2d6. In addition to the 79 points of damage Nonnach takes from the dragon's breath, he suffers minor injuries to his arm and abdomen, but his leg is burned off at the knee! (And the DM could require him to make a saving throw vs. death magic to check for death from massive damage, as described in the* PHB*.) All of a sudden, Nonnach finds himself wishing he were somewhere else entirely.*

## Specific Injuries and Effects

Usually, a critical strike results in a specific injury or penalty for the victim. As noted above, the victim does not gain a saving throw to avoid the special effects of a

critical strike since he's already failed one pretty badly. However, many creatures can ignore the effects of certain strikes just by their nature. Most undead monsters are immune to cold-based attacks and therefore don't suffer any ill effects from cold critical strikes. Constructs such as golems don't have a real physiology and can ignore the incapacitating effects of internal injuries. Injuries are divided into six degrees of severity: *grazed, struck, injured, broken, shattered* and finally *severed*.

Wounds or injuries are always accompanied by some loss of hit points, and some critical strike results may increase the damage caused by the spell or effect. Many also inflict temporary attack or movement penalties that persist until the character receives medical attention of some kind. The actual damage, or loss of hit points, may be recovered normally, but the injury's effects linger until it is specifically addressed.

*After a few months of recovering from his battle with the dragon, Nonnach is riddled by a high-level wizard's* magic missile *spell and receives a critical strike.* Magic missiles *strike on the impact chart; the location roll is a 10 and the severity roll comes up as a 6, so Nonnach catches a* missile *in the eye. The spell inflicts 16 points of damage, but more importantly, Nonnach is temporarily blinded. He'll suffer a –4 penalty to all attack rolls until his injury is treated in some way, although he can recover the loss of hit points through magical or normal healing.*

**Grazed, Singed, Chilled, Bruised:** While the nature of the injury varies with the type of critical strike, all of these minor wounds fall under the category of 'grazes.' A graze is not very serious, although it may cause minor bleeding. A *cure light wounds* or any other healing magic capable of restoring 4 hit points will heal a graze. Grazes also heal naturally as if they were a loss of 1d6 hit points; if a graze is the equivalent of a 2-hit point wound, a single day of rest will cure it and eliminate any penalties. If a character receives healing magic, the graze is healed *and* he gets to recover hit points from the same spell or effect.

**Struck, Blistered:** Slightly more serious than a graze, a 'struck' result usually entails some kind of attack or movement penalties, such as a –2 penalty to attack rolls. Injuries of this type can be healed by a *cure light wounds* spell or other healing magic capable of restoring 5 lost hit points. Struck areas heal naturally as if they were a wound of 2d6 hit points.

**Injured, Burned, Frostbitten:** Wounds of this level can trouble a character for many weeks; they heal naturally as if they were a loss of 10d6 hit points. A *cure serious wounds* spell, or any other healing magic capable of restoring 10 hit points or more, can repair the injury.

Injuries almost always entail significant combat penalties for the character and may temporarily reduce a character's maximum number of hit points. Since he's favoring a painful injury, he is more susceptible to attacks. Injured arms, legs, or tails reduce a character to 75% of his normal maximum hit points, while an injury to the torso, abdomen, or head reduces a character to 50% of his normal. (If the damage done by the spell or effect didn't bring the character down to his new maximum, he is reduced to the lower number immediately, but if the damage was severe enough to drop the character beneath his new maximum, he doesn't lose any additional hit points.)

For example, let's take a look at Lord Nonnach again. As noted in the example,

Nonnach normally has a maximum of 109 hit points. If he sustained an injury to his torso, he would temporarily be reduced to a maximum of 55 hit points. Even if the torso injury only did 10 or 15 points of damage, Nonnach is still going to lose half his hit points due to the effects of his injury!

**Broken:** Most minor breaks are assumed to fall into the previous two categories; hairline fractures or chipped bones are painful, but generally minor, injuries. This category is reserved for severe fractures that render the limb in question useless. Broken bones can be mended by a *cure serious wounds* spell that is used only to knit the bone; unlike the *grazed*, *struck*, or *injured* categories, this healing spell restores no hit points to the character. Broken bones heal naturally as if they were a loss of 20d6 hit points, so a character with a badly broken leg won't be running sprints anytime in the next month or two.

Broken arms reduce a character to 75% of his normal hit points, and broken ribs or legs reduce a character to 50% of his normal hit point maximum. Any other broken bones reduce a character to 25% of his normal hit point maximum. Continuing to adventure with a fractured skull or a few broken vertebrae is never a good idea.

**Crushed, Shattered, Frozen, or Destroyed:** A critical strike of this magnitude simply destroys the affected tissue or limb, rendering it forever useless. The victim of such a devastating injury *never* recovers his full health, without magical aid. A limb damaged in this way is completely useless, while other areas so affected will leave the victim incapacitated. One to eight months of bed rest will be required before he regains even a semblance of mobility.

An injury of this kind can only be repaired by a *cure critical wounds* spell or any other magic capable of restoring at least 20 hit points to the victim. In addition, any bones in the affected area are assumed to be broken and may require additional magic to knit.

Destroyed shoulders, hips, or limbs reduce a character to 50% of his normal hit point maximum. Any other injuries of this severity reduce the character to 25% of his normal hit point maximum. At the DM's option, appropriate ability scores may be reduced by up to 50%; an acrobat with a ruined hip will never perform again.

**Severed, Dissolved, or Incinerated:** Obviously, a creature that has a limb severed or completely removed from his body can no longer use that limb for movement or combat. A human with a severed leg can't walk or run and is reduced to crawling until he finds a crutch; a character with a severed shield-arm can no longer employ his shield, and so on. The only way to undo damage of this scale is by use of the *regeneration* spell or similar effects, or a properly worded *wish*.

The shock of losing a limb will prevent a character from moving independently or attacking for 2d10 full weeks, although a character who "only" loses a hand or a foot may be able to perform limited activities within 1d6 rounds of the injury, if he passes a system shock roll. Note that creatures with more than four limbs (especially insects or octopus-like creatures) are slightly more resistant to this sort of trauma and may be able to continue the fight after one or two rounds of being stunned.

The loss of a limb will reduce a character's hit point maximum by 25% for a partial loss, or 50% for a more catastrophic injury. If the character is able to compensate with a prosthesis such as a wooden leg or a hook, the hit point loss may be reduced by one level.

## Bleeding

A common effect of many critical strikes is bleeding. Bleeding falls into three categories: minor, major, and severe. In many cases, bleeding may prove more dangerous than the original injury.

**Minor bleeding** causes the victim to lose 1d2 hit points per full turn until the wound is magically healed or bound. There is a chance that minor bleeding will stop on its own; every time the character suffers damage from the bleeding, he may attempt a saving throw vs. death magic. If he succeeds, the bleeding stops.

Anybody (including the injured character!) can stop minor bleeding by applying a bandage. This requires one round.

**Major bleeding** is much more dangerous, resulting in a loss of 1d2 hit points per round (not turn) until the injury is healed or bound. In effect, the standard negative 10 rule represents major bleeding; the character loses 1 hit point per round when reduced to negative hit points.

Major bleeding can be stopped by a *cure light wounds* spell or the healing of 5 points of damage by any other means. In addition, the successful use of the healing proficiency halts major bleeding. If the wound is bound by an untrained character, make an Intelligence check for the would-be medic; if he fails, he is unable to help, but if he succeeds, the bleeding is reduced to minor.

**Severe bleeding** causes the victim to lose 10% to 60% (1d6 x 10%) of his unwounded hit point total every round. For example, a fighter with 43 hit points would lose 4 (10%) to 24 (60%) of his hit points every round. A *cure light wounds* or 5 hit points of healing will reduce severe bleeding to major bleeding; a *cure serious wounds* or 10 hit points of healing reduces it to minor bleeding; and a *cure critical wounds* or 20 hit points of healing stops it altogether.

An untrained character has no chance to bind a torso, abdomen, or head wound with severe bleeding, but a trained healer can attempt a proficiency check with a –4 penalty to reduce severe bleeding to major bleeding in these areas. A trained healer can reduce severe bleeding from a limb to major bleeding with an unpenalized proficiency check, and an untrained character can do the same with a successful Intelligence check at a –4 penalty. Note that once severe bleeding has been reduced to major bleeding, the character may be able to then reduce the major bleeding to minor bleeding.

Bleeding from several wounds is cumulative; a character with three cases of minor bleeding from three separate injuries suffers 3d2 damage every turn. After a character is reduced to 0 hit points by any level of bleeding, the bleeding stops, and he simply loses 1 hit point a round until he reaches –10 and dies.

## Combat Penalties

Many critical strikes hamper the victim's ability to fight or move by penalizing his attack rolls or reducing his movement rate. A character with reduced movement may not choose to charge, jog, run, sprint, or force-march in order to compensate. A character reduced to no movement may still drag himself along with an effective movement rating of 1 or ride a mount with difficulty.

A few critical strikes may prevent the victim from attacking at all; if this is the case, the character may not engage in spellcasting or performing any other actions except for using magical items or possibly using psionic powers that affect only his own body.

**Knockdowns:** Some critical strikes may inflict a knockdown on the victim. This is not an automatic result; the victim may still attempt a saving throw vs. death magic to remain on his feet.

### Armor, Shield, and Equipment Damage

Acid, fire, lightning, and other lethal energies and substances can quickly destroy a character's armor. Unlike the critical hits introduced in *Player's Option: Combat & Tactics*, every critical strike endangers the victim's armor and equipment since the character already failed a saving throw. However, there's no need to check everything the character may have on his person—instead, only check items on or in the location struck. For example, if a character is struck in the face with a *burning hands* spell, his magical boots are in no real danger of being destroyed, but his helm or his reading spectacles might be ruined.

To check for item damage, refer to Table 29: Item Saving Throws in the *DMG*. Vibration or sonic attacks can be treated as either a crushing blow or disintegration as the DM prefers, although if you decide to use the disintegration column, a +4 bonus is reasonable to reflect the less destructive nature of vibration attacks. Wounding critical strikes do not damage equipment.

**Partially Destroyed Armor:** If a character loses his armor in one particular location, the most accurate way to reflect his increased vulnerability is to consult the partial armor rules described on pages 128, 146 and 147 of the *Player's Option: Combat & Tactics* book. Basically, the character's overall AC will be worsened by the value of the missing piece, and the character will also have an AC 10 location that can be exploited by a called shot.

If you don't have the *Combat & Tactics* book or don't want to use partial armor rules, simply assign the character a 1-point AC penalty for each piece of missing armor. For example, if a character in chain mail (base AC 5) loses the armor protecting his torso and right arm, his armor is now treated as a base AC of 7. This isn't as realistic, but may be a little easier to use in play.

## Acid

**Hit Location Chart**

| d10 roll | Humanoid | d10 roll | Monster/Animal |
|---|---|---|---|
| 1–2 | Right leg | 1 | Right foreleg/wing |
| 3–4 | Left leg | 2 | Left foreleg/wing |
| 5 | Abdomen | 3 | Right hind leg |
| 6–7 | Torso | 4 | Left hind leg |
| 8 | Right arm | 5 | Tail |
| 9 | Left arm | 6–7 | Abdomen |
| 10 | Head | 8–9 | Torso/chest |
| | | 10 | Head |

**Location: Legs**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |

| | |
|---|---|
| 4 | Acid splash grazes victim; pain distracts character for 1d4 rounds causing a –2 penalty to attack rolls |
| 5 | Leg struck, 1/2 move; pain distracts character for 1d6 rounds, as above, and causes knockdown |
| 6 | Foot burned, 1/2 move, pain distracts character for 1d6 rounds |
| 7 | Armor destroyed, acid splash as 4 above; if target has no leg armor, leg burned, 1/4 move, victim knocked down and stunned 1d6 rounds |
| 8 | Hip/thigh burned, minor bleeding, stunned 1d6 rounds, 1/4 move |
| 9 | Armor destroyed, leg struck as 5 above; if target has no leg armor, acid burns to bone causing major bleeding, no move or attack |
| 10 | Foot dissolved; minor bleeding, victim stunned 1d6 rounds, then no movement and –2 penalty to attacks |
| 11 | Leg dissolved at knee, major bleeding, no move or attack |
| 12 | Leg dissolved at hip, no move or attack, major bleeding |
| 13 | +As 12 above with an additional abdomen hit |

**Location: Abdomen**

| **Severity** | **Effect** |
|---|---|
| 1–3 | No unusual effect |
| 4 | Acid splash grazes victim, –2 to attack rolls for 1d6 rounds |
| 5 | Abdomen struck, –2 to attack rolls, victim reduced to 1/2 move |
| 6 | Armor destroyed, acid splash as 4 above; if target has no armor, abdomen burned, 1/2 move, minor bleeding, –2 to attack rolls |
| 7 | Abdomen burned, minor bleeding, 1/2 move, –2 to attack rolls, victim stunned 1d6 rounds by pain |
| 8 | Abdomen burned, minor bleeding, 1/4 move, –4 to attack rolls |
| 9 | Armor damage, abdomen struck, minor bleeding, 1/2 move and –2 to attacks; if no armor, victim stunned 1d6 rounds, 1/4 move, –4 to attack rolls, major bleeding |
| 10 | Abdomen burned, no move or attack, major bleeding |
| 11 | Abdominal wall dissolved, no move or attack, severe bleeding |
| 12 | Abdomen dissolved, victim reduced to 0 hp, severe bleeding |
| 13+ | As 12 above with additional torso or leg hit (50% chance of either) |

**Location: Torso**

| **Severity** | **Effect** |
|---|---|
| 1–3 | No unusual effect |
| 4 | Acid splash grazes victim, –2 to attack rolls for 1d6 rounds |
| 5 | Torso struck; 1/2 move, –2 to attack rolls, victim stunned 1 round |
| 6 | Shield destroyed, acid splash as 4 above; if target has no armor, torso burned, 1/2 move, minor bleeding, –2 to attack rolls |
| 7 | Armor destroyed, torso struck, 1/2 move, –2 to attacks; if target has no armor, torso burned, victim stunned 1d6 rounds, 1/2 move, –2 to attacks |
| 8 | Torso burned, minor bleeding, 1/4 move, –4 to attack rolls |
| 9 | Torso burned, minor bleeding, no move or attack |
| 10 | Torso burned deeply, major bleeding, no move or attack |

| | |
|---|---|
| 11 | Torso partially dissolved, victim reduced to 0 hit points with severe bleeding |
| 12 | Torso dissolved, victim killed instantly |
| 13+ | As 12 above with additional abdomen, arm or head hit (40% abdomen, 20% left arm, 20% right arm, 20% head); it might make a difference when the survivors claim the treasure and possessions left behind by the victim. |

**Location: Arms**

| **Severity** | **Effect** |
|---|---|
| 1–3 | No unusual effect |
| 4 | Hand grazed by acid splash, weapon or shield dropped |
| 5 | Arm struck, victim distracted by pain (–2 penalty to attack rolls) for 1d4 rounds, shield or weapon damaged by acid |
| 6 | Hand burned, –2 to attacks with that hand (or no shield use if shield arm is burned), victim stunned 1d3 rounds by pain |
| 7 | Armor destroyed, arm grazed by acid as in 4 above; if victim has no armor, arm burned by acid, –2 penalty to all attacks, victim stunned 1d4 rounds by the pain |
| 8 | Arm burned, victim stunned 1d4 rounds, –4 to attacks with affected arm and –2 to all other attacks |
| 9 | Deep acid burn renders arm useless, victim stunned 1d6 rounds |
| 10 | Hand dissolved, stunned 1d6 rounds, –2 to all attacks, minor bleeding |
| 11 | Arm dissolved at elbow, stunned 1d6 rounds, no attack, major bleeding |
| 12 | Arm dissolved at shoulder, stunned 1d6 rounds, 1/2 move, no attacks, major bleeding |
| 13+ | As 12 above with an additional torso hit |

**Location: Head**

| **Severity** | **Effect** |
|---|---|
| 1–3 | No unusual effect |
| 4 | Acid splash distracts victim for 2d4 rounds, –2 penalty to all attacks |
| 5 | Head struck, helm damaged, victim stunned 1d3 rounds; –2 to all attack rolls if victim had no helm |
| 6 | Head struck, –2 to attacks, stunned 1d4 rounds by pain |
| 7 | Helm destroyed, face burned, stunned 1d6 rounds, –2 to attacks; if victim wears no helm, –4 to all attacks and 1/2 move |
| 8 | Face burned, victim blinded, stunned 2d8 rounds, Charisma reduced by 2d6 points, minor bleeding |
| 9 | Scalp and one ear dissolved, victim stunned 2d8 rounds, major bleeding, 1/2 move and no attacks, Charisma reduced by 2d4 points |
| 10 | Face dissolved, victim blinded, no move or attack, major bleeding, Charisma/Appearance reduced to 3 |
| 11 | Throat dissolved, no move or attack, severe bleeding; if bleeding doesn't kill the victim, he asphyxiates in 1d4+1 rounds |
| 12 | Skull dissolved, immediate death |
| 13+ | As 12 above with additional torso hit |

**Location: Tail**

| Severity | Effect |
|---|---|
| 1–5 | No unusual effect |
| 6 | Tip of tail burned; if prehensile, any items carried are dropped, –2 penalty to all tail attacks due to pain |
| 7–8 | Tail burned, lose any tail attacks; normal animals must roll saving throw vs. death magic or retreat in pain |
| 9–10 | Tail burned, lose any tail attacks, 1/2 move if animal uses tail for movement |
| 11 | Tail dissolved at mid-length, victim stunned 1d3 rounds, major bleeding, lose any tail attacks, no movement or attacks if creature uses tail for movement |
| 12 | Tail dissolved, victim stunned 1d6 rounds, pain reduces creature to 1/2 move and –2 penalty on any attack rolls, major bleeding; no move or attack and severe bleeding if creature uses tail for movement |
| 13+ | As 12 above with abdomen or torso hit (assign 50% chance to both) |

## Cold

**Hit Location Chart**

| d10 roll | Humanoid | d10 roll | Monster/Animal |
|---|---|---|---|
| 1–2 | Right leg | 1 | Right foreleg/wing |
| 3–4 | Left leg | 2 | Left foreleg/wing |
| 5 | Abdomen | 3 | Right hind leg |
| 6–7 | Torso | 4 | Left hind leg |
| 8 | Right arm | 5 | Tail |
| 9 | Left arm | 6–7 | Abdomen |
| 10 | Head | 8–9 | Torso/chest |
| | | 10 | Head |

**Location: Legs**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim chilled; 1/2 move and –2 penalty to attacks for 1d6 hours |
| 5 | Leg struck, 1/2 move; victim knocked down and chilled as above |
| 6 | Foot frostbitten, 1/2 move |
| 7 | Armor shattered, victim chilled as 4 above; if target has no leg armor, leg frostbitten, 1/4 move, victim knocked down |
| 8 | Hip/thigh frostbitten, stunned 1d3 rounds, 1/4 move |
| 9 | Armor shattered, leg struck as 5 above; if target has no leg armor, bone broken by cold, no move, –2 to attack rolls |
| 10 | Foot frozen; victim knocked down, 1/4 movement, –2 penalty to attacks |
| 11 | Leg frozen from knee down, no move, –4 penalty to attacks |
| 12 | Leg frozen at hip, no movement or attacks possible |
| 13+ | As 12 above with an additional abdomen hit |

**Location: Abdomen**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim chilled, –2 to attack rolls for 1d6 hours |
| 5 | Abdomen struck, victim reduced to 1/2 move, chilled 1d6 hours |
| 6 | Armor shattered, victim chilled as 4 above; if target has no armor, abdomen frostbitten, 1/4 move, –2 to attack rolls |
| 7 | Abdomen frostbitten, 1/4 move, –2 to attack rolls; victim slowed for 2d6 rounds due to intense cold |
| 8 | Abdomen frostbitten, 1/4 move, –4 to attack rolls; victim slowed for 1d6 hours by intense cold |
| 9 | Armor shattered, abdomen struck, 1/4 move and –2 to attacks; if no armor, victim slowed 1d6 hours, 1/4 move, –4 to attack rolls |
| 10 | Abdomen partially frozen, no move or attack; victim succumbs in 1d4 days without magical healing |
| 11 | Abdomen frozen, no move or attack, victim reduced to 0 hp; victim succumbs in 1d6 hours without magical healing |
| 12 | Abdomen frozen, victim reduced to 0 hp and succumbs in 1d6 rounds without magical healing |
| 13+ | As 12 above with additional torso or leg hit (50% chance of each) |

**Location: Torso**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim chilled, –2 to attack rolls for 1d6 rounds |
| 5 | Torso struck; 1/2 move, –2 to attack rolls, victim chilled 1d6 hours |
| 6 | Shield shattered, victim chilled as 4 above; if target has no shield, torso frostbitten, slowed 1d6 rounds, 1/4 move, –2 to attack rolls armor, torso frostbitten, victim slowed 1d6 hours, 1/4 move, –2 attacks |
| 8 | Torso frostbitten, 1/4 move, –4 to attack rolls, victim slowed 1d6 hours by intense cold |
| 9 | Torso frostbitten, no movement or attacks possible |
| 10 | Torso partially frozen, no move or attack, victim perishes in 1d4 hours without magical help |
| 11 | Torso frozen, victim reduced to 0 hp, dies in 1d6 rounds |
| 12 | Torso frozen, victim dies immediately |
| 13+ | As 12 above with additional abdomen, arm or head hit (40% abdomen, 20% left arm, 20% right arm, 20% head) |

**Location: Arms**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Hand chilled, weapon or shield dropped |
| 5 | Arm struck, shield or weapon dropped, –2 penalty to attacks with that hand until victim recovers |

| | |
|---|---|
| 6 | Hand frostbitten, –4 to attacks with that hand (or no shield use if shield arm is struck) |
| 7 | Armor shattered, arm chilled as in 4 above; if victim has no armor, arm frostbitten, –2 penalty to all attacks, victim slowed 1d4 rounds |
| 8 | Arm frostbitten, victim slowed 1d4 rounds, –4 to attacks with affected arm and –2 to all other attacks |
| 9 | Deep frostbite renders arm useless, victim slowed 1d6 hours |
| 10 | Hand frozen and useless, stunned 1d6 rounds, –2 to all attacks |
| 11 | Arm frozen from elbow down and useless, stunned 1d6 rounds, –4 to all attacks, slowed 1d6 hours |
| 12 | Arm frozen from shoulder down, stunned 1d6 rounds, 1/4 move, no attacks, slowed 1d6 hours |
| 13+ | As 12 above with an additional torso hit |

**Location: Head**

| **Severity** | **Effect** |
|---|---|
| 1–3 | No unusual effect |
| 4 | Frost disorients victim for 2d4 rounds, –2 penalty to all attacks |
| 5 | Head struck, helm damaged, victim slowed 1d6 rounds; –2 to all attack rolls if victim had no helm |
| 6 | Head struck, –2 to attacks, slowed 1d6 hours |
| 7 | Helm shattered, face frostbitten, slowed 1d6 hours, –2 to attacks; if victim wears no helm, –4 to all attacks and 1/4 move |
| 8 | Face frostbitten, victim blinded 1d6 hours and slowed 1d6 hours |
| 9 | Scalp and side of head frozen, victim slowed 1d6 hours, 1/4 move and no attacks |
| 10 | Face frozen, victim blinded, no move or attack |
| 11 | Throat/nose frozen, no move or attack, asphyxiation in 1d4+1 rounds |
| 12 | Skull frozen through, immediate death |
| 13+ | As 12 above with additional torso hit |

**Location: Tail**

| **Severity** | **Effect** |
|---|---|
| 1–5 | No unusual effect |
| 6 | Tip of tail frostbitten; if prehensile, any items carried are dropped, –2 penalty to all tail attacks |
| 7–8 | Tail frostbitten, lose any tail attacks; victim chilled 1d6 hours, suffers a –2 penalty to attacks while chilled |
| 9–10 | Tail badly frostbitten, lose any tail attacks, 1/4 move if animal uses tail for movement |
| 11 | Tail frozen at mid-length, victim stunned 1d6 rounds, lose any tail attacks, no movement or attacks if creature uses tail for movement |
| 12 | Tail frozen, victim stunned 1d6 rounds, pain reduces creature to 1/4 move and –2 penalty on any attack rolls; no move or attack if creature uses tail for movement |
| 13+ | As 12 above with abdomen or torso hit (50% chance of either) |

Note: A frozen result kills the affected tissue; without access to powerful healing magic, the victim must have a frozen limb removed within 1d3 days to prevent lethal infection or gangrene.

## Constriction

**Hit Location Chart**

| d10 roll | Humanoid | d10 roll | Monster/Animal |
|---|---|---|---|
| 1–2 | Right leg | 1 | Right foreleg/wing |
| 3–4 | Left leg | 2 | Left foreleg/wing |
| 5 | Abdomen | 3 | Right hind leg |
| 6–7 | Torso | 4 | Left hind leg |
| 8 | Right arm | 5 | Tail |
| 9 | Left arm | 6–7 | Abdomen |
| 10 | Head | 8–9 | Torso/chest |
| | | 10 | Head |

**Location: Legs**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim knocked down |
| 5 | Knee twisted (struck), knockdown, 1/2 move |
| 6 | Foot dislocated (broken), knockdown, 1/2 move |
| 7 | Armor damaged, leg twisted, 1/2 move; leg injured if target has no plate armor to cover legs, 1/4 move |
| 8 | Knee dislocated (broken), no move, –2 to all attacks |
| 9 | Armor damaged, leg injured, 1/2 move, –2 to all attacks; leg broken if target has no plate armor to cover legs, no move, –4 to attacks |
| 10 | Knee crushed, no move, –4 to attacks, minor bleeding |
| 11 | Hip broken and dislocated, minor bleeding, no move or attack |
| 12 | Leg crushed, no move or attack, major bleeding from compound fractures |
| 13+ | As 12 above with additional abdomen hit |

**Location: Abdomen**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim stunned 1d4 rounds |
| 5 | Abdomen struck, victim stunned 1 round and reduced to 1/2 move |
| 6 | Armor damaged, victim stunned 1d6 rounds; if victim has no plate armor, abdomen injured, stunned 1d6 rounds, 1/2 move, –2 penalty to all attacks |
| 7 | Abdomen injured, 1/2 move, –2 to all attacks |
| 8 | Abdomen injured, minor internal bleeding, 1/2 move and –2 to attacks |
| 9 | Armor damaged, abdomen injured, minor bleeding, 1/2 move and –2 to |

| | |
|---|---|
| | attacks; if victim does not have plate armor, 1/4 move, –4 to attacks |
| 10 | Abdomen injured, no move or attack, minor internal bleeding |
| 11 | Abdomen crushed, no move or attack, major internal bleeding |
| 12 | Abdomen crushed, victim reduced to 0 hit points with severe internal bleeding |
| 13+ | As 12 above with additional torso or leg hit (50% chance of each) |

**Location: Torso**

| **Severity** | **Effect** |
|---|---|
| 1–3 | No unusual effect |
| 4 | Knockdown, stunned 1d4 rounds |
| 5 | Torso struck, victim stunned 1 round and reduced to 1/2 move |
| 6 | Shield damaged, torso struck, 1/2 move |
| 7 | Armor damaged, torso struck, 1/2 move, –2 to attacks; if no plate armor, torso injured, 1/4 move, –4 penalty to all attacks |
| 8 | Torso injured, minor internal bleeding, 1/4 move, –4 to attacks |
| 9 | Ribs broken, minor internal bleeding, 1/2 move, –2 to attacks |
| 10 | Ribs broken, major internal bleeding, no move or attack |
| 11 | Torso crushed, victim reduced to 0 hit points with severe internal bleeding |
| 12 | Torso crushed, victim killed |
| 13+ | As 12 above with additional hit in abdomen (40%), left arm, right arm, or head (20% each) |

**Location: Arms**

| **Severity** | **Effect** |
|---|---|
| 1–3 | No unusual effect |
| 4 | Hand twisted, weapon/shield dropped |
| 5 | Arm twisted, weapon/shield dropped, –2 to attacks |
| 6 | Hand broken, –2 to attacks/shield dropped |
| 7 | Armor damaged, arm injured, –2 to attacks with that arm; arm broken if victim has no plate armor, arm useless |
| 8 | Shield damaged, arm broken and useless, stunned 1 round |
| 9 | Arm broken and useless, stunned 1d4 rounds |
| 10 | Shoulder dislocated (broken), no attacks, minor bleeding |
| 11 | Arm crushed, 1/2 move, no attacks, minor bleeding |
| 12 | Shoulder crushed, no move or attacks, major bleeding |
| 13+ | As 12 above with additional torso hit |

**Location: Head**

| **Severity** | **Effect** |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim stunned 1d6 rounds |
| 5 | Head twisted (struck), helm removed, victim stunned 1 round; –2 to attack rolls due to pinched nerves in neck |
| 6 | Head struck, 1/2 move, –2 to attacks |
| 7 | Helm damaged, face injured, stunned 1d6 rounds, 1/2 move, –4 to attacks |
| 8 | Skull broken, helm damaged, victim reduced to 0 hit points and conscious 1d4 |

| | |
|---|---|
| | hours; if victim has no helmet, unconscious for 4d6 days, lose 1d3 points of Intelligence permanently |
| 9 | Jaw dislocated (broken), minor bleeding, no move or attack |
| 10 | Neck broken, reduced to 0 hp, unconscious 1d6 days; victim must roll saving throw vs. death magic or suffer 50–100% paralysis (1d6+4) x 10%. Paralysis caused by this injury can only be cured by heal, regenerate, or healing magic of similar power |
| 11 | Throat crushed, reduced to 0 hit points, major bleeding |
| 12 | Skull crushed, immediate death |
| 13+ | As 12 above with additional torso hit |

**Location: Tail**

| **Severity** | **Effect** |
|---|---|
| 1–5 | No unusual effect |
| 6 | Tip of tail struck; if prehensile, any items carried are dropped, –2 penalty to all tail attacks due to pain |
| 7–8 | Tail injured, lose any tail attacks; normal animals must roll saving throw vs. death magic or retreat in pain |
| 9–10 | Tail broken, lose any tail attacks, 1/2 move if animal uses tail for movement |
| 11 | Tail crushed, victim stunned 1–3 rounds, lose any tail attacks, no movement or attacks if creature uses tail for movement |
| 12 | Tail crushed, pain reduces creature to 1/2 move and –2 penalty on any attack rolls, minor bleeding; no move or attack if creature uses tail for movement |
| 13+ | As 12 above with additional abdomen or torso hit (50% chance each) |

## Crushing

**Hit Location Chart**

| **d10 roll** | **Humanoid** | **d10 roll** | **Monster/Animal** |
|---|---|---|---|
| 1–2 | Right leg | 1 | Right foreleg/wing |
| 3–4 | Left leg | 2 | Left foreleg/wing |
| 5 | Abdomen | 3 | Right hind leg |

| | | 10 | Head |

**Location: Legs**

| **Severity** | **Effect** |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim knocked down |
| 5 | Leg struck, knockdown, 1/2 move |
| 6 | Foot broken, 1/2 move |
| 7 | Armor damaged, leg struck, 1/2 move; if target has no armor to cover |

| | |
|---|---|
| | legs, leg injured, 1/4 move, –2 to all attacks |
| 8 | Hip broken, minor bleeding, no move, –2 to all attacks |
| 9 | Armor destroyed, leg injured, 1/2 move; leg broken if target has no armor to cover legs, no move, –4 to attacks |
| 10 | Knee crushed, no move, –4 to attacks, minor bleeding |
| 11 | Hip shattered, minor bleeding, no move or attack |
| 12 | Leg crushed, no move or attack, major bleeding from compound fractures |
| 13+ | As above with additional abdomen hit |

**Location: Abdomen**

| **Severity** | **Effect** |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim stunned 1d6 rounds |
| 5 | Abdomen struck, victim stunned 1 round and reduced to 1/2 move |
| 6 | Armor damaged, victim stunned 1d6 rounds; if target has no armor, abdomen injured, stunned 1d6 rounds, 1/2 move, –2 penalty to attacks |
| 7 | Abdomen injured, stunned 2d6 rounds, 1/2 move, –2 to hit |
| 8 | Abdomen injured, minor internal bleeding, 1/4 move and –4 to attacks |
| 9 | Armor damaged, abdomen injured, minor bleeding, 1/2 move and –2 to attacks; if victim has no armor, stunned 2d6 rounds, major internal bleeding, 1/4 move, –4 to attacks |
| 10 | Abdomen partially crushed, 1/4 move, –4 to attacks, major internal bleeding, stunned 2d6 rounds |
| 11 | Abdomen crushed, no move or attack, major internal bleeding |
| 12 | Abdomen crushed, victim reduced to 0 hit points with severe internal bleeding |
| 13+ | As above with additional leg or torso hit (50% each) |

**Location: Torso**

| **Severity** | **Effect** |
|---|---|
| 1–3 | No unusual effect |
| 4 | Knockdown, stunned 1d4 rounds |
| 5 | Torso struck, victim stunned 1 round and reduced to 1/2 move |
| 6 | Shield destroyed, torso struck, 1/4 move, stunned 1d6 rounds |
| 7 | Armor destroyed, torso injured, stunned 1d6 rounds, 1/4 move, –2 to attacks |
| 8 | Ribs broken, stunned 1d6 rounds, 1/4 move, –4 to all attacks |
| 9 | Ribs broken, stunned 2d6 rounds, minor bleeding, 1/4 move, –4 to attacks |
| 10 | Ribs crushed, major internal bleeding, no move or attack |
| 11 | Torso crushed, victim reduced to 0 hit points with severe internal bleeding |
| 12 | Torso crushed, victim killed |
| 13+ | As above with additional abdomen (40%), head (20%), or arm (20% each) hit |

**Location: Arms**

| **Severity** | **Effect** |
|---|---|
| 1–3 | No unusual effect |

| | |
|---|---|
| 4 | Hand struck, weapon/shield dropped |
| 5 | Arm struck, –2 to attacks with that arm |
| 6 | Hand broken, –2 to all attacks, weapon or shield dropped |
| 7 | Armor destroyed, arm injured, –2 to attacks with that arm; if victim has no armor, arm broken, stunned 1 round |
| 8 | Shield destroyed, arm broken, stunned 1d3 rounds |
| 9 | Hand crushed, stunned 1d4 rounds, minor bleeding |
| 10 | Shoulder dislocated (broken), no attacks, minor bleeding |
| 11 | Arm crushed to elbow, 1/4 move, no attacks, major bleeding |
| 12 | Arm crushed to shoulder, no move or attacks, major bleeding |
| 13+ | As above with additional torso hit |

**Location: Head**

| **Severity** | **Effect** |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim stunned 1d6 rounds |
| 5 | Head struck, helm removed, victim stunned 1d6 rounds; head injured, –2 to attack rolls if victim had no helm |
| 6 | Head injured, stunned 2d6 rounds, 1/4 move, –2 to all attacks |
| 7 | Helm destroyed, face injured, stunned 2d6 rounds, 1/4 move, –4 to all attacks; victim must roll saving throw vs. death magic or be blinded as well |
| 8 | Skull broken, helm destroyed, victim reduced to 0 hit points and unconscious 2d6 hours |
| 9 | Face crushed, minor bleeding, no move or attack, –2 Charisma permanently |
| 10 | Skull broken, unconscious 1d6 days, –2 to all attacks, lose 1 point each of Intelligence/Wisdom/Charisma permanently |
| 11 | Skull crushed, reduced to 0 hit points, major bleeding; victim loses 1d6 points of Intelligence, Wisdom, and Charisma (a heal or regenerate spell can restore lost ability points) |
| 12 | Skull crushed, immediate death |
| 13+ | As 12 above with additional torso hit |

**Location: Tail**

| **Severity** | **Effect** |
|---|---|
| 1–5 | No unusual effect |
| 6 | Tip of tail struck; if prehensile, any items carried are dropped, –2 penalty to all tail attacks due to pain |
| 7–8 | Tail injured, lose any tail attacks; normal animals must roll saving throw vs. Death magic or retreat in pain |
| 9–10 | Tail broken, lose any tail attacks, 1/4 move if animal uses tail for movement |
| 11 | Tail crushed, victim stunned 1d6 rounds, lose any tail attacks, no movement or attacks if creature uses tail for movement |
| 12 | Tail crushed, pain reduces creature to 1/4 move and –2 penalty on any attack rolls, minor bleeding; no move or attack and major bleeding if |

| | |
|---|---|
| | creature uses tail for movement |
| 13+ | As 12 above with additional abdomen or torso hit |

## Electricity

**Hit Location Chart**

| d10 roll | Humanoid | d10 roll | Monster/Animal |
|---|---|---|---|
| 1–2 | Right leg | 1 | Right foreleg/wing |
| 3–4 | Left leg | 2 | Left foreleg/wing |
| 5 | Abdomen | 3 | Right hind leg |
| 6–7 | Torso | 4 | Left hind leg |
| 8 | Right arm | 5 | Tail |
| 9 | Left arm | 6–7 | Abdomen |
| 10 | Head | 8–9 | Torso/chest |
| | | 10 | Head |

**Location: Legs**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim shocked and knocked down; spasms distract character for 1d4 rounds causing a –2 penalty to attack rolls |
| 5 | Leg struck, 1/2 move; victim knocked down and shocked for 1d6 rounds |
| 6 | Foot burned, 1/2 move, victim knocked down, spasms last 1d6 rounds |
| 7 | Armor destroyed, leg burned, 1/2 move, victim knocked down and stunned 1d6 rounds |
| 8 | Hip/thigh burned, knocked down, stunned 1d6 rounds, 1/4 move |
| 9 | Armor destroyed, leg broken, stunned 1d6 rounds, 1/4 move and –4 penalty to all attacks |
| 10 | Foot incinerated; minor bleeding, victim stunned 1d6 rounds, then no movement and –4 penalty to all attacks |
| 11 | Leg incinerated at knee, major bleeding, no move or attack |
| 12 | Leg incinerated at hip, no move or attack, major bleeding |
| 13+ | As 12 above with an additional abdomen hit |

**Location: Abdomen**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim shocked and knocked down, –2 to attack rolls for 1d6 rounds |
| 5 | Abdomen struck, –2 to attack rolls, 1/2 move, victim knocked down |
| 6 | Armor destroyed, abdomen burned, 1/2 move, –2 to attack rolls, victim stunned 1d6 rounds |
| 7 | Abdomen burned, 1/2 move, –2 to attack rolls, victim stunned 2d8 rounds |
| 8 | Abdomen burned, 1/4 move, –4 to attack rolls, stunned 2d8 rounds |
| 9 | Armor destroyed, abdomen burned, victim stunned 2d8 rounds, 1/4 move, –4 to attack rolls |
| 10 | Severe internal burns, no move or attack |

| | |
|---|---|
| 11 | Abdomen partially incinerated, no move or attack, death follows in 1d4 hours if victim is not treated with a cure critical wounds or more powerful healing magic |
| 12 | Abdomen incinerated, immediate death |
| 13+ | As 12 above with additional torso or leg hit (50% chance of each) |

**Location: Torso**

| **Severity** | **Effect** |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim shocked and knocked down, –2 to attack rolls for 1d6 rounds |
| 5 | Torso struck; 1/2 move, –2 to attack rolls, victim knocked down |
| 6 | Shield destroyed, torso burned, victim knocked down, 1/2 move, –2 to attack rolls |
| 7 | Armor destroyed, torso burned, victim stunned 1d6 rounds, 1/2 move, –2 to attacks |
| 8 | Torso burned, victim stunned 2d8 rounds, 1/4 move, –4 to attack rolls |
| 9 | Torso burned, no move or attack |
| 10 | Torso burned deeply, no move or attack, possible stopped heart; roll a saving throw vs. death magic or die in 1d3 rounds |
| 11 | Torso partially incinerated, victim reduced to 0 hit points and dies in 1d3 turns unless treated by cure critical wounds or more powerful healing magic |
| 12 | Torso incinerated, victim killed instantly |
| 13+ | As 12 above with additional abdomen, arm or head hit (40% abdomen, 20% left arm, 20% right arm, 20% head) |

**Location: Arms**

| **Severity** | **Effect** |
|---|---|
| 1–3 | No unusual effect |
| 4 | Hand shocked, weapon or shield dropped |
| 5 | Arm struck, victim knocked down, –2 to attacks for 1d6 rounds due to muscle spasms |
| 6 | Hand burned, –2 to attacks with that hand (or no shield use if shield arm is burned) |
| 7 | Armor destroyed, arm burned, –2 penalty to all attacks, victim stunned 1d6 rounds |
| 8 | Arm burned, victim stunned 2d8 rounds, –4 to attacks with affected arm and –2 to all other attacks, current crosses body and may stop heart; roll saving throw vs. death magic or die in 1d3 rounds |
| 9 | Arm broken and useless, victim stunned 2d8 rounds |
| 10 | Hand incinerated, stunned 1d6 rounds, –2 to all attacks |
| 11 | Arm incinerated at elbow, stunned 1d6 rounds, no attacks |
| 12 | Arm incinerated at shoulder, stunned 2d8 rounds, 1/2 move, no attacks |
| 13+ | As 12 above with an additional torso hit |

**Location: Head**

| **Severity** | **Effect** |
|---|---|

| | |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim shocked, knocked down, –2 penalty to attacks for 1d6 rounds |
| 5 | Head struck, helm destroyed, victim stunned 1d6 rounds, –2 to all attack rolls |
| 6 | Head struck, –2 to attacks, stunned 2d8 rounds, victim deafened |
| 7 | Helm destroyed, face burned, stunned 2d8 rounds, –4 to all attacks and 1/2 move |
| 8 | Face burned, victim blinded, stunned 2d8 rounds |
| 9 | Scalp burned, victim stunned 2d8 rounds, 1/2 move and –4 penalty to attacks; roll saving throw vs. death magic or heart stops, killing character in 1d3 rounds |
| 10 | Face burned, victim blinded, no move or attack, unconscious 4d6 days |
| 11 | Head burned, victim blinded, deafened, and paralyzed, and remains so until he receives a regenerate spell or similar healing magic |
| 12 | Skull incinerated, immediate death |
| 13+ | As 12 above with additional torso hit |

**Location: Tail**

| **Severity** | **Effect** |
|---|---|
| 1–5 | No unusual effect |
| 6 | Tip of tail shocked; if prehensile, any items carried are dropped, –2 penalty to all tail attacks |
| 7–8 | Tail burned, lose any tail attacks; normal animals must roll saving throw vs. Death magic or retreat |
| 9–10 | Tail burned, lose any tail attacks, 1/2 move if animal uses tail for movement |
| 11 | Tail incinerated at mid-length, victim stunned 1d3 rounds, minor bleeding, lose any tail attacks, no movement or attacks if creature uses tail for movement |
| 12 | Tail incinerated, victim stunned 1d6 rounds, pain reduces creature to 1/2 move and –2 penalty on any attack rolls, minor bleeding; no move or attack and major bleeding if creature uses tail for movement |
| 13+ | As 12 above with abdomen or torso hit (50% chance of either) |

## Fire

**Hit Location Chart**

| **d10 roll** | **Humanoid** | **d10 roll** | **Monster/Animal** |
|---|---|---|---|
| 1–2 | Right leg | 1 | Right foreleg/wing |
| 3–4 | Left leg | 2 | Left foreleg/wing |
| 5 | Abdomen | 3 | Right hind leg |
| 6–7 | Torso | 4 | Left hind leg |
| 8 | Right arm | 5 | Tail |
| 9 | Left arm | 6–7 | Abdomen |
| 10 | Head | 8–9 | Torso/chest |
| | | 10 | Head |

**Location: Legs**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim singed, –1 penalty to attack rolls |
| 5 | Leg scorched, 1/2 move, –1 penalty to attack rolls |
| 6 | Foot burned, 1/2 move, –1 penalty to attack rolls |
| 7 | Leg burned, 1/2 move, –2 penalty to attack rolls; if victim is wearing metal armor, hot steel scorches him for an additional 2d4 damage in the following round, and 1d4 damage in the round after that. |
| 8 | Hip/thigh burned, 1/4 move, –2 to all attacks, victim must roll saving throw vs. death magic or be on fire (see page 122) |
| 9 | Leg burned, 1/4 move and –4 penalty to all attacks; if victim wears metal armor, armor is destroyed and continues to inflict damage as 7 above |
| 10 | Foot incinerated; minor bleeding, victim stunned 1d6 rounds, then no movement and –4 penalty to all attacks |
| 11 | Leg incinerated at knee, major bleeding, no move or attack |
| 12 | Leg incinerated at hip, no move or attack, major bleeding |
| 13+ | As 12 above with an additional abdomen hit |

**Location: Abdomen**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim singed, –1 to attack rolls |
| 5 | Abdomen scorched, –1 to attack rolls, 1/2 move |
| 6 | Abdomen burned, 1/2 move, –2 to attack rolls; if victim wears metal armor, he is seared as described in 7 for the previous chart |
| 7 | Abdomen burned, 1/2 move, –2 to attack rolls, victim must roll saving throw vs. death magic or catch fire (see page 122) |
| 8 | Abdomen burned, 1/4 move, –4 to attack rolls, stunned 1d6 rounds |
| 9 | Abdomen burned, stunned 1d6 rounds, 1/4 move, –4 to attacks; if victim wears metal armor, armor destroyed, victim seared as in 6 above |
| 10 | Abdomen burned severely, no move or attack |
| 11 | Abdomen partially incinerated, no move or attack, death in 1d4 hours unless victim receives cure critical wounds or more powerful magic |
| 12 | Abdomen incinerated, immediate death |
| 13+ | As 12 above with additional torso or leg hit (50% chance of each) |

**Location: Torso**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim singed, –1 to attack rolls, stunned 1 round |
| 5 | Torso scorched; 1/2 move, –2 to attack rolls |
| 6 | Torso burned, 1/2 move, –2 to attack rolls; if victim carries shield, shield destroyed, causing searing damage as described above |
| 7 | Torso burned, victim stunned 1d6 rounds, 1/2 move, –2 to attacks; if victim wears metal armor, he is seared as described above |

| | |
|---|---|
| 8 | Torso burned, victim stunned 1d6 rounds, 1/4 move, –4 to attack rolls; victim must roll saving throw vs. death magicor catch fire (see page 122) |
| 9 | Torso burned, no move or attack |
| 10 | Torso burned deeply, no move or attack, victim on fire (see page 122) |
| 11 | Torso partially incinerated, victim reduced to 0 hit points, dies in 1d3 turns unless treated by cure critical wounds or more powerful magic |
| 12 | Torso incinerated, victim killed instantly |
| 13+ | As 12 above with additional abdomen, arm or head hit (40% abdomen, 20% left arm, 20% right arm, 20% head) |

**Location: Arms**

| **Severity** | **Effect** |
|---|---|
| 1–3 | No unusual effect |
| 4 | Hand singed, weapon or shield dropped |
| 5 | Arm scorched, –2 to attacks |
| 6 | Hand burned, –2 to attacks with that hand (or no shield use if shield arm is burned) |
| 7 | Arm burned, –2 penalty to all attacks; if victim wears metal armor, seared for 2d4 damage in next round, 1d4 in round after that |
| 8 | Arm burned, victim stunned 1d6 rounds, –4 to attacks with affected arm and –2 to all other attacks; roll saving throw vs. death magic or catch fire |
| 9 | Arm burned and useless, victim stunned 1d6 rounds and on fire |
| 10 | Hand incinerated, stunned 1d6 rounds, –2 to all attacks |
| 11 | Arm incinerated at elbow, stunned 1d6 rounds, no attacks |
| 12 | Arm incinerated at shoulder, stunned 1d6 rounds, 1/2 move, no attacks |
| 13+ | As 12 above with an additional torso hit |

**Location: Head**

| **Severity** | **Effect** |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim singed, –1 penalty to attacks |
| 5 | Head scorched, –2 to all attack rolls, if victim wears metal helm, hot metal sears him for 2d4 damage next round, 1d4 more the round after |
| 6 | Head scorched, –2 to attacks, victim must roll saving throw vs. death magic or catch fire (see page 122) |
| 7 | Face burned, stunned 1d6 rounds, –4 to all attacks and 1/2 move; if victim wears metal helm, seared for additional damage as 5 above |
| 8 | Face burned, victim blinded, stunned 1d6 rounds |
| 9 | Scalp burned, victim stunned 1d6 rounds, 1/2 move and –4 penalty to attacks, victim set on fire |
| 10 | Face burned, victim blinded, no move or attack |
| 11 | Head burned, victim blinded and deafened, and remains so until he receives a regenerate spell or similar healing magic |
| 12 | Skull incinerated, immediate death |
| 13+ | As 12 above with additional torso hit |

**Location: Tail**

| Severity | Effect |
|---|---|
| 1–5 | No unusual effect |
| 6 | Tip of tail singed; if prehensile, any items carried are dropped, –2 penalty to all tail attacks |
| 7–8 | Tail burned, lose any tail attacks; normal animals immediately retreat |
| 9–10 | Tail burned, lose any tail attacks, 1/2 move if animal uses tail for movement; roll saving throw vs. death magic or catch fire (see page 122) |
| 11 | Tail incinerated at mid-length, victim stunned 1d3 rounds, minor bleeding, lose any tail attacks, no movement or attacks if creature uses tail for movement |
| 12 | Tail incinerated, victim stunned 1d6 rounds, pain reduces creature to 1/2 move and –2 penalty on any attack rolls, minor bleeding; no move or attack and major bleeding if creature uses tail for movement |
| 13+ | As 12 above with abdomen or torso hit (50% chance of either) |

## Impact

**Hit Location Chart**

| d10 roll | Humanoid | d10 roll | Monster/Animal |
|---|---|---|---|
| 1–2 | Right leg | 1 | Right foreleg/wing |
| 3–4 | Left leg | 2 | Left foreleg/wing |
| 5 | Abdomen | 3 | Right hind leg |
| 6–7 | Torso | 4 | Left hind leg |
| 8 | Right arm | 5 | Tail |
| 9 | Left arm | 6–7 | Abdomen |
| 10 | Head | 8–9 | Torso/chest |
| | | 10 | Head |

**Location: Legs**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim knocked down |
| 5 | Knee struck, victim knocked down, 1/2 move |
| 6 | Foot broken, 1/2 move, minor bleeding |
| 7 | Leg injured, 1/2 move; if target has no armor to cover legs, 1/4 move, –2 to all attacks, and minor bleeding |
| 8 | Hip broken, stunned 1d6 rounds, minor bleeding, no move, –4 penalty to all attacks |
| 9 | Leg injured, stunned 1d6 rounds, 1/2 move, –2 to all attacks; if victim has no armor, leg broken, no move, –4 to all attacks, major bleeding |
| 10 | Knee shattered, minor bleeding, stunned 1d6 rounds, no move, –4 penalty to all attacks |
| 11 | Hip shattered, major bleeding, stunned 1d6 rounds, no move or attack |
| 12 | Leg shattered, stunned 2d6 rounds, no move or attack, major bleeding from compound fractures |
| 13+ | As above with additional abdomen hit |

**Location: Abdomen**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim stunned 1d6 rounds |
| 5 | Abdomen struck, victim stunned 1 round, reduced to 1/2 move |
| 6 | Abdomen struck, 1/2 move, –2 to all attacks; if victim wears no armor, abdomen injured, stunned 1d6 rounds, 1/2 move, –2 to all attacks, minor bleeding |
| 7 | Abdomen injured, stunned 1d6 rounds, 1/2 move, –2 to attacks, major bleeding |
| 8 | Abdomen injured, major bleeding, stunned 1d6 rounds, 1/4 move, –4 to all attacks |
| 9 | Abdomen injured, stunned 1d6 rounds, major bleeding, 1/4 move, –4 to all attack rolls, armor destroyed; if victim wears no armor, no move or attack, major bleeding |
| 10 | Abdomen injured, no move or attack, major bleeding |
| 11 | Abdomen destroyed, no move or attack, major bleeding |
| 12 | Abdomen destroyed, victim reduced to 0 hp, severe bleeding |
| 13+ | As above with additional torso (50%) or leg (50%) hit |

**Location: Torso**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Knockdown, stunned 1d4 rounds |
| 5 | Torso struck, victim stunned 1 round, 1/2 move |
| 6 | Torso struck, 1/2 move, shield damaged; if victim has no shield, stunned 1d6 rounds, 1/2 move, –2 to attacks, minor bleeding |
| 7 | Armor damaged, torso injured, 1/2 move, –2 to attacks; if victim wears no armor, stunned 1d6 rounds, ribs broken, minor bleeding, 1/2 move, –2 penalty to attacks |
| 8 | Torso injured, stunned 1d6 rds, major bleeding, 1/4 move, –4 to attacks |
| 9 | Ribs broken, major bleeding, stunned 1d6 rounds, 1/4 move, –4 attacks |
| 10 | Ribs broken, major bleeding, no move or attack |
| 11 | Torso destroyed, victim reduced to 0 hp, severe bleeding |
| 12 | Torso destroyed, victim killed |
| 13+ | As above with additional abdomen (40%), arm (20% each) or head (20%) hit |

**Location: Arms**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Hand struck, weapon/shield dropped |
| 5 | Arm struck, –2 to attacks with that arm |
| 6 | Hand broken, minor bleeding, –2 to all attacks |
| 7 | Armor damaged, arm injured, –2 to all attacks; if victim has no armor, arm broken, –4 to attacks with that arm, minor bleeding |

| | |
|---|---|
| 8 | Shield damaged, arm broken, stunned 1 round, minor bleeding |
| 9 | Weapon dropped, arm broken, stunned 1d6 rounds, minor bleeding |
| 10 | Shoulder injured, no attacks, stunned 1d6 rounds, minor bleeding |
| 11 | Arm shattered, 1/2 move, no attacks, stunned 1d6 rounds, minor bleeding |
| 12 | Shoulder shattered, stunned 2d6 rounds, no move or attacks, major bleeding |
| 13+ | As 12 above with additional torso hit |

**Location: Head**

| **Severity** | **Effect** |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim stunned 1d6 rounds |
| 5 | Head struck, helm removed, victim stunned 1 round, –2 to attack rolls; if victim has no helm, stunned 1d6 rounds, –2 to attacks |
| 6 | Head injured, victim stunned 1d6 rounds, –2 to attacks, minor bleeding |
| 7 | Helm damaged, face injured, stunned 1d6 rounds, 1/2 move, –4 to attack rolls; if victim has no helm, unconscious 2d4 hours, minor bleeding, 1/4 move, no attacks |
| 8 | Skull broken, helm destroyed, victim reduced to 0 hit points, unconscious 1d4 hours, minor bleeding; no movement or attacks |
| 9 | Jaw/face broken, major bleeding, no movement or attack; victim loses 1d3 points of Charisma/Appearance permanently |
| 10 | Head injured, major bleeding, unconscious 1d6 days; victim must roll saving throw vs. death magic or lose 1d3 points of Intelligence, Wisdom, and Charisma permanently |
| 11 | Throat destroyed, no move or attack, stunned 2d6 rounds, severe bleeding |
| 12 | Skull destroyed, immediate death |
| 13+ | As above with additional torso hit |

**Location: Tail**

| **Severity** | **Effect** |
|---|---|
| 1–5 | No unusual effect |
| 6 | Tip of tail struck; if prehensile, any items carried are dropped, –2 penalty to all tail attacks due to pain |
| 7–8 | Tail injured, minor bleeding, lose any tail attacks; normal animals must roll saving throw vs. death magic or retreat in pain |
| 9–10 | Tail broken, minor bleeding, lose any tail attacks, 1/2 move if animal uses tail for movement |
| 11 | Tail injured, victim stunned 1d3 rounds, lose any tail attacks, no movement or attacks if creature uses tail for movement |
| 12 | Tail destroyed, pain reduces creature to 1/2 move and –2 penalty on any attack rolls, major bleeding; no move or attack if creature uses tail for movement |
| 13+ | As 12 above with additional torso or abdomen hit |

## Slashing

**Hit Location Chart**

| d10 roll | Humanoid | d10 roll | Monster/Animal |
|---|---|---|---|
| 1–2 | Right leg | 1 | Right foreleg/wing |
| 3–4 | Left leg | 2 | Left foreleg/wing |
| 5 | Abdomen | 3 | Right hind leg |
| 6–7 | Torso | 4 | Left hind leg |
| 8 | Right arm | 5 | Tail |
| 9 | Left arm | 6–7 | Abdomen |
| 10 | Head | 8–9 | Torso/chest |
| | | 10 | Head |

**Location: Legs**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Leg struck, minor bleeding, victim knocked down |
| 5 | Knee struck, knockdown, minor bleeding, 1/2 move |
| 6 | Leg injured, 1/2 move, minor bleeding |
| 7 | Leg injured, knockdown, 1/2 move, minor bleeding; if victim has no armor, stunned 1d4 rounds, 1/2 move, major bleeding |
| 8 | Knee injured, stunned 1d4 rounds, minor bleeding, 1/4 move, –2 attacks |
| 9 | Leg injured, minor bleeding, 1/4 move, –2 to attacks; if victim has no armor, leg broken, major bleeding, no move, –4 to all attacks |
| 10 | Hip broken, stunned 1d6 rounds, no move or attack, major bleeding |
| 11 | Leg severed at knee, stunned 2d6 rounds, major bleeding, no move or attack |
| 12 | Leg severed at thigh, stunned 2d6 rounds, no move or attack, severe bleeding |
| 13+ | As above with additional abdomen hit |

**Location: Abdomen**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Abdomen grazed, minor bleeding |
| 5 | Abdomen struck, victim stunned 1 round, 1/2 move, minor bleeding |
| 6 | Abdomen struck, armor damaged, stunned 1d3 rounds, 1/2 move, minor bleeding; if victim wears no armor, abdomen injured, stunned 1d6 rounds, 1/2 move, –2 penalty to all attacks, minor bleeding |
| 7 | Abdomen injured, 1/2 move, –2 to all attacks, major bleeding |
| 8 | Abdomen injured, major bleeding, 1/4 move, –4 to all attacks |
| 9 | Abdomen injured, armor destroyed, 1/4 move, –4 to all attacks; if victim has no armor, unconscious 1d6 hours, major bleeding |
| 10 | Abdomen injured, no move or attack, major internal bleeding |
| 11 | Abdominal wall destroyed, stunned 2d6 rounds, no move or attack, severe bleeding |
| 12 | Abdomen destroyed, victim killed |
| 13+ | As above with additional torso or leg hit (50% of either) |

**Location: Torso**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Torso grazed, minor bleeding |
| 5 | Torso struck, stunned 1 round, 1/2 move, minor bleeding |
| 6 | Shield damaged, torso struck, 1/2 move, minor bleeding |
| 7 | Armor damaged, torso injured, 1/2 move, –2 to all attacks; if victim wears no armor, stunned 1d6 rounds, major bleeding, 1/2 move, –2 penalty to all attacks |
| 8 | Torso injured, major bleeding, stunned 1d6 rounds, 1/4 move, –2 attacks |
| 9 | Ribs broken, major bleeding, stunned 1d6 rounds, 1/4 move, –4 attacks |
| 10 | Ribs broken, major bleeding, stunned 1d6 rounds, no move or attack |
| 11 | Torso destroyed, severe bleeding, unconscious 2d6 days, no move or attack |
| 12 | Torso destroyed, victim killed |
| 13+ | As above with additional abdomen (40%), arm (20% each), or head (20%) hit |

**Location: Arms**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Hand struck, weapon or shield dropped |
| 5 | Arm struck, minor bleeding, shield damage or weapon dropped |
| 6 | Hand injured, minor bleeding, –2 to attacks or no shield use |
| 7 | Armor damaged, arm injured, minor bleeding, –2 to all attacks; if victim has no armor, arm broken, stunned 1d6 rounds, major bleeding, –2 to all attacks |
| 8 | Hand severed, stunned 1d6 rounds, major bleeding |
| 9 | Arm broken, and useless, stunned 1d6 rounds, major bleeding, 1/2 move, –2 to all other attacks |
| 10 | Shoulder injured, stunned 1d6 rounds, no attacks, major bleeding |
| 11 | Arm severed at elbow, stunned 2d6 rounds, no attacks, major bleeding |
| 12 | Arm severed at shoulder, no move or attacks, severe bleeding |
| 13+ | As above with additional torso hit |

**Location: Head**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Head grazed, minor bleeding, victim stunned 1d6 rounds |
| 5 | Head struck, helm removed, victim stunned 1 round, –2 to attack rolls; if victim has no helm, head injured, stunned 1d6 rounds, 1/2 move, –2 penalty to all attack rolls |
| 6 | Eye destroyed, stunned 2d6 rounds, –2 to all attacks |
| 7 | Helm damaged, face injured, stunned 1d6 rounds, 1/2 move, –4 to all attacks, minor bleeding |
| 8 | Skull broken, helm damaged, major bleeding, unconscious 1d6 hours |
| 9 | Face injured, victim blinded, major bleeding, no move or attack |
| 10 | Skull broken, unconscious 1d6 days, major bleeding, 1/4 move, –4 penalty to all attacks |
| 11 | Throat destroyed, severe bleeding |
| 12 | Skull destroyed, immediate death |

| | |
|---|---|
| 13+ | As above with additional torso hit |

**Location: Tail**

| Severity | Effect |
|---|---|
| 1–5 | No unusual effect |
| 6 | Tip of tail struck; if prehensile, any items carried are dropped, –2 penalty to tail attacks, minor bleeding |
| 7–8 | Tail injured, lose any tail attacks; minor bleeding, normal animals must roll saving throw vs. death magic or retreat in pain |
| 9–10 | Tail broken, lose any tail attacks, 1/2 move if animal uses tail for movement, minor bleeding |
| 11 | Tail destroyed, stunned 1d3 rounds, major bleeding, lose any tail attacks, no move or attack if creature uses tail for movement |
| 12 | Tail severed, stunned 1d6 rounds, 1/2 move, –2 penalty on all attacks, major bleeding; no move or attack if creature uses tail for movement |
| 13+ | As 12 above with doubled damage dice |

## Vibration

**Hit Location Chart**

| d10 roll | Humanoid | d10 roll | Monster/Animal |
|---|---|---|---|
| 1–2 | Right leg | 1 | Right foreleg/wing |
| 3–4 | Left leg | 2 | Left foreleg/wing |

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim grazed and knocked down |
| 5 | Leg struck, 1/2 move; victim knocked down, stunned 1d4 rounds |
| 6 | Foot injured, 1/2 move, victim knocked down, stunned 1d4 rounds |
| 7 | Armor destroyed, leg injured, 1/2 move, victim stunned 1d4 rounds |
| 8 | Hip/thigh injured, knocked down, stunned 2d4 rounds, 1/4 move |
| 9 | Armor destroyed, leg broken, stunned 2d4 rounds, 1/4 move and –4 penalty to all attacks |
| 10 | Foot disintegrated; minor bleeding, victim stunned 2d4 rounds, then no movement and –4 penalty to all attacks |
| 11 | Leg disintegrated at knee, major bleeding, no move or attack |
| 12 | Leg disintegrated at hip, no move or attack, major bleeding |
| 13+ | As 12 above with an additional abdomen hit |

**Location: Abdomen**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim grazed and stunned 1 round |
| 5 | Abdomen struck, –2 to attack rolls, 1/2 move, stunned 1d4 rounds |
| 6 | Armor destroyed, abdomen injured, 1/2 move, –2 to attack rolls, victim stunned 1d4 rounds |
| 7 | Abdomen injured, 1/2 move, –2 to attack rolls, victim stunned 2d4 rounds |
| 8 | Abdomen injured, 1/4 move, –4 to attack rolls, stunned 2d4 rounds |
| 9 | Armor destroyed, abdomen injured, victim stunned 2d4 rounds, 1/4 move, –4 to attack rolls, minor bleeding |
| 10 | Abdomen injured internally, no move or attack, major bleeding |
| 11 | Abdomen partially disintegrated, no move or attack, death follows in 1d4 hours if victim is not treated with a cure critical wounds or more powerful healing magic |
| 12 | Abdomen disintegrated, immediate death |
| 13+ | As 12 above with additional torso or leg hit (50% chance of each) |

**Location: Torso**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim grazed, stunned 1 round |
| 5 | Torso struck; 1/2 move, –2 to attack rolls, stunned 1d4 rounds |
| 6 | Shield destroyed, torso injured, stunned 1d4 rounds, 1/2 move, –2 to attack rolls |
| 7 | Armor destroyed, torso injured, stunned 2d4 rounds, 1/2 move, –2 penalty to attacks |
| 8 | Torso injured, victim stunned 2d4 rounds, 1/4 move, –4 to attack rolls |
| 9 | Torso injured, no move or attack, minor bleeding |
| 10 | Ribs broken, no move or attack, major bleeding |
| 11 | Torso partially disintegrated, victim reduced to 0 hit points and dies in 1d3 turns unless treated by cure critical wounds or more powerful healing magic |
| 12 | Torso disintegrated, victim killed instantly |
| 13+ | As 12 above with additional abdomen, arm or head hit (40% abdomen, 20% left arm, 20% right arm, 20% head) |

**Location: Arms**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Hand grazed, weapon or shield dropped |
| 5 | Arm struck, stunned 1d4 rounds, –2 to attacks with that hand |
| 6 | Hand injured, –2 to attacks with that hand (or no shield use if shield arm is burned), minor bleeding |
| 7 | Armor destroyed, arm injured, –2 penalty to all attacks, victim stunned 1d4 rounds |
| 8 | Arm injured, victim stunned 2d4 rounds, –4 to attacks with affected arm and –2 to all other attacks, minor bleeding |

| | |
|---|---|
| 9 | Arm broken and useless, victim stunned 2d4 rounds |
| 10 | Hand disintegrated, stunned 1d4 rounds, –2 to all attacks, minor bleeding |
| 11 | Arm disintegrated at elbow, stunned 2d4 rounds, no attacks, major bleeding |
| 12 | Arm disintegrated at shoulder, stunned 2d4 rounds, 1/2 move, no attacks, major bleeding |
| 13+ | As 12 above with an additional torso hit |

**Location: Head**

| **Severity** | **Effect** |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim stunned 1 round |
| 5 | Head struck, helm destroyed, victim stunned 1d4 rounds, –2 to all attack rolls |
| 6 | Head struck, –2 to attacks, stunned 2d4 rounds, victim deafened |
| 7 | Helm destroyed, face injured, stunned 2d4 rounds, –4 penalty to all attacks, ½ move, victim deafened |
| 8 | Face injured, victim blinded and deafened, stunned 2d4 rounds |
| 9 | Skull broken, stunned 2d4 rounds, 1/2 move and –4 penalty to attacks; roll saving throw vs. death magic or lose 1d3 points of Intelligence |
| 10 | Jaw/face broken, no move or attack, unconscious 4d6 days, major bleeding, victim deafened |
| 11 | Throat destroyed, stunned 2d4 rounds, severe bleeding |
| 12 | Skull disintegrated, immediate death |
| 13+ | As 12 above with additional torso hit |

**Location: Tail**

| **Severity** | **Effect** |
|---|---|
| 1–5 | No unusual effect |
| 6 | Tip of tail grazed; if prehensile, any items carried are dropped, –2 penalty to all tail attacks |
| 7–8 | Tail injured, lose any tail attacks; normal animals must roll saving throw vs. Death magic or retreat |
| 9–10 | Tail injured, lose any tail attacks, 1/2 move if animal uses tail for movement |
| 11 | Tail disintegrated at mid-length, victim stunned 1d4 rounds, minor bleeding, lose any tail attacks, no movement or attacks if creature uses tail for movement |
| 12 | Tail disintegrated, victim stunned 2d4 rounds, 1/2 move and –2 penalty on any attack rolls, major bleeding; no move or attack and severe bleeding if creature uses tail for movement |
| 13+ | As 12 above with abdomen or torso hit (50% chance of either) |

| 6 | Torso injured, 1/2 move, –2 to attack rolls |
| 7 | Torso injured, victim stunned 1d6 rounds, 1/2 move, –2 to attacks, minor bleeding |
| 8 | Torso injured, victim stunned 1d6 rounds, 1/4 move, –4 to attack rolls, minor bleeding |
| 9 | Torso injured, no move or attack, major bleeding |
| 10 | Torso withered, no move or attack, major bleeding |
| 11 | Torso withered, victim reduced to 0 hit points, dies in 1d3 turns unless treated by cure critical wounds or more powerful magic |
| 12 | Torso destroyed, victim killed instantly |
| 13+ | As 12 above with additional abdomen, arm or head hit (40% abdomen, 20% left arm, 20% right arm, 20% head) |

**Location: Arms**

| **Severity** | **Effect** |
|---|---|
| 1–3 | No unusual effect |
| 4 | Hand grazed, weapon or shield dropped |
| 5 | Arm struck, –2 to attacks with that hand |
| 6 | Hand injured, –2 to attacks with that hand (or no shield use if shield hand is injured) |
| 7 | Arm injured, –2 penalty to all attacks, minor bleeding |
| 8 | Arm injured, stunned 1d6 rounds, –4 to attacks with affected arm, –2 penalty to all other attacks, minor bleeding |
| 9 | Arm injured and useless, victim stunned 1d6 rounds, minor bleeding |
| 10 | Hand withered, stunned 1d6 rounds, –2 to all attacks |
| 11 | Arm withered at elbow, stunned 1d6 rounds, no attacks |
| 12 | Arm withered at shoulder, stunned 1d6 rounds, 1/2 move, no attacks |
| 13+ | As 12 above with an additional torso hit |

**Location: Head**

| **Severity** | **Effect** |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim grazed, –1 penalty to attacks |
| 5 | Head struck, –2 to all attack rolls |
| 6 | Head injured, –2 to attacks, stunned 1d6 rounds |
| 7 | Face injured, stunned 1d6 rounds, –4 to all attacks and 1/2 move |
| 8 | Face injured, victim blinded, stunned 1d6 rounds |
| 9 | Head partially withered, stunned 1d6 rounds, 1/2 move and –4 penalty to attacks, minor bleeding |
| 10 | Face destroyed, victim blinded, no move or attack, major bleeding |
| 11 | Throat destroyed, stunned 1d6 rounds, severe bleeding |
| 12 | Skull destroyed, immediate death |
| 13+ | As 12 above with additional torso hit |

**Location: Tail**

| Severity | Effect |
|---|---|
| 1–5 | No unusual effect |
| 6 | Tip of tail struck; if prehensile, any items carried are dropped, –2 penalty to all tail attacks |
| 7–8 | Tail injured, lose any tail attacks; normal animals must roll saving throw vs. Spell or immediately retreat |
| 9–10 | Tail injured, lose any tail attacks, 1/2 move if animal uses tail for movement, minor bleeding |
| 11 | Tail withered, stunned 1d3 rounds, minor bleeding, lose tail attacks; no movement or attacks if creature uses tail for movement |
| 12 | Tail destroyed, victim stunned 1d6 rounds, 1/2 move and –2 penalty on any attack rolls, major bleeding; no move or attack and severe bleeding if creature uses tail for movement |
| 13+ | As 12 above with abdomen or torso hit (50% chance of either) |

In addition to the usual spell characteristics (range, components, duration, casting time, area of effect, and saving throw), several additional characteristics are included in these new spells. These refer to material discussed in Chapter 8 and include the following items:

**Casting Subtlety:** This describes how easily the spell may be cast without the caster's action being spotted for what it is. The number given is the base modifier to an observer's Intelligence check based on the physical components and casting time of the spell. However, the DM may apply situational modifiers as he deems appropriate.

**Sensory Signature:** Spells possess sensory signatures ranging from small to gargantuan describing how spectacular and noticeable the spell's effects are.

**Knockdown:** If the spell causes a knockdown chance when it strikes a creature, the knockdown die is noted here.

**Critical Strikes:** If the spell is capable of causing a critical strike check, the spell's size, number of locations hit, and the type of damage is noted here. For example, *lightning bolt* would be noted as large (1d3 hits), electricity. Huge creatures treat spells as if they were one size smaller, and gargantuan creatures treat spells as if they were two sizes smaller.

If you are not using any of these optional spell characteristics in your campaign, simply ignore the information; the basic spell description can be used for play in most campaigns.

## First-Level Spells

### Detect Phase

**(Divination, Dimension)**

Range: 0
Duration: 2 rds./level
Area of Effect: 10 x 60 ft.
Components: V, S
Casting Time: 1
Saving Throw: None

Subtlety: +2 Knockdown: None
Sensory: Moderate visual Critical: None

Creatures or objects that are *phased*—that is, in the Border Ehtereal Plane—can be detected by using this spell. The spell affects a path 60 feet long and 10 feet wide; any phased creatures or objects in this area are revealed as soft, blue-glowing outlines visible to anyone in the vicinity. Creatures or effects detected by this spell include: phase spiders, ghosts in their ethereal state, characters or creatures employing *oil of etherealness*, psionic etherealness or phasing, and all other similar effects. Doorways or portals to extradimensional spaces are also detected, although anything hidden within remains unseen.

*Detect phase* does not reveal the location of creatures or objects concealed by magical invisibility or illusions. Note that detecting a phased monster doesn't necessarily give the caster the ability to attack it, but creatures such as phase spiders lose any special surprise bonuses they may receive if they are detected by using this spell.

## Detect Secret Passages and Portals

**(Divination)**

Range: 0 Components: V, S
Duration: 1 turn Casting Time: 1
Area of Effect: 10 x 10 ft. area/level Saving Throw: None
Subtlety: +2 Knockdown: None
Sensory: None Critical: None

This spell enables a wizard to detect secret doors, compartments, caches, and similar devices. Only passages, doors, or openings that have been deliberately constructed so as to escape detection are detected by this spell—a trap door buried beneath crates in a cellar, an illusionary wall, or an amulet left in a cluttered room would not be detected. The wizard affects an area of 10 feet square per level, so a 4th-level wizard could search four sections of wall, floor, or ceiling. Any doorways or openings detected by this spell glow softly for one full turn. It's possible that a wizard might not find a secret compartment in the area of effect if the compartment is behind or under another object that covers it completely. This spell only detects the doorway or opening; the wizard may have to search for a mechanism or catch that opens the door.

## Dictation

**(Invocation/Evocation, Geometry)**

Range: 10-ft. radius Components: V, M
Duration: 1 turn/level Casting Time: 1
Area of Effect: Special Saving Throw: None
Subtlety: +2 Knockdown: None
Sensory: Small audio Critical: None

This spell causes any words spoken by the wizard or anyone within 10 feet of him to appear on a piece of paper or the blank page of a book. It is useful for recording conversations, verbal agreements, interrogations, or even notes or observations if the wizard doesn't want to take the time to write them down himself. Generally, a person reading aloud takes about one to five minutes to read a page, depending on how many words are on a page.

Foreign languages are not translated, although foreign words are given the correct alphabetic spelling in the wizard's native tongue; for example, the phrase *c'est la vie* would appear as it does here, with no English translation, but a phrase or name in Arabic or Chinese would not be transcribed in those alphabets. Magical spells and invocations are not recorded, so this spell can't be used to create a backup copy of a scroll even as it's read by the wizard, but a clever wizard may be able to record a magical item's command word if an enemy within range uses it while the spell is in effect.

The material component for this spell is the blank page, scroll, or paper that the dictation will appear on. This must be prepared with a special wash of vinegar, which brings the cost to 10 gold pieces per page so readied.

## Expeditious Retreat

**(Alteration)**

| | |
|---|---|
| Range: 0 | Components: V, S |
| Duration: 3 rds. + 1 rd./level | Casting Time: 1 |
| Area of Effect: The caster | Saving Throw: None |
| Subtlety: +2 | Knockdown: None |
| Sensory: None | Critical: None |

The wizard Kerith was noted for his astounding lack of courage in the face of even the most insignificant dangers. He developed this spell early in his career to assist him in his frequent and precipitous withdrawals from combat. When cast, *expeditious retreat* provides the wizard with an amazing fleetness of foot, enabling him to run in great leaps and bounds. The caster's movement rate is tripled for the duration of the spell, so a wizard with a movement of 12 would be able to run at a rate of 36 while the spell was in effect. In addition, the wizard can jump up to 5 feet in the air or make a 15-foot horizontal leap with ease. The wizard does not have to move while the spell is in effect, but if he moves at all, his unnatural speed and bounds prevent him from taking any other actions except for running—in other words, he can't take a half-move and throw a missile, or charge, cast a spell, or do anything else except move.

The wizard cannot increase his movement further by any means, including additional movement-affecting magical spells or items. Kerith was also noted for his cynical observation to a companion: "I don't have to outrun the troll. I just have to outrun you."

## Protection from Vermin

**(Abjuration)**

Range: Touch
Duration: 2 rds./level
Area of Effect: Creature touched
Subtlety: +3
Sensory: Small visual/olfactory
Components: V, S, M
Casting Time: 1
Saving Throw: None
Knockdown: None
Critical: None

This spell creates a magical barrier around the recipient, preventing the attacks of nonintelligent monsters of less than 1 Hit Die. Creatures in this category include normal centipedes, spiders, bats, and rats, but any monster with an Intelligence of low or better can ignore the spell's effects.

The barrier extends about one foot from the protected character's body and moves with him; vermin cannot tolerate the aura's touch and recoil from the character. Any attacks that require physical contact (bites, stings, claws, etc.) automatically fail, but a creature with a ranged attack can still attack the spell's recipient.

The spell ends if the recipient attacks a creature he has been protected against, or tries to pin or trap the vermin by forcing the repelling barrier against them. The material component for this spell is a cone of pungent incense burned in a tiny bronze censer containing osquip ashes.

## Ray of Fatigue

**(Necromancy)**

Range: 10 yds. + 5 yds./level
Duration: 1 rd./level
Area of Effect: 1 creature
Subtlety: +2
Sensory: Small visual
Components: V, S
Casting Time: 1
Saving Throw: Neg.
Knockdown: None
Critical: None

This nefarious spell affects the victim's life energies, increasing any fatigue or exhaustion the victim currently possesses. Alert and well-rested characters suddenly become tired and sluggish, and characters who are already fatigued may be reduced to near-helplessness. In effect, the *ray* adds one level of fatigue or encumbrance to the victim. Moderately encumbered characters suffer a –1 penalty to attack rolls; heavily encumbered characters suffer a –2 penalty to attacks rolls and a +1 Armor Class penalty; and severely encumbered characters suffer a –4 penalty to attack rolls and a +3 Armor Class penalty. (Assume that monsters suffer a –1 penalty to their attack rolls and reduce their movement rates by 33%.) The victim is allowed a saving throw to negate the spell's effects.

If you are using the fatigue rules from the *Player's Option™: Combat & Tactics* book, this spell operates in a slightly different manner—fresh characters become fatigued, gaining one level of encumbrance; fatigued characters become exhausted, gaining two levels of encumbrance; and exhausted characters collapse in a quivering heap, unable to move or attack.

## Second-Level Spells

## Cat's Grace
**(Alteration)**

Range: Touch
Duration: 1 hr./level
Area of Effect: Creature touched
Subtlety: +3
Sensory: Small tactile
Components: V, S, M
Casting Time: 2
Saving Throw: None
Knockdown: None
Critical: None

Just as a *strength* spell can increase a subject's physical power for a time, cat's grace can enhance a subject's Dexterity. All abilities and skills that are Dexterity-based may be affected by an enhanced Dexterity score, including a subject's reaction adjustment, missile attack adjustment, defensive adjustment, Dexterity-based proficiency scores, and adjustments to thief abilities. The exact amount of Dexterity gained depends on the subject's class; multi-classed characters use the most favorable die.

| Class | Dexterity Gain |
|---|---|
| Rogue | 1d8 points |
| Warrior | 1d6 points |
| Wizard | 1d6 points |
| Priest | 1d4 points |

The spell cannot confer a Dexterity score of 20 or more, and it is not cumulative with any other Dexterity-enhancing magical or psionic power. Subjects without Dexterity scores gain a –1 bonus to AC and a +1 to attack rolls with missiles for the duration of the spell. The material component for this spell is a few whiskers from an elven cat.

## Displace Self
**(Alteration, Dimension)**

Range: 0
Duration: 1 rd./level
Area of Effect: The caster
Subtlety: +2
Sensory: None
Components: V, M
Casting Time: 2
Saving Throw: None
Knockdown: None
Critical: None

Emulating the natural ability of the displacer beast, this spell causes the caster to appear to be about two feet away from his true location. Any creature making a melee or missile attack against the caster automatically misses with his first attempt and suffers a –2 penalty on all subsequent attack rolls. In addition, the wizard also gains a +2 bonus on saving throws for any spell or special attack aimed directly at him, not at any other characters or the area around him. The only spell that will reveal the caster's true location is true seeing.

The material component for this spell is a small strip of leather made from displacer beast hide that is twisted into a loop.

## Moon Rune

**(Alteration, Geometry, Artifice)**

| | |
|---|---|
| Range: 0 | Components: V, S, M |
| Duration: Permanent | Casting Time: 2 |
| Area of Effect: Up to 1 sq. ft. | Saving Throw: None |
| Subtlety: +3 | Knockdown: None |
| Sensory: Small visual | Critical: None |

By using this spell, the wizard can create an invisible mark or rune on any surface. This mark remains invisible until conditions specified at the time of the casting are met. For example, the wizard could specify that the runes are only visible by the light of the moon or by the light of a moon of a certain phase (half, full, etc.), when viewed by an elf, at sunset or sunrise, when viewed by a wizard, when the caster is present, and so on. The spell cannot be used to transcribe magical runes, signs, glyphs, or symbols, but as many as seven letters or marks can be drawn. Unlike a magic mouth spell, a *moon rune* is permanent and will appear any time its conditions are met.

In addition to appearing when the proper conditions are met, a *moon rune* also becomes visible if a *detect magic*, *detect invisibility*, *true seeing*, or other such spell or effect is used on it. A *read magic* spell will reveal the maker's words, if any. *Moon rune* cannot be cast on a living creature. The mark cannot be dispelled, but it can be removed by the caster or by an *erase* spell.

A *moon rune* requires a special mixture of pigment including mithral filings or powder worth at least 100 gp.

## Protection from Poison

**(Abjuration)**

| | |
|---|---|
| Range: Touch | Components: V, S |
| Duration: 1 rd./level | Casting Time: 2 |
| Area of Effect: Creature touched | Saving Throw: None |
| Subtlety: +2 | Knockdown: None |
| Sensory: None | Critical: None |

With this abjuration spell, the wizard provides a protective barrier similar to that created by the spells *protection from evil* or *protection from vermin*, warding the recipient against creatures that possess venom or poison of some kind. Poisonous monsters or poison-using characters of 4 or less Hit Dice or levels are prevented from making physical contact with the spell recipient, while venomous creatures of 4+1 Hit Dice or poison-using characters of five levels or more suffer a –2 penalty on their attack rolls against the protected character. Only injected or contact poisons from natural or innate sources (such as compounds made from plants or the venom from a snake) in a position to possibly injure the character are protected against; a thief carrying a vial of ingestive poison in his pouch is not counted as a venomous character while a character that is brandishing a poisoned short sword is counted as venomous. The spell recipient can still be poisoned by a spitting attack or a thrown dagger smeared with poison.

If the spell recipient attacks a creature he has been warded against or uses the

resistance of the spell's aura to force his antagonist to give ground, the spell ends. Regrettably, reaching out to drink from a poisoned cup dispels the effect, so this spell offers no protection against ingested poisons. The spell functions normally if cast upon a poison-using creature or character.

### Wall of Gloom

**(Conjuration/Summoning, Shadow)**

Range: 30 yards
Duration: 2d4 rds. + 1 rd./level
Area of Effect: Two 10-ft. cubes, + one 10-ft. cube/level (max. is 8 cubes)
Subtlety: +3
Sensory: Huge visual, small tactile

Components: V, S, M
Casting Time: 2
Saving Throw: Special

Knockdown: None
Critical: None

This spell creates a wall or barrier of ominous shadow in any area within the spell range. The *wall of gloom* does not obscure sight completely, but objects or creatures within the wall, or on its other side, are dim shadows that can barely be seen. Creatures attempting missile fire through the wall suffer a –2 penalty to their attack rolls. In addition, the supernatural cold and darkness of the *wall of gloom* may cause creatures moving through the wall to recoil in fear. Creatures of 4 Hit Dice or less who enter the wall must make a saving throw vs. spell or retreat for 1d3 rounds; creatures of 4+1 to 7 Hit Dice must save or hesitate for 1 round before entering the wall; and undead and creatures of 7+1 Hit Dice or more ignore the wall's fear effects.

The wall can take any shape the caster desires, as long as it is at least 10 feet high and 10 feet thick. The material component is a bit of fleece from a black sheep and the eyelash of a revenant.

## Third-Level Spells

### Bands of Sirellyn

**(Conjuration/Summoning)**

Range: 40 yards
Duration: 1 turn + 1 rd./level
Area of Effect: 1 creature
Subtlety: +3
Sensory: Medium visual

Components: V, S, M
Casting Time: 3
Saving Throw: Neg.
Knockdown: None
Critical: None

Once employed by the mysterious ancient wizard known as the Arcanamach, the mage Sirellyn rediscovered this forgotten dweomer many centuries after its last use. The spell causes a number of shining metal bands to materialize out of the air, encircling and capturing a target of the caster's choice. The victim is allowed a saving throw vs. spell to elude capture, with a –1 penalty per three caster levels (for example, –1 for a 4th to 6th level caster, –2 for a 7th to 9th level caster, –3 for a 10th to 12th level caster, and so on), since higher-level casters tend to conjure more bands in a denser pattern. Any creature of less than size G (gargantuan) can be snared, but gargantuan monsters are simply too big

to be restrained by the bands.

If the victim fails his saving throw vs. spell, he is caught and held immobile by the bands. He may not move his arms and legs, but he is still capable of speech and can employ psionic powers or use worn magical items, such as rings. Subjects with a Strength rating may attempt to burst the bands and free themselves with a bend bars/lift gates roll. If the subject does not have a strength rating, it may make a saving throw vs. petrification with a –4 penalty.

The spell requires three miniature bands of silver that are interlocked so that all three are connected.

## Lance of Disruption

**(Invocation/Evocation, Elemental Air, Force)**

| | |
|---|---|
| Range: 0 | Components: V, S |
| Duration: Instantaneous | Casting Time: 3 |
| Area of Effect: 5 ft. x 60 ft. | Saving Throw: 1/2 |
| Subtlety: +2 | Knockdown: d10 |
| Sensory: Huge audio vibration | Critical: Medium (1 hit) |

This spell creates a beam of concussive, disrupting force that lashes out from the wizard's hand in a path 5 feet wide and 60 feet long. Any creatures caught in the beam's path suffer 5d4 points of damage, plus 2 points of damage per caster level (maximum damage is 5d4+30); for example, a 6th-level wizard would inflict 5d4+12 damage with the *lance of disruption*. Victims are allowed a saving throw vs. spell for half damage. The lance's energy delivers a powerful blow against inanimate objects and can easily blast light furniture, thin wooden walls, or fragile stonework to flinders. Barred wooden doors can be blasted of their hinges and even sturdy iron-bound doors or heavy stonework can be seriously damaged by the *lance of disruption*.

Creatures with amorphous or nonsolid bodies, such as fire or air elementals and some oozes and slimes, are resistant to the lance's effects and only sustain half damage, or one-quarter damage with a successful save.

## Lesser Sign of Sealing

**(Abjuration, Geometry)**

| | |
|---|---|
| Range: 0 | Components: S, M |
| Duration: Special | Casting Time: 1 turn |
| Area of Effect: One portal | Saving Throw: 1/2 |
| Subtlety: +2 | Knockdown: d8 |
| Sensory: Medium visual | Critical: Medium, type varies |

By using this spell, the caster creates a magical ward that has two major effects; first of all, it affects a doorway or item that opens (a chest, for instance) as if it were a *hold portal* spell, keeping it securely locked and closed. Secondly, if the protected doorway is forced open by any means, magical or physical, the sign is not only destroyed, but also strikes the offending creature for 1d8 points of damage +1 point of damage per

level of the caster. The duration of this spell is either one day per level of the caster or until discharged, whichever happens first. The exact form of energy is chosen by the caster when he creates the lesser sign; acid, cold, fire, electricity, or sonic disruption are popular choices.

The sign is not hidden or concealed in any way and is usually quite prominent on the item or portal it protects. The caster cannot specify particular creatures or conditions for the lesser sign's operation; it functions against any creature that attempts to pass it (except for extraplanar creatures of 6 HD or more and wizards of higher level than the caster—they can merely ignore it as if it were not there). The sign cannot be dispelled by spells of lower spell levels such as knock, but the caster can remove it any time he chooses, thus ending the spell, or it can be defeated by an erase spell cast by a wizard of equal or higher level than the original caster.

The material component for a *lesser sign* can be a pinch of either powdered diamond (cold), ruby (fire), emerald (acid), pearl (sonic disruption, or sapphire (electricity), depending on the type of energy the wizard wishes the sign to employ. The value of the gemstone must be at least 100 gold pieces.

## Protection from Amorphs

**(Abjuration)**

Range: 0
Duration: 2 rds./level
Area of Effect: The caster
Subtlety: +3
Sensory: Medium tactile
Components: V, S, M
Casting Time: 3
Saving Throw: None
Knockdown: None
Critical: None

This abjuration resembles the spells *protection from vermin* or *protection from evil*, but in this case the caster is protected from the attacks of any of the various amorphous monsters, including slimes, jellies, oozes, puddings, cubes, and slithering trackers. In order to qualify as an amorphous creature, the monster must have an amorphous or fluid body, attack through acids or secretions of some kind, and be native to the Prime Material Plane (as opposed to extraplanar elementals and such creatures). The monster cannot stand the touch of the barrier surrounding the protected character, and its natural attacks automatically fail. If the monster has an innate ranged attack of any kind, these also fail.

If the protected character makes an attack against the monster, or if he forces the barrier against the monster, the spell ends and he is no longer protected. The material component is a mixture of rare salts sprinkled in a small circle around the character to be protected.

## Solvent of Corrosion

**(Conjuration/Summoning, Alchemy)**

Range: 10 yards
Duration: 3 rounds
Area of Effect: 1 sq. ft./level
Components: V, S, M
Casting Time: 3
Saving Throw: 1/2

Subtlety: +4
Sensory: Medium visual
large olfactory
Knockdown: None
Critical: Medium (1 hit) acid

This spell conjures a corrosive, acidic slime of horrid strength on one surface or creature within the spell's range. Up to one square foot of surface area per caster level can be affected, so a 5th-level caster can affect 5 square feet—enough to create a 2-foot by 3-foot hole in a door or wall, or thoroughly drench a man-sized creature. The acid eats through 6 inches of wood, leather, or bone, 4 inches of stone, or 1 inch of metal each round. Against monsters composed of stone, metal, or wood, the solvent inflicts 1d3 points of damage per caster level per square foot affected in the first round, 1d2 per caster level in the second round, and 1 per two caster levels in the third and final round. Therefore, a 10th-level wizard who strikes a treant with *solvent of corrosion* inflicts 10d3, then 10d2, and finally 5 points of damage. Each round, the victim is allowed a saving throw vs. spell for half damage.

Against flesh, the solvent is much less effective; it is caustic and burns painfully, inflicting 1 point of damage per caster level in the first round, but no further damage in the second or third round. However, the burning in the following rounds does inflict a –2 penalty to the victim's attacks while the solvent is active. The solvent is extremely likely to cause extensive damage to the victim's armor and equipment; item saving throws vs. acid may apply at the DM's discretion. If the armor or equipment is magical in nature, then the saving throw is made with the usual bonuses allowed to the magical item.

The great alchemist Vandarien developed his solvent to dissolve iron grates, stone and woodwork traps, and other such hazards. The solvent's effectiveness against mineral or wood-based creatures was a mere side effect of his research. The material component of this spell is a mixture of vinegar, water, and a drop of black dragon acid.

## Wall of Water

**(Invocation/Evocation, Elemental Water)**

Range: 30 yards
Duration: Special
Area of Effect: Special
Subtlety: +3
Sensory: Large visual
Components: V, S, M
Casting Time: 3
Saving Throw: None
Knockdown: None
Critical: None

This spell calls into being a curtain or field of water that remains intact and upright in defiance of gravity. The wall lasts as long as the wizard chooses to concentrate on maintaining it or one round per level if the wizard chooses not to concentrate on holding it together. The caster may shape the *wall of water* in one of three ways:

**A. Water Curtain.** In this form, the wizard conjures one plane of water, 5 feet square and 1 foot thick, per experience level; for example, a 5th-level caster can create five 5-foot x 5-foot x 1-foot wall sections that would be enough to block an arched passageway 15 feet wide and 10 feet high with a curtain of water 1 foot thick. The curtain's lower edge must rest upon the ground, but it need not be anchored on either

side, and it remains cohesive and upright for the duration of the spell. Once raised, the wall cannot be moved.

**B. Hemisphere.** In this manifestation, the *wall of water* forms a dome 1 foot thick over the caster, with an inner radius equal to 3 feet plus 1 foot per caster level; a 7th-level caster could create a dome with a 10-foot radius. The wall must rest upon the ground. The dome is immobile.

**C. Sphere.** If cast underwater, the caster may shape the *wall of water* into a sphere 1 foot thick, with an inner radius equal to 3 feet plus 1 foot per caster level (no air is in the sphere). The sphere is centered on the caster and moves with him.

In any form, the wall of water has two primary effects. First of all, missile fire through the wall is next to impossible, suffering a –4 attack penalty for each foot of thickness as well as a –1 damage penalty for every two feet of thickness. Creatures gain a +1 bonus to saving throws against attack spells that must pass through the wall. If the spell allows no saving throw, none is granted by the *wall of water*. Secondly, physical passage through the wall is hindered; any creature trying to pass through must take one full round to do so and becomes soaked to the skin in the process.

The *wall of water* can be defeated or bypassed by a number of spells or effects. At the end of the spell's duration, the water loses its cohesiveness and collapses, which may surprise those sheltering under the hemisphere or standing next to the curtain. Note that the water itself may be fresh water (25% chance), salt water (50% chance), or brackish (25% chance), although the sphere will always be composed of the water type that surrounds it. The material component is a vial full of blessed spring water.

## Fourth-Level Spells

### Conjure Elemental-Kin

**(Conjuration/Summoning, all Elemental, Geometry)**

| | |
|---|---|
| Range: 60 yards | Components: V, S, M |
| Duration: 1 turn/level | Casting Time: 1 turn |
| Area of Effect: Special | Saving Throw: None |
| Subtlety: +6 | Knockdown: None |
| Sensory: Medium tactile | Critical: None |

Like the *conjure elemental* spell, this summoning can be used to summon a creature from one of the four elemental planes—a sylph from the plane of Air, a pech or sandling from the plane of Earth, a fire snake from the plane of Fire, or a nereid or water weird from the plane of Water. The wizard must decide which elemental-kin he will conjure when he memorizes the spell since the components and procedures are different for each. An elemental specialist can conjure only from his own element.

Elemental-kin can only be conjured if there is a good amount of their native element at hand; a good-sized fire or a body of water is required for those elemental-kin. In addition to this and either an aquamarine, amber, ruby or emerald gem worth 1,500 gold pieces, the wizard must also provide the spell's material component, which varies by element:

**Air Elemental-kin:** Burning incense
**Earth Elemental-kin:** Soft clay
**Fire Elemental-kin:** Sulphur and phosphorus
**Water Elemental-kin:** Water and sand

The elemental-kin is bound to obey the wizard's commands and will not turn against him, but it is generally annoyed by its summoning and cooperates only as instructed. Given the chance, the creature will disappear and return to its home in the elemental planes; in order to prevent this, the wizard must concentrate on keeping the creature from leaving. (If the wizard is wounded or grappled, or casts another spell, his concentration is broken.) The elemental-kin can be controlled or maintained at a distance of 30 yards per caster level.

The various elemental-kin creatures are described in detail in the Monstrous Manual tome, under the heading **Elemental**. At the DM's option, other elemental creatures of 4 Hit Dice or less may be summoned with this spell.

## Improved Strength
**(Alteration)**

Range: Touch
Duration: 1 rd./level
Area of Effect: Creature touched
Subtlety: +4
Sensory: None
Components: V, S, M
Casting Time: 4
Saving Throw: None
Knockdown: None
Critical: None

By casting this spell, the wizard can empower a creature with superhuman strength. Unlike the 2nd-level strength spell, improved strength allows the recipient of the spell to ignore race or class restrictions on his maximum Strength score, possibly reaching scores as high as 25. The exact amount of strength gained varies by the recipient's class group:

| **Class** | **Strength Gain*** |
|---|---|
| Warrior | 1d8+4 (max 25) |
| Priest | 1d6+4 (max 23) |
| Rogue | 1d6+4 (max 23) |
| Wizard | 1d4+4 (max 21) |

* Count each percentile bracket of exceptional strength as one point; the strength gain proceeds as 18, 18/01, 18/51, 18/76, 18/91, 18/00, 19, and so on.

Even if the recipient is not a warrior, he gains all the benefits of an exceptional Strength category; for example, if a thief with a Strength of 14 gained 7 points, he would possess a Strength of 18/76 for the duration of the spell. In addition to the attack and damage bonus, increased chance to open doors or bend bars, and increased carrying capacity, the spell recipient may temporarily gain the ability to throw boulders as a giant of equivalent Strength, as shown below:

| Strength Score | Equivalent Giant Type | Rock Hurling Range | Damage |
|---|---|---|---|
| 19 | Hill giant | 80 yards | 1d6 |
| 20 | Stone giant | 100 yards | 1d8 |
| 21 | Frost giant | 100 yards | 1d8 |
| 22 | Fire giant | 120 yards | 1d8 |
| 23 | Cloud giant | 140 yards | 1d10 |
| 24 | Storm giant | 160 yards | 1d12 |
| 25 | Titan | 200 yards | 1d20 |

When the spell ends, the recipient is struck by intense exhaustion; he can do nothing except rest for 1d3 full turns to recover his strength. The material component is a strand of hair from a giant.

## Lesser Geas

**(Enchantment/Charm, Song)**

Range: 10 yards
Duration: Special
Area of Effect: 1 creature
Subtlety: +1
Sensory: Medium audio
Components: V
Casting Time: 2
Saving Throw: Neg.
Knockdown: None
Critical: None

By means of this spell, the wizard places a magical command upon a creature of 7 Hit Dice or less to carry out some service, undertake a task, or refrain from some action or course of activity. The caster specifies the conditions of the *lesser geas* when he casts the spell; the victim must be intelligent, conscious, able to understand the caster, and not under the influence of any spells or effects that affect or control its mind. The *lesser geas* cannot compel a creature to kill itself or perform acts that will result in certain death, although the wizard can use the spell to coerce the subject into almost any other nondestructive course of action. The victim is entitled to a saving throw vs. spell to avoid the *lesser geas*, but suffers a –2 penalty on its save if the wizard is of higher level or Hit Dice, or a –4 penalty if the wizard is more than twice the victim's level or Hit Dice.

The wizard must be careful in the wording of his *lesser geas* since the casting and fulfillment are tricky. The subject should be given a tangible, achievable goal, with clear courses of action available to him. "Climb that mountain!" or "Tear that mountain down rock by rock!" are legitimate geases, but a geas such as "Become a mountain!" is just not specific enough to work.

Similar to the 6th-level spell *geas*, the *lesser geas* compels the subject to obey the wizard's command. If the *geased* creature fails to follow the wizard's instructions, it will grow sick—each week that passes, the creature loses one point from each ability score, 1 hit point per Hit Die, and suffers a cumulative –1 penalty to attack rolls and saving throws. These penalties cannot reduce an ability score to less than 3, reduce a creature to less than 1 hit point per Hit Die, or reduce its attacks and saves by more than 4 points. The *lesser geas* can be countermanded by a *remove curse* spell, or a *limited wish* or *wish*. However, if the subject entertains thoughts of removing the *lesser geas*, it will protect

itself by giving the subject a warning headache. If the subject persists, then the sickness will begin,

## Mordenkainen's Force Missiles

**(Invocation/Evocation, Force)**

| | |
|---|---|
| Range: 30 yds. + 10 yds./level | Components: V, S |
| Duration: Instantaneous | Casting Time: 4 |
| Area of Effect: 1–7 targets | Saving Throw: Special |
| Subtlety: +3 | Knockdown: d10 |
| Sensory: Medium visual, large audio | Critical: Medium (1 hit) impact |

This spell creates a brilliant globe of magical energy that streaks forth from the caster's hand to unerringly strike its target, much like a *magic missile* spell. The subject must be seen or otherwise detected in order to be targeted by this spell. The wizard creates one missile at 7th level and an additional missile at every third level after 7th—in other words, two missiles at 10th level, three at 13th, four at 16th, and so on, to a maximum of seven missiles at 25th level. Each missile inflicts 2d4 points of damage to the target and then bursts in a 3-foot radius concussive blast that inflicts 1 point of damage per level of the caster—for example, a 12th-level wizard could conjure two *force missiles*, each of which strikes for 2d4+12 points of damage. The victim may attempt a saving throw vs. spell to negate the concussion damage, but the impact of the missile itself allows no saving throw.

Just like *magic missile*, the force spheres may be directed at as many or as few targets as the caster likes. The missiles can easily damage or destroy inanimate objects, especially fragile or delicate items.

## Psychic Protection

**(Abjuration, Mentalism)**

| | |
|---|---|
| Range: 0 | Components: V, S, M |
| Duration: 3 rds./level | Casting Time: 4 |
| Area of Effect: The caster | Saving Throw: None |
| Subtlety: +4 | Knockdown: None |
| Sensory: None | Critical: None |

This spell provides the caster with a +6 bonus to saving throws (or allows a saving throw in the case that one is not normally allowed) against spells or effects that control or destroy his mind, including *command, domination, feeblemind, hold magic jar, insanity, possession*, and the psionic powers of domination, mass domination, and switch personality. Any attempt to subvert or destroy the wizard's mind automatically fails, but the wizard is still vulnerable to spells or effects that influence his actions without taking control of his psyche. In other words, attacks that simply encourage the victim to act in a certain way or influence his perceptions do not trigger the magical warding of the spell. A partial list of spells, powers, and effects that are not defended against includes *charm,*

*suggestion, emotion, confusion, hypnotism, fear, antipathy, beguiling, Otto's irresistible dance*, a mind flayer's mental blast, and most psionic attacks.

The material component for this spell is a tiny figurine of the wizard, cast in iron.

## Ultravision

**(Alteration)**

| | |
|---|---|
| Range: Touch | Components: V, S, M |
| Duration: 2 hrs. + 1 hr./level | Casting Time: 1 round |
| Area of Effect: Creature touched | Saving Throw: None |
| Subtlety: +6 | Knockdown: None |
| Sensory: None | Critical: None |

An improved version of the *infravision* spell, *ultravision* allows the spell recipient to see perfectly in normal darkness, starlight, or moonlight to the full range of his unobscured daylight vision. (See Chapter 13 of the *Player's Handbook*; in most outdoor settings, this means that the character can spot movement at 1,500 yards.) In underground settings, the spell enables the recipient to see up to 90 feet in nonmagical darkness. Magical darkness, fog, or smoke is less effective than normal against a character using *ultravision*; the spell permits the recipient to see at least 30 feet in magical darkness, and at least 10 feet in any kind of vaporous, foggy, or smoky atmosphere. *Ultravision* does not permit the recipient to spot invisible creatures, and it does not function in the presence of strong light sources (lanterns, torches, and so on).

The material component for this spell is a black agate worth at least 50 gold pieces.

## Vitriolic Sphere

**(Conjuration/Summoning, Elemental Water, Alchemy)**

| | |
|---|---|
| Range: 150 yards | Components: V, S, M |
| Duration: Special | Casting Time: 4 |
| Area of Effect: 5-ft. radius | Saving Throw: 1/2 |
| Subtlety: +4 | Knockdown: d8 |
| Sensory: Medium visual, large olfactory | Critical: Large (1d3 hits) acid |

This spell conjures a one-foot sphere of glowing emerald acid that the caster can direct to strike any target within range. When it reaches its target, the sphere explodes and drenches the victim in potent acid. The victim suffers 1d4 points of damage per caster level (to a maximum damage of 12d4) and may attempt a saving throw vs. spell for half damage. If the victim fails his saving throw, he continues to suffer acid damage in the following rounds, sustaining two less dice of damage each round. For example, an 8th-level wizard inflicts 8d4 damage with this spell on the first round, 6d4 on the second round, 4d4 on the third round, 2d4 on the fourth round, and the spell ends in the fifth round. Each round, the subject is entitled to a saving throw—the spell ends when he succeeds, or when the acid damage runs its course. The acid can also be neutralized with

soda, ash, lye, charcoal, or removed with a large quantity of water.

The *vitriolic sphere* also splashes acid in a 5-foot radius around the primary target. Any creatures within the splash radius must save vs. paralyzation or suffer a splash hit that inflicts 1d4 points of damage per every five caster levels. Splash hits do not cause continuing damage. The material component for this spell is a drop of giant slug bile.

## Fifth-Level Spells

### Improved Blink

**(Alteration, Dimension)**

| | |
|---|---|
| Range: 0 | Components: V, S |
| Duration: 1 rd./level | Casting Time: 1 |
| Area of Effect: The caster | Saving Throw: None |
| Subtlety: +2 | Knockdown: None |
| Sensory: Medium visual | Critical: None |

Naturally, this spell is an improvement of the 3rd-level alteration spell *blink*, allowing the wizard to shift his body to any point within 15 feet of his current location. Unlike the lower-level spell, *improved blink* allows the wizard to choose the exact time of his jump, the exact destination, and the orientation or facing of his choosing. For example, a wizard confronted by an enemy fighter could blink just before the fighter attacked, reappearing directly behind his foe for a back attack. If the wizard blinks away from an attack, his enemy automatically misses—but creatures with multiple attacks may be able to reposition themselves for another swing if the wizard blinks to a location within reach.

If the wizard intends to take any action such as attacking, casting a spell, or using a magical item, he must decide before the round begins if he will do so before or after he blinks. If he acts before he blinks, he may be endangered by an attack before he finishes; he can choose to proceed with his action, hoping that he won't be hit, or he can abort his action by taking his blink for the round. On the other hand, if the wizard begins his action after his blink, the initiative modifier of his attack or spell is added to the time of his blink to determine when he attacks.

*A* blinking *wizard dueling a fighter decides to blink first, when the fighter attacks and then* lightning bolt *the offensive fellow. The fighter rolls a modified 6 for initiative, so the wizard waits until 6, then* blinks, *making the fighter miss. At that time, he starts his* lightning bolt, *which has a casting time of 3—the spell will go off on 9.*

*In the* Player's Option: Combat & Tactics *initiative system, the wizard must count 1, 2, or 3 phases from the time of his blink for fast, average, or slow actions. If the fighter above attacked in the average phase, the wizard would blink during the fighter's attack, and then his* lightning bolt *(a fast spell) would go off 1 phase later, with any other slow actions.*

Because the wizard can pick the location he is blinking to, he may not choose to blink into a movable object in order to force it aside—he must blink to an area clear of

obstructions or obstacles. If he does attempt to blink into a movable object, he will find himself displaced to a random location (use the blink 1d8 rules in the *PHB* for determining where he
ends up).

## Leomund's Hidden Lodge

**(Alteration, Enchantment/Charm)**

| | |
|---|---|
| Range: 20 yards | Components: V, S, M |
| Duration: 1d4 hrs. + 1 hr./level | Casting Time: 2 turns |
| Area of Effect: 30 sq. ft./level | Saving Throw: None |
| Subtlety: +7 to +10 | Knockdown: None |
| Sensory: None | Critical: None |

Similar in most regards to the 4th-level spell *Leomund's secure shelter*, this spell offers one significant improvement: The shelter is perfectly camouflaged to blend in with whatever terrain or surroundings are appropriate. It may appear as a house-sized boulder in rocky or mountainous areas, a sand dune, a deadfall, a small grassy knoll, or even a mighty tree. The spell also conceals all telltale signs of habitation, including any smoke, light, or sound coming from within the lodge. Creatures or characters who are exceptionally well-tuned to their surroundings (elves, druids, rangers, and various sylvan monsters) may attempt a saving throw vs. spell to spot the hidden lodge if they pass within 30 feet; all other creatures cannot find the wizard's refuge without the aid of *true seeing* or similar magic.

In all other respects, the *hidden lodge* resembles Leomund's secure shelter. The interior is level, clean, and dry, and the whole thing is sturdily constructed from timber, stone, or sod. It is secure against winds of up to 100 miles per hour, impervious to normal missiles, and the doors, windows, and chimney have the option to be *wizard locked* and guarded by an *alarm* spell. Simple furnishings include up to ten bunks, a small writing desk, a trestle table and benches, and an optional *unseen servant* to wait on the wizard. (If any of the optional secondary spells are added on to this spell, then the casting time goes up to one hour and adds a +3 modifier to the subtlety rating.)

The material components are a square chip of stone, crushed lime, a few grains of sand, a sprinkle of water, and a splinter of wood, plus a crushed diamond worth at least 100 gold pieces. If the secondary spells are to be included, their material components are required also.

## Proofing versus Combustion

**(Abjuration, Elemental Fire)**

| | |
|---|---|
| Range: Touch | Components: V, S, M |
| Duration: Permanent | Casting Time: 1 turn |
| Area of Effect: Special | Saving Throw: None |
| Subtlety: +6 | Knockdown: None |
| Sensory: None | Critical: None |

The renowned fire wizard Daltim developed this spell some years ago to protect important items or structures against the various incendiary spells with which he was familiar. *Proofing* renders an inanimate object nearly impervious to fire, granting the affected item a +3 bonus to saving throws vs. magical fire (including a dragon's breath), and a +6 bonus to saving throws vs. normal fire. This is cumulative with the saving throw bonus of a magical item, so a *cloak of protection +4* could have a bonus of +7 to +10 on any item saving throws versus combustion effects. Remember that an item fails its saving throw on a natural roll of 1, regardless of any bonuses.

The item affected must be one discrete construction or object, although it can be articulated or composed of several parts (for example, a suit of armor, a catapult, a house, or a carriage). At 9th level, the wizard can proof an article of clothing or a small piece of furniture; at 12th level, a small vehicle or large piece of furniture; at 15th level, a small building or large vehicle; at 18th level, a medium building or a very large vehicle; and at 20th level or higher, a large building or small fortification. A character dressed in a completely proofed article of clothing (a large cloak) gains a +2 bonus to saving throws vs. fire.

The material component for *proofing versus combustion* is a fire-brick made with the ashes left from a phoenix's fire. Seafaring wizards often use this spell to protect their vessels from hostile *fireballs* and various fire-throwing devices.

## Rusting Grasp

**(Alteration, Elemental Water, Alchemy)**

| | |
|---|---|
| Range: 0 | Components: V, S, M |
| Duration: 1 rd./level | Casting Time: 5 |
| Area of Effect: The caster | Saving Throw: Special |
| Subtlety: +4 | Knockdown: None |
| Sensory: Medium visual/olfactory | Critical: None |

By casting this spell, the wizard gains the power to corrode ferrous metals and alloys at a touch. Iron and iron-based alloys such as steel, meteoric iron, mithral, and adamantite are affected, but noble metals such as gold, silver, and copper are not subject to reduction through rusting. Any ferrous metal touched by the wizard must make an item saving throw vs. disintegration (usually a 17 or better on a d20) or be destroyed. Magical arms or armor may apply their bonus to this save, so a sword +3 would gain a +3 to its roll. Other magical metal items may receive a +1 to a +6 bonus based on the DM's estimate of their power.

The wizard may employ *rusting grasp* in combat by simply touching the equipment of metal-wearing characters or creatures. If he tries to touch the armor of a character, the wizard need only hit the opponents unarmored AC. If the armor fails its save, *rusting grasp* permanently destroys 2d4 points of AC through corrosion. For example, *plate mail +3* (base AC 0) could be reduced to a base AC of 2 to 8 if it fails its item saving throw.

Weapons are more difficult to grasp; the wizard must make an attack roll against AC 4 (modified by the opponent's Dexterity) in order to touch the weapon. If the weapon fails its saving throw, it is destroyed. Important note: The wizard must touch the weapon

and not the other way around! Unlike a rust monster, he doesn't corrode weapons simply by being hit.

Against metallic creatures, *rusting grasp* functions like the priest spell *cause serious wounds* in that it inflicts 2d8+1 point of damage per successful attack. The spell lasts for one round per level, and the wizard can make one touch attack per round. The material component is an antenna from a rust monster.

## Tenser's Destructive Resonance

**(Invocation/Evocation, Force)**

| | |
|---|---|
| Range: 60 yds. + 10 yds./level | Components: V, S, M |
| Duration: Instantaneous | Casting Time: 5 |
| Area of Effect: 1 object | Saving Throw: Special |
| Subtlety: +4 | Knockdown: d12 |
| Sensory: Huge audio, large tactile | Critical: Huge (1–4 hits) crushing |

When this spell is cast, a thin beam of destructive blue force springs forth from the caster's fingertip and strikes any one object within range. The beam imparts an immense amount of energy to the object struck, causing it to spontaneously explode. Large, massive objects have more potential destructive energy than small, lightweight objects, but the wizard must hold the beam on the larger object for a longer time in order to cause detonation.

The beam has two principal effects: First of all, the object struck is *disintegrated* if it fails its item saving throw. Secondly, any creature near the destroyed item suffers damage proportional to the weight of the item detonated, plus blast damage of 1d6 points per two caster levels. Creatures caught within the blast radius may attempt a saving throw vs. paralyzation for half damage (1 point per caster level), but the base damage of the explosion may not be saved against.

| **Weight (lb.)** | **Resonance Time** | **Base Damage** | **Explosive Radius** |
|---|---|---|---|
| 1–5 | Instant | 1d8 | 2 ft. |
| 6–25 | Instant | 1d12 | 3 ft. |
| 26–100 | One rd. | 1d20 | 5 ft. |
| 101–500 | Two rds. | 2d12 | 10 ft. |
| 501–2,000 | Three rds. | 3d12 | 15 ft. |

Objects more massive than 2,000 pounds are simply too big to detonate. Living flesh and enchanted objects or items are immune to the destructive resonance, but a wizard could choose to use *Tenser's destructive resonance* on an object worn or carried by another creature. However, if he does so, the victim is entitled to a saving throw vs. spell to negate the beam entirely and prevent any damage at all, and then gains a save for half damage against the blast effect even if the beam succeeds in detonating his equipment.

The material component for this spell is a tiny orb of finely-crafted gold with a

small removable ring surrounding it that must be taken off as the spell is cast.

## Prying Eyes
**(Divination)**

| | |
|---|---|
| Range: 1 mile | Components: V, S, M |
| Duration: 1 hr./level | Casting Time: 1 turn |
| Area of Effect: Creates 1d4+1 eyes/level | Saving Throw: None |
| Subtlety: +6 | Knockdown: None |
| Sensory: Tiny visual | Critical: None |

This spell conjures a small horde of semitangible magical orbs or eyes that can be used to reconnoiter an area at the wizard's command. Each of the eyes is about the size of a small apple and can see 120 feet (normal vision only) in all directions. In order to report their findings, the eyes must return to the caster's hand to replay in the caster's mind everything they have seen during their existence. The eyes are subject to illusions, darkness, fog, and any other factors that would affect the wizard's ability to receive visual information about his surroundings. The eyes only see as a normal human would—abilities and spell effects including infravision do not alter the eyes' vision. It only takes the eye one round to replay one hour of recorded images.

The spell conjures 1d4 eyes, plus 1 eye per caster level. The eyes exist for up to 1 hour per caster level, or until they return to the wizard; after relaying its findings, an eye disappears. Each eye is AC 4, flies by levitation at a rate of 12, and has only 1 hit point—a single hit from any weapon or damaging spell destroys it. A successful *dispel magic* destroys all eyes caught in the area of effect. While the individual eyes are quite fragile, they're small and difficult to spot, especially in conditions of poor visibility such as darkness, fog, or rain. Of course, if the eye is being sent into darkness, then it's very possible that it could hit a wall or other similar obstacle and destroy itself.

When the wizard creates the eyes, he can specify any set of instructions or orders that he wishes, up to 25 words. Any knowledge the wizard possesses is assumed to be known by the eyes as well, so if the wizard knows what a typical Jakallian merchant looks like, the eyes do as well. Sample commands might be, "Surround me at a range of 400 yards and return if you spot any dangerous creatures," or "Spread out and search the town for Arweth; follow him for three turns, staying out of sight, and then return." Note that in the first command, the eye only returns if it spots a creature that the wizard would regard as dangerous; a seemingly innocuous peasant that is actually a *shapechanged* dragon wouldn't trigger the eye's return. In any event, if an eye is ever more than one mile distant from the wizard, it instantly ceases to exist. However, the wizard's link with the eye is such that he won't know if the eye was destroyed or if it just wandered out of range.

Some command words can be used to abbreviate the directions. For example, "surround me" directs the eyes to form an equally-spaced ring at whatever range is indicated, and then move with the wizard. As eyes return or are destroyed, the rest automatically space themselves to compensate. "Spread out" directs the eyes to move away from the wizard in all directions. Other commands that might be useful include

having them form a line in a certain manner, making them move at random within a certain range, or have them follow a certain type of creature. The DM is the final judge of the suitability of the wizard's directions.

The material component is a handful of crystal marbles.

### Vile Venom

**(Conjuration/Summoning, Elemental Water, Alchemy)**

| | |
|---|---|
| Range: 30 yards | Components: V, S, M |
| Duration: 1 hr./level | Casting Time: 5 |
| Area of Effect: Special | Saving Throw: Special |
| Subtlety: +4 | Knockdown: None |
| Sensory: Small visual | Critical: None |

By casting this inherently evil spell, the wizard conjures a small amount of deadly poison directly onto any weapon blades or other surface within the area of effect. The spell creates one dose per caster level; a single dose is sufficient to coat one size S weapon such as a dagger or an arrowhead, three doses can coat a size M weapon, and five doses can coat a size L weapon. The venom remains potent for up to one hour per caster level, although an envenomed blade remains so for only 1d3 successful attacks before the poison has been worn off. The potency of the venom varies by the caster level, as shown below.

| Level | Onset Time | Strength |
|---|---|---|
| 9th | 2–12 rounds | 20/1d3 |
| 12th | 2–5 rounds | 25/2d4 |
| 15th | 1–2 rounds | 30/2d6 |
| 18th+ | Immediate | death/20 |

If a weapon coated with *Vandarien's vile venom* successfully hits a creature, the victim must make a saving throw vs. poison or suffer the first damage figure—if the caster was a 12th-level wizard, this would be 25 points. (Naturally, this is damage above and beyond any caused by the weapon that injects the poison.) Even if he succeeds in the save, the victim still sustains a lesser amount of damage, as shown in the second figure.

Instead of creating an insinuative poison (one that is introduced to the body through a cut), the wizard can instead conjure the venom as a contact poison. A surface of about one-half square foot per caster level can be affected. One square foot is enough to coat a doorknob, a sword-hilt, the handle or clasp of a chest, or an object of similar size. The contact poison has the same effects as the insinuative venom, but the victim gains a +2 bonus on his saving throws. The contact poison's toxicity fades at the end of the spell's duration.

The material component is a small vial of venom from a giant snake.

## Sixth-Level Spells

### Arrow of Bone

**(Necromancy, Artifice)**

| | |
|---|---|
| Range: 0 | Components: V, S, M |
| Duration: Special | Casting Time: 6 |
| Area of Effect: 1 missile | Saving Throw: Special |
| Subtlety: +4 | Knockdown: Varies |
| Sensory: Small visual/tactile | Critical: Medium (1 hit) impact |

By drawing runes of dire power upon a simple arrow, bolt, dart, or javelin, the caster changes the weapon into a sinister missile of cold, enchanted bone. The wizard may then throw or fire the weapon in the normal fashion, or he can choose to give it to a companion to use. If the wizard employs the arrow of bone himself, he strikes with the THAC0 of a warrior of half his own level and a +3 bonus to his attack roll; if he gives it to someone else, the *bone arrow* merely confers a +1 bonus to hit. A creature struck by the weapon must make a saving throw vs. death magic or die; even if successful, the victim sustains normal damage for the missile, plus an additional number of points equal to the weapon's maximum damage (for example, 1d6+6 for an arrow or javelin, or 1d3+3 for a dart). Unlike the *death spell* or *finger of death*, the victim can be raised or resurrected in any expedient manner.

The *arrow of bone* does not destroy undead or nonliving creatures outright. Instead, the arrow inflicts normal damage plus four times the missile's normal maximum (1d6+24 for an arrow, 1d3+12 for a dart, and so on), or half that if the subject creature succeeds in its saving throw.

The material component is a powdered sliver of bone mixed with black dragon blood. The resulting mixture is used to paint runes on the weapon. If the splinter of bone can be taken from the remains of a close blood relative of the subject (a sibling, parent, or grandparent), the victim receives a –4 penalty on his or her saving throw if struck by the *arrow of bone*.

## Dimensional Blade

**(Invocation/Evocation, Dimension, Artifice)**

| | |
|---|---|
| Range: 0 | Components: V, S |
| Duration: 1 rd./level | Casting Time: 3 |
| Area of Effect: 1 object | Saving Throw: None |
| Subtlety: +2 | Knockdown: None |
| Sensory: Small visual | Critical: Moderate (1 hit) slashing |

This spell makes a single weapon incredibly sharp by reducing one of its physical dimensions to an infinitesimal measurement. The *dimensional blade* can slash through matter with as much effort as it takes to wave a stick through the air. Even stone and iron can be carved to pieces with ease. The spell can be cast on almost any hand-held slashing (type S) weapon, as well as a few thrown weapons of this type, such as the chakram, shuriken, or a hand axe.

Against creatures, the *dimensional blade* ignores any portion of Armor Class

derived from armor itself; only magical and Dexterity adjustments affect the opponent's AC. For example, a warrior in *chain mail +2* with a Dexterity of 17 is normally AC 0, but against the dimensional blade he only applies the 3-point adjustment for Dexterity and the 2-point magical adjustment, for a total AC of 5. Creatures wearing purely magical armor (such as *bracers of defense*) may keep the full magical adjustment. Monsters with thick or toughened hides, such as dragons, may lose part of the Armor Class at the DM's discretion. The weapon gains a +2 bonus to attack and damage rolls in any event, but the wielder ignores any Strength-based combat adjustments—muscle power doesn't help the blade at all.

The *dimensional blade* is also quite effective against inanimate objects. Any object with a diameter or thickness smaller than the blade's length must make a saving throw vs. disintegration when struck, or be cleanly severed in twain. Larger objects can be sawed through or sliced away at the rate of about 5 cubic feet per round. It's dangerous to attempt to disarm a *dimensional blade*; the weapon used must make an item saving throw vs. disintegration or be destroyed.

Finally, the blade is also effective against phased or ethereal creatures since part of its existence is forced into the Ethereal Plane. If the wielder has some way to detect creatures concealed in this way, the blade can strike and affect them normally, but without the power to negate Armor Class or other combat bonuses.

The wizard must touch the weapon to be affected by the spell, but afterward anyone may wield it. The material component for this spell is a razor-thin shard of glass.

## Etherealness

**(Dimension)**

| | |
|---|---|
| Range: Touch | Components: V, S |
| Duration: 1 hr./level | Casting Time: 1 |
| Area of Effect: Creature(s) touched | Saving Throw: Neg. |
| Subtlety: +2 | Knockdown: None |
| Sensory: None | Critical: None |

By means of this spell, the wizard and up to six other creatures joined by linked hands become *ethereal* (along with their equipment). While ethereal, the group need not stay together. The group's presence can be detected only by *detect phase, true seeing,* or similar spells and effects. No physical, or magical attack can affect him, unless his assailant is ethereal as well (although some monsters, such as the basilisk, have gaze weapons whose power extends into the Ethereal Plane). The spell recipients are actually in the Border Ethereal and can still perceive their physical surroundings, but the world appears gray, misty, and indistinct to them. Note that as ethereal creatures can perceive the physical world here, a character could scout out his surroundings or make good an escape from the safety of the Border Ethereal.

The wizard and his companions may remain in the Border Ethereal for up to one hour per level; when the spell expires, they return to normal existence, although the wizard can choose to end the spell before its full duration. The wizard also has the option of moving himself or the group from the Border Ethereal into the Deep Ethereal, in which case they remain ethereal when the spell ends. He will have to use this spell again or find

another way back in order to return to his home plane.

The wizard can attempt to use *etherealness* to banish an unwilling subject. He must make a successful attack roll in order to touch him, and the subject receives a saving throw vs. spell to negate the effect. An unwilling subject automatically remains in the Border Ethereal for an amount of time specified by the wizard at the time of the casting, but no more than one hour per caster level. When used like this, etherealness does not affect the caster, only the subject.

## Greater Sign of Sealing

**(Abjuration, Geometry)**

| | |
|---|---|
| Range: 0 | Components: S, M |
| Duration: Permanent | Casting Time: 1 turn |
| Area of Effect: Special | Saving Throw: Special |
| Subtlety: +5 | Knockdown: Special |
| Sensory: Medium visual | Critical: Special |

A more potent form of the lesser *sign of sealing*, this spell allows the caster to guard an item or portal and prevent all other creatures from opening or passing through the sealed item or surface. The *greater sign* has several effects; first of all, it affects a doorway or item that opens (a chest, for instance) as a wizard lock spell. If placed in an open corridor or archway to prevent passage, the *greater sign* creates a magical barrier that repels all who try to pass.

Second, the *greater sign* greatly strengthens the physical structure of any door or item it is placed upon, granting a +6 bonus on any item saving throws and allowing the item or door to ignore 1 point of damage per caster level from any attack. For example, a *greater sign* cast by a 12th-level wizard would reduce the damage of any blow or spell by 12 points, so a fighter armed with a broad sword (maximum damage of 8 points) could never hack through a door protected by the sign.

Finally, if the protected doorway or item is forced open or destroyed by any means, the sign itself is not only destroyed, but also releases a spell upon the offending creature. The spell held by the sign is cast into the ward when the greater sign is created, and any spell the caster has memorized may be used in this way, from a *fireball* or *shocking grasp* to a very nasty *wish* or *polymorph*. The range of the sign's retributive spell is 10 yards per caster level, so it is possible to destroy the warding from a safe distance.

The sign is displayed in plain sight, and most wizards will recognize it for what it is. The caster cannot specify particular creatures or conditions for the sign's operation; it functions against any creature that attempts to pass it, although the wizard can freely pass through his own sign without activating it. The *greater sign* can be removed by the caster, thus ending the spell, or it can be defeated by a *limited wish* or *wish* spell cast by a wizard of equal or higher level than the original caster; it cannot be dispelled.

The material component for a greater sign is a powdered diamond worth at least 1,000 gold pieces.

## Superior Magnetism

**(Alteration)**

Range: 30 yds. + 5 yds./level
Duration: 1 rd./5 levels
Area of Effect: Special
Subtlety: +4
Sensory: None
Components: V, S, M
Casting Time: 6
Saving Throw: None
Knockdown: None
Critical: None

When this spell is cast, the wizard designates one inanimate object of stone, earth, or metal within the spell's range to function as a powerful magnet, attracting all metal. The object affected can be no larger than a 10-foot cube, although a section of wall, floor, or ceiling about 10 square feet will work. Once magnetized, the object exerts a powerful attractive or repulsive force (caster's choice) against objects of ferrous metal. The effects vary by the proximity of the metal objects to the center of magnetism, as shown below:

| **Distance to Magnetism** | **Movement Rate per Round** | **Effective Strength** | **Missile Attack Penalty** |
|---|---|---|---|
| 10 feet or less | 40 feet | 22 (Garg.) | –40 |
| 20 feet or less | 20 feet | 20 (Huge) | –20 |
| 30 feet or less | 10 feet | 18 (Large) | –10 |
| 40 feet or less | 5 feet | 14 (Medium) | –5 |
| 50 feet or less | 2 feet | 10 (Small) | –2 |
| 60 feet or less | 1 foot | 4 (Tiny) | –1 |

The movement rate represents how fast objects are drawn to or repelled from the center of magnetism. If the creature or object in question is heavier than the magnetized item, the magnetized item does the moving instead. The effective Strength is the "pull" of the magnetism at that range; the size equivalent refers to creature sizes, not weapon sizes. (All human-sized weapons are considered small or tiny for this chart). A character or creature carrying loose metal items or objects such as weapons, shields, helms, buttons, and so on must win an opposed Strength check (see *Player's Option: Combat & Tactics* for information on opposed ability checks) in order to keep his possessions from being wrenched out of his grasp by the magnetism. Securing a weapon in its sheath, holding an item with both hands, and other precautions may give the character a +2 to +4 to his base ability score, at the DM's discretion.

Characters wearing metal armor must attempt an opposed Strength check to ignore the effects of the magnetism. If the character fails his Strength check outright, he loses his footing and flies towards or away from the object at the full rate indicated. He suffers full falling damage based on the speed with which he hits the item—1d6 for every 10 feet of the movement rate, or half that damage if he is repelled and simply thrown back onto the ground. If the character passes his Strength check but is beaten by the magnetism roll, he is moved one foot for each point he lost by. Again, some precautions or assistance may help iron-wearing characters in their Strength checks. For monsters, compare the creature's size to the effective size of magnetism.

An armored character who is stuck to a surface or object loses any Dexterity adjustments to AC and cannot make any physical attacks. He can try to wriggle out of his armor and free himself, employ a magical item, or use psionic powers if he has any at his disposal.

*Lodestone the fighter is charging a wizard when the dastardly felon* magnetizes *a sizable boulder about 30 feet from Lodestone's present position. Lodestone carries a long sword, a shield, and wears plate mail; he has a Strength of 17. First, he checks to see if he holds onto his sword and shield, making two opposed Strength rolls. He loses the shield, but keeps hold of his sword. Now the DM checks to see if Lodestone resists the drag on his armor. At 30 feet, the magnetism has a Strength of 18. Lodestone rolls a 6, but the magnetism roll is a 12. Even though both Lodestone and the magnetism made their Strength rolls, the magnetism roll is higher than Lodestone's roll and does not go over its target Strength score. As a result, Lodestone is dragged 6 feet closer to it. Next round, Lodestone tries again and blows his roll altogether, moving a full 10 feet closer. Now only 14 feet from the boulder, the magnetism's Strength is effectively a 20, which means Lodestone is in big trouble. If he blows his roll again the next round, he'll go flying into the boulder at a rate of 20 feet/round, which will inflict 2d6 points of damage.*

If a creature wins its Strength check, it can ignore the spell's effects and move out of the zone of influence normally.

*Sirellyn's superior magnetism* also affects the passage of iron or steel missiles, such as steel-headed arrows or quarrels. Any missile that passes through the zone of influence suffers an attack penalty equal to the movement at the range indicated. For example, if the path of an arrow brings it within 40 feet of a magnetized object, the attack suffers a –5 penalty. Finally, it is possible for the casting wizard to be affected by this spell as well. As a result, the wizard had better make sure that he's out of the effective area of effect when casting.

The material component for this spell is a small bar magnet, bent into a U-shape and coated with mithral.

## Trollish Fortitude

**(Necromancy)**

| | |
|---|---|
| Range: 0 | Components: V, S, M |
| Duration: 1 rd./level | Casting Time: 6 |
| Area of Effect: The caster | Saving Throw: None |
| Subtlety: +4 | Knockdown: None |
| Sensory: None | Critical: None |

This powerful spell imbues the caster with the physical fortitude and resilience of a troll. While the spell is in effect, the caster regenerates 3 hit points per round until he reaches his normal maximum. He also gains a troll's ability to ignore dismemberment, decapitation, and other horrible injuries that would normally incapacitate or kill him outright (although losing a limb may prevent the caster from taking certain actions, such as running, climbing, and other activities). Bleeding, wounding, being reduced to negative hit points, and other effects that cause the victim to lose hit points from round to round are ignored—the caster instead regains 3 hit points per round, up to his normal maximum. If the caster is reduced to less than 0 hit points, he is incapacitated and must make a system shock roll or lose all of his highest level spells. The incapacitation lasts

only until his regeneration restores him to 1 hit point or more; he can move, fight, and cast spells again as soon as his hit point total is positive.

*Trollish fortitude* does not provide the caster with any defenses against lethal poison, disease, and other effects that don't cause a loss of hit points. Hit points lost through level draining, *vampiric touch*, or *vampiric regeneration* cannot be regenerated since this represents damage to the victim's life force, and not physical injury. In addition, fire damage and acid damage cannot be regenerated. While the spell is in effect, the caster can rejoin severed limbs simply by holding them in place, but if the spell ends while a limb (which were already moving toward him) is still separate from his body, he immediately suffers the full effects of the injury.

The material component for this spell is a shred of dried flesh from a troll's heart that must be pulverized into dust. The dust is then sprinkled on the caster.

## Seventh-Level Spells

### Descent into Madness

**(Enchantment/Charm, Mentalism)**

| | |
|---|---|
| Range: 10 yds./level | Components: V, S, M |
| Duration: Permanent | Casting Time: 7 |
| Area of Effect: 1 creature | Saving Throw: Negates |
| Subtlety: +5 | Knockdown: None |
| Sensory: Moderate visual | Critical: None |

More insidious and powerful than the *feeblemind* spell, *descent into madness* afflicts one creature with a random form of insanity. The spell can affect any creature with an Intelligence of low (5) or higher; however, a character or creature protected by a *mind blank* is immune to this spell. Creatures are entitled to a normal saving throw vs. spell to withstand the spell. The form of insanity caused by the spell is determined by a roll on the chart:

| **d%** | **Insanity Type** |
|---|---|
| 01–15 | Delirium |
| 16–22 | Disorientation |
| 23–34 | Phobia |
| 35–40 | Paranoia |
| 41–44 | Alienation |
| 45–54 | Amnesia |
| 55–64 | Hallucinatory insanity |
| 65–69 | Melancholia |
| 70–74 | Dementia praecox |
| 75–83 | Mania |
| 84–89 | Hebephrenia |
| 90–95 | Catatonia |
| 96–00 | Homicidal mania |

The various types of insanity and their game effects are described under the **Alienist** in Chapter 6. The caster has no idea what kind of madness the spell inflicts on its victim, although he may be able to form an educated guess after observing the victim for a few rounds. *Descent into madness* accelerates the process of insanity radically, producing an advanced condition almost immediately; for example, a character rendered paranoid by this spell skips past suspicion and instantly regards his friends and allies as enemies of the worst sort. The victim has a small chance of recovering with the passage of time (as described under each type of insanity) but other than that the only ways to repair the effects of this spell are *restoration*, *wish*, or use of the psionic power psychic surgery.

The material component is a special cube of gold wire worth at least 500 gold pieces shaped to represent a tesseract, or four-dimensional figure.

## Neutralize Gas

**(Abjuration, Elemental Air, Alchemy)**

Range: 60 yards
Duration: Instantaneous
Area of Effect: One 10-ft. cube/lvl.
Subtlety: +5
Sensory: Large visual/olfactory
Components: V, S, M
Casting Time: 1
Saving Throw: None
Knockdown: None
Critical: None

By using this spell, the wizard renders inert and makes breathable any harmful vapors, gases, clouds, or fogs in the area of effect. This includes *stinking cloud*, *cloudkill*, *solid fog*, *death fog*, *incendiary cloud*, *acid storm*, gaseous breath weapons, spore or mold clouds, and similar spells and effects. Harmful gas or vapor is transformed into a common, harmless *fog cloud* of the same dimensions as the original effect, and then dissipates 1d3 rounds later. Creatures who were injured before *neutralize gas* is cast continue to suffer any effects from their previous exposure—the spell does not heal or counter existing damage, so a creature that is choking and gagging from a *stinking cloud* would receive no relief from this dweomer.

If cast in the same round of the effect's appearance, *neutralize gas* may be used to counter gaseous breath weapons, spores, and molds by granting any creatures affected a +4 bonus to their saving throws and reducing any damage to one-half or one-quarter normal, depending on whether or not the victims make their saving throws. Air-based creatures are not affected by this spell; neutralize gas only "clears the air" of any harmful inhalants. The material components are a bit of charcoal and some bark from a treant.

## Persistence

**(Invocation/Evocation)**

Range: 0
Duration: 1 day/level
Area of Effect: The caster
Subtlety: +6
Sensory: None
Components: V, S, M
Casting Time: 1 turn
Saving Throw: None
Knockdown: None
Critical: None

Related to both the *contingency* and *permanency* spells, *persistence* allows a wizard to cast a spell of 6th level or lower and then hold it until it is needed. There are two general uses for *persistence:* to use a personal spell effect as needed up to the maximum duration of the *persistence* itself, or to prepare an instantaneous spell and hold it ready until the caster wishes to use it.

**A. Personal effect.** Any spell that augments the wizard's natural abilities—*detect magic, protection from evil, jump, infravision, fly, wraithform*, or other caster-affecting spells—can be made *persistent* by use of this spell. The wizard casts *persistence* and then immediately follows with the desired spell. Instead of taking effect immediately, the magic of the *persistence* holds it ready for use by a simple act of will. The wizard can then "turn on" or "turn off" the girded spell as often as he likes over the course of the duration of the *persistence*. The duration of the girded spell only runs while the spell is active, so a 15th-level wizard who makes a *fly* spell *persistent* will be able to use 1d6+15 turns of flight (the normal duration of fly) over the next 15 days (the duration of the *persistence*) as he sees fit.

This is especially useful because it allows the wizard to cast the girded spell and the *persistence* and have the girded spell's effects available while he then memorizes another spell in place of the spell made *persistent*. It is also useful because the girded spell can be activated instantly by an act of will. The main difference between this spell and *contingency* lies in the fact that a *persistent* spell may be invoked several times (up to the limit of its normal duration) while a *contingency* functions once only.

**B. Held spell.** Spells that have an instantaneous effect, such as most attack spells and some movement spells like *teleport* or *dimension door*, can be rendered *persistent* as well. The held spell may be activated or discharged at any time during the duration of the *persistence*, but its magic is then exhausted as if it had been cast normally. This resembles the effect of a *contingency* spell, but the effect has no predefined conditions and simply occurs when the caster wills it to.

Damaging or offensive spells that have a duration (for example, *flaming sphere or wall of fire*) cannot be rendered *persistent*. A wizard may have no more than one *persistence* spell active at any given time; if he girds a new spell while an old one is still *persistent*, the old spell is simply replaced by the new one. The material component is a crystal chalice of exquisite workmanship worth at least 2,000 gp. The material component of a held or girded spell is expended when the spell is made *persistent*.

## Seven-Eyes

**(Abjuration, Conjuration/Summoning)**

| | |
|---|---|
| Range: 0 | Components: V, S, M |
| Duration: 1 rd./level | Casting Time: 7 |
| Area of Effect: Create 7 eyes | Saving Throw: Special |
| Subtlety: +5 | Knockdown: Varies |
| Sensory: Medium visual | Critical: Varies |

This spell conjures into existence seven magical orbs that float above the caster's head in a ring about 5 feet in diameter. The eyes remain for 1 round per level, or until the

caster chooses to either expend the orb by using it in attack or defense. In addition, as long as at least one eye is still in existence, the caster gains 360° vision and can *detect invisibility* and *detect phase* at will, with a 60-foot range. The powers of each eye are described below.

**Eye of the Mind.** This orb protects the caster against mental attack, charm, or influence, including *charm, beguiling, hold*, and *emotion* effects. The first such attack is negated by the orb and destroys it in turn. If the wizard desires, the eye of the mind can instead be used to *charm person* like the 1st-level wizard spell, although this also expends the orb.

**Eye of the Sword.** This eye deflects the first physical attack that endangers the caster, including hand-held or missile attacks, and then disappears. The wizard can also employ the eye of the sword to create five magical blades that strike as *magic missiles* for 1d4+1 points of damage each. (Knockdown d6, medium (1 hit) impact)

**Eye of the Mage.** One manifestation of raw energy, such as lightning, fire, force, cold, or a similar effect, is absorbed by the eye of the mage. The eye can also project a 60-foot long by 5-foot wide *lightning bolt* that inflicts 4d8 damage (saving throw vs. spell for half damage) to all in its path. Either use expends the eye's power. (Knockdown d12, large (1–3 hits) electricity)

**Eye of Venom.** This eye can be used to halt any one attack or effect that could poison the caster. In the case of an attacker armed with an envenomed weapon, the caster may decide to expend either the eye of venom or the eye of swords in order to block the attack. The eye can also be used to poison one creature within 30 feet; the victim must make a saving throw vs. poison or die in one round.

**Eye of the Spirit.** The first attack that affects the victim's life energy, including *energy drain, strength drain, cause wounds, trap the soul, magic jar*, or *death* is parried by the eye of the spirit. The wizard may instead choose to expend the eye's power by casting *enervation* (see the 4th-level wizard spell) upon one target within 30 feet.

**Eye of Artifice.** This eye deflects and is destroyed by the first attack directed at the caster from a magical device. If the attack also takes a form that may be blocked by another eye (for example, the bolt from a *wand of lightning*) the caster may choose which eye is expended. If used to attack instead, the eye of artifice functions as a *dispel magic* cast at 8th level.

**Eye of Stone.** This eye offers protection against the first attack that could petrify the caster and then vanishes. It can also be expended to cast *hold person*.

Although any number of eyes can defend the wizard in the course of a single round, only one eye may be used to attack per round. When the caster uses an eye to attack, he may not cast a spell, attack physically, or employ another magical item in the same round; willing the eye to discharge its energies requires his complete concentration. Eye attacks are considered to have an initiative modifier of 1 or a speed of very fast in the *Player's Option: Combat & Tactics* initiative system.

The material component is seven blessed gemstones worth at least 50 gold pieces each.

## Eighth-Level Spells

## Analyze Dweomer

**(Divination, Artifice)**

Range: 10 yards
Duration: 1 rd./2 levels
Area of Effect: 1 object or creature
Subtlety: +7
Sensory: Medium visual/small audio

Components: V, S, M
Casting Time: 8 hours
Saving Throw: None
Knockdown: None
Critical: None

This spell reveals to the caster all spells, enchantments, dweomers, and magical properties present in one creature or object. One property, spell, or power is revealed each round in approximate order of when the spells were cast or the properties were acquired. (If the DM doesn't know which spells were placed on the subject first, a random roll for order of discovery is fine.) The caster has a base 50% chance to discern the existence and identity of a particular spell or property, +2% per level to a maximum of 99%. The only enchantments that remain inscrutable to *analyze dweomer* are those surrounding artifacts or relics.

*A 16th-level wizard finds an unknown wand and decides to use* analyze dweomer *to study it. The DM knows that it's a* wand of fire, *and he decides that the spells* enchant an item, fireball, burning hands, *and* wall of fire *were used to create the wand, in that order. In the first round, the wizard has an 82% chance to identify* enchant an item*; in the following round, an 82% chance to discover* fireball*; in the next round, an 82% chance to perceive* burning hands*; and so on, for all remaining enchantments. Note that the DM could have decided that any rare or unusual materials or processes used to create the wand would also be revealed as if they were spells.*

After the wizard analyzes one object or creature, the spell ends, even if its duration has not expired yet. Casting this spell is physically taxing; the wizard must pass a system shock check or be exhausted and unable to do anything but rest for the next 1d8 hours. While this spell is most frequently used in the comfort and safety of the wizard's laboratory, a mage could also cast *analyze dweomer* to study the magical seals and barriers on a portal, to determine just how a companion has been cursed, or to examine a potential opponent for defensive spells.

The material component for this spell is a tiny lens of ruby or sapphire set in a small golden loop. The gemstone must be worth at least 1,000 gp.

## Heart of Stone

**(Necromancy)**

Range: 0
Duration: 1 year
Area of Effect: The caster
Subtlety: 8
Sensory: None

Components: V, S, M
Casting Time: 1 day
Saving Throw: None
Knockdown: None
Critical: None

This potent spell exchanges the necromancer's own living heart for a finely crafted heart of perfect, unblemished stone that alters the very nature of the wizard's body. As long as the *heart of stone* remains in effect, the caster need not fear attacks that pierce, slash, or cut him; he does not bleed and can ignore the most horrible injuries of this kind. The caster can also ignore most magical effects such as spells, magical devices, and innate spell abilities of less than 8th level.

In game terms, the character suffers only 1 point of damage from any type S or type P attack, plus any magical adjustment for the weapon. For example, if struck by a *long sword +1*, he would suffer only 2 points of damage. Strength and specialization bonuses are ignored. If the wizard is dismembered, he suffers no additional damage other than the inconvenience of having his limbs removed, and he can reattach a severed limb by holding it in place for one full turn. The *heart of stone* is also partially effective against type B attacks since it prevents bruising, swelling, and crushed blood vessels. Against bludgeoning weapons, the wizard only suffers half the normal damage. *Cause wound spells* always inflict minimum damage against a wizard protected by this spell. While the caster may not feel a sword in his rib cage, any damage sustained interrupts spellcasting.

In addition to resisting injury, the *heart of stone* also renders the character immune to fatigue and exhaustion, whether normal or magical. He also gains a +4 bonus to saving throws vs. petrification attacks.

While the *heart of stone* is quite powerful, it has limitations. First of all, determined physical attack can eventually destroy the wizard despite his unnatural resistance to injury—a mob of angry peasants with hatchets and spears can finish him off 1 point at a time if that's what it takes. Second, the *heart* confers no protection against other attack forms, such as fire, electricity, cold, acid, and so on, although any bleeding caused by a burn is ignored. *Disintegration* effects also affect the caster. Most importantly, the caster loses the ability to naturally recover from injury and no longer regains lost hit points with the passage of time. Healing spells, potions and items are reduced to their minimum effect, so a *cure serious wounds* (2d8+1 hit points restored) would only return 3 hit points to a wizard protected by heart of stone. However, *limited wish* or *wish* can be used to restore 1 hit point per level of caster or all but 1d4 hit points, respectively.

In addition to these disadvantages, *heart of stone* also renders the caster vulnerable in one other way: his own real heart can be destroyed, instantly slaying him. Naturally, the caster will want to take steps to hide and protect his true heart to prevent this from happening. The living heart continues to beat for the duration of the spell but requires no special receptacle or facilities to protect it—the caster could leave it lying on the floor, if he wished.

The *heart of stone* cannot be dispelled, although a more powerful negation magic such as *Mordenkainen's disjunction* can bring the spell to an end. *Stone to flesh* also undoes the magic of the *heart of stone*. No matter how the spell is ended, the wizard's own living heart instantly returns to its proper place, and the stone heart appears wherever the living heart was kept. At this time, any injuries the wizard currently has are multiplied by 1d6 as the wounds begin to bleed again. For example, a necromancer who was injured for 6 points of damage instead suffers 6d6 when the spell ends.

The material component for this spell is the stone heart itself. This must be a carved stone of quality (jade, obsidian, or gold-veined marble would be appropriate) worth not less than 5,000 gold pieces. It must be prepared by use of the *enchant an item* spell. The stone is not consumed at the spell's end and may be used again if it is undamaged.

## Iron Body

**(Alteration, Elemental Earth)**

| | |
|---|---|
| Range: 0 | Components: V, S, M |
| Duration: 1 rd./level | Casting Time: 8 |
| Area of Effect: The caster | Saving Throw: None |
| Subtlety: +5 | Knockdown: None |
| Sensory: Medium visual | Critical: None |

This spell transforms the caster's body into living iron, which grants him several powerful resistances and abilities. While the spell is in effect, the caster can only be injured by blunt weapons of +3 or better value, or monsters of 8+3 Hit Dice or more. Slashing weapons, falling, crushing, and constriction attacks of all types are completely unable to harm the caster, although an attack may knock him off-balance or pin him beneath tons of debris. Spells or attacks that affect the subject's physiology or respiration—for example, *poison, cloudkill, enfeeblement, contagion,* or *pain touch*—fail completely, since the caster *has* no physiology or respiration while the spell is in effect. Also, spells that have weight limits should be applied to the wizard as if he weighed over 3,000 pounds. The wizard ignores electrical attacks and saves at +4 against fire attacks. If he saves, he takes quarter damage; if not, he takes half damage. If hit with a *rod of smiting*, he takes 2d8+6 points of damage unless the attacker rolls a natural 20. If this occurs, then the damage is doubled.

In addition to the natural immunities of an iron body, the wizard enjoys powerful offensive abilities. His Strength score is raised to 20 (+3 to attack rolls, +8 damage) for the duration of the spell, and he can punch or bludgeon his enemies twice per round for 1d4 points of damage per blow, plus his Strength bonus. Unfortunately, his movement becomes slow and awkward, so he is reduced to a move of 3 and suffers a –2 penalty to his initiative rolls (or a reduction of his base phase by one step, in *Player's Option: Combat & Tactics*). Most importantly, the wizard's clumsiness and lack of breath prevent him from casting any spells while the iron body is in effect.

Iron body may create additional hazards for the wizard as the DM deems appropriate. For example, rust monsters are extremely dangerous to a wizard using this spell. *Heat metal* spells inflict double damage to the caster. And, naturally, the wizard sinks like a stone in water—although he could survive the crushing pressure and lack of air at the bottom of the ocean—at least until the spell expired. Some magical items, such as potions or winded instruments, may be temporarily unusable as well.

The material component for this spell is a small piece of iron that once belonged to an iron golem.

## Ninth-Level Spells

## Programmed Amnesia

**(Enchantment/Charm, Mentalism)**

| | |
|---|---|
| Range: 20 yards | Components: V, S |
| Duration: Special | Casting Time: Special |
| Area of effect: 1 creature | Saving Throw: Special |
| Subtlety: +8 | Knockdown: None |
| Sensory: None | Critical: None |

This particular spell was the last and most powerful spell developed by the archmentalist Rheizom. It allows the wizard to selectively destroy, alter, or implant memories in the subject creature as he sees fit. He can completely reprogram a character, inventing a new persona, a new alignment, and assigning a new class as he sees fit. Only sentient beings can be affected; if the subject is not human, humanoid, or demihuman, he gains a +4 bonus on his saving throw.

As described above, *programmed amnesia* can be used to achieve several different effects. The wizard may choose to make use of any or all of the effects listed below:

**A. Memory erasure.** Any or all memories possessed by the subject can be erased at the caster's will, including knowledge of specific events, people, or places.

**B. Memory implant.** The caster can create false memories in the subject's mind as he sees fit. Imaginary friends, events that didn't really take place, betrayals by people the subject regards as his friends, or the friendship of an enemy could all be implanted in the subject's mind.

**C. Skill erasure.** The subject can be made to forget any or all class-based skills or proficiencies, including all or part of his THAC0 (it resets to 20), thief abilities, spellcasting, turning undead, or any other ability that stems from knowledge. About the only characteristics that can't be affected by this usage of *Rheizom's programmed amnesia* are hit points, saving throws, and ability scores. A character's native language cannot be erased, either.

**D. Persona erasure.** Combining the effects of a skill erasure and a memory erasure, this leaves the subject as a clean slate. Only his ability scores, hit points, saving throws, and native language remain. The character may assume any class or alignment available, beginning as a 1st-level character just as if he had decided to dual-class. (Even demihumans can dual-class in this fashion, since they forget all skills of their previous class.)

**E. Persona implant.** By erasing the existing personality and implanting a false set of memories, the wizard can build a new persona for the mind-wiped character. In effect, he can decide what class, alignment, and personality the subject will assume after his persona erasure. If the new persona is an adventurer, the character dual-classes, as described above.

**F. Programmed erasure.** The subject can be programmed to suffer a memory, skill, or persona erasure when a certain event takes place. For example, the wizard could set the subject to be wiped clean as a slate when the subject receives a coded message or

arrives at some destination. Optionally, the wizard can decide to have an erasure partially or totally lifted when the programmed condition comes to pass.

The casting time of this spell varies according to what effects the wizard wishes to impose on the subject. To cast just one of the listed effects, the wizard must spend two days secluded away from any distractions—a personal laboratory is a good example of a secluded place. In between the intense eight-hour casting sessions, the wizard can sleep and eat in the area he chose to seclude himself in. If the wizard breaks his seclusion for any reason, the spell is lost. Also, for every effect over the first, another day (with its eight-hour intense casting period) must be spent in seclusion.

The wizard must be able to see the spell's subject. At the end of each day of casting, the subject makes a saving throw vs. spell to negate the effect.

*Programmed amnesia* is normally permanent, unless the wizard cares to specify a set of conditions or parameters that will end the effect (see F, above). Its effects can only be undone by a *restoration* or *wish* spell, or by successful use of the psionic science psychic surgery. A character who picks up new skills or class abilities while amnesiac must make a saving throw vs. spell when his own real memories return; if he fails, the skills he learned as an amnesiac are gone forever, replaced by his former abilities, but if he succeeds he retains any new skills, and may even choose to continue in his new class as a dual-classed character. Dungeon Masters should keep in mind that an amnesiac character should still meet the new class's full prerequisites before he can become that class.

Obviously, this is a very powerful spell, and the DM should very carefully examine a PC's use of this magic. Dungeon Masters, take note—there are dozens of excellent plot vehicles hiding here if an NPC wizard uses this on a player character! Also, be aware that destroying a creature's personality and replacing it with one more amenable to the wizard's designs is never a good act.

## Sphere of Ultimate Destruction

**(Conjuration/Summoning, Dimension)**

Range: 5 yds./level
Duration: 1 rd./level
Area of Effect: Creates a sphere
Subtlety: +5
Sensory: Small visual
Components: V, S, M
Casting Time: 9
Saving Throw: Special
Knockdown: None
Critical: None

This awful spell brings into existence a short-lived *sphere of annihilation* (as described in Appendix 3 of the *DMG*). The sphere is a black ball of nothingness about 2 feet in diameter that instantly and utterly destroys any matter that comes into contact with it. The *sphere* appears anywhere in the spell's range and moves up to 15 feet per round as the wizard directs. If the wizard attempts to bring the sphere into contact with a living creature, the potential victim gains a saving throw vs. breath weapon to dodge aside, but a victim who is unaware of the *sphere's* appearance or unable to move is destroyed without a saving throw.

Once conjured, the *sphere of ultimate destruction* may not move exactly as the

caster wishes. The wizard has a 75% chance to control it, plus 1% per point of Intelligence over 12 and 3% for each point over 15. In other words, a wizard with an Intelligence of 18 would gain a +12% bonus to his chance to control the *sphere*. If the wizard fails to control the *sphere* in any given round, it automatically moves directly towards him at its maximum speed of 15 feet per round. Unlike the magical item, another wizard may not contest the caster's control of a *sphere* of ultimate destruction unless the second wizard possesses a *talisman of the sphere*. (See the *DMG*.)

Should a *gate* spell be cast upon the sphere, there is a 50% chance that the *sphere* is destroyed, a 35% chance that nothing happens, and a 15% chance that a gap is torn in the spatial fabric, catapulting everything in a 180-foot radius to another plane of existence. If the sphere is touched by a *rod of cancellation*, a tremendous explosion inflicts 3d4 x 10 points of damage to everything within 60 feet as the two forces negate each other. No other spell or magical item has any effect on a *sphere of ultimate destruction*.

There is a 5% chance that any particular manifestation of this spell does not cause a victim's utter destruction but instead transports him to a random plane of existence. The conjuring wizard has no way of knowing whether he has destroyed his enemy or merely blasted him into some remote dimension. The material component of this spell is a dark crystal ball that has been on the Ethereal Plane and that can be comfortably held in two hands.

As noted in the previous chapter, several new spell characteristics appear in the spell descriptions of this book. These include casting subtlety, sensory signature, critical strikes, and knockdown. Refer to page 136 for more information about these new characteristics.

## First-Level Spells

### Astral Celerity

**(Alteration)**

| | |
|---|---|
| Sphere: Astral | |
| Range: 0 | Components: V, S |
| Duration: 1 hr./level | Casting Time: 4 |
| Area of Effect: The caster | Saving Throw: None |
| Subtlety: +3 | Knockdown: None |
| Sensory: None | Critical: None |

This spell enhances the caster's movement capabilities in extraplanar settings by attuning him to his new surroundings. While very few 1st-level priests find themselves in this situation, higher level characters often make use of this spell. *Astral celerity* doubles the character's movement rate on the Astral Plane; normally, characters move at a rate of 30 times their Intelligence score in feet per round, but this spell increases this to 60 feet times their Intelligence score. As an incidental benefit, the caster also attunes himself to the plane much faster and suffers no penalties for missile fire while astral.

While *astral celerity* is most often used in the astral plane, it also offers a small benefit to ethereal characters, too: their movement rates are increased by 50%, so a

character with a movement rate of 12 would enjoy a movement rate of 18 while this spell was in effect. Of course, time and distance have little meaning in the overall scheme of the Astral or Ethereal Planes, but *relative* speed could be very important in avoiding an unpleasant encounter or escaping from pursuit of some kind.

## Battlefate

**(Alteration)**

Sphere: Chaos
Range: 20 yds. Components: V, S, M
Duration: 2 rds./level Casting Time: 4
Area of Effect: 1 creature Saving Throw: None
Subtlety: +4 Knockdown: None
Sensory: None Critical: None

This spell alters probability to favor one character or creature locked in battle. His opponent may stumble at an awkward time, a clumsy parry might catch the enemy's weapon at just the right angle, or he happens to notice the foe moving in for a flank attack. The more powerful the priest, the more potent the aid; combat modifiers provided by *battlefate* equal +1 per three levels, so a 1st-level caster provides a +1 bonus, a 4th-level caster a +2 bonus, a 7th-level caster a +3, and so on to a maximum of +5 for a 13th-level priest. The exact form of the aid or assistance varies from round to round—roll a d6 to see which aspect of the subject's combat abilities are affected in any given round.

| **d6** | **Effect** |
|---|---|
| 1 | Nothing happens |
| 2 | Defenses enhanced, apply bonus to subject AC |
| 3 | Luck enhanced, apply bonus to saving throws |
| 4 | Accuracy enhanced, apply bonus to attack rolls |
| 5 | Damage enhanced, apply bonus to damage rolls |
| 6 | Lucky opening! Subject gains one extra attack with either enhanced accuracy or damage (subject's choice) |

If the character does not make a roll of the specified type in the round, he gains no benefit for the spell; for example, if the character gains the saving throw bonus but doesn't have to make any saving throws during the round in question, *battlefate* doesn't help him. Of course, in the following round, the spell may provide him with a different benefit. Note that on a roll of 1, *battlefate* does not help the character ththe priest intends to aid—such is the nature of chaos.

The material component for this spell is an electrum coin tossed by the priest as he casts the spell.

## Blessed Watchfulness

**(Alteration)**

Sphere: Guardian
Range: Touch Components: V, S

Duration: 4 hrs. + 1 hr./level
Area of Effect: Creature touched
Subtlety: +3
Sensory: None
Casting Time: 4
Saving Throw: None
Knockdown: None
Critical: None

By casting this spell, the priest confers exceptional powers of observation and alertness to one creature for the duration of the spell. While *blessed watchfulness* is in effect, the designated sentinel remains alert, awake and vigilant for the duration of the spell. In fact, it takes a roll of 1 to surprise someone under this effect. He resists *sleep* spells and similar magic as if he were 4 levels or Hit Dice higher than his actual level and gains a +2 bonus to saving throws against other spells or effects that could lower his guard or force him to abandon his watch, including *charm, beguiling, fear, emotion,* and similar mind-affecting spells. If the effect normally allows no saving throw, the watcher gains no special benefit.

## Calculate

**(Divination)**

Sphere: Numbers
Range: 0
Duration: Instantaneous
Area of Effect: The caster
Subtlety: +3
Sensory: None
Components: S, M
Casting Time: 4
Saving Throw: None
Knockdown: None
Critical: None

By means of this spell, the priest can accurately estimate the chance of success of one specific action, such as climbing a dangerous cliff, making a trick bowshot, crossing a burning room unharmed, or even striking an enemy. The action in question must be one that would normally be resolved by a die roll, but the priest doesn't have to be the person who attempts the feat; he can use *calculate* to estimate the odds for anyone taking an action in his sight. The priest has a 70% chance, +2% per level, of making an accurate estimate.

If successful, the DM reveals to the player the action's chance for success or any modifiers that may be in play. For example, he could reveal a particular opponent's Armor Class or THAC0, the saving throw an opponent would require in order to save against a particular spell cast by the priest or the priest's wizard companion, or a character's chance to open doors, bend bars, or use a thief ability. The priest could even *calculate* his odds for actions that might be resolved by a die roll or DM caprice, such as his chance to avoid detection by hiding behind a rock. This spell takes into account factors that the priest himself may not be aware of, so from time to time a character may receive some very confusing results from this spell. For instance, if the priest doesn't know that an orc chieftain is actually a polymorphed tanar'ri masquerading as an orc, he may be astonished to learn that the "orc" has a THAC0 of 7!

If the priest fails his calculation check with a roll of 99 or 00, his calculation is wildly skewed in a random fashion. The material component for this spell is a miniature abacus of ivory worth at least 100 gp. It is not consumed in the casting of the spell.

## Calm Animals
**(Enchantment/Charm)**

Sphere: Animal
Range: 60 yds.
Duration: 1 turn + 1 rd./level
Area of Effect: Special
Subtlety: +3
Sensory: Moderate audio
Components: V, S
Casting Time: 4
Saving Throw: Special
Knockdown: None
Critical: None

This spell soothes and quiets normal animals, which renders them docile and harmless. Only creatures with Intelligence ratings of 1 to 4 (in other words, animal- or semi-intelligent creatures) can be affected by this spell. The caster can calm 2d4 Hit Dice of animals, plus 1 Hit Die per level, so a 4th-level priest could affect 2d4+4 Hit Dice of creatures. The caster can affect any animals he wishes to within the spell's range, but all the subjects must be of the same species. The subject creatures are not allowed a saving throw unless they have magical powers, abilities, or are clearly not entirely natural; a priest could calm a normal bear, war dog, or wolf with little trouble, but it's more difficult to affect a winter wolf, hell hound, or owlbear.

While under the influence of this spell, the affected creatures remain where they are and do not attack or flee, unless they are attacked or confronted by a significant hazard such as a fire or a hungry predator. Once roused, the spell's magic is broken and the animals are free to act in whatever fashion they normally would. Note that creatures affected by this spell are not helpless and defend themselves normally if attacked.

## Dispel Fatigue
**(Necromancy)**

Sphere: Necromantic
Range: 30 yds.
Duration: Instantaneous
Area of Effect: 1 creature
Subtlety: +4
Sensory: None
Components: V, S, M
Casting Time: 4
Saving Throw: None
Knockdown: None
Critical: None

This spell removes physical fatigue or exhaustion from the subject by undoing the physiological effects of his exertions. The subject is instantly restored to his normal, fully rested level of endurance or vigor. This spell can be used to negate the penalties of forced marching, long swims, jogging, running, or sprinting, or even accumulated fatigue points from either the *Player's Option: Combat & Tactics* rules or the magic fatigue rules in Chapter 6. Once this spell has been cast, the subject may start to accumulate fatigue or fatigue-based penalties again, depending on how he continues to exert himself. The material component is a sprinkle of fresh, *blessed* springwater.

## Firelight
**(Alteration)**

Sphere: Elemental Fire
Range: Touch
Duration: 4 hrs. + 1 hr./2 levels
Area of Effect: 1 object
Subtlety: +4
Sensory: Large visual
Components: V, S, M
Casting Time: 4
Saving Throw: None
Knockdown: None
Critical: None

This variant of the spell *log of everburning* changes one small fire no larger than a campfire into *firelight*. The flame ceases to produce smoke and becomes much cooler; within 1 turn of the spell's casting, the fire cools enough to be handled or touched barehanded without causing harm. The *firelight* is resistant to gusts of wind or poor burning conditions (pouring rain, lack of air, and so on), but complete immersion in water, vacuum, or magical darkness extinguishes the flame immediately. *Firelight* burns brighter and steadier than a normal flame, and a torch enchanted with this spell sheds light in a 30-foot radius instead of the normal 15-foot radius. The fuel source lasts throughout the duration of the spell. Unlike *log of everburning*, this spell is not at all useful for staying warm since *firelight* produces very little heat.

*Firelight* inflicts 1d2 points of damage per caster level if cast on creatures of living or elemental fire, but has no other effect on these monsters. The material component is a mix of resins and incense, thrown into the flame to be affected.

## Orison
**(Various schools)**

Sphere: All
Range: 10 yds.
Duration: Special
Area of Effect: Varies
Subtlety: +3
Sensory: Small visual/audio
Components: V, S
Casting Time: 4
Saving Throw: None
Knockdown: None
Critical: None

The most humble of priestly spells is the orison, a brief prayer or invocation of a minor nature. Typically, priests learn a number of *orisons* as acolytes or students in order to hone their spellcasting skills and emphasize concepts, ideals, or phrases of particular importance to the faith. Because an *orisons* is not even on par with other 1st-level magic, a priest memorizes a number of individual *orisons* equal to three +1 per level (up to a maximum of nine) when he devotes a 1st-level spell slot to *orison*. In other words, a 1st-level priest can memorize four *orisons* for one 1st-level spell slot, a 2nd-level priest can memorize five, and so on.

Unlike *cantrip*, an *orison* must have a specific effect, although the priest need not decide which incantation he will use until he actually casts the spell. Regardless of the prayer chosen, the *orison's* duration is never more than one round per level. Known

*orisons* include the following:

**Alleviate:** A single creature suffering from nausea or pain is relieved of its discomfort. Magically induced nausea or pain is only alleviated if the victim passes a saving throw vs. spell with a –2 penalty.

**Calm:** A single creature that has been startled or frightened is soothed. Victims suffering from magical fear may attempt a save vs. spell with a –2 penalty to calm themselves.

**Clarity:** For the duration of the orison, the priest's speech is clear and free of impediment—useful for readings from sacred texts and other such rites. Magical conditions such as *confuse languages* cannot be overcome by this *orison*.

**Courage:** The priest gains a +1 bonus to his next attack roll, as long as the attack is made within the spell's duration.

**Guidance:** The priest gains a +1 bonus to a Wisdom or Intelligence check to determine the right course of action in a moral dilemma or puzzle.

**Healing:** By his touch, the priest may heal a creature of 1 point of damage.

**Magic sense:** If there is a persistent spell effect or magical item within 10 yards, the priest feels a recognizable tingle or sensation of some kind. He has no way to determine what item or spell may have caused the reaction.

**Memory:** Any item the priest commits to memory during the spell duration is more completely and permanently learned; he gains a +2 bonus to any checks to recall the exact appearance, wording, or meaning of an item, text, or message.

**Resistance to magic:** The caster gains a +1 bonus to his next saving throw against magic of any type, as long as it occurs during the *orison's* duration.

**Resistance to poison:** The priest gains a +1 bonus to his next saving throw vs. poison, as long as it occurs during the *orison's* duration.

Other orisons of similar power or scope may be permitted by the DM. Generally, an *orison* should not affect more than one creature or die roll at a time, and an *orison* that can actually cause immediate harm to a creature should inflict no more than 1 or 2 points of damage. An offensive *orison* would be quite rare and most probably associated with an evil or chaotic priesthood.

## Protection from Chaos

**(Abjuration)**

| | |
|---|---|
| Sphere: Law | |
| Range: Touch | Components: V, S, M |
| Duration: 3 rds./level | Casting Time: 4 |
| Area of Effect: 1 creature | Saving Throw: None |
| Subtlety: +4 | Knockdown: None |
| Sensory: Small visual | Critical: None |

Resembling the spell *protection from evil*, this abjuration wards the creature touched from the attacks of minions of chaos. Chaotic creatures suffer a –2 penalty to attack rolls against the spell recipient, and the subject gains a +2 bonus to saving throws against spells or other attacks employed by chaotic creatures. Attempts to possess,

dominate, or exercise other forms of mental control against the recipient are automatically blocked by this spell.

*Protection from chaos* also wards the recipient against contact with extraplanar creatures of chaotic origin, including tanar'ri, slaad, and eladrin. Unlike *protection from evil*, this spell does not necessarily guard against summoned or conjured creatures unless the creatures in question are chaotic in alignment. However, *protection from chaos* does protect the recipient from creatures influenced by confusion and chaos spells and effects. The natural or bodily attacks of such creatures automatically fail, as long as the recipient does not use the spell's power to trap, pin, or drive back the chaotic creatures in question. The spell ends if the recipient makes a melee attack against creatures that are prevented from attacking him by this spell.

The material component is a small ring of gold or lead tempered by a chaotic smith. Note that this spell is not reversible.

## Strength of Stone

**(Invocation/Evocation)**

Sphere: Elemental Earth
Range: Touch
Duration: 3 rds.+ 1 rd./level
Area of Effect: 1 creature
Subtlety: +4
Sensory: None
Components: V, S, M
Casting Time: 4
Saving Throw: None
Knockdown: None
Critical: None

This spell grants supernatural strength to the recipient by raising his Strength score by 1d4 points or to a minimum of 16, whichever is higher. Each 10% of exceptional Strength counts as 1 point, so a character with a Strength of 17 could be raised as high as an 18/30, but no higher. Both the priest and the recipient must be in contact with solid stone or earth when the spell is cast—standing on the ground will do nicely, but *flying* or *swimming* will not. The spell lasts for 3 rounds plus 1 round per caster level or until the subject loses contact with the earth. Obviously, this can happen in a number of ways, including being picked up or grappled by a larger creature, being knocked through the air by an impact or explosion, or even being magically moved in some fashion.

The material components are a chip of granite and a hair from a giant.

## Sunscorch

**(Invocation/Evocation)**

Sphere: Sun
Range: 40 yds.
Duration: Instantaneous
Area of Effect: 1 creature
Subtlety: +3
Sensory: Moderate visual, moderate tactile
Components: V, S
Casting Time: 4
Saving Throw: Neg.
Knockdown: d6
Critical: Medium (1 hit) fire

This spell creates a brilliant ray of scorching heat that slants down from the sky to strike one target of the caster's choice. The victim is entitled to a saving throw vs. spell to avoid the ray—a successful save indicates that it missed altogether. Any creature struck by the ray sustains 1d6 points of damage, plus 1 point per caster level. Undead creatures and monsters vulnerable to bright light sustain 1d6 points of damage, plus 2 points per caster level. In addition to sustaining damage, living victims are also blinded for 1d4 rounds by the spell.

The sun must be in the sky when *sunscorch* is cast, or the spell fails entirely. It cannot be cast underground, indoors, or in hours of darkness, although routine overcasts do not hinder the *sunscorch*.

## Wind Column

**(Invocation/Evocation)**

Sphere: Elemental Air

| | |
|---|---|
| Range: 0 | Components: S |
| Duration: 2 rds./level | Casting Time: 1 |
| Area of Effect: The caster | Saving Throw: None |
| Subtlety: +1 | Knockdown: None |
| Sensory: Moderate visual | Critical: None |

A priest with access to this spell need not fear most routine falls, since the casting of the *wind column* creates a pillar of strong winds to slow his descent. The spell is most effective in areas or regions where a strong breeze is available, such as the heights of a mountain or the mast of a ship at sea. In areas of dead, calm air, it is much more difficult to muster the windpower necessary to arrest the caster's fall. The caster's rate of descent (and risk of damage) varies with the strength of the prevailing winds, as shown below.

If the wind is very strong, the caster can even choose to gain altitude instead of falling, although he can rise no higher than 5 feet per level above his original height before the *wind column* loses cohesiveness and he starts to fall again. However, a priest could use this to leap out a castle window and allow the winds to bear him to the roof of the tower, if the conditions are right.

| **Wind Strength** | **Falling Rate** | **Damage Sustained** |
|---|---|---|
| Very strong | ±2 ft./sec. (120 ft./rd.) | None |
| Strong | 4 ft./sec. (240 ft./rd.) | None |
| Moderate | 8 ft./sec. (480 ft./rd.) | 1 per 10 ft.[1] |
| Light | 16 ft./sec. (960 ft./rd.) | 1d2 per 10 ft.[2] |
| None | 32 ft./sec. (2000 ft./rd.) | 1d3 per 10 ft.[3] |

[1] Maximum of 8 points
[2] Maximum of 10d2
[3] Maximum of 12d3

If you prefer to use the combat round scale from *Player's Option: Combat & Tactics*, rounds are approximately one-tenth as long, and movement per round is reduced

accordingly. For example, in moderate winds, the caster will fall about 48 feet per round in the Combat & Tactics scale.

## Second-Level Spells

### Astral Awareness

**(Divination)**

Sphere: Astral
Range: 0
Duration: 1 hr./level
Area of Effect: The caster
Subtlety: +3
Sensory: None
Components: V, S
Casting Time: 5
Saving Throw: None
Knockdown: None
Critical: None

This divination attunes the caster's perceptions to the silver void of the Astral Plane or the misty grayness of the Ethereal Plane. While the spell is in effect, the caster automatically notes the approach of all kinds of astral or ethereal phenomena, including shifting conduits, the psychic wind, ether cyclones, demiplanes and debris, color pools, and curtains of vaporous color. The character has a 90% chance to detect a color pool from its invisible side and a 5% chance per level to determine which plane a curtain or pool leads to simply by studying its color.

In addition to his awareness of physical phenomena, the caster gains a +2 bonus to surprise checks against astral or ethereal monsters. He also has a 5% chance per level to detect the threat of creatures whose gaze extends into the Ethereal (basilisks, for instance) before he enters the range of the monster's gaze weapon.

### Chaos Ward

**(Abjuration)**

Sphere: Chaos
Range: Touch
Duration: 2 rds./level
Area of Effect: Creature touched
Subtlety: +4
Sensory: Small visual
Components: V, S, M
Casting Time: 5
Saving Throw: None
Knockdown: None
Critical: None

By using this spell, the priest can create a shimmering aura of whirling light that surrounds the chosen creature. This protective aura makes the spell recipient more difficult to hit in hand-to-hand combat by providing a –1 bonus to the subject's Armor Class. Against missile attacks or ranged spells aimed directly at the recipient, the *chaos ward* is even more effective since it provides a –2 bonus to Armor Class and a +2 bonus to any saving throws required. In addition, there is a chance that missile attacks or directed spells may be deflected or reflected by the chaotic energy of the shield, as shown below:

| d%[1] | Effect |
|---|---|
| 01–85 | No unusual effect, subject gains normal benefits of chaos ward |
| 86–95 | Spell or attack automatically defeated |
| 96–99 | Spell or attack ricochets, affecting a random creature within 30 feet—normal attack roll or saving throw needs to be rolled for the random creature to be affected |
| 100+ | Spell or attack reflected back at originator, normal attack roll or saving throw applies |

[1] Add the caster's level to the d% roll.

In order to qualify as a spell aimed directly at the recipient, a spell must affect only the subject in question; a spell such as *hold person* or *sleep* that happens to include the subject in its area of effect does not count as a directed spell and does not trigger the *chaos ward*. The material component is a playing card used by a rogue of chaotic alignment.

## Cure Moderate Wounds

**(Necromancy)**
**Reversible**

Sphere: Healing
Range: Touch
Duration: Instantaneous
Area of Effect: Creature touched
Subtlety: +3
Sensory: Moderate visual wounding when reversed
Components: V, S
Casting Time: 5
Saving Throw: None
Knockdown: d8
Critical: Medium (1 hit)

Somewhat less common than the well-known *cure light wounds* and *cure serious wounds*, this healing spell was created by a priest who found that his heroic companions required his skill at doctoring more than his advice and wisdom. By laying his hand on the subject's body, the priest can heal 1d10+1 points of damage. Noncorporeal, nonliving, or extraplanar creatures cannot be healed by this spell. The reverse of this spell, *cause moderate wounds*, requires the priest to successfully touch the victim and inflicts 1d10+1 points of damage. (The knockdown and critical strike entries above are for spell's reverse.)

## Ethereal Barrier

**(Abjuration)**

Sphere: Astral, Wards
Range: 120 yds.
Duration: 1 turn/level
Area of Effect: Two 10-ft. squares/level
Components: V, S, M
Casting Time: 1 turn
Saving Throw: None

Subtlety: +6 Knockdown: None
Sensory: None Critical: None

The *ethereal barrier* is a defense against the passage of extradimensional creatures, including characters or monsters that are *phased*, *ethereal*, or travelling via *dimension door* or *shadow walk*. The priest creates an imperceptible barrier of 10 square feet per level that may be arranged in any fashion the priest desires. For example, a 3rd-level character can ward six 10-foot by 10-foot surfaces, which would be sufficient to guard a 10-foot by 10-foot by 10-foot room (four walls, a ceiling, and a floor need to be protected.) Note that some monsters may be capable of abandoning their ethereal approach in order to simply enter the barred area on their own feet—the *ethereal barrier* only bars their passage as long as they are traveling in the Border Ethereal. Also, while this spell can't be worn down by any form of attack, it does not bar *teleportation*, *gates*, or the passage of astral creatures.

*Ethereal barrier* may be cast as cooperative magic by several priests working together. As long as all involved characters can cast the spell, the areas of effect of each priest are added together. Total the levels of all priests involved and multiply by two to find the number of 10-foot by 10-foot squares that may be warded. For example, four 6th-level casters (24 total levels) can ward 48 10-foot by 10-foot squares. The duration is determined by the highest level priest involved, plus 1 turn for each additional priest. In the previous example, this would be 6 turns plus 3 turns for three additional priests for a total of 9 turns.

This spell is also suitable for focus magic (see the spell *focus* in the *Tome of Magic*). The material component is a special compound of rare earths and lead worth at least 10 gp per application. One application is required for each 10-foot by 10-foot square to be warded.

## Iron Vigil

**(Alteration)**

Sphere: Guardian
Range: 0 Components: V, S
Duration: 1 week + 1 day/level Casting Time: 1 turn
Area of Effect: The caster Saving Throw: None
Subtlety: +5 Knockdown: None
Sensory: None Critical: None

This spell allows the priest to ignore hunger, thirst, and extremes of climate for an extended period of time. While the spell is in effect, the priest requires no food or drink. He is effectively immune to exposure, dehydration, and heat or cold injury, since no naturally occurring climatic condition will cause him harm. (Lightning, floods, tornadoes, earthquakes, and other such hazardous phenomena can still cause physical injury, of course.)

During the *iron vigil*, the priest is able to ignore the need to sleep by choosing to meditate instead. While meditating, the priest can keep watch on his surroundings, but he suffers a +1 penalty to any surprise checks. If the character wishes to memorize spells, he

must sleep normally.

At the vigil's end, the priest must eat and drink; if no food or water is available, the character must make a Constitution check once every four hours at a cumulative –1 penalty or fall into a coma and perish within 1d3 days if he receives no aid. He also requires at least four hours of rest for each day that he did not eat, drink, or sleep during his vigil.

## Resist Acid and Corrosion

**(Abjuration)**

Sphere: Protection
Range: Touch
Duration: 1 rd./level
Area of Effect: Creature touched
Subtlety: +3
Sensory: None
Components: V, S
Casting Time: 5
Saving Throw: None
Knockdown: None
Critical: None

This spell provides a subject with a better resistance to acid, corrosives, and caustic substances of all kinds. Mild corrosives cannot harm the subject at all, although they can still damage his gear. More intense acids and corrosives (black dragon breath, *Melf's acid arrow*, and the natural attacks of various puddings, oozes, slimes, and jellies) inflict only half the normal damage on the protected character. If the attack requires a saving throw, the subject gains a +3 bonus, sustaining half damage with a failed save or one-quarter damage with a successful saving throw.

## Restore Strength

**(Necromancy)**

Sphere: Necromantic
Range: Touch
Duration: Instantaneous
Area of Effect: Creature touched
Subtlety: +3
Sensory: Moderate visual
Components: V, S
Casting Time: 5
Saving Throw: None
Knockdown: None
Critical: None

This spell removes unnatural weakness, debilitation, or exhaustion from the creature touched and restores him to his normal strength and stamina. It is useful in countering the effects of *chill touch, ray of enfeeblement, ray of fatigue,* the touch of a shadow or roper, and any similar spell or effect. Only temporary ability score losses may be alleviated by this spell; if a character suffers an incapacitating, physical injury, *restore strength* cannot help him. Also, loss of strength or stamina from purely natural causes such as exposure, disease, or exertion is not repaired by *restore strength.* The duration is permanent in that the subject remains at his maximum strength and endurance only until he is drained (or exerts himself) again.

## Soften Earth and Stone

**(Alteration)**

Sphere: Elemental Earth
Range: 10 yds./level
Duration: Permanent
Area of Effect: 10-ft. square/level
Subtlety: +4
Sensory: Moderate visual
Components: V, S, M
Casting Time: 5
Saving Throw: None
Knockdown: None
Critical: None

When this spell is cast, all natural, undressed earth or stone in the area of effect is softened. Wet earth becomes thick mud; dry earth becomes loose sand or dirt; and stone becomes soft clay, easily molded or chopped. The priest affects a 10-foot square area to a depth of 1 to 4 feet, depending on the toughness or resilience of the ground at that spot (DM option). Magical or enchanted stone cannot be affected by this spell, nor can dressed or worked stone.

Creatures attempting to move through an area softened into mud are reduced to a move of 10 feet per round. Any creatures caught within the mud when the spell takes effect must make a saving throw vs. paralyzation or lose the ability to move, attack, or cast spells for 1d2 rounds as they flounder about in the muck. Loose dirt is not as troublesome as mud, and creatures are only reduced to half their normal movement rate, with no chance of being caught for a round or two. However, it is impossible to run, sprint, or charge over either surface.

Stone softened into clay does not hinder movement, but it does allow characters to cut, shape, or excavate areas they may not have been able to affect before. For example, a party of PCs trying to break out of a cavern might use this spell to soften a wall.

While *soften earth and stone* does not affect dressed or worked stone, vertical surfaces such as cliff faces or cavern ceilings can be affected. Usually, this causes a moderate collapse or landslide as the loosened material peels away from the face or roof and falls. A moderate amount of structural damage can be inflicted to man-made structures by softening the ground beneath a wall or tower, causing it to settle. However, most well-built structures will only be damaged by this spell, not destroyed. The material component is a bit of slip (wet clay) from the wheel of a master potter.

## Watery Fist

**(Conjuration/Summoning)**

Sphere: Elemental (Water)
Range: 60 yds.
Duration: 1 rd./level
Area of Effect: Special
Subtlety: +4
Sensory: Moderate visual
Components: V, S, M
Casting Time: 5
Saving Throw: None
Knockdown: d10
Critical: Medium (1 hit) crushing

This spell conjures a coherent pseudopod of water from any suitable body of water at least 5 feet across and 2 feet deep (for streams) or 10 feet in diameter and 2 feet deep (for ponds or pools). The pseudopod can stretch up to 10 feet plus 1 foot per caster

level from its source, so a 3rd-level priest could command *watery fist* to strike at a creature hovering thirteen feet above a lake or standing on the shore 13 feet from the water. The pseudopod obeys the priest's mental commands, although the priest must concentrate each round in order to maintain control of the watery member.

The pseudopod is incapable of fine manipulation, but it can be used to make bludgeoning or constricting attacks. When used to strike at opponents, it attacks with the caster's THAC0 and inflicts damage as shown below. The priest may add his magical attack adjustment (from his Wisdom score) to his THAC0, but Strength-based adjustments or special weapon skills don't help the priest to control *watery fist*. The pseudopod may be able to make rear or flank attacks if the priest can direct it into the proper position.

If used to encircle and constrict, the pseudopod must first make an attack roll as described above, inflicting damage based on the priest's level. However, in following rounds, the pseudopod automatically strikes its grappled target for constricting damage, +1 point per round of constricting. In other words, in the first round the victim sustains listed damage, in the second round he sustains listed damage +1, in the third he sustains listed damage +2, and so on. The pseudopod holds its target with an effective Strength equal to the priest's Wisdom score.

| **Caster Level** | **Striking Damage** | **Constricting Damage** |
|---|---|---|
| 1–4 | 1d6 | 1d3 |
| 5–8 | 1d10 | 1d6 |
| 9–12 | 1d12 | 1d8 |
| 13+ | 2d8 | 1d10 |

*Watery fist* can be released by the priest any time he cares to stop concentrating on maintaining it. The pseudopod immediately resumes its normal state, possibly drenching a grappled creature or extinguishing a small fire if the caster wishes. The pseudopod is AC 6 and has 15 hp plus 1 hp per caster level, but it can only be damaged by magical weapons, fire, or cold; all other attacks simply pass through the water. *Transmute water to dust, part water, lower water,* and *Otiluke's freezing sphere* all destroy *watery fist* on contact.

The material component is a vial full of blessed water or a sprig of mistletoe that is thrown onto the body of water from which the fist will be summoned.

## Third-Level Spells

### Control Animal

**(Enchantment/Charm)**

Sphere: Animal
Range: 60 yds. + 10 yds./level
Duration: 1 round/level
Area of Effect: 1 animal
Subtlety: +3

Components: V, S
Casting Time: 6
Saving Throw: Neg.
Knockdown: None

Sensory: Small audio/tactile Critical: None

When a priest casts this spell, he forces an animal to do his bidding. The creature is entitled to a saving throw vs. spell; if it fails, the caster may direct the creature with simple commands to act in any fashion desired. Sample commands include attack, run, fetch, etc. Suicidal or self-destructive commands grant the subject another saving throw to break free of the caster's control, with a +1 to +4 bonus depending on the extremity of the caster's orders. Ordering an animal to engage in combat is not necessarily self-destructive, as long as the prospective opponent is not more than three times the animal's Hit Dice or more than two size categories larger than the subject. For example, a wolf (3 Hit Dice, size M) would attack a troll (6+6 Hit Dice, size L) without hesitation, but it might break free of the caster's control if ordered to attack a size H dragon or an 8+8 HD umber hulk.

*Control animal* establishes a mental link between the caster and the subject, and the animal can be directed by silent mental command as long as it remains within range. Because the caster's intelligence directs the animal, the creature may be able to take actions normally beyond its own comprehension, such as manipulating objects with its paws and mouth. The caster need not concentrate in order to maintain control of the creature unless he is trying to direct it to do something it normally couldn't.

*Control animal* only works on normal or giant-sized animals with Intelligence ratings between 1 and 4. Magical animals, monsters, and creatures of low Intelligence or higher are immune to the effects of this spell. Druids always avoid using this spell.

## Detect Spirits

**(Divination)**

Sphere: Divination
Range: 0 Components: V, S, M
Duration: 1 turn + 1 turn/level Casting Time: 6
Area of Effect: 10 x 60 ft. path Saving Throw: None
Subtlety: +4 Knockdown: None
Sensory: Moderate visual Critical: None

This divination reveals the presence of disembodied or noncorporeal spirits of all types, including wraiths, ghosts, spectres, astrally-projecting creatures, characters or monsters employing *magic jar* or possession, and (of course) animal spirits and spirits of nature. Characters or monsters who are simply *invisible, phased*, or *ethereal* do not count as spirits, since they are physically present in the flesh despite their unusual status. The caster detects spirits in a path 10 feet wide and 60 feet long; any within the area of effect are revealed in their preferred form or appearance for all to see. Simply detecting a spirit doesn't give the caster any special ability to communicate with or attack the entity.

The material component for this spell is a small pendant of copper wire worth at least 20 gp.

## Dictate

**(Enchantment/Charm)**

Sphere: Charm, Law
Range: 30 yds.
Duration: 1 rd./level
Area of Effect: Up to 6 creatures in a 20-ft. cube
Subtlety: +2
Sensory: Small audio
Components: V
Casting Time: 6
Saving Throw: Neg.
Knockdown: None
Critical: None

Originally developed by the Harmonium faction of the Outer Planes, this useful spell has come into more widespread use in recent years. While the spell is available as a 2nd-level enchantment for members of the Harmonium, the general version is not quite as efficient and is considered a 3rd-level spell.

The *dictate* spell is an improved version of command, affecting up to 6 creatures in a 20-foot cube. The caster is not limited to a single word and can issue an order of no more than a dozen words in length. All the specified targets who fail their saving throws must attempt to obey the caster's instructions. For example, a priest could issue a dictate such as "Stay here until I return," "Throw down your weapons," or "Seize that elf!" The subjects will continue to obey nonimmediate orders for up to one round per experience level of the caster.

Subjects who cannot understand the caster are not affected, so characters who do not understand the caster's language are immune to this spell. In addition, the order must create an immediate and obvious course of action for the subject; a *dictate* to "Die!" or "Feel sorry for him!" would simply cause the subject to stand still in confusion for one round. Poorly worded or confusing commands grant the subjects a +1 to +4 bonus on their saving throws at the DM's discretion. Similarly, if after the subject fails his saving throw he is given an obviously self-destructive *dictate*, the subject simply loses his next round as he fights off the compulsion.

## Etherealness

**(Alteration)**

Sphere: Numbers
Range: 0
Duration: 1 turn + 1 rd./level
Area of Effect: The caster
Subtlety: +2
Sensory: None
Components: V, S
Casting Time: 1
Saving Throw: None
Knockdown: None
Critical: None

This spell resembles the 5th-level wizard spell *etherealness* in many respects, but there are a few important differences. First, the priest may not leave the Border Ethereal and venture into the Deep Ethereal; therefore, at the end of the spell's duration, he must return to the Prime Material Plane whether he wants to or not. Secondly, the priest may not use this spell on an unwilling target and can only make another creature ethereal if the subject is willing and in physical contact with the priest when the spell is cast. Besides himself, the caster can bring one creature per two experience levels (three at 5th, four at

7th, five at 9th, and so on) to the Ethereal Plane. Even if the priest abandons his charges in the Border Ethereal, the stranded characters will automatically materialize when the spell ends.

While *ethereal*, the priest cannot be detected by any means short of a *true seeing* or *detect phase* spell. He perceives his surroundings as misty, gray, and otherworldly. No action he takes can affect the physical world, but he can pass through walls, doors, and other solid objects without hindrance. The priest can choose to end the spell voluntarily at any time, materializing in the physical world in one round. If the caster occupies a solid object when the spell ends, he is hurled into the Deep Ethereal and stranded in a catatonic stupor until he can be rescued.

## Fortify

**(Alteration)**

Sphere: War
Range: 60 yds.
Duration: Permanent
Area of Effect: 10 ft. cube/2 levels
Subtlety: +6
Sensory: Moderate visual
Components: V, S, M
Casting Time: 1 round
Saving Throw: None
Knockdown: None
Critical: None

By means of this spell, the priest prepares an area as a defensive position. *Fortify* may be used to prepare an open outdoors area such as a field, road, or grassland, or a rough or broken outdoors area such as a hillside, forest, or boulder-fall. Large rooms or chambers such as a cavern or a great hall may be *fortified* as well. The exact effects of the spell depend on the nature of the site to be *fortified*.

**A. Open Outdoors Site:** A rampart or dike of earth and loose stone rises from the ground along the perimeter of the site, leaving a shallow ditch on the outward face. Creatures defending the dike receive 50% cover against missile fire (+4 bonus to AC), or 25% cover (+2 bonus) if they expose themselves by engaging in melee combat or firing missiles out of the dike. Attackers cannot charge, run, or sprint over the ditch-and-dike. Large, open rooms or chambers with few features may fall into this category.

**B. Rough Outdoors Site:** Loose stones and boulders, deadwood, and patches of dense briars are arranged to form a defensible wall or rampart along the perimeter of the area of effect. Characters hiding behind the wall receive 75% cover (+7 bonus to AC), or 50% cover if they expose themselves by firing missiles or defending the wall. In hand-to-hand combat, the wall's defenders receive a +1 bonus to attack rolls; man-sized attackers must spend one full round in climbing over the wall in order to enter the *fortified* area. Natural caverns and large, cluttered chambers fall into this category, as well.

**C. Marshy or Low-lying Site:** In areas such as swamp, marsh, bog, or tundra, *fortify* cannot raise a wall or dike to cover the defenders. Instead, the spell creates a water-filled ditch around the perimeter of the area of effect. This ditch is 10 feet wide and 2 to 4 feet deep; most creatures require 1 full round to negotiate the ditch, and defenders gain a +1 bonus to attack rolls against enemies who are wading the ditch or climbing up the other side.

The fortifications are permanent, although erosion, weathering, and excavations, clearing, or filling can quickly raze the site, returning it to its original state. The material component is the shell of a snail dusted with 100 gold pieces worth of diamond powder. In Battlesystem® rules, *fortify* provides a defending unit with a +2 bonus to its AR against missile and melee attacks, but no bonus against missile attacks in marshy or low-lying areas.

## Summon Animal Spirit

**(Necromancy)**

Sphere: Summoning
Range: 10 yds./level
Duration: 1 round/level
Area of Effect: Special
Subtlety: +4
Sensory: Moderate visual
Components: V, S, M
Casting Time: 6
Saving Throw: None
Knockdown: d8
Critical: Medium (1 hit) slashing

This spell summons a minor spirit or entity to the caster's aid. Clerics usually summon minor elementals of some kind, while shamans typically conjure an animal spirit or spirit of nature. Regardless of the spirit's origin, it appears as a ghostly beast of some kind—wolves, bears, tigers, or lions are most common. The *animal spirit* obeys the mental commands of the priest, attacking his enemies or performing any other task that it could reasonably accomplish. The creature is incorporeal and cannot handle or manipulate objects of any kind, but it can see and hear as a normal animal of its archetype and could be used to scout a dangerous area or act as a distraction of some kind.

In combat, the *animal spirit* has the following statistics: MV 24; AC 4; THAC0 15; Dmg 2d4. It can only be injured by magical weapons and can strike monsters hit only by +1 or better weapons. The spirit has a number of hit points equal to 10 plus the caster's level, so a 6th-level priest conjures a animal spirit with 16 hit points. The creature is not affected by *charm*, *sleep*, *hold*, or other mind-affecting spells and suffers no damage from cold-based attacks. However, it is vulnerable to *dispel magic* or turning as an undead monster of the caster's Hit Dice. If the *animal spirit* is turned, destroyed, or dispelled, the priest who summoned it must make a saving throw vs. spell or be stunned for 1d4 rounds.

Because the spirit is intelligent and free-willed under the caster's direction, the priest need not concentrate in order to direct its attacks—an *animal spirit* could be ordered to attack a spellcaster in the back of an enemy party, while the cleric waded into hand-to-hand combat. The *animal spirit* makes use of flank or rear attacks when it can and gains any normal combat bonuses that a living creature in its position would be entitled to. The priest enjoys instantaneous, silent communication with the *animal spirit* and can order it to stop attacking, to change its target, or to undertake almost any conceivable action desired. However, the spirit must remain within the spell's range; if it is ever more than 10 yards per caster level away from the priest, it dissipates harmlessly.

The material component is a small whistle carved from a bone taken from the appropriate type of animal.

## Hold Poison

**(Necromancy)**

Sphere: Healing
Range: Touch
Duration: 1 day/level
Area of Effect: Creature touched
Subtlety: +3
Sensory: None
Components: V, S, M
Casting Time: 1
Saving Throw: None
Knockdown: None
Critical: None

This spell is an improved version of *slow poison*, with a duration measured in days rather than hours. When cast upon a victim who has been poisoned by any means, *hold poison* arrests the venom and prevents it from doing any additional damage to the victim. (In most cases, the spell must be cast during the poison's onset time in order to be effective.) Damage that has already been inflicted is not restored, but as long as the *hold poison* is in effect, the victim can be cured or healed of damage caused by poison by any normal means.

This spell can be used to indefinitely postpone the onset of a poison if the caster chooses to continue to cast it on the poisoned character before the previous *hold poison* wears off. However, each time a new *hold poison* is used to stop the venom's advance for another few days, there is a 2% cumulative chance that the spell fails and the poison runs its course. Evil priests have been known to deliberately poison a person and then use this spell to grant the victim a stay of death for a few days. This can be an extremely effective threat if the victim doesn't have access to a *neutralize poison* spell.

The material component is the priest's holy symbol and a bud of garlic, crushed and smeared on the injury (or eaten if the poison was ingested).

## Repair Injury

**(Necromancy)**

Sphere: Healing
Range: Touch
Duration: Instantaneous
Area of Effect: Creature touched
Subtlety: +5
Sensory: None
Components: V, S
Casting Time: 1 turn
Saving Throw: None
Knockdown: None
Critical: None

*Repair injury* is intended for use in campaigns featuring the critical hit or critical strike rules. This spell addresses one specific injury or wound (see Chapter 8). It can be used to knit a broken bone, alleviate the swelling and pain of a sprain or a twist, or repair soft-tissue damage such as an injured eye, ear, or a severed tendon. If used as a simple curing spell, *repair injury* restores 1d10+1 hit points to the injured character, but if used to address the effects of a specific injury, *repair injury* automatically removes one grazed, struck, injured, or broken condition, and alleviates any combat, movement, or maximum hit point penalties associated with the injury in question. The spell does not

restore any lost hit points to the victim, other than the 1d10+1 that are incidental to the working of the spell.

*Beran, a fighter with 44 hit points, is struck by an ogre's club. The blow inflicts 12 points of damage, but Beran also suffers a broken hip. This injury will reduce him to a maximum of 25% of his normal total, so Beran's current hit points drop from 32 to 11 after the battle ends. In addition, he is not capable of moving or attacking due to the effects of the injury.*

*When the smoke clears, Talmos the priest comes to Beran's aid. Using* repair injury*, he knits Beran's broken hip. The spell cures 6 hit points in the process. Beran no longer suffers the movement or attack penalties for a broken hip and has 17 hit points to his credit. With time or additional healing, he can regain his normal total of 44.*

*Repair injury* is also helpful in dealing with wounds that fall in the crushed, shattered, or destroyed category. This spell reduces the severity of the injury to the broken level, which means it heals as if it were 20d6 lost hit points. Only one repair injury can be used on any given wound, so a character with a shattered knee could still require a lot of time to recover after an application of this spell.

Severed limbs, destroyed eyes or ears, and ability score losses caused by injuries cannot be healed by this spell. Repair injury is the equivalent of cure serious wounds for the purpose of slowing or stopping bleeding.

## Unfailing Premonition

**(Divination)**

Sphere: Time

| | |
|---|---|
| Range: 0 | Components: V, S |
| Duration: 1 turn + 2 rds./level | Casting Time: 6 |
| Area of Effect: The caster | Saving Throw: None |
| Subtlety: +3 | Knockdown: None |
| Sensory: None | Critical: None |

By anticipating possible futures and outcomes of the caster's actions, this spell provides the character with a temporary sixth sense or feel for danger. The spell operates on a subconscious level, and the caster receives strong intuitive impulses when he contemplates courses of action that may bring immediate physical injury or harm to him. For example, if the priest was about to open a trapped chest, the *unfailing premonition* would create a flash of insight or a gut feeling telling him that he shouldn't do so. Similarly, opening a door that leads into the lair of a ferocious troll may also trigger the spell's warning. Threatening a NPC who is likely to respond by drawing a weapon and attacking the PC would create a warning, but threatening a NPC who will get even with the priest in an hour or two will not trigger the *premonition*.

The *unfailing premonition* is also quite useful in combat, as long as the priest obeys his instincts and ducks, dodges, or withdraws when his subconscious tells him to. While the spell is in effect, the priest gains a +2 bonus to his Armor Class and saving throws, but in any given round there is a 25% chance that he will have to forego his

intended action in order to obey the spell's warning impulses.

The *premonition* only works on actions undertaken by the priest himself. If his companion is about to pull a mysterious lever that will drop a 10-ton block of stone on the priest, he receives no warning.

## Weather Prediction

**(Divination)**

Sphere: Weather
Range: 0
Duration: Instantaneous
Area of Effect: The caster
Subtlety: +5
Sensory: None
Components: V, S
Casting Time: 1 rd.
Saving Throw: None
Knockdown: None
Critical: None

By casting this spell, the priest can predict the weather conditions at his location for a period of time equal to one day per level. The caster becomes aware of the prevailing conditions, trends, and weather systems that may affect his present location. Temperature, wind speed and direction, cloud cover, and precipitation can all be predicted with 95% accuracy for the next day, less 10% for each day after that. In other words, the priest's prediction is 95% accurate for the first day, 85% accurate for the second, 75% accurate for the third, and so on. In addition, magical or supernatural phenomena cannot be predicted.

Priests of powers concerned with weather may use this spell to determine the best time for certain ceremonies or observances. Other priests find *weather prediction* useful for planning journeys or selecting campsites.

## Wind Servant

**(Conjuration/Summoning)**

Sphere: Elemental (Air)
Range: 20 yds./level
Duration: 1 rd./level
Area of Effect: Special
Subtlety: +3
Sensory: Moderate audio/tactile
Components: V, S
Casting Time: 6
Saving Throw: None
Knockdown: None
Critical: None

This spell allows the priest to exert fine control over air currents and winds, possibly extinguishing small fires or manipulating light objects as he sees fit within the spell's range. Generally, the priest is limited to one discrete action per round since he must focus his wind servant tightly on any given task. The *wind servant* can affect objects or creatures weighing up to 1 pound per caster level, twice as much if the object is reasonably light or airy (a cloak, scroll, or haystack, for instance), or 10 times as much if the object is designed to be carried by the wind, such as a ship's sail or a bird in flight.

If an object is within the spell's weight limit, the caster may direct the *wind servant* to carry it along in gusts and air currents at a flying movement rate of 12 (E). If

the object leaves the limits of the spell's range, the *wind servant* fails, and the object drops or falls normally from that point. Flying creatures of size M or smaller can be forced to land or be driven away by use of the spell if they fall within the weight limit, or slowed by 50% if they exceed the weight limit. Employing the *wind servant* against an arrow or light missile adds a penalty of –4 to the attack roll.

In dusty, snowy, or sandy regions, the caster can instead use *wind servant* to create a vicious zephyr of stinging dust around an enemy. This zephyr inflicts damage equal to the opponent's base AC less 2d6 points and creates a –2 penalty to the victim's attack rolls. For example, an enemy in leather armor +1 (AC 7) would suffer 7 – 2d6 damage if attacked by means of this spell. Note that any use of the *wind servant* requires the priest's undivided attention; he can take no other actions while directing the spell.

## Fourth-Level Spells

### Adamantite Mace

**(Alteration)**

Sphere: Elemental (Earth)
Range: Touch
Duration: 1 rd./level
Area of Effect: Caster's weapon
Subtlety: +5
Sensory: Small visual
Components: V, S, M
Casting Time: 7
Saving Throw: None
Knockdown: d12
Critical: Medium (1 hit) impact

By means of this spell, the priest transmutes his own cudgel, mace, or staff into an enchanted weapon of adamantite, the most magical mineral known. The *adamantite mace* gains a +2 bonus to attack and damage rolls, but it can strike creatures normally hit only by +4 or better weapons. As an incarnation of elemental earth, the mace inflicts up to twice the damage (roll twice the required damage dice) against creatures of elemental air or magical avians such as griffons, perytons, pegasi, and winged baatezu or tanar'ri. The *adamantite mace* retains its special properties for one round per level of experience of the caster.

The material component is a special powder made from a diamond worth 100 gp, sprinkled over the weapon.

### Dimensional Anchor

**(Alteration)**

Sphere: Guardian
Range: 10 yds./level
Duration: 1 turn + 1 rd./level
Area of Effect: 1 creature
Subtlety: +2
Sensory: Moderate visual
Components: V, S
Casting Time: 1
Saving Throw: None
Knockdown: None
Critical: None

When a priest casts this spell, a green ray springs from his outstretched hand and

unerringly strikes a creature within line of sight and the range of the spell, covering the subject with a shimmering emerald field that completely blocks bodily extradimensional travel. Forms of movement barred by the *dimensional anchor* include *blinking, dimension door, etherealness, gate, phasing, plane shift, maze, shadow walk, teleportation,* and similar spell-like or psionic abilities. The field persists for one turn plus one round per caster level and has no effect other than blocking extradimensional travel. The *dimensional anchor* does not interfere with the movement of creatures in astral form, nor does it block extradimensional perception or attack forms such as a basilisk's gaze.

## Entrench

**(Alteration, Invocation/Evocation)**

Sphere: War
Range: 60 yds.
Duration: Permanent
Area of Effect: 10-ft. cube/2 levels
Subtlety: +3
Sensory: Moderate visual
Components: V, S, M
Casting Time: 3 rds.
Saving Throw: None
Knockdown: None
Critical: None

An improved version of the *fortify* spell, entrench has much the same effect, but prepares an even more formidable set of defenses. Like *fortify, entrench* may be used to prepare an open outdoors area such as a field or grassland, or a rough outdoors area such as a hillside or forest. Large rooms or chambers may be *entrenched* as well. In addition to the ditches and ramparts of the fortify spell, *entrench* makes use of local materials to create a small palisade and an array of stakes or sharp stones to discourage attackers.

**A. Open Outdoors Site:** A rampart or dike of earth faced by a staked ditch rises from the ground along the perimeter of the site. Creatures defending the dike receive 75% cover against missile fire (+7 bonus to AC), or 25% cover (+2 bonus) if they expose themselves by engaging in melee combat or firing missiles out of the dike. Attackers cannot charge, run, or sprint over the rampart, and must spend one full round negotiating the defenses in order to attack. The dike's defenders receive a +1 bonus to attack rolls against any creatures trying to move through the stakes or stones.

**B. Rough Outdoors Site:** Loose stones, deadwood, and briars are arranged to form a defensible wall along the perimeter of the area of effect, faced by an array of sharp stakes or stones. Characters hiding behind the wall receive 90% cover (+10 bonus to AC), or 50% cover (+4 bonus) if they expose themselves by firing missiles or defending the wall. Attacking creatures cannot run, charge, or sprint through the defenses, and must spend one full round to get through the stakes plus an additional round climbing over the wall in order to enter the fortified area. The wall's defenders gain a +1 bonus to attacks against creatures negotiating the defenses.

**C. Marshy or Low-lying Site:** In swamps or bogs, *entrench* creates a water-filled ditch around the perimeter of the area of effect. This ditch is 15 feet wide and 3 to 6 feet deep; most creatures require two full rounds to negotiate the ditch and climb up the far side, and defenders gain a +1 bonus to attack rolls against enemies who are wading the ditch or climbing up the other side.

The fortifications created by this spell are permanent, although erosion,

weathering, and clearing or filling can return the site to its original state. The material component is the shell of a giant nautilus. In the Battlesystem rules, *entrench* provides the defending units with a +3 bonus to their AR versus missile and melee attacks, but only a +1 bonus against missile attacks in marshy areas.

## Omniscient Eye

**(Divination)**

Sphere: Divination
Range: 0
Duration: 1 turn + 1 rd./level
Area of Effect: The caster
Subtlety: +5
Sensory: None
Components: V, S, M
Casting Time: 7
Saving Throw: None
Knockdown: None
Critical: None

This divination enhances the caster's vision by allowing him to see through any normal or magical darkness, fog, or mist to a range of 60 feet. In addition, the caster has a chance of piercing magical illusions, blending, and invisibility equal to 70% plus 1% per level of experience, less 2% per spell level. For example, a 7th-level priest has a 70% + 7% - 4%, or 73% chance, to spot a wizard concealing himself by using the 2nd-level spell *invisibility*.

Unlike the 5th-level spell *true seeing*, the *omniscient eye* does not grant the caster the ability to perceive secret doors, traps, lost or misplaced objects, or creature alignments; it simply ensures that the caster can see the surroundings as they would appear without the interference of weather, lighting, or illusionary magic. Thus, the *omniscient eye* can be deceived by careful camouflage, concealment, or other purely physical precautions. Other phenomena that may bypass this spell's power include psionic invisibility, true transparency, or extradimensional objects or creatures.

The material component of this spell is a special ointment for the eyes that is composed of rare powders and herbs. The ointment costs at least 100 gold pieces for a single application.

## Recitation

**(Abjuration, Invocation/Evocation)**

Sphere: Combat
Range: 0
Duration: 1 rd./level
Area of Effect: 60-ft. radius
Subtlety: +5
Sensory: Moderate audio
Components: V, S, M
Casting Time: 7
Saving Throw: None
Knockdown: None
Critical: None

By reciting a sacred passage or declaration, the priest invokes his deity's blessing upon himself and his allies, while causing confusion and weakness among his enemies. All creatures within the area of effect at the instant of the spell's completion are affected. Allies of the priest gain a +2 bonus to attack rolls and saving throws, or a +3 bonus if

they are of the same faith (not just alignment) as the caster. Enemies suffer a –2 penalty to attack rolls and saving throws. After the *recitation*, the priest is free to take further actions during the spell's duration as he sees fit—he need not concentrate to maintain the spell. As a result, it is possible for the priest to cast a *prayer* spell, which increases the bonuses and penalties provided to +3 and –3 respectively. If another priest is using *chant* at the same time, then the bonuses and penalties given by it are also allowed to add to the total.

The material spell component is the priest's holy symbol and a copy of whatever text or scroll he holds sacred. Neither are consumed by the spell.

## Suspended Animation

**(Necromancy)**

Sphere: Necromantic
Range: Touch
Duration: Special
Area of Effect: Creature touched
Subtlety: +8
Sensory: None
Components: V, S, M
Casting Time: 4
Saving Throw: None
Knockdown: None
Critical: None

By using this spell, the caster can place one willing subject in a state of *suspended animation*. The victim's breathing, heartbeat, and other vital processes slow to the point of nonexistence, although he or she seems to be deeply asleep, not dead. A caster of 7th to 10th level can maintain the suspended animation for up to one week plus one day per level; a caster of 11th to 15th level can maintain the state for up to one month plus one week per level; and a caster of 16th level or higher can place someone in *suspended animation* for one year plus one month per level.

This spell has many useful applications. First, all bodily or mental afflictions become quiescent during the victim's slumber. Poison, insanity, and many curses (lycanthropy, geas, and mummy rot included) can be arrested, if not cured, and have no effect on the subject while he sleeps. Of course, if the spell is broken prematurely, all the conditions that were halted by the spell will start once again. Second, the subject requires no food or water, but he still needs air and dies if deprived of oxygen. Third, for every month that the subject is in *suspended animation*, he recovers one hit point.

The caster can awaken the subject at any time within the spell's duration, although he must be in the subject's presence to do so. Optionally, the priest may pre-specify an amount of time within his normal duration or a special condition to awaken the sleeper. A condition must include a physical stimulus to the subject, such as a change in temperature, the touch of the sun, the kiss of a princess, or whatever the priest desires. If the priest maintaining the spell dies or is not able to awaken the sleeper, then the subject can be taken to another priest of the same deity to be awakened.

If the subject is attacked, he is completely helpless and can be killed by a single blow. However, if the subject is attacked without being slain for some reason, he gains a saving throw vs. spell each round to emerge from his suspended animation. The subject will be extremely groggy and disoriented if his slumber is disturbed in this fashion, suffering a –2 penalty to all die rolls for 1d6 turns, but if he awakens in the normal or

prescribed fashion, he is disoriented for only one round.

Some of the drawbacks to this spell affect the casting priest. First of all, it takes all of the priest's concentration to cast and maintain this spell. This means that the priest cannot cast any other spell while a subject is being held under the influence of the *suspended animation*. For each week that the subject is in *suspended animation*, the priest loses one point of Constitution. This happens each week until the priest transfers the spell to another priest of the same alignment. Transferring this spell requires a successful saving throw vs. spell. If the saving throw is successful, then the priest who transfers the spell can start recovering Constitution at a rate of one point per hour of bedrest. If the saving throw doesn't succeed, then the priest loses another point of Constitution and cannot try to transfer the spell again for 8 hours. Either way, because of the temporary lapse of the spell, the subject will automatically lose 1 hit point each time a transfer is attempted.

The material component for this spell is a rare herb that must be prepared with exacting care. The treatment costs at least 200 gold pieces and requires 1d3 days of the priest's time and attention.

## Unfailing Endurance

**(Necromancy)**

Sphere: Necromantic
Range: Touch
Duration: 1 day/level
Area of Effect: 1 creature/level
Subtlety: +5
Sensory: None
Components: V, S
Casting Time: 1 round
Saving Throw: None
Knockdown: None
Critical: None

This spell enhances the natural hardiness and stamina of the affected creatures by rendering them virtually immune to fatigue or exhaustion. During the casting of the spell, the caster must touch each creature to be affected. While under the spell's influence, the subjects may force march with no penalty, engage in up to 12 hours of hard labor per day with no fatigue (or up to 16 hours with moderate fatigue), and gain a +4 bonus to Strength/Stamina or Constitution/Fitness checks. In addition, the subjects gain a +4 bonus to saving throws against spells or magical effects that cause *weakness*, *fatigue*, or *enfeeblement*. Finally, an affected creature's fatigue rating (from *Player's Option: Combat & Tactics*) is doubled, and the subject gains a +4 bonus to his saving throws to recover from a fatigued or exhausted state.

## Windborne

**(Conjuration/Summoning)**

Sphere: Elemental (Air)
Range: 0
Duration: Special
Area of Effect: The caster
Subtlety: +5
Components: V, S, M
Casting Time: 7
Saving Throw: None
Knockdown: None

Sensory: Moderate visual Critical: None

This spell provides a priest of elemental air with the ability to conjure a powerful column of wind that can bear his weight, permitting him to fly or glide for long distances. If used from a high place such as a mountainside or tower, the caster can glide a maximum horizontal distance of 20 feet per foot of initial altitude—for example, if the priest used this spell and launched himself from a hilltop 800 feet high, he could glide a maximum distance of 16,000 feet, or about 3 miles.

If *windborne* is cast by a priest on level ground, the initial gust carries him aloft to a maximum altitude of 10 feet per caster level. From that point, he may then glide 10 feet per foot of initial altitude. For example, a 7th-level priest would ascend to an altitude of 70 feet and thus be able to glide for a total horizontal distance of 700 feet. He can choose to glide for a much shorter distance, but never less than his initial altitude.

While gliding, the priest moves at a rate of 15 (or about 450 feet) with a maneuverability class of D. Each round, he drops between 20 and 40 feet. He can choose to descend at a much more rapid pace, dropping up to 200 feet per round without risk of a damaging impact upon landing. The caster doesn't gain a mastery of aerial combat with this spell and suffers a –2 penalty to his attack rolls and Armor Class if he becomes involved in combat while gliding.

The material component for this spell is the feather from a giant eagle .

## Fifth-Level Spells

### Animate Flame

**(Alteration)**

Sphere: Elemental (Fire)
Range: 120 yds.
Duration: 1 rd./level
Area of Effect: 1-ft. diameter/level
Subtlety: +4
Sensory: Large visual, moderate tactile/olfactory
Components: V, S
Casting Time: 8
Saving Throw: None
Knockdown: None
Critical: Varies

While using this spell, the priest can command a flame to leave its source of fuel and move at his direction. The flame is magically preserved at the intensity it possessed when animated and does not weaken or fail even if it has nothing to burn. The priest can affect any natural fire within range, but magical fires (including breath weapons) can only be animated and controlled on a roll of 11 or higher on a d20, –1 per level or Hit Dice difference between the caster and the creature or spellcaster who created the flame in question. For example, a 9th-level priest can animate a *flaming sphere* cast by a 4th level wizard on a roll of 6 or better on 1d20. In order to animate instantaneous effects such as a red dragon's breath or a *fireball*, the priest must beat his opponent's initiative in the round he casts this spell and succeed in his attempt to take control of the flame.

Under the priest's direction, an animated flame can move at a rate of 12, although it cannot cross water or wet or muddy ground. If the priest directs the flame to leave the

spell's range, the spell ends and the flame stops and burns whatever it may be resting on. *Animate flame* can be a very effective weapon; the fire attacks with a THAC0 of 10 and may be able to strike several creatures in the same round, depending on its size. It inflicts damage as shown below:

| Size | Diameter | Number of Targets | Damage |
|---|---|---|---|
| Torch or lantern | less than 1 ft. | 1 | 1d3 |
| Small campfire | 1–2 ft. | 1 | 1d4 |
| Large campfire | 3–5 ft. | 2 | 1d6 |
| Bonfire | 6–10 ft. | 4 | 2d6 |
| Conflagration | 11–20 ft. | 8 | 3d6 |
| Inferno | 21 ft. or more | 20 | 5d6 |

Creatures actually caught within the fire's diameter are automatically hit (without an attack roll) for the listed damage. Very hot or unusually cold fires may inflict damage (at the DM's discretion) as if they were one category larger or smaller. In addition to attacking the caster's enemies, the fire will naturally cause any combustibles it comes into contact with to burn, as well; an animated fire can easily torch a small town, given a few rounds to move from building to building.

The animated flame can be dispelled normally. It can also be defeated by contact with a significant volume of water, ice, cold, or earth or dirt, just as a normal fire can be drowned or smothered.

The priest can affect a single fire of up to 1 foot in diameter per level of experience; if a natural fire is too large for him to animate, he can animate a smaller portion of it and command the portion he controls. Magical fires cannot be divided in this way, so it requires a very high-level priest to deflect the breath weapon of a red dragon!

## Dimensional Translocation

**(Alteration)**

Sphere: Numbers, Summoning

| | |
|---|---|
| Range: 60 yds. | Components: S |
| Duration: 1 rd./level | Casting Time: 3 |
| Area of Effect: 1 creature | Saving Throw: Special |
| Subtlety: +1 | Knockdown: None |
| Sensory: Small visual | Critical: None |

By using this spell, the priest seals off the multidimensional existence of a magical, undead, or extraplanar creature. The affected creature can be forced entirely into its extraplanar dimension, which removes it from the physical world, or its extraplanar existence can be severed, forcing it entirely into the Prime Material Plane. If the priest's level exceeds the subject's level or Hit Dice, the subject is not allowed a saving throw, but creatures of higher level or Hit Dice than the caster are entitled to a saving throw vs. spell to negate the effect. Also note that magic resistance may apply, as well.

If used to banish an extraplanar or multidimensional creature, *dimensional*

*translocation* prevents the creature from returning to the Prime Material Plane for the duration of the spell. The creature may be able to take other actions, such as using magical items or spell-like abilities on itself while it waits to return. If the caster instead forces an extradimensional creature into the Prime Material Plane, one or more of the following effects may apply, at the DM's option:

The creature's Armor Class may be reduced by 1d6 points for the duration of the spell.
The quality of a magical weapon needed to strike the creature may be reduced by one "plus"; for example, a monster normally hit by +2 or better weapons may become vulnerable to +1 weapons for the spell's duration.
The creature may suffer permanent death upon the loss of all its hit points.
Use of 1d6 spell-like powers (such as *gating* in allies) may be limited or negated.
Undead creatures lose the ability to drain life energy levels.

This spell does not prevent extradimensional travel on the Prime Material Plane (i.e., *dimension door, blinking, teleport*, or similar effects), but it does prevent the subject from *plane shifting* or becoming *ethereal* while in effect.

## Impregnable Mind

**(Enchantment/Charm)**

Sphere: Protection, Thought
Range: Touch
Duration: 1 turn + 1 rd./level
Area of Effect: Creature touched
Subtlety: +2
Sensory: None
Components: V, S
Casting Time: 1
Saving Throw: None
Knockdown: None
Critical: None

This spell guards the spell recipient against magical or psionic attacks that affect the mind. This includes *beguiling, charm, domination, feeblemind, hold*, and similar effects, as well as most telepathic psionic powers and attacks. Against magical influences, *impregnable mind* grants a +4 bonus to saving throws; if the attack normally allows no saving throw, the spell recipient may attempt one at no modifier. Against telepathic psionics, the spell inflicts a –6 penalty to the attacking psionicist's power checks, making it more likely that a psionic attack or telepathic contact will fail. *Impregnable mind* offers no protection against nontelepathic psionics, such as a telekinetic thrashing or other psionics that affect the body.

## Othertime

**(Alteration)**

Sphere: Time
Range: 0
Duration: Special
Area of Effect: The caster
Components: V, S, M
Casting Time: 7
Saving Throw: None

Subtlety: +5 Knockdown: None
Sensory: Small visual Critical: None

When a priest enters *othertime*, he steps into a different reality in which the world around him is frozen at a moment in the future. Until time catches up to him, he may move about unhindered and observe his surroundings; no force known can detect his presence or harm him in the alternate reality, although he in turn cannot affect any creature or object in the physical world. For instance, he could read a book at the page it was opened to, but he could not turn the page since that would require him to move an object that is temporarily immovable for him. To his companions or enemy in real time, the priest appears to simply vanish altogether, only to reappear at some later point.

The duration of this spell is a little odd, to say the least. The priest may choose a duration of up to 1 round at 7th to 9th level, 2 rounds at 10th to 12th level, 3 rounds at 13th to 16th, 4 rounds at 17th to 19th, up to a maximum of 5 rounds at 20th level or higher. The duration chosen by the priest governs the length of the *othertime*; if the priest decides that the spell will last 2 rounds, then he is instantly transported to that point in time, surrounded by the frozen still-life of the world as it will appear 2 rounds after the priest cast *othertime*. The caster then has 2 rounds to himself to take any actions he cares to, although he cannot affect the real world by any physical, magical, or mental means.

While the caster is in the *othertime*, he is completely unaware of the intervening events. In the example above, if the caster's friends were *teleported* away 1 round after the caster left and replaced by an identical group of dopplegangers, the caster would have no chance to detect the switch; all he sees are the bodies of his "friends," frozen in the positions they will occupy when he emerges from the *othertime*. This also means that nasty things like dragon breath, *cloudkills*, or *mind blasts* that pass through the spot where the caster happens to be have no effect on him—he simply does not exist in the real world while he waits for everyone else to catch up to him.

As noted above, the caster gains an amount of subjective time equal to the duration of the spell. By leaping 3 rounds into the future, the caster gains 3 rounds of actions in the *othertime*. He could drink a potion, cast a spell, and then maneuver for an attack, for example, or he could gain a 3-round head start by running for his life while no one else can pursue him. If the priest uses this time to study a battle and position himself for an attack, he gains a –4 bonus to his initiative roll on the round he emerges from *othertime*, and a +4 attack bonus with his first strike.

Leaping in and out of the time stream is a dangerous activity; every time the priest employs this spell, there is a 1% noncumulative chance that he becomes stuck in *othertime*, doomed to death by thirst or starvation when his own rations run out. Only the most extraordinary measures (a *wish* spell, divine intervention, etc.) can save a character in this predicament. Once a priest is in *othertime*, he cannot pray for further spells. After all, if the priest is going to attract his deity's attention by praying for spells, the deity will most likely allow him out! The material component for this spell is an hourglass filled with rare salts, worth at least 100 gold pieces.

## Produce Ice

**(Conjuration/Summoning)**

Sphere: Elemental (Water)
Range: 60 yds.
Duration: 2 rds./level
Area of Effect: Cube 1 ft./level
Subtlety: +5
Sensory: Moderate visual, small tactile
Components: V, S, M
Casting Time: 8
Saving Throw: Special
Knockdown: None
Critical: None

This spell creates supernatural cold in the area of effect, condensing all atmospheric and standing water into a thick rime of ice. If there is no source of water or even enough humidity to support this spell, then the DM can rule that the spell has no effect. The caster affects a cubic area of 1 foot per level to a side, so a 12th-level caster affects a 12-foot by 12-foot by 12-foot cube (up to a maximum of 25 feet to a side). This can have several effects; first of all, any creature caught in the area of effect when the temperature is lowered suffers 2d4 damage plus 1 point per level of the caster (or 2d4+12, for the 12th-level caster described above), or half that damage with a successful saving throw vs. spell. Any fires in the area are suppressed and may (50% chance) be extinguished.

Creatures entering the area of effect after the initial creation of ice suffer no additional damage, although the air will be noticeably dry and cold. However, the ice formed by the spell coats all surfaces and may cause creatures to slip and fall. Any creature moving into or out of the affected area must make a saving throw vs. spell or fall, losing their action for the round. The ice lasts at least 2 rounds per caster level, and then begins to melt at whatever rate nature decrees.

If cast on a body of water, this spell creates an iceberg of the stated dimensions. A swimmer or aquatic creature could be caught in the ice and trapped until the ice melts; most air-breathers will suffocate from this treatment, but a few aquatic creatures (fish, amphibians, etc.) may survive being frozen, at the DM's discretion.

The material component is a scale from a white dragon.

## Righteous Wrath of the Faithful

**(Enchantment/Charm)**

Sphere: War
Range: 0
Duration: 1 rd./level
Area of Effect: 30-ft. radius
Subtlety: +5
Sensory: None
Components: V, S, M
Casting Time: 8
Saving Throw: None
Knockdown: None
Critical: None

When a priest casts this spell, he fires his allies and companions with a divine madness or fury that greatly enhances their combat ability. Allies who are fighting on the side of the priest are affected as if they had received an aid spell, gaining a +1 bonus to attack rolls and saving throws, plus 1d8 additional hit points for the duration of the spell.

Allies who share the same faith (not just alignment) of the caster are transported into the *righteous wrath*; they gain one additional melee attack each round and a +2 bonus to saving throws and attack and damage rolls. Creatures under the influence of the *righteous wrath* gain 1d8 additional hit points, which are the first points lost if the subject

sustains any injury (see *aid*, on page 257 of the *PHB*). Characters in a state of divine frenzy are difficult to *charm* or *hold*. Against spells or effects that target the subject's mind or emotions, the saving throw bonus increases to +3.

When the spell ends, all remaining additional hit points are lost. Characters who fought under the righteous wrath find themselves extremely fatigued and must rest for one full turn before exerting themselves again; if forced to fight in this state, they are treated as if they were *exhausted* under the *Combat & Tactics* fatigue rules. The material component of this spell is the priest's holy symbol.

## Sixth-Level Spells

### Command Monster

**(Enchantment/Charm)**

Sphere: Charm
Range: 60 yds.
Duration: 1 rd./2 levels
Area of Effect: 1 creature
Subtlety: +1
Sensory: Small audio
Components: V
Casting Time: 1
Saving Throw: Special
Knockdown: None
Critical: None

This spell allows the priest to issue a *command* to any one creature within the spell's range. The magic of the spell translates the priest's order into a language or form the subject creature can understand. The creature must have an Intelligence of at least 1 in order to be affected by this spell; nonintelligent creatures (those with a score of 0) cannot comprehend any order, no matter how the priest phrases it. Other creatures gain a saving throw vs. spell to resist *command monster*, but only if they have an Intelligence of Exceptional (15) or better, or the creature's levels or Hit Dice are equal to or greater than the caster's.

Just like the 1st-level spell *command*, this spell coerces the subject into obeying the priest's one-word order to the best of its ability. The order must be absolutely clear and unequivocal; the subject will continue to obey for one round per two caster levels—six rounds at 12th level, seven at 14th, and so on. If this action places the subject in mortal peril, he may attempt a saving throw (whether he was originally entitled to one or not) in order to break free of the spell's power. Therefore, ordering a character standing at the edge of a cliff to "jump" will create an opportunity for the subject to break free. A command to "die" or "sleep" renders the creature unconscious for the spell's duration.

Undead creatures are immune to this spell.

### Entropy Shield

**(Abjuration)**

Sphere: Chaos
Range: 0
Duration: 1 rd./level
Components: V, S, M
Casting Time: 9

Area of Effect: The caster
Subtlety: +5
Sensory: Moderate visual/tactile
Saving Throw: None
Knockdown: None
Critical: None

This potent defense surrounds the caster in a chaotic maelstrom of energy and demimatter that blocks or deflects many attacks. The *entropy shield* extends about two feet in all directions from the caster's body. The warping effect of the field causes any melee or hand-to-hand attack to miss 50% of the time—even if the roll allows an attack to continue, the priest still gains a –2 bonus to his Armor Class. Normal missiles or hurled weapons miss automatically as the *entropy shield* deflects them from the caster. Even magical missile attacks (*produce flame, magic missile,* or *Melf's acid arrow,* for example), siege engines, and giant-thrown boulders may be deflected as if they were hand-to-hand attacks.

Against spells or effects that produce energy, gas, or other physical attack forms (*fireball, lightning bolt, cloudkill,* and other such spells) the *entropy shield* provides a 50% chance that the attack simply does not affect the protected priest. Even if the harmful energy or matter penetrates the shield, the caster gains a +2 bonus on his saving throw. This does not cause a spell to fizzle or fail; a priest standing in the middle of a *fireball* is simply not touched by the spell, which will inflict its normal damage on anyone else in the area of effect. Any spell or effect that does not create matter or energy to harm or hinder the victim can pass through the *entropy shield* normally, so mind-based attacks and magical effects such as *petrification, paralyzation, enfeeblement*, or *polymorph* (to name a few) can still affect the priest.

In addition to its defensive benefits, the *entropy shield* has the ability to repel normal or giant-sized animals and creatures of lawful alignment, such as extraplanar monsters from the lawful planes. Any such creature attempting to attack the shielded priest in hand-to-hand combat must roll a saving throw vs. spell at the end of the round. If the creature fails, it recoils from the priest and cannot attack him physically for the remainder of the spell's duration (although it could decide to turn on one of the priest's companions).

The material component for this spell is a gemstone worth at least 100 gold pieces that has been exposed to the chaotic energies of Limbo.

## Whirlwind

**(Invocation/Evocation)**

Sphere: Elemental (Air)
Range: 60 yds. + 10 yds./level
Duration: 1 rd./level
Area of Effect: Cone 10 ft. wide at base and 30 ft. tall
Subtlety: +6
Sensory: Huge visual/audio, large tactile
Components: V, S, M
Casting Time: 9
Saving Throw: Special
Knockdown: d20
Critical: Large (1d3 hits) crushing

This spell creates a powerful cyclone of raging wind that moves as directed by the

priest. The *whirlwind* can move by zigzagging along the ground or over water at a movement rate of 6. The *whirlwind* always moves after all other creatures have moved, and many creatures can avoid it simply by keeping their distance. If the cyclone exceeds the spell's range, it moves in a random, uncontrolled fashion for 1d3 rounds—possibly endangering the caster or his allies—and then dissipates.

Any creature of size L (large) or smaller that comes in contact with the *whirlwind* must make a saving throw vs. breath weapon or suffer 2d8 damage. Size M (man-sized) or smaller creatures who fail their first saving throw must attempt a second one, or be picked up bodily by the *whirlwind* and held suspended in its powerful winds, suffering 1d8 points of damage each round with no save allowed. The caster may direct the cyclone to eject any carried creatures whenever he wishes, depositing the hapless souls wherever the *whirlwind* happens to be when they are released.

Maintaining the *whirlwind* requires the caster's full attention, and he cannot cast other spells or make any attacks while directing the spell's course. If his concentration fails for some reason, he cannot simply cancel the spell. Instead, the spell becomes uncontrolled as described above and dissipates after 1d3 rounds.

In truly desperate circumstances, priests of elemental air have been known to deliberately overrun their companions in order to carry them out of the path of some certain doom. Few care to repeat the experience. The material component for this spell is a handful of dust collected from a zephyr or snow from a williwaw.

## Seventh-Level Spells

### Antimineral Shell

**(Abjuration)**

Sphere: Protection, Elemental (Earth)

| | |
|---|---|
| Range: 0 | Components: V, S, M |
| Duration: 1 turn/level | Casting Time: 1 round |
| Area of Effect: 10-ft. radius | Saving Throw: None |
| Subtlety: +6 | Knockdown: None |
| Sensory: None | Critical: None |

When a priest casts this spell, he creates an invisible force field or barrier that blocks the entrance of animated or living mineral creatures. It is effective against elementals and creatures of elemental origin such as aerial servants, djinns, and mephits; golems and other constructs; creatures of living stone, such as galeb duhr or xorn; and objects, weapons, or armor animated by some outside force. It does not bar the passage of undead monsters, living creatures carrying inanimate material, or nonanimated minerals such as a giant-thrown boulder or a common rockslide. The *antimineral shell* moves with the caster, but if the caster tries to force it against a creature affected by this spell, the *antimineral shell* fails. The material component is a drop of some caustic solvent, such as acid from a black dragon.

### Conjure Air or Water Elemental

**(Conjuration/Summoning)**

**Reversible**

Sphere: Elemental (Air/Water)
Range: 80 yds. Components: V, S
Duration: 1 turn/level Casting Time: 6 rds.
Area of Effect: Special Saving Throw: None
Subtlety: +5 Knockdown: None
Sensory: Moderate visual Critical: None

Priests of elemental air or elemental water can summon elementals from their respective spheres, just as druids can conjure fire or earth elementals. The summoned elemental is 60% likely to have 12 Hit Dice, 35% likely to have 16 Hit Dice, and 5% likely to have 21 to 24 Hit Dice (20+1d4). Unlike the wizard version of this spell, the caster does not need to concentrate to maintain control of the elemental since the creature regards the caster as a friend and obeys him implicitly. The elemental remains until destroyed, dispelled, sent away by a dismissal or a *holy word* spell, or the spell duration expires.

## Impervious Sanctity of Mind

**(Abjuration)**

Sphere: Protection, Thought
Range: 0 Components: V, S, M
Duration: 1 turn/level Casting Time: 1 round
Area of Effect: The caster Saving Throw: None
Subtlety: +6 Knockdown: None
Sensory: None Critical: None

When using this spell, the priest renders his mind completely immune to any mind-affecting spell, power, or psionic effect. This includes *amnesia, awe, beguiling, charm, command, confusion, domination, emotion, empathy, ESP, fascination, fear, feeblemind, hold, hypnotism, insanity, magic jar, mind blast, phantasmal killer, possession, rulership, sleep, soul trapping, suggestion, telepathy,* and any psionic attack or power of the telepathic discipline. In short, if the spell or effect coerces the priest into taking an action or forming an impression that he doesn't wish to, it fails while *impervious sanctity* of mind is in effect. The only mind-affecting spells or powers that can affect the protected priest are those of exceedingly powerful creatures or artifacts and relics.

Unlike the wizard spell *mind blank*, the *impervious sanctity* of mind offers no protection against detection or scrying. However, it is effective against some attacks and powers that *mind blank* is powerless against. The spell requires a small ring of lead that was once breathed upon by a red dragon.

## Tsunami

**(Conjuration/Summoning)**

Sphere: Elemental (Water)
Range: 200 yds. + 50 yds./level
Duration: Special
Area of Effect: Wave 2 ft. high and 10 ft. long per level
Subtlety: +6
Sensory: Gargantuan visual, huge audio

Components: V, S, M
Casting Time: 3 rds.
Saving Throw: None

Knockdown: Special
Critical: None

This mighty spell summons a tsunami, or gigantic wave, from any major body of water. The body of water must be at least 1 mile in width, so in most circumstances the *tsunami* can only be summoned from the sea, large lakes, or extremely big rivers. The wave is 2 feet high and 10 feet long for each level of experience of the caster, so a 15th-level priest would summon a *tsunami* 30 feet high and 150 feet wide. The wave can appear anywhere within the spell's range and immediately sweeps forward in the direction specified by the caster. This may take it out of the allowed range or even back at the casting priest. The *tsunami* moves at a rate of 24 (240 yards per round) and lasts one round at 14th level, two rounds at 18th level, or three rounds at 22nd or higher level.

Ships caught by the *tsunami* must make a seaworthiness check (see Table 77: Ship Types in the *DMG*) with a penalty equal to the wave's height in feet. For example, a *tsunami* created by a 15th-level caster would inflict a –30% penalty to a vessel's seaworthiness check. If the check is failed, the vessel capsizes and sinks in 1d10 rounds, with the possible loss of those aboard. Human or humanoid swimmers caught in the wave must make a saving throw vs. death magic or be drowned in the wave; any creature in the water in the wave's path will be carried along as long as it lasts.

If the priest sent the wave towards the shore, the *tsunami* loses 5 feet of height for every 20 yards it travels; a 30-foot wave could wash 120 yards inland before there was nothing left of it. Creatures caught in the area sustain 1d4 points of damage for every 5 feet of height the *tsunami* currently possesses and are carried along until it ends. Air-breathing creatures must make saving throws vs. death magic or be drowned outright by this treatment. Wooden buildings have a chance equal to three times the wave's current height of being destroyed by the *tsunami* (90% for a 30-foot wave, for example) while stone buildings have a chance equal to the wave's height (or 30% for a 30-foot wave). Topography may influence or channel the wave's advance, so a good-sized hill could stop a tsunami cold, although its seaward face may be denuded of creatures and vegetation by the wave.

Note that this spell in the hands of a high-level character can blanket an awesome amount of territory and literally destroy or drown anything in its path. The *tsunami* is so strenuous a spell that the priest is exhausted and helpless for 1d6 hours after summoning it.

*Italicized* spells are reversible. **Boldfaced** spells can be found in the *Tome of Magic*. SMALL CAPITALIZED spells appear in *The Complete Wizard's Handbook*. Underlined spells are introduced in Appendix 1 of this book. As mentioned in Chapter 2, some spells have been reassigned to the school of universal magic.

In the PHB, clerics have major access to all, astral, charm, combat, creation, divination, guardian, healing, necromantic, protection, summoning, sun, and minor access to elemental.

**Revision: Clerics lose access to sun, elemental air, and elemental fire. They retain minor access to elemental water and elemental earth.**

Previously, druids had major access to all, animal, elemental, healing, plant, weather, and minor access to divination.

**Revision: Druids lose access to the sphere of divination. They gain major access to the sphere of sun.**

* Cooperative magic spells. **Bold** spells appear in the *Tome of Magic*. *Italicized* spells are reversible. Underlined spells are introduced in Appendix 2 of this book. As mentioned in

Chapter 3, some spells have been added to the sphere of all. Also, other spheres have been reorganized.

**All**
**(Major: any priest)**
*Bless/Curse (1st)*
Combine (1st)
Detect Magic (1st)
Orison (1st)
*Purify Food & Drink/Putrefy Food & Drink (1st)*
Chant (2nd)
**Mystic Transfer* (2nd)**
***Sanctify/Defile* (2nd)***
Dispel Magic (3rd)
*Remove Curse/Bestow Curse (3rd)*
**Focus* (4th)**
*Tongues (4th)*
**Uplift* (4th)**
Atonement (5th)
Commune (5th)
**Meld* (5th)**
Quest (5th)
*True Seeing/False Seeing (5th)*
Speak with Monsters (6th)
Gate (7th)

**Animal**
**(Major: shaman, druid)**

Animal Friendship (1st)
Calm Animals (1st)
Invisibility to Animals (1st)
Locate Animals or Plants (1st)
Charm Person or Mammal (2nd)
Messenger (2nd)
Snake Charm (2nd)
Speak with Animals (2nd)
Control Animal (3rd)
Hold Animal (3rd)
Summon Insects (3rd)
Animal Summoning I (4th)
Call Woodland Beings (4th)
Giant Insect (4th)
Repel Insects (4th)
*Animal Growth (5th)*
Animal Summoning II (5th)

Commune with Nature (5th)
Insect Plague (5th)
Animal Summoning III (6th)
Antianimal Shell (6th)
Creeping Doom (7th)
Reincarnate (7th)

## Astral
**(Major: cleric)**

Astral Celerity (1st)
**Speak with Astral Traveler (1st)**
Astral Awareness (2nd)
Ethereal Barrier (2nd)
**Astral Window (3rd)**
Etherealness (3rd)
**Join with Astral Traveler (4th)**
Plane Shift (5th)
Astral Spell (7th)

## Chaos
**(Major: chaotic crusaders)**

Battlefate (1st)
**Mistaken Missive (1st)**
Chaos Ward (2nd)
**Dissension's Feast (2nd)**
**Miscast Magic (3rd)**
**Random Causality (3rd)**
**Chaotic Combat (4th)**
**Chaotic Sleep (4th)**
**Inverted Ethics (4th)**
**Chaotic Commands (5th)**
Entropy Shield (6th)
**Uncontrolled Weather (7th)**

## Charm
**(Major: clerics)**

Command (1st)
*Remove Fear/Cause Fear (1st)*
Sanctuary (1st)
Enthrall (2nd)
Hold Person (2nd)
**Music of the Spheres (2nd)**
Snake Charm (2nd)

Dictate (3rd)
**Emotion Control (3rd)**
*Cloak of Bravery/Cloak of Fear (4th)*
Free Action (4th)
Imbue with Spell Ability (4th)
Command Monster (6th)
Confusion (7th)
Exaction (7th)

## Combat
**(Major: clerics, crusaders; Minor: monks)**

Command (1st)
Magical Stone (1st)
Aid (2nd)
Spiritual Hammer (2nd)
Prayer (3rd)
**Unearthly Choir* (3rd)**
Recitation (4th)
Flame Strike (5th)
Righteous Wrath of the Faithful (5th)
**Spiritual Wrath* (6th)**
Word of Recall (6th)
*Holy Word/Unholy Word (7th)*

## Creation
**(Major: clerics)**

*Light/Darkness (1st)*
**Create Holy Symbol (2nd)**
*Continual Light/Continual Darkness (3rd)*
Create Food & Water (3rd)
**Blessed Abundance (5th)**
Blade Barrier (6th)
Heroes' Feast (6th)
***The Great Circle/The Black Circle* (6th)***

## Divination
**(Major: clerics, monks)**

**Analyze Balance (1st)**
*Detect Evil/Detect Good (1st)*
Detect Poison (1st)
Augury (2nd)
*Detect Charm/Undetectable Charm (2nd)*
Find Traps (2nd)

Detect Spirits (3rd)
**Extradimensional Detection (3rd)**
*Locate Object/Obscure Object (3rd)*
Speak with Dead (3rd)
*Detect Lie/Undetectable Lie (4th)*
Divination (4th)
Omniscient Eye (4th)
**Consequence (5th)**
Magic Font (5th)
*Find the Path/Lose the Path (6th)*
Stone Tell (6th)
**Divine Inspiration (7th)**

**Elemental, Air**
**(Major: druids)**

Wind Column (1st)
Dust Devil (2nd)
Wind Servant (3rd)
**Zone of Sweet Air (3rd)**
Windborne (4th)
Air Walk (5th)
**Cloud of Purification (5th)**
Control Winds (5th)
Whirlwind (6th)
Conjure Air Elemental (7th)
Wind Walk (7th)

**Elemental, Earth**
**(Major: druids; Minor: clerics)**

Strength of Stone (1st)
Soften Earth and Stone (2nd)
Meld into Stone (3rd)
Stone Shape (3rd)
Adamantite Mace (4th)
Spike Stones (5th)
*Transmute Rock to Mud/Transmute Mud to Rock (5th)*
Stone Tell (6th)
Animate Rock (7th)
Antimineral Shell (7th)
Conjure Earth Elemental (7th)
Earthquake (7th)
Transmute Metal to Wood (7th)

**Elemental, Fire**

**(Major: druids)**

Firelight (1st)
**Log of Everburning (1st)**
Fire Trap (2nd)
Flame Blade (2nd)
*Heat Metal/Chill Metal (2nd)*
Produce Flame (2nd)
Flame Walk (3rd)
Protection from Fire (3rd)
Pyrotechnics (3rd)
*Produce Fire/Quench Fire (4th)*
Animate Flame (5th)
Wall of Fire (5th)
Conjure Fire Elemental (6th)
Fire Seeds (6th)
Chariot of Sustarre (7th)
Fire Storm (7th)

**Elemental, Water**
**(Major: druids; Minor: clerics)**

*Create Water/Destroy Water (1st)*
Watery Fist (2nd)
*Water Breathing/Air Breathing (3rd)*
Water Walk (3rd)
*Lower Water/Raise Water (4th)*
Reflecting Pool (4th)
Produce Ice (5th)
Part Water (6th)
*Transmute Water to Dust/Improved Create Water (6th)*
Conjure Water Elemental (7th)
Tsunami (7th)

**Guardian**
**(Major: clerics, crusaders, monks)**

Blessed Watchfulness (1st)
*Light/Darkness (1st)*
**Sacred Guardian (1st)**
Iron Vigil (2nd)
Silence, 15' Radius (2nd)
Wyvern Watch (2nd)
*Continual Light/Continual Darkness (3rd)*
Glyph of Warding (3rd)
Abjure (4th)

Dimensional Anchor (4th)
*Dispel Evil/Dispel Good (5th)*
**Unceasing Vigilance of the Holy Sentinel (5th)**
Blade Barrier (6th)
Forbiddance (6th)
Symbol (7th)

## Healing
**(Major: clerics, crusaders, druids; Minor: monks, shamans)**

*Cure Light Wounds/Cause Light Wounds (1st)*
*Cure Moderate Wounds/Cause Moderate Wounds (2nd)*
Slow Poison (2nd)
*Cure Blindness or Deafness/Cause Blindness or Deafness (3rd)*
*Cure Disease/Cause Disease (3rd)*
Hold Poison (3rd)
Repair Injury (3rd)
*Cure Serious Wounds/Cause Serious Wounds (4th)*
**Fortify* (4th)**
*Neutralize Poison/Poison (4th)*
*Cure Critical Wounds/Cause Critical Wounds (5th)*
*Heal/Harm (6th)*
Regenerate (7th)

## Law
**(Major: lawful crusaders)**

Command (1st)
Protection from Chaos (1st)
**Calm Chaos (2nd)**
Enthrall (2nd)
Hold Person (2nd)
Dictate (3rd)
**Rigid Thinking (3rd)**
**Strength of One (3rd)**
**Compulsive Order (4th)**
**Defensive Harmony (4th)**
**Champion's Strength (5th)**
**Impeding Permission (5th)**
**Legal Thoughts (6th)**

## Necromantic
**(Major: clerics; Minor: crusaders, monks)**

Dispel Fatigue (1st)
Invisibility to Undead (1st)

Aid (2nd)
Restore Strength (2nd)
Animate Dead (3rd)
Feign Death (3rd)
Negative Plane Protection (3rd)
Remove Paralysis (3rd)
Speak with Dead (3rd)
Suspended Animation (4th)
Unfailing Endurance (4th)
Raise Dead (5th)
Restoration (7th)
Resurrection (7th)

**Numbers**
**(Major: Monks)**

**Analyze Balance (1st)**
Calculate (1st)
**Personal Reading (1st)**
**Moment (2nd)**
**Music of the Spheres (2nd)**
Etherealness (3rd)
**Extradimensional Detection (3rd)**
**Moment Reading (3rd)**
**Telethaumaturgy (3rd)**
**Addition (4th)**
**Dimensional Folding (4th)**
**Probability Control (4th)**
**Consequence (5th)**
Dimensional Translocation (5th)
**Extradimensional Manipulation (5th)**
**Extradimensional Pocket (5th)**
**Physical Mirror (6th)**
**Seclusion (6th)**
**Spacewarp (7th)**
**Timelessness (7th)**

**Plant**
**(Major: druids; Minor: shamans)**

Entangle (1st)
Locate Animals or Plants (1st)
Pass without Trace (1st)
Shillelagh (1st)
Barkskin (2nd)
Detect Snares & Pits (2nd)

*Goodberry/Badberry (2nd)*
Trip (2nd)
Warp Wood (2nd)
Plant Growth (3rd)
**Slow Rot (3rd)**
Snare (3rd)
Spike Growth (3rd)
Tree (3rd)
Hallucinatory Forest (4th)
Hold Plant (4th)

**Disbelief (6th)**
**Group Mind (6th)**
Impervious Sanctity of Mind (7th)
**Mind Tracker (7th)**

## Time
**(Minor: Monks)**

**Know Age (1st)**
**Know Time (1st)**
**Hesitation (2nd)**
**Nap (2nd)**
**Accelerate Healing (3rd)**
**Choose Future (3rd)**
Unfailing Premonition (3rd)
**Age Plant (4th)**
**Body Clock (4th)**
**Age Object (5th)**
Othertime (5th)
**Repeat Action (5th)**
**Time Pool (5th)**
**Age Creature (6th)**
**Reverse Time (6th)**
**Skip Day (6th)**
**Age Dragon (7th)**

## Travelers
**(Major: Shamans)**

**Know Direction (1st)**
**Aura of Comfort (2nd)**
**Lighten Load (2nd)**
**Create Campsite (3rd)**
**Helping Hand (3rd)**
**Know Customs (3rd)**
**Circle of Privacy (4th)**
**Tree Steed (4th)**
**Clear Path (5th)**
**Easy March (5th)**
**Monster Mount (6th)**
**Hovering Road (7th)**

## War
**(Major: crusaders)**

**Courage (1st)**
**Morale (1st)**
**Emotion Perception (2nd)**
**Rally (2nd)**
**Adaptation (3rd)**
**Caltrops (3rd)**
Fortify (3rd)
Entrench (4th)
***Leadership/Doubt (4th)***
***Tanglefoot/Selective Passage (4th)***
**Disguise (5th)**
**Illusory Artillery (5th)**
**Gravity Variation (6th)**
**Illusory Fortification (7th)**
**Shadow Engine (7th)**

## Wards
**(Major: Crusaders, shamans)**

**Antivermin Barrier (1st)**
**Weighty Chest (1st)**
Ethereal Barrier (2nd)
**Frisky Chest (2nd)**
**Zone of Truth (2nd)**
**Efficacious Monster Ward (3rd)**
**Invisibility Purge (3rd)**
**Squeaking Floor (3rd)**
**Thief's Lament (3rd)**
**Zone of Sweet Air (3rd)**
**Fire Purge (4th)**
**Weather Stasis (4th)**
